LIVE PIGEON SHOOTING.

In 1887, at which time A. Nelson Lewis, a member of the Philadelphia Gun Club, was indicted before the Bucks County Court under the act of March 29, 1869, which makes it a misdemeanor to wantonly or cruelly kill or ill-treat, overload, beat or otherwise abuse any animal.

On the 14th of December, 1887, the Philadelphia Gun Club held a pigeon shooting match at their grounds on the "Old Brinkley" bounded by Adams and other contestants being the Exeter Gun Club, the Westminster Kennel Club and the River Gun Club. The club members and their friends went to the grounds by way of the Pennsylvania Railroad. Upon the same train from Broad Street Station were two uniformed officers of the Woman's Branch of the Society for the Prevention of Cruelty to Animals, who openly avowed their intention of making arrests if the match should take place.

The grounds were filled with people, the contest became very exciting and a large amount was staked on the result. Shortly after the shooting began the officers of the woman's society approached the gates and were met by members of the club, who stated that they had intended to meet the issue and would allow an arrest to be made. They did not raise any question as to the right of the officers to enter, because it was known that the act was reasonable in that case, as far as all present were concerned, the day would have ended in disappointment.

Then came the question of who would allow himself to be arrested. None cared to come up to the scratch, although several were club members. Finally General Grubb, the president of the club, expressed his determination to throw himself into the breach, if no one else could be found courageous enough to do so. This, for several reasons, was undesirable, and A. Nelson Lewis was appealed to. Without a moment's hesitation he gave his consent, resolving to be sacrificed in friendship to his club members, and that the purpose and pleasure of the guests might not be marred.

Mr. Lewis was then technically arrested and taken before a justice of the peace. He was defended by General Dechert. Subsequently the club presented him with a resolution of thanks, highly extolling him for the way in which he had stood up for the interests of the club.

The late Lewis C. Cassidy was to have defended Mr. Lewis, but died before the case came to trial. On the trial the jury returned a special verdict, in which they found that it was the custom of the association to hold matches for skill in marksmanship, that Mr. Lewis participated in the match in December, 1887, and "for the purpose aforesaid fired with a gun upon certain pigeons liberated from a trap, killing one and wounding another. The bird so wounded alighted upon a tree, and as soon as his wounded condition was discovered it was killed by a member of said club, for and on behalf of said defendant, according to the custom of said club in regard to wounded birds. The bird so killed was immediately sold for food, according to the rule and custom of said club."

Judgment was entered in favor of the Commonwealth and a fine of \$5 imposed on Mr. Lewis. From the crime the present appeal of Judge Paxson, Chief Justice, delivered the opinion of the Supreme Court, which is as follows: "The specific charge in the indictment was that the defendant did unlawfully, wantonly and cruelly shoot, wound, torture, abuse and ill-treat a certain pigeon," etc. The jury found a special verdict, upon which the court below entered judgment for the Commonwealth. We are, therefore, limited to the facts as found. From the verdict we learn that the defendant was a member of an association called the Philadelphia Gun Club; that on the 14th day of December, 1887, he attended a pigeon-shooting match and fired with a gun upon certain pigeons liberated from a trap, killing one and wounding another. The bird so wounded alighted upon a tree, and as soon

as its wounded condition was discovered it was killed by a member of said club for and on behalf of said defendant, according to the custom of said club in regard to wounded birds. The birds so killed were immediately sold for food, according to the rule and custom of said club."

"We have thus the finding of the jury that the object of this association was to test the skill of its members in marksmanship. In other words, it was a training school for sportsmen, in which they could acquire skill in shooting on the wing. This being the object of the association, the jury further found that the defendant attended for the purposes aforesaid. It was conceded that had he killed his bird he would not have been liable under the act of 1869. But having merely wounded it, he was guilty of the cruelty under said act. So that the crime consisted, not in the fact of shooting, but in wounding instead of instantly killing it. From the facts found by the jury, the defendant has merely been punished for want of skill.

"It is doubtless true that much pain and suffering is often caused to different kinds of game by this unskillfulness of sportsmen. A squirrel badly wounded may yet crawl to its hole and suffer for many hours or days and die. It was not pretended that the act applied to such cases. The sportsman in the woods is not responsible for the accuracy of his aim under the act of 1869. At the same time it is manifest that much suffering would be spared wild game if sportsmen were better trained. Skill in shooting upon the wing can only be gained by practice. It is not so with marksmanship. There are many who are content with aiming at a shooting at a mark. It is conceded that the sportsman in the woods may test his skill by shooting at wild birds. Why, then, may he not do the same with a bird confined in a cage and let out for that purpose? Is the bird in the cage any better or has it any higher rights than the bird in the woods? Both were placed here by the Almighty for the use of man. They were not given to him to be needlessly and cruelly tortured, and even then, to anything but the finding of the jury to show that the object of this association was to torture pigeons we would not hesitate to sustain the judgment of the court below. But no such purpose appears, nor is there any finding that the defendant was guilty of needless and wanton cruelty. The bird was immediately killed as soon as its condition was ascertained. The defendant was not punished for the finding of the jury to show that the object of this association was to torture pigeons we would not hesitate to sustain the judgment of the court below. But no such purpose appears, nor is there any finding that the defendant was guilty of needless and wanton cruelty. The bird was immediately killed as soon as its condition was ascertained. The defendant was not punished for the finding of the jury to show that the object of this association was to torture pigeons we would not hesitate to sustain the judgment of the court below. But no such purpose appears, nor is there any finding that the defendant was guilty of needless and wanton cruelty. The bird was immediately killed as soon as its condition was ascertained. Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1890-91.
COMMODORE: WALTER U. LAWSON, Boston, Mass.
SECRETARY-TREASURER: RALPH F. BRAZER, 47 Central street, Lowell, Mass.
REGATTA COMMITTEE: J. A. Gage, Lowell, Mass.; W. G. MacKendrick, Toronto; L. B. Palmer, Newark, N. J.

CENTRAL DIVISION. OFFICERS:
VICE-COM: C. V. WILHELM, Albany, N. Y.
REAR-COM: T. P. GADDIS, Dayton, O.
PUSHER: H. HOWARD, Albany, N. Y.
EX-COM: J. K. BAKER, and H. M. Stewart.

EASTERN DIVISION. OFFICERS:
VICE-COM: J. W. CARTWRIGHT, Jr.
REAR-COM: D. F. PARMELE, Hartford.
PUSHER: R. APOLLONIO, Winchester.
EX-COM: EARL BUTLER, E. S. Towne and Sidney Bishop.

Applications for membership must be made to division pursers, accompanied by the recommendation of one member and the sum of \$2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay \$1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division. Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

COMMODORE: D. H. CRANE, Chicago, Ill.
VICE-COMMODORE: N. B. COOK, Chicago, Ill.
REAR-COMMODORE: O. A. WOODRUFF, Dayton, O.
SECRETARY-TREASURER: H. WARE, 130 Right Building, Chicago, Ill.
Applications for membership should be made to the Sec'y-Treas., on blanks which may be obtained from him, and should be accompanied by \$2 as initiation fee and dues for the current year.

WHITE SQUALL'S '88 CRUISE.

[Concluded from Page 98.]

As we pushed into the stream we saw a woodboat under way about 300 yds. ahead. She ran out of her way to speak the A. Gibson and we got near enough to spell out the name Zephyr on her stern. Then I settled back with the remark, "That's the last time we'll be able to spell that name to-day." The wind freshened and a thin creamy streak of foam seemed to have got entangled across the canoe's bows and was trailing off from either quarter. Horace said, "We are gaining on that wood boat." I looked up and it was even so. Then we trimmed our sails more fully, hunched up to windward, and the mercury in our barometer went up about ten degrees. Still the wind breezed up; the streak of foam changed to a pale brandy-colored wave, and in five minutes the nose of the Squall was lapped on the Zephyr's quarter.

Her captain evidently not liking the turn affairs were taking, he held his head in air and steadily resisted all our attempts to get acquainted. "He despises us on account of our size," said one of the Squall's crew. "He doesn't know we have paced the quarter deck, rolled the wheel and 'taken sight' along the compass card, or perhaps he wouldn't put on so many airs. Now suppose we give him a hint that we were once of the brotherhood, by breaking out one of those rollicking old sea shanties?" "Shenadore," "Lowlands," and "Whistling Johnny" were turned up, but there was "Renzo," none could find any fault with that; it was a good humble sea song. And his rich beary-tone voice rolled forth on the first line:

"O! my Renzo was no sailor,"

But he never went any further. Like most amateur performers, he had kept one eye on the audience to note the effect. When he saw the worthy captain darken his brow and make a motion to flatten the singer by throwing a bunch of lath on him, he resolved to postpone the "shiping" of Renzo "on board a whaler" until a more convenient season. The one who did not do the singing says that it was the quality of the music which disgusted the captain, while the performer as stoutly maintains that his quick mind had drawn a parallel between Renzo and the Zephyr, which was also no sailor.

We passed the wood boat and luffed out across her bow, getting a stick caught squarely across the board. In the process, which so hindered our progress that we were in some little danger of being run down. After we passed Lincoln we erred by steering too close to the right bank, thus losing some of the force of the wind and current; and when we drew out of the race at Oromocto Island the wood boat was 100 yds. ahead. But this does not alter the fact that in an 11-mile race we beat a loaded boat of 75 ft. waterline, with a stiff whole sail breeze, part of the time on her quarter and the rest dead aft. Had there been any sea on we could not have done it, and until I saw it I would not have believed that it could be done at all.

Before we reached our camping place two boom men hailed us with a long drawn "Hello!" and then shouted, "Eel-grass ahead." "All right, pass it over to the wood-boatmen, they're interested in eel-grass, it don't affect our craft a mite." A chuckle from one of them announced that the answer struck him favorably; and a moment later one of them shouted, "How yer makin' it?" "O! we're a good fair wind, plenty of grub, and the cook's sober—first-rate, first-rate." When d'y' leave Fredericton?" "Four o'clock, the same time as the wood boat, and yer holdin' her well," Horace said. "Who is that fellow?" "I don't know." A chuckle seemed to talk like old acquaintances. "Ah, my son, you must not put on any airs, or affect any stiffness, when talking with lumbermen; and, above all, be civil—even polite. I need only have said, 'Go to blazes,' when he first hailed, to have heard a torrent of abuse, mingled with a smell of sulphur that would shame a volcano." And the above is true, in my judgment. The outer may, in his camp life, approach as near that of the savage as seems to him desirable; but in his intercourse with his fellow men, no matter what their station in life, he should never forget his good breeding. If he does, he will some day run up against some one who will make him regret it. If, however, he is treated uncivilly by any of the natives, and thinks he can come out as the Chinaman says, "topside," in a word scurrilous, without using any language that he will be ashamed to repeat when he gets home, let him sail in, if he wants to, and success to him. But the game is rarely worth the candle.

Opposite the head of Oromocto Island Horace hailed the deal boat Seattle, bound to the Nashvaak, commanded by Capt. Williams, a friend of his. By this time the wind had veered around to the south and we were sailing close-hauled. The captain begged Horace to lift sheets and return to Fredericton; and failing to persuade him fired as a parting shot, "Surely you're not going down river in that thing! How heavy a life insurance do you carry?" I wanted Horace to put the canoe about that we might follow and kick him, but he steered for the island, and we were all snug in camp an hour before sundown. As I wish to go

on record as a person who can mention the mosquito without indulging in hyperbole, I will attempt to estimate of the numbers that assailed us that evening. It was enough for any that we were obliged to eat close up on the lee side of the camp-fire, and even then they were unbearable. Prospects for a night's rest were slim, but we beat them by a very simple expedient. We gathered two bundles of cedar bark from drift "shingle-shims," and placing a live coal in the end of each, laid them in the tent door, and we were troubled no more. The pungent smell of the smoke was too much for them.

The next day was Sunday and Horace did not want to travel, so we lay in camp and saw a gale of fair wind howl by nearly all day. We cooked potatoes for dinner, and just as I was lifting them off the fire, which H. W. "chucking up" with a board edging, two irresponsible of the d were flipped from the end of said edging into the pot. We were more successful in our second attempt, though the pot boiled dry so quickly that we had to keep adding water from a kettle, which we kept boiling. In the afternoon we visited the mainland for spring water, and had a chat with the men at one of the boom houses. While we were getting supper a boating party, consisting of two men and a half dozen ladies, came by, raising hats and waving handkerchiefs, which so rattled Horace that he tried to catch a pot from his hand to wave a return, while I was doffing my 50-cent felt in answer. I had to threaten to kick him before he desisted, and dove into the tent for a towel, which he whirled till it looked like a Catherine wheel.

After supper more mosquitoes and cedar bark. It may be worth mention that we whittled the latter into shreds two feet long and tied them tightly into bundles the thickness of a man's wrist, two such lastingly lighted fires were on the mainland, near the border of dreamland, when we were aroused by the sound of singing, and the writer caught the following words from an old hymn in the collection used by the Episcopal Church:

"Here in this body pent
Absent from thee I roam,
And nightly pitch my moving tent
A day's march nearer home."

We thought a church choir had gone astray; but it proved to be our boating party on its way back to Upper Maugerville. They rendered some fine pieces of sacred music, and wound up with old "Gloria in excelsis." "They differ from the most vocalists in free concerts; they can sing," and they reflectively, "I never saw such a place for singing as this St. John River; we've had a serenade every night since we left home, and this is the best of the lot."

I awakened at dawn on Monday to find a light southerly wind blowing, and after lighting the fire "chewed the bitter cud of reflection" on the folly of all sailing a fair wind to go by while we were observing the Sabbath, that we might have an opportunity to break our backs at the paddles on Monday.

By six o'clock everything was stored in the canoe, and we were pushing out into the river. The southerly air had now hauled around to the south-west, and we could make a straight course for the foot of the island. Here we ran out of our course to speak Commodore Weldon, who had only made four miles since we passed him on our way up. By this time the wind was westerly. We rounded the foot of the island, and with sheet well off headed for Middle Island, which we left on our starboard hand, as we did all other islands on our way down. Then the wind came in fair and about as hard as we wanted; and to make a long story short the forenoon's sail was one of unmarred pleasure.

Of the many incidents that occurred I will mention two. As we passed the small schooner Native, which was making her way down under mainsail and jib, Horace said: "It's a good thing the old man hasn't his foresail on, if he had there would be no way for him to excuse a ghastly bad defeat." This illustrates the moral effect of victory. Because we had thrashed the Zephyr he took it for granted that he could make short work of the smaller craft. The undersigned would have felt in the same way, had he not raced endeavor to have had all such thoughts beaten out of him.

The other episode was something unique in my experience. We were rounding the lower point of Mauger's (pronounced M-d-jors) Island when a little jet of water was flung on the foredeck right by the stem and later I felt something touch the rider. Looking back we saw red squirrel steadily making for the island, his collision with the canoe having in no way changed his purpose. We wished him good speed without inquiring whether like Casus he was swimming a race with some chicaree Casar, or, imitating Leander, he was crossing "all for to see his dear." Instead of returning by way of the "raging canal" we sailed down around "No 1" and made our camp on a swamp on "Grimsor's Neck," nearly opposite the village of Gagetown.

About 2 o'clock we started under paddle against a heavy sea. We had gone, perhaps, a mile, when we sighted a golden-eye duck with a brood of very small ducklings. Seeing us she maneuvered about 50 yds. to one side of her brood, with the evident intention of diverting our attention from her young. But we were too close, and she hid straight to the water. The flock, now huddled in a compact mass, we put on the muscle. The first bird, divining our purpose, raised her head high in air and seemed to balance herself for a moment on her tail, then she dived like a flash, and as she did so there was nothing but blank water where the bunch of ducklings had been. In a quarter of a second she reappeared, and rising as before craned her neck to see if her little ones were safe. We were so close that we could see her no more. But I have many a time paid a dollar for the privilege of looking at a poorer exhibition.

In crossing the river near the mouth of Gagetown Creek we shipped a gallon of water through the centerboard trunk, which we had carelessly left open. Had the canoe filled in that sea our earthly cruise would have been ended. It is needless to say that the duck and her scared brood in that craft, and we jammed a stop-water in before she could make another thrust. At the lower end of the Friend we hoisted our reefed mainsail and drove down the Lawson River. At the head of Colwell's Creek we made everything snug and "rode out" a thunderstorm in a hay barn—a mighty good harbor, by the way. We bowled down to the mouth of the lake before a nor'west gale and lay to for some time under Musquash Island Light, waiting for the wind to abate. But we had to get somewhere before we could eat another meal, as our grub sack was entirely empty. We concluded we could meet the raging of the skies, but not an empty larder; so we worked across the broad bay at the lower end of the lake and arrived at a farm-house, where we had both been before. Here we took the first night's rest in our life.

About 6 o'clock we hoisted sail before a nice little southerly breeze that had sprung up, and made home just at dark, thus closing a most enjoyable cruise with a day of rare good luck.

The next day a sailor man who had crossed the Atlantic a half dozen times, and circumnavigated this terrestrial ball once, borrowed a 15 ft. catboat of his best girl's uncle, and tackled the Squall, at a place crew was in training. In a puff now and then we outalled him on every point; in fact, as an eyewitness put it, we "made a holy exhibition of the outfit." This was a glorious round-off to our cruise. I have a suspicion that some may think the account rather long-winded. To such I can only reply, that I have done the best I could under the circumstances; but to show how I could afford to do it, I will say that I had a five-day cruise of the St. John, between Washademoak and Spring-hill. There, "you pays your money and you takes your choice."

L. I. FLOWER.

THE LIBRARIAN RECEIVES A CRUISE.

WE take great pleasure in the facts that out of the thousand members of the A. C. A. there are three who have made a cruise westward, and one who has been energetic enough to write it up and forward to the Librarian, as provided by the laws. The percentage is not particularly large, 1 to 333; but still it marks a distinct advance on the previous year, in which no cruise was reported, so that presumably none was made. Through the courtesy of the A. C. A. Librarian, Mr. W. P. Stephens, we are enabled to publish the cruise, which is a model of condensed information.

WALKILL RIVER.

Librarian A. C. A.:

DEAR SIR—In compliance with Chapter XI, A. C. A. By-Laws, I send you herewith a record of a cruise made by three members of the N. C. and B. A. during this past season. We used on our cruise three canoes, a Canadian basswood, partially decked, 16½ x 33 and very light, a Mohican No. 2, 15 x 31½, and an Ontario longitudinal strip canoe, 16½ x 31½. The lighter basswood and the lapstrake fared much better than the heavier smooth-skin in the many stony places where the water was "thin."

At 10:30 A. M., July 8, 1890, we shipped our canoes and baggage by Lake Erie & Western Railway to Hampton, 24 miles, following in a late train. The canoes arrived at Hampton at about 6 P. M., and were carried by wagon one mile to the nearest point on the river, at a place where the wagon road crosses the stream, "Chee-chunk" by name.

Fare for three, \$2.25; freight, \$1.53. In running the mile to our first camp we passed three small gravelly riffles. Made camp in a high pasture on right hand side of river at about 8 o'clock. Farm house ¼ mile away, where milk and water may be found; river water not fit to drink.

From camp to Phillipsburgh one mile, still water, with one fish dam to carry over. Dam at Phillipsburgh with break at left end which might run at high water, but not at present stage. We carried over. Below dam, quick water with rocks and stones for half a mile, then still water to Stonyford bridge, four miles, and thence to Montgomery, eight miles. Left canoes at boat house near the road, and dived at hotel just across the way. Dinner for three, \$1.20. There are two dams at Montgomery about half a mile apart. Quick water over slate rock, with occasional boulders scattered about between the dams, but at high water it would be well to examine them carefully before trying it.

The lower dam, which is a double one, especially. From Montgomery to Walden, three miles, still water with many large boulders. Keep a sharp lookout for those under water. They are black and hard to locate. At Walden there are two dams and a fall between. We did not examine these, but were assured that they were impassable. Made the carry in an express wagon. Three-quarters of a mile, at a cost of 50 cents per boat. From Walden to Walkill, four miles. Half the distance rifts and slate ledges, balance back water from Walkill dam.

We found a good camping spot on the left bank at head of back water. Farm house on opposite side of river where excellent milk and good water may be purchased. Between the camp and the dam we passed Jordan's milk condenser. Below the dam at Walkill the rocks were bare. Hired man with hay wagon to carry us quarter of mile to end of tail race, \$1. For half a mile further slate ridges, stones and black boulders, those under water being particularly troublesome. From Walkill to Galeville, two miles, quick shoal water most of way to backwater of dam. Water not running over. Carried over at right hand side of river.

From Galeville to Perrine's Bridge, eight miles, still water, with waters most of the way. There are many large boulders in stream above the dam. Keep a sharp lookout for those below water. The dam is in a bad state of preservation and full of projecting iron spikes. We carried over, as usual, at east end of dam. The river below the dam is filled with immense boulders crowded so closely together that it is with difficulty that a passage can be found. From Libertyville to New Paltz, three miles, there are two or three rapids and at one place a drop of four or five feet over a slate ledge. The best place to run it is near near the middle of the river. It looks bad but is in reality all right. After passing this there is still water. From New Paltz to camp, on right side of river in a grove on high bank, three miles. Milk and water on opposite side some distance below.

From camp to Perrine's Bridge, five miles, the water is still and river very crooked. Dashville Falls, a half mile below the bridge, about fifty feet fall, very fine. There are three falls within a little over a mile, Dashville, Rifton and Buttermilk. We dined at the hotel at Perrine's Bridge, at 30 cents a head and hired two teams to carry the canoes around the three falls, by the road about three miles, at a cost of \$5 for the trip. The river winds through the valley season it is hard to get a man at an angle, it might be possible to carry a light canoe around each of the three falls. We did not try it.

From Perrine's Bridge to Powder Mill Ferry, where we put our boats in the water is three miles. From Ferry to guard lock in canal, three miles. Here we passed through a short canal and were locked down into the Rondout Creek. Tide water begins here. It is better to put your canoe on a canal boat lock down, as this is a very busy spot, and they will not hold a loaded canal boat to let a canoe go through.

From canal lock to Rondout Light, four miles. The balance of cruise was on the Hudson River. Our first camp on the Hudson was on a rocky point west of Esopus Light. From camp to Poughkeepsie, ten miles, we had to keep a sharp lookout to Newburgh fifteen miles. Total expenses, \$13.58.

In closing this report I would say that our cruise was made in a very dry time, when the river was at least two feet below the high water mark, making the wear and tear much harder on both canoe and canoeist, particularly the former. With six inches of a foot more water it would have been much better, although we enjoyed it very much. From it we saw the river winds through meadows most of the way, with distant views of the Mohawk, Shandaken and Catskill Mountains. After passing Perrine's Bridge the stream runs through a deep valley to the Hudson at Rondout. I would advise any one making the trip to go as light as possible. If intending to extend the trip to the Hudson, ship sails and paddles, but not food and call for them there.

In the expense account I have not included the provisions taken with us from home, nor the milk and eggs bought on the way. Information in regard to stage of water may be had by inclosing addressed postal to postmaster at Montgomery or Walden, I think. The cruise, for a short one, is well worth taking.

Yours fraternally, N. S. SMITH, A. C. A. 153.

CARELESS CANOEING.

WE have frequently spoken of the danger of the ordinary amateur-built canvas canoes, and of the manner in which these canoes in particular are misused by boys without judgment or experience, and who should not be permitted to go afloat except in large boats and in company with experienced boatmen. The vicinity of Bergen Point, Bayonne, and the bays on each side, has been noted for this class of poor canoe, from which serious, and in some cases fatal, accidents have occurred, the latest one being on Monday of this week. This one was drowned was due only to the accidental presence of a small expert-boating man and not to the efforts of the would-be canoeists.

Early in the morning two boys, James Van Buren and Charles Collins, started from the house of the Newark Bay Boat Club, at Bergen Point, in a small canoe, carrying two guns. They used a canvas canoe about 10 ft. long, built by the boys, of the type model and fitted only for one person. About 2 P. M., when in mid-channel and just abreast of the club house, the canoe capsized, as it is stated, through one of the boys standing up to shoot. Both were thrown into the icy water, where they clung to the capsized canoe, being carried down swiftly by a strong ebb tide. They were seen by some young boys on shore and a man put out in a small flatboat, with no rowlocks and but one oar.

After the capsized two canoeists, Mr. H. C. Ward, of the Brooklyn C. C., and his brother, happened to visit the beach, and while they were looking for a boat they were joined by Mr. Hobbs, of the N. B. C. C. The three quickly launched the first boat in the club house and pulled off. In a case such as this, where the canoeists, but was unable to rescue the other. Both were picked up into the yawl, and with the punt and canoe in tow the party pulled in to the station of the Newark Y. C. C. half a mile below where the canoe had capsized. The two boys were completely exhausted, and for two hours the rescuers worked over them, aided by the club janitor, and his wife, who provided warm flannels and drinks. They finally recovered and were taken to their homes.

In spite of the pluck and promptness of the first rescuer his work would probably have been in vain if other help had not arrived, as even in case he had taken both boys into his boat it would have been a long time before he could have reached the shore again in an overloaded boat, with but one oar and carried down in mid-channel by a strong tide. When taken from the water the boys were so exhausted that immediate care was necessary to save one, if not both.

If properly built, and used with any care, the ordinary small canoe of wood or canvas is not specially dangerous; but as these boats are commonly built by boys they have no bearings at the ends and are very cranky. In no case should one be used by a person who cannot swim and who is not familiar with small boats. In no case should more than one person be crowded into one, and above all, a canoe even of good model, is an unsafe boat for a boy to shoot from, as there is little room to handle a gun in. The combination of two boys, two guns and a small cranky canoe, with the water at an intermediate temperature, is simply an invitation for a fatal disaster that would be the blame of canoeing instead of the ignorance and recklessness of boys.

MOHICAN C. C.—The annual meeting and camp fire of the Mohican C. C. was held on Feb. 14 at the residence of Mr. Howard Martin. The election of officers resulted as follows: Captain, Charles V. Winne; mate, William A. Wheeler; purser and sec'y, William S. Hackett; member of the executive committee, W. B. Wackerhagen. The following were elected members: Stewart McKnight, Ed. Wagoner, Theodore McLaughlin, S. Howard Ransom, and George Haleott. Later on a merry camp fire was taken, which was fairly loaded. In the center was a large square table, the totem of the club, beautifully mounted and polished and surrounded by smilax. During the evening the Turtle Mandolin and Banjo Club gave selections, and songs were sung and stories told. Mr. Martin was voted a jolly good fellow and his health was drunk. Then in the famous Regatta punch of the Fort was drank. The Regatta punch is a very good punch, and a great revival of the sport is expected in the spring. P. M. Wackerhagen, a former member of the club, at present living in Racine, Wis., has given a fine silver cup to be sailed for at the next regatta in June.

WINTER QUARTERS.—The meeting on Feb. 20 was one of the most successful of the season, Messrs. Dunnell and Winttingham giving an excellent display of lantern views. Arrangements are being made for a novel entertainment by Messrs. Seavey and Rogers, who will each tell the story of their cruise on the Housatonic River, neither being present while the other is speaking. The meetings and the dinner which precede them are well attended, and have proved of great value in uniting local connoisseurs through the winter.

A. C. A. MEMBERSHIP.—Central Division: C. H. Stewart, Newark, N. J. Eastern Division: Fred. M. Clark, Jr., W. F. Robinson, Del. Morgan, William A. Dustin, Walter J. Holden, Worcester, Mass.

Yachting.

Model Yachts and Boats. Their design, making and sailing, with designs and working drawings. Postpaid, \$2.

Yachtsmen who do not see what they want under this heading will please look under the hatches of the *Canoe*, peep into the *Kennel*, squint down the barrel of the *Rifle*, open the *Fish Car* and *Game Bag*, inquire of the *Sportsman Tourist*, and if their yearnings are still unsatisfied, push their explorations into the *Editorial* and *Advertising Departments*.

CORINTHIAN NAVY.—The Delaware River Squadron held its organization meeting on Feb. 13. Mr. Wm. Dressler, of Camden, N. J., was elected Commodore; Mr. Geo. D. Gideon, of Philadelphia, Purser. Commodore Dressler appointed the following officers and committees: Measures, Winfield Van Deusen. Committee on Education, W. E. Rothery. Committee on Regatta, Dr. C. P. Tuttle, C. L. Leison, G. T. Hugo Schram. The new squadron starts in with an excellent membership, and thoroughly good officers. The New York Bay Squadron will hold a meeting at 757 Broadway, on Feb. 23, at 4 P. M. The Staten Island Sound Squadron will shortly hold its organization meeting. The Navy as organized for 1891 is composed of the following squadrons: East River Squadron, New York Bay Squadron, Long Island Sound Squadron, Staten Island Sound Squadron, St. Lawrence River Squadron, and Delaware River Squadron. New members are coming in at a rate that assures this popular organization a membership which is simply astonishing, when its age is taken into consideration. The New York Bay Squadron will give a lecture at the Hotel Marlborough at an early date. The following names have been proposed for membership: Geo. B. Colborn and G. T. Hugo Schram, Camden, N. J.; Frank W. Leison and W. E. Rothery, Philadelphia, Pa.; H. F. G. Wey, R. Bonnell and Paul A. Oliver, New York; M. Gates, Fort Hamilton, N. Y.

LARCHMONT Y. C.—On Feb. 18 the annual meeting of the Larchmont Y. C. was held at Delmonico's, the following officers being elected: Gom., Girard C. W. Lowrey; Vice-Com., Joseph H. Sterling; Rear Com., David Irwin Jackson; Sec'y, Chas. A. Singer; Treas., Wm. Murray; Trustees to serve for three years, Augustin Monroe, Eugene L. Bushe. Some changes were made in the sailing rules, the time limit for races being fixed at 30 minutes after sunset, while cat yachts were classed with catboats, to be rated under the allowance for yachts. It was decided to make the annual regatta a handicap. The following resolution, offered by Mr. Eugene L. Bushe, was carried unanimously: Resolved, That this club declares its opposition to the bill lately introduced in the Senate of the United States to amend the navigation laws, by imposing penalties or charges upon foreign-built yachts coming to this country; and we also declare our opposition to all laws imposing charges upon such yachts so long as they are employed exclusively as pleasure vessels. We point out the great value of the contests sailed in our waters with yachts of foreign build. They have developed and advanced the science of naval architecture not only in the United States, but throughout the world. We also point out the fact that every foreign-built yacht brought to this country has stimulated yacht designers and encouraged yacht building. Resolved, That the commodore, with two others whom he shall name, be appointed a committee to represent this club before Congress and to oppose such legislation.

ONE GUN STARTS.—The *Boston Globe* speaks as follows in favor of the one gun start which we have so long advocated. Now that racing is confined almost entirely to small fleets, as in the 40 and 46ft. classes, there can be no argument in favor of the lubberly old method of allowing anywhere from 5 to 15 min. in which to cross the line. The *Globe* says: "Without doubt a one gun start offers a splendid chance for an expert to gain an advantage. This may be pushed too far, and some skippers may bluf a faint-hearted helmsman out of his rights. Nothing is prettier than a cleverly executed one gun start, and nothing tends more to elevate the standard of yacht handling. If the yachts are allowed time in which to cross the starting line, there is always the danger that the boats will meet different conditions, and that the value of the race will be vitiated by a fluke. Then again, one never knows where he stands when the yachts do not start together, and the race is robbed of its most exciting features. Instances are numerous where a yacht has sailed over the whole course in the lead, and her crew have thought they had won the race, only to find that some boat which started five or ten minutes astern, which they had hardly considered at all, has sailed the course in faster time and won the race."

SEAWANHAKA C. Y. C.—The regular meeting of the Seawanhaka C. Y. C. was held on Feb. 24, with Com. Hill in the chair. The race committee offered several changes in the rules, the principal one being in the regular club cruises. The old start at Buoy 18 and finish at Cravens Shoal Buoy have been abandoned in favor of a start and finish off Cravens Shoal Buoy; the three courses being around the Sandy Hook Lightship, around the Scotland Lightship, and around Buoy 1, off Point Comfort Shoal. This latter course replaces the old club cruise for the smaller classes, around Buoy 5, over which so many hot races have been sailed. Several changes to Rule XXIV. were proposed, and will be voted upon at the next meeting. The race committee is now at work on a scheme for securing entries for the annual race, which includes a provision for yachts in cruising trim.

PART III.

[Concluded from Page 96]

AFTER breakfast we took the skiff and towed ashore, landing on a sandy beach, which formed part of a boat builder's yard. The cat-yawl *Empress* was undergoing some repairs on the marine ways close by. We strolled along the water front and saw a number of well-known yachts. Afterward we went into the town and enjoyed ourselves in various ways until about two o'clock. On our way back we purchased a nice fresh bluefish, which we carried on board and demolished, or, I should say, partly demolished, as it was a good-sized one, weighing, if I remember correctly, 6 lbs. After eating we got out the awning and put it up;

WE FOUND EMPLOYMENT IN THE SAME WAY.

under which, protected from the sun, we quietly watched the maneuvers of several sailing craft.

The sloop yacht *Wizard* was trying to beat past the breakwater against the ebb tide, but appeared to make no progress, as after four or five tacks she was in the same place as when we first saw her. About this time two large catboats came up astern of her, and a man, who happened to be in a boat alongside, told us to watch them. Instead of beating back and forth in the channel they ran well into the lee of the breakwater; then, going about, stood off parallel with it, with sheets slightly started, so that they were going fast when the end was reached. As they ran out, both

keg, and when we came back our neighbors on the skipjack, two in number, were cooking their evening meal. We immediately found employment in the same way.

As we reclined after everything was cleared away we perceived that our flat-bottomed friend had swung around so that we were within easy speaking distance, and Tom fell into a conversation with one of the crew, inviting them on board our craft. They expressed great astonishment at the size of our cabin and its comforts. Judging from an exterior view one would pronounce it very small and squat, but the floor being low down and with a centerboard trunk to split it up, one can get around quite handsly; and best of all can stretch his legs in any direction he pleases.

Our visitors were cruising, and said they had just arrived from New London, having left there the night before. It being calm all night they had drifted about the Sound until morning, when getting the wind they made their way into Greenport. Another boat had started with them, but they believed she had turned back. They informed us that they were going to cruise around Peconic Bay; they had been there before, and from the account given us of it we felt disposed to spend a few days on its waters, but as Tom's time was limited we thought it prudent to start on our return homeward in the morning.

We were invited to come aboard their boat, and during the evening we spent a couple of hours there very pleasantly. Cruisers are sociable fellows, and we enjoyed ourselves without restraint. Their cabin was considerably larger than the *Monaitepee's* with the exception that it had no more head room. Being a much longer and broader boat she was supplied with any amount of lockers and storage facilities. They used a coal burning stove and had a spacious icebox, in the bottom of which was the water tank. Altogether she was a very comfortable cruiser—for smooth water.

We retired to our bunks early, setting the alarm for 2 A. M., at which time we reluctantly forsook our beds and got on deck ready for a start—and found a dead calm. Our object in starting so early was to get down to Plum Gut before low water, so as to go through on low water slack, thus escaping the worst of the tide rip. We got our anchor and drifted along with the current toward the Gut. A coaster got under way at the same time, but we so n left her astern by using a sweep. In a short time the current took hold and whirled us along rapidly, sometimes bow and then stern first, occasionally sideways. Once in a while a light breeze would give us steegeage way for a short time, but the tide was our chief motive power on this occasion. I sent Tom below to finish his nap, as he was yawning and gaping at the rate of four per minute, and promised to call him at five o'clock.

flattened down and shot up into the wind and reached far enough to clear the breakwater on the other tack. The *Wizard* followed their example and succeeded in reaching her mooring shortly after.

When the tide began to flood we got up sail and took a turn over toward Shelter Island, but did not land, continuing on in channel for a few miles. On our way back we had a brush with a large open catboat, which came along with an impudent air, having a pile of sand bags to windward. Fortunately we had the wind free and our clubtopsail aloft, and the cat soon found that he had tackled the wrong one, for the *Monaitepee* is a slippery customer before the wind, and we were all furled up when our friends came up. We found that during our absence a large skipjack had arrived and was lying close abreast of us, but there was no one on board when we espied her. We went on shore to fill the water-

Time dragged heavily until we were within a half mile of Orient Point, when the bell at the Lighthouse startled me out of a doze, and I looked about to discover the cause of the ringing. A glance southward toward Shelter Island revealed a bank of fog rolling toward us, and I perceived that we were soon to be enveloped in its clammy folds. I immediately altered the course of the yacht and stood inshore with the aid of the light breeze which came before the fog. I thought I would be able to get close enough in to keep the land in view when the fog closed down, but had not gone a quarter of a mile when it shut in so thick that I could not see beyond the edge of the bowsprit. I held her on her course for twenty minutes, guided by the fog-bell, and when I considered ourselves clear of the track of any steamers I let go the anchor to await developments.

This state of affairs brought to me forcibly the need of charts

and a good compass, neither of which we had. Our compass, which had been a good one in its earlier days, was now practically useless, and the boat was perfectly motionless—the needle would wander about from one point to another, never coming to the north pole. The glass had got broken, allowing the water to collect in the bowl and saturate the dial until it was pulp. Well, it was no good, and we deserved all we got for not providing ourselves with a reliable one before starting. The same in regard to charts. We had every one except the ones we wanted, and several times during the cruise we hauled out our set of charts, comprising the whole south side of Long Island and the Jersey coast to the Delaware, in a vain search for something that would give us any information about the waters in which we were cruising, but found nothing further east than Whitestone. And on several occasions we bewailed our carelessness and neglect in not attending to these matters before attempting to navigate in, to us, strange waters. I sat down on a camp stool with my back against the cabin, lit my pipe and began wondering how long this was going to last, if it preceded a storm, perhaps a southeaster, in which case our position would be an unenviable one; and in a dejected state of mind I dozed off and fell asleep.

When I awoke what a glorious sight; no signs of the fog were visible, and the sun shone forth in all his grandeur, while small fleecy clouds chased each other across the sky before a spirited southerly breeze. I immediately got up, and, taking the jib, which was the only sail I had lowered, stood out toward the Sound.

I now called Tom, who had snored in peaceful oblivion through all my racket on deck, to say nothing of the fog bell which had kept up a continual clanging close alongside. He took the tiller and, as soon as possible I dove into the cabin, determined to have some more sleep.

It is wonderful how a person can snooze when on the salt water, but fate was against me on this occasion. I had not been asleep an hour when I was pitched out of my bunk on to the floor and awoke painfully to the fact that the Monatippe was lurching herself into a good bit of a sea. Going on deck I found we were a distance out on the Sound, and the clouds were closing with the wind blowing quite hard from the west. A nasty storm was now closing in, causing the boat to pitch about in a jerky manner. Tom put her about on the starboard tack as I appeared and headed her on a southwest course, which we held for an hour, the wind steadily increasing. When well in under the land again we put a reef in the mainsail and made several short tacks along shore.

About noon the tide turned and the four of us could make but slow progress, for the current is very swift along the Long Island shore here. We were at this time just east of what is called Horton's Point and in order to get by it, and escape the strong tide-way which makes around, we took a long reach off shore until well out in the Sound, and here we observed that the Connecticut sloop was much further off than the Long Island and we suddenly made up our minds to keep on the course we were pursuing and cross the Sound, thinking we would stand a better chance of finding a harbor for the night over there than on the Long Island coast, for we had learned that Wading River was the only opening between Plum Gut and Port Jefferson, except Miller's place, which could only be entered at certain stages of the tide and was not by any means a desirable haven.

There was every appearance of a good blow, and we set to work and made all snug inside and out. Even now the yacht was laboring heavily in the constantly enlarging waves which she encountered as we proceeded. It soon became necessary to reduce our headsail and I gave the tiller to Tom and went forward. Tom is such a long fellow that when he straddles the bowsprit his head extends far beyond the mast, and the waves as they come under the present circumstances, I being the shorter and somewhat lighter in weight, it would be prudent to keep Tom at it. He was not sorry. When I returned to the cockpit after reefing the jib I was wet to the waist, having been dipped to that extent a number of times.

We found we had not shortened sail any too soon, for the wind got up stronger than ever, the sky took on an angry appearance and the white foam showed sharp and distinct on each wave crest as the boat came down the face of the wave and alone on the Sound we fought the storm and strove hard toward the shore.

About 3 o'clock Tom went into the cabin to light his pipe, and when he returned told me that there was considerable water in the yacht, as he could hear it swishing about under the floor. I did not think much about it, as there is nearly always a little water in her when sailing hard, but when I looked in shortly after dark I started back in amazement, for the water was washing across the floor. I rushed in and tore up the mattress and soon after found it soaked on the under side and the water was slopping through the slats which form the bottom of the bunk. I threw the blankets and mattress on to the windward bunk and then tried the pump, but owing to the strong list to starboard the water ran over the bilge, where the pump, which is situated in the middle of the boat, could not get it out, and I was obliged to use one or two strokes to turn up the slats, and seizing the rail from the cockpit began bailing out. I soon reduced the water considerably, and as soon as possible began to search for the cause of this sudden catastrophe, which I found quicker than I expected.

As I shot a quick glance about the cabin I noticed that the ceiling boards on the side opposite the mast were wet. And on closer inspection found that every time the boat pitched and rolled a wave a flow of water ran down the side into the bottom of the boat. I got down on my hands and knees and peered about for an opening that would permit such a flow of water to enter, and I will admit that a sensation not unlike a chill passed over me as I looked and saw daylight through the side of the boat between the planks, and the water as it came out was the summit of a billow. Without stopping to look further I went out and informed Tom and told him to go and see what he could make of it. He disappeared into the cabin and in a few minutes reappeared and said that the screw bolt which served as a chain plate for the starboard shroud had pulled out of the gunwale, bringing all the strain on the plankhead and thus causing it to spring upward. The cabin was open nearly a quarter of a mile, and the distance of two feet along the top strake. This was indeed serious, and we wondered when it could have happened, as there was certainly no strain on that shroud now, being on the lee side, and we concluded it must have happened during the forenoon while beating along the Long Island shore. However, it mattered little when it occurred. The fact that the water was so close to the cockpit was alarming, and Tom immediately set about finding something to stop it with, but before he could do so he had to bail out again, as the water was again rising rapidly.

My attention was now fully occupied in steering the yacht, for she required dexterous handling to contend with the boiling waters that swept beneath her. Although the sky was thickly clouded, and the water as it came out was the summit of a billow, still it was apparent that the water was getting nearer to the shore as time progressed, and we hoped to be able to reach a harbor before dark, as it would be extremely risky for us to fool about the coast in search of shelter after nightfall. We did not know anything definite as to where we were, and we had no desire to knock about the Sound all night in such a sea, and a gale of wind was threatening, and the water was getting so close to the cockpit, and would require one of us to be constantly bailing unless we could manage to stop it up.

I waited anxiously for Tom to report what progress he was making in that direction. It was nearly a half-hour before he came out, and he said he stuffed the seam full of lampwick and cotton, but even this did not keep the water out entirely, although it stopped the flow to some extent. He looked about at the raging sea, and, turning to me, said, "I am making my headway. I told him that the shore looked nearly as close as the water was getting closer in. He gave a whistle as he noted the size of the waves that towered about us, for they were getting higher every minute. We would have liked to put in another reef, but could not do so without deserting the helm, and to leave her at the mercy of such billows was something we could not bring ourselves to do; so we started on bailing to luff and spill the wind from the sails at every screaming gust.

Tom returned to his bucket to bail out, and for the next hour he could be seen bobbing up and down, disappearing with the pall and emptying its contents over the rail. He did not seem to be much worried about the mishap, and smoked away at his pipe, occasionally uttering some cheerful remark. Suddenly he came out without having bailed his bucket and, taking the tiller, he said, "I am making my headway. I told him that the shore looked nearly as close as the water was getting closer in. He gave a whistle as he noted the size of the waves that towered about us, for they were getting higher every minute. We would have liked to put in another reef, but could not do so without deserting the helm, and to leave her at the mercy of such billows was something we could not bring ourselves to do; so we started on bailing to luff and spill the wind from the sails at every screaming gust.

Tom bailed harder than ever, and could just keep the water from rising any higher, but could not lower it any. With the addition of weight in water, which rolled about in the bottom, the yacht was more sluggish than ever, and rose heavily on the sea and wallowed deep in the trough. But now we observed that the waves were becoming smaller as we neared the land, and though not less vicious, it was five o'clock when we made out some islands which we have since learned were Faulkners, and a half-hour later we passed to windward of them and found the water less

troublesome, and now began to wake up from the state of anxiety and gloom into which we had fallen, and with a determination to get to some safe anchorage I eased her off and gave her the full force of the wind. When she got right down on her side and clawed along at a furious rate with the brine lapping against the cabin windows, I mechanically got as far to windward as I could and still reach the tiller. Tom stood in the bilge and threw out the aqua unconcernedly, with a look of suppressed exhilaration on his face, while he puffed spasmodically at his meerschaum, sending clouds of smoke out through the companionway to be whisked away in the gale.

We made direct for a point of land which appeared ahead; just before dusk we passed between it and a reef of rock going 7-knot speed; and I found ourselves in a sheltered bay, protected from the Sound by the reef. It was low tide, but we found about 8 ft. of water, and we let go the anchor, lowered the dripping sails and sat down and looked first at the Monatippe and then at each other.

"Well," said Tom.
"Well," said I.
"We're here."
"You bet!"
"She's a daisy!"
"Don't mention it."

In his admiration of our gallant little craft he patted her affectionately on the side. After a short rest, perceiving that darkness was rapidly coming on, we set to work and furling up put things to rights and pumped out. We were too tired to do anything about the opening in the side of the boat, and after helping ourselves freely to the provisions we stretched out and conversed until fatigue closed our eyes in slumber. I was aroused shortly after midnight by the violent pitching of the boat, and putting my head out I found the wind had shifted and was blowing a gale from the southwest. It was high water, and the sea was rolling straight in over the reefs, which were now almost entirely submerged. Fearing that we might drag I went forward and let out about four fathoms more cable. The anchor light was burning all right and I crawled back, steadying myself by leaning on the cabin as I came aft. Being in my night clothes I was thoroughly chilled by the time I got inside again, where Tom was still sound asleep.

I could not go to sleep and lay there bracing myself with feet and hands to prevent being rolled off the bunk, and all the time wondering how in thunder Tom managed to stay on his bed, when of a sudden the yacht gave an extra heavy lurch and he landed out on the floor in a heap. Before he realized where he was he sprang to his feet, and I thought the reef was a goner when his head brought up against one of the carlins. He says to-day that there is more crown to that cabin top ever since he hit it. He resumed his seat on the bunk, muttering a short prayer, and solemnly swore that this was the five thousandth time that this had happened since he had started on this blooming cruise, and he confidently expected to have his brains scattered about the cabin before he got home. I consoled him as best as I could, and producing the deck (no pun is intended) suggested a game of euchre. In this way we passed the time until about 4 o'clock, when it began to calm down; and soon we were enabled to return to our blankets and sleep.

When we turned out about 6 o'clock scarcely a breath of wind troubled us, and I showed no evidence of having been disturbed during the night. I set to work at repairing the damage we had sustained as well as possible, by driving the bolt down and putting it up under the gunwale. I then took the skiff alongside and caulked the seam outside, puttied it and daubed it over with black paint.

When the tide began to flood we got under way and with all sail set began our journey along down shore toward home. The breeze was very light and half the time they were scarcely felt. Nothing occurred during the day worth mentioning. It was one of those scorches when exertion is out of the question and we were contented to drift, and drift we did all day, and at dark we had just left Black Rock Light astern. The night was beautiful and shortly after dark a smart breeze set in from the east and we were able to make a little headway. The water was very light and half the time they were scarcely felt. Nothing occurred during the day worth mentioning. THE WHITE SHOSHONE.*

THIS is the title of a poem by our correspondent, Mr. Charles L. Paige, which gives, in remarkably smooth verse, an ancient tradition current among that tribe of the appearance among them of the first white man that they had seen. The story is divided into six chapters, which tell of the condition of things in the early days after the Indians had obtained horses, yet before they knew the whites or firearms. This chapter closes with the appearance of the white man. The second chapter tells of his reception by the tribe and of the Indians' speculations and futile efforts to learn whence the strange being had come. They learned nothing of this, yet the man, whom they named Malo, lived with them, proved himself skillful and helpful to all and was loved. At the close of the third and opening of the fourth chapter, a party of warriors come to the Shoshone camp, and report meeting with white men far to the south and east. They had had a battle with them, had lost some of their own people and had killed all the white men and one woman. A second woman they had taken alive. Malo, with a party of Snakes, starts out to rescue the woman, does so and brings her back to the Shoshone camp. He comes to love her, but she feels herself a captive, refuses to listen to him, wishes to return to her people, and at length, when it is learned that other white men are near, Malo gives her his great horse Koshah, and she rides away, and does not return. The horse returns, and soon after this Malo himself departs and the Shoshones see him no more. All this was many, many years ago. Yet they believe that now he often rides over the desolate sage plain, followed by a thousand braves, and that some day they will see him again. He will appear mounted as of old on his great black horse, and with a wave of his hand will call up from the grave the warriors who knew and loved him in the past.

The poem is full of deep, tender feeling. All through it runs
* The White Shoshone, by Charles L. Paige. Author's Edition. San Francisco: The Bancroft Company. 1890.

the sad plaint of regret over the change that the years have wrought in the life of the aborigines. The hopelessness of it all is pitiful.

"WITH FLY-ROD AND CAMERA."—This is a book which makes one wish that he could have been the hero of the story, but failing in having that wish gratified, the angler and lover of nature is well satisfied to have the narrative at second hand. What makes this a remarkable book is not only the excellence of the text and the beauty of the typography, but it is the wonderful illustrations which the book contains. When we state that there are 150 full-page plates, reproduced from photographs of fishing scenes, etc., in the land of the salmon, one can realize what a treat the book contains. The text of the volume is conversational in style, and while free from technical terms it conveys a vast fund of information, suitable even for beginners, relative to fly-fishing for salmon, sea trout, bass, etc. The author of the volume, E. A. Samuels, is president of the Massachusetts Fish and Game Association, and an ardent sportsman, as the pages of his book attest. In closing his delightful volume Mr. Samuels says: "Reader, my story is told. I have endeavored to describe to you the charm of an angler's life. I have succeeded poorly, I am certain, but I have shown how and where you may enjoy them. To appreciate them in the highest degree you must go to them. Do so; take fly-rod and camera, camp outfit, and canoe, and seek the beautiful, the graceful, the gamy denizens of the rivers and lakes; follow them in their wildest haunts, and, my word for it, you will never, never regret it." Ah! if we could only follow the advice.—*St. Louis Grocer.*

Engineer Faust has been making a few trips of late on the southern end of the division, and while flying down the road on his steam horse he noticed on every trip what appeared to be three monstrous crows at a point near the bayou. They were such gigantic ravens that he longed to get one for a curiosity, so he drove down in his buggy, loaded for crow.

Sure enough, there they were, and staking his horse he crept up and blazed away, downing one of them nicely. To his surprise, however, the two remaining, instead of flying away as he expected, came for him with a rush. He braced himself, and as they got near he dropped another one, but the third swooped down on the back of his neck. He drove it off in a moment or two and picked up his dead birds, which proved to be eagles. He brought them to town, and, after all, feels as highly elated as though they had been crows.—*Tulare (Cal.) Register.*

The fame of

Reels, Lines, etc., is world wide. Ask all Anglers.

Are the most skillfully made. Best material, more perfect in action, of any Split Bamboo Rods in the World.

Are the smoothest running, strongest in power, noted for lightness, beautiful in finish, full steel pivots, patented side plates, highest quality, unequalled.

Are made of best silk, enameled, water-proof, flexible and tapered. Warranted not to crack, nor to become stiff. The Fly-Casting Lines par excellence.

Send for Special Price List of "Kosmic" Angling Implements, ready March 1.

LYMAN ACCELERATING SHOTGUN CARTRIDGE

The "EXPERT" is charged with a perforated cake of especially prepared powder, which burns progressively—the only correct method of availing of the power of powder in guns. Shot started easily, with rapidly increasing velocity and least recoil, and without stringing. Perfect combustion, little smoke, harmless dry ash residue. Cake burns in shell; no flying, heated grains to cut barrel of gun. Cakes made by machinery; greatest uniformity of pattern and penetration. No nitrates, decomposing, or changeable chemicals! Detonating impossible! Shotted cartridges, or Blanks containing powder cake only, for sale by
LYMAN CARTRIDGE CO., 9 Chambers Street, N. Y.
J. P. DANNEFELSER, Selling Agent.

GUNNERS.

Gunners, read this and practice till you can hit anything that hops, runs or flies. One pound of No. 1 shot gives you 1200 rounds with your own gun. Practice limited only by shooter's enthusiasm. Our pneumatic auxiliary gun barrels can be inserted in any ordinary breech-loading shotgun in a moment, converting your gun into an air gun to practice with. By pulling trigger of your gun precisely as if using shells, a single pellet of No. 1 shot is discharged that will break any clay pigeon or kill small game at short range. No fire, smoke or noise, and no trouble to load; can be used anywhere. Will teach you to hit with centre of load and kill neatly instead of crippling. Such practice is invaluable to any club shooter or sportsman. When ordering give gauge and length of your gun barrels. Sold by dealers or samples sent on receipt of price, \$3.50; 10, 12 and 14 gauge only.

ANSWERS TO CORRESPONDENTS.

WYOMING SHOULD ACT.

ONE of the few good hunting regions for big game left in this country is in the State of Wyoming. East and south of the Yellowstone Park there is a considerable range for big game, a country too rough and high for settlement, into which comes a considerable overflow of elk and deer from the natural increase of the stock protected in the national reservation.

In past years this country was little known and by no means easy of access, but of late it has been often visited. It is not so very long ago that we used to hear of Jackson's Hole as that far distant point, where the game was always plenty and the fish always bit. And in truth, when we first visited it, there was enough game and fish there to satisfy the most exacting sportsman. Of late years, however, the settlements have crept up Snake River, the Indians from Washaki and Ft. Hall come there and hunt; there is even a hotel on Jackson's Lake.

The game and the fish are being destroyed there just as they have been in so many other places. During the winter of 1889-90 a great deal of game was killed near this point by men who wintered north of Jackson's Lake. In one place there were seen last summer the skeletons of thirteen elk, which had been shot down, and not very far from this were a number of moose skins lying on the ground. Near all the places where elk had been killed were evidences that trapping had been carried on. Not satisfied with destroying the game, the greedy settlers are ruining the fishing in Snake River. Parties come in from the west to that stream just north of Jackson's Lake, and in their wagons bring nets, skiffs and dynamite. With these agents they make the destruction complete. Some of these poachers are well known, but we do not know that any evidence has been collected against them.

It will be remembered that the country on the east side of the Park is pretty well protected, from south of the Gray Bull River north to the Montana line, through the efforts of the local association which was organized largely through the efforts of Col. Pickett, Mr. A. Rogers

and others; but this is a private association, paying its own men and receiving no help from the State. At the last session of the Wyoming Legislature, Col. Pickett, of that body, procured the passage of a good game law which is still in force, but this law exists only on the statute books. The result of the efforts made by Col. Pickett and his association has been a very considerable increase in the game throughout the Territory covered by his protective society. The butchers have learned that in that country they cannot kill, and the game is not unduly disturbed. In view of what has been accomplished here, and the fact that Wyoming has a good game law, it certainly seems that it would be worth while for the State to spend a little money to enforce that law and protect its game, which is certainly worth more to it on the hoof than it is dead. A small force of efficient game constables, who should patrol the country south and east of the Park, reporting at certain intervals to some chief, could in a short time, we believe, put an end to the game and fish butchery, which is now a disgrace to the newest of our States.

We venture to predict that if a movement in this direction were to be made, Col. Pickett would be glad to give the State the benefit of his great experience, and in this way to help on this much needed work.

A GOOD APPOINTMENT.

ALMOST from the time that the project for a National Zoological Park at Washington took shape, it has been felt that the Yellowstone Park might furnish many specimens of our native mammals for exhibition there. Such specimens could be captured for this good purpose without in any way interfering with the game supply in the Park, and the wild animals there are so abundant and so tame, that it is almost possible to make a selection of the finest specimens for transportation to their new home in the East.

Although game is plenty and tame in the National Park, the animals have not reached such a point of gentleness that it is possible to go out and put a rope around the neck of a moose, or a buffalo and lead him into the barn. These animals must still be trapped, and to trap them successfully calls for the services of a man familiar with their habits. While it is no doubt true that there are many men in the West who are competent to undertake this work, we are glad to learn that the choice of the authorities has fallen on the very one who, in our opinion, is best qualified to perform it. This man is our correspondent, Mr. Elwood Hofer.

Mr. Hofer, who is known to many readers of the FOREST AND STREAM by his writings, is an old mountain man, a sportsman, an ardent lover of nature, and a close observer of all her works. He is a man of great nerve and courage, as was shown by the difficult and dangerous snowshoe trip, which he made in the dead of winter through the National Park as special commissioner for the FOREST AND STREAM. The graphic report of that trip, which was published in our columns in 1887, excited great public interest, and was widely copied.

Mr. Hofer has resided in or near the Yellowstone Park for a good many years, and takes the deepest interest in the protection of that reservation. His appointment as Smithsonian trapper will be a good thing, not only for the Zoological Park at Washington, but also for the National Park; for in the discharge of his duties he will of necessity be much abroad, and will have an opportunity, while traveling about the Park, to look out for forest fires and for poachers, who may slip into the Park to kill game. His appointment is therefore, in a certain degree, like the appointment of another civilian scout for the Park.

It is satisfactory to know that among those persons who have been most deeply interested in the National Park, there is but one opinion as to Mr. Hofer's fitness for his new position, and that all these persons have cordially united in recommending him for the appointment he has received.

New York fishermen who have taken Hudson River salmon in their nets have not always complied with the law, which says that the fish must be freed, but have taken them over to Jersey City, where there being no law, a ready sale was found. Now New Jersey has passed a salmon law, drafted by Commissioner Blackford, and uniform with the New York law. A capital instance of co-operative legislation.

SNAP SHOTS.

THERE was a large attendance at the Assembly hearing at Albany last Thursday to consider the codification bill. Fish Commissioner Burden objected to any reduction of the number of Fish Commissioners, and asked that the present members should retire by lot, one each year, beginning with Oct. 1 of this year. He showed that the work could be better accomplished if the office were in New York. He recommended that 12 in. should be the lawful length for trout, and 9 in. for black bass. Mr. Horace White, of Syracuse, advocated the prohibition of spring duck shooting, and Mr. F. E. Hamilton, of Oswego, sustained him; and Mr. Reeves, of Smithport, contended that Long Island gunners wanted spring shooting. Dr. S. B. Ward asked that professional men going to the Adirondacks might have the privilege of hounding deer after Sept. 5. Mr. Stevens, of the committee, said that hounding in hot weather was cruel.

There is decided opposition to certain provisions of the New York codification bill relating to the Fish Commission. This opposition is so strong as seriously to endanger the entire measure. As Gen. Sherman points out in a communication published to-day the laws relating to the Commission need revision; and a consistent, definite law is urgently desired. But is it not a mistake to hamper the fish and game protection bill by this Fish Commission rider? We cannot at all afford to lose the entire measure by reason of antagonism to the Fish Commission sections. It would be wiser to separate the two subjects than to sacrifice the entire bill.

Historic Castle Garden, the emigrant reception depot, having been abandoned by the Emigration Commissioners, has come into the control of the Park Commissioners, and remains to be converted to some public use. Fish Commissioner Blackford proposes to convert the building into a great aquarium to be maintained by the city. Its position on the Battery is ideal for the reception and maintenance of salt-water specimens; and the building can readily be adapted to the purposes of an aquarium. The scheme is worthy of careful consideration, a public aquarium such as might here be established, would furnish an immense amount of amusement and instruction.

The old story of the apprentices who stipulated that they should not be compelled to eat salmon every day in the week has its counterpart in an American tradition that in the old times the slaves on a Maryland plantation revolted because they were fed so exclusively on diamond-back terrapin. With these delicacies now selling at \$60 per dozen, that story sounds very much like a yarn.

A brief summary of the report of the committee of investigation as to the conduct of the National Fish Commission was given last week, we publish a more complete record to-day. It is a complete exoneration of Col. McDonald.

The Massachusetts game importation enterprise is winning fame for the Association in foreign parts, its work having been favorably noticed by our contemporary, *Le Chenil*, and other journals.

The bill to repeal the charter of the West Jersey Game Protective Society will probably come up in the Trenton Legislature next Monday evening.

REVOLVER CHAMPIONSHIP.—The growing popularity of revolver shooting has led to the making of scores far beyond what the weapon was thought capable of making. Minor improvements in loading, etc., have brought the arm up to a point of precision which should satisfy the most critical user. Thus far the scores made have been without any very precise conditions, and comparisons have been difficult to make. In order to bring about a definite fixed championship record to determine the amateur having the highest degree of credit as a shot, FOREST AND STREAM has undertaken the conduct of a formal championship match. This is at the special request of Mr. Walter Winans, whose position at the head of the line of English revolver shooters is well known. He will contribute as an emblem of the championship one of his own artistic pieces of sculpture done in bronze, and the conditions, of which more will be said in our next issue, will be made as open as possible and an opportunity made for all to shoot in what promises to be a match of more than ordinary importance.

The Sportsman Tourist.

IN THE REGION ROUND NICATOWIS.

XVI.—DOWN NICATOWIS BRANCH.

WE got off early the next morning while as yet the white frost made both ground and air chilly. As we approached Darling's, seeing no smoke nor any sign of life, we thought to pass unseen; but when we were still quite a distance away a man came to the doorway, and we caught the shine of a field glass leveled on us. We drew up alongside of the landing and the man came down for a chat. It was Charley Morey, of whose exploits I had heard so much—of his fleetness, strength, agility, and of his adventures with the sheriff, which have precisely the flavor of the tales of the merry greenwood, and like them are not unpopular as a fireside entertainment. Why should such stories delight us if they happened six hundred years or more ago in a foreign land, and yet their counterparts of to-day or yesterday happening close at home be passed by unnoticed? Here they are not so neglected; and it is a fact worthy of comment, one without which the present attitude of the people of this State toward the game laws cannot be fully explained, that many, if not most, of us were brought up on stories native to the soil, with our own Achilles the dauntless and Odysseus the crafty, and our own Wat Tylers and Robin Hoods, who defied the sheriffs and loved the common people. Each little place has its cycle, with its own list of heroes grouped about those of wider fame. What robustness and dignity, and, in time, what good literary form some of these acquire; the unimportant fades, the characteristic grows more clear, the figures rise into form and color and we have the beginning of an epic even in the nineteenth century. But to strangers these things do not appear so plainly, and they do not see the hold they have upon our imaginations; for we do not talk much of what most nearly affects us. My childish Odysseus, preferred before the great original, was of tales of hunting on the Tobique with Leonard and Philbrook and Peol Antoine Tomah; and to this day my Robin Hood ballads read better with the names of living people. But it is a mistake to speak of Jack Darling as the modern Robin Hood; the situation may warrant a comparison, but there is no point of personal resemblance; Charles Morey, however, would make up admirably as Will Scarlet.

Father walked from the foot of the lake to the head of Nicatowis Carry, while Jot and I went down by stream. We found plenty of water. There were two or three sets of little rips, of which only the one just above the carry deserves a name. The rest of the stream is good plain canoeing. Nicatowis Falls, however, is called "very bad water." Although Morey told us that he usually ran it and others sometimes do the same, watermen equally skilled, but less rashly adventurous, prefer to lug both their loads and their canoes two miles across the carry. Few who go to Nicatowis ever see the falls, for the road does not follow the river, but many doubtless have heard the story of how, one day in the spring when a heavy freshet was pouring over the falls and the drive had just got down to them, Isaiah Morey, father of Charles, stood up before all the men and gave them "the dare, saying he would run that place if he could find a man for bowman. No one could run it, that they all knew; but any one around Nicatowis can tell you how Lon Spearer stepped out with, "I'm your man, Isaiah," and held him to it; how Lon followed the precept to obey orders if it breaks owners and held to his rope; how Isaiah had nothing to say afterward except (with a sniff), "Didn't think 'twas so bad." When all the rest of the world has forgotten it the owner of that batteau will still remember.

It was our own Big Sebattis Mitchell who ran Nesowadunchunk Falls on the West Branch one spring. Everybody knows what kind of water that is. Joe Aitteon—Thoreau's Joe—was at the end of the carry with the other boats' crews and saw him and his bowman make the leap. They had just lugged their boats across, but this was too much for them. They shouldered the boats again, staggered back under the load, put in and ran. Why tell of the boats crushed on the rocks, of the number drowned? The same thing happens too often. Joe Aitteon, at least, lived to be drowned at another place, in another way.

Only one more. There are those four Penobscot Indians, well known to us, who in 1876 ran Canaan Falls on the Connecticut. The brother of one of them told the tale. It was un navigable water, and they were in the eddy below the pier of the bridge which crosses the river just above the falls, holding on by a ringbolt waiting, when word went abroad that the Penobscot Indians were going to run the falls. People began to gather on the bridge. The Indians below looked up at the line of faces above them and below at the black water, swelling in ridges as it gathered its strength for its white plunge among the rocks. Sappiel Orson was one, Sebati Clossian was one, little Sebati Solomon was one—better watermen never were; they consulted; no man ever had run the place, man could not do it, but the honor of the tribe demanded it; it was a mistaken rumor that had brought the spectators, but—the pity of it and the tragedy!—to disappoint them meant dishonor to the tribe. "Old man, younk man, boy, gal, all sort, was there. Oldtown Injun she got great name ribber drivin'. We mus' go. We know it was die, but we musn' go back on our name," said the brother, speaking out his approbation of the act and his willingness to do the same. They went. One died; three were saved by a miracle. They were drunk when they did it, they were unlettered Indians at best; but call up the knightliest knight of all antiquity, Bayard or Lancelot, and ask if he ever did a deed more noble, more devoted, more honorable to Honor, and when he answers Nay, I will call up four more like these, and four more, and four more, until he cries he never saw any army all so knightly. That is the Penobscot waterman. That is the kind of story on which Penobscot children are brought up.

At the upper end of Nicatowis carry, which is part of the woods road from Gilman's to Nicatowis, there is a hill, and on the hill there is a camp, and at the camp we found a man who was waiting for Darling to come in from Lowell. Porter was his name, and for a reasonable sum we got him to answer to it and help us. But first we hunted around in the beeches and drew forth our hidden supplies, some of which were the worse for water, especially the potatoes and the anglerworms. (Good gentlemen, we do fish with a worm when the fishes prefer

worms). Frankly, the worms were all dead, having been drowned by the frequent rains.

This carry is the best two-mile carry I ever saw in the State, not excepting Northeast Carry. I claim to know because I lugged on it myself. Usually this is not permitted; and, being entirely under masculine control, and very submissive, I can seldom steal a chance to carry anything but my handbag. But in the present instance, as there was a little more than two loads for each of the three men, rather than have the expedition delayed while one man traveled two miles and back for a mere handful of small articles, I was allowed to be useful. True, I got Jack Mann's load—two axes, a fish-pole, a frying-pan, a bundle of ropes, my heavy jacket and the two grape baskets—not much in pounds but a fine assortment for inconvenience, for the jacket had a satin lining and was as hard to hold as an otter, the frying-pan was not desirable as a near neighbor, and the axes and fishing pole utterly refused to fellowship; if one pointed east and west, the other two pointed north and south, and to the zenith and nadir. But we all held together until we were across.

It is worth narrating that I inquired of our porter about that noise which we heard at Gassobeeis. "Oh, you always hear that about Nicatowis," I was piqued at the reply; it was just such an answer as woodsmen often make to greenhorns to put them off, and—is it going beyond the bounds of modesty?—there didn't seem to be any call for such an answer in the present instance. It was not so easy to believe in the supernatural when invited by another person; and so I told Father. "It's the blasting on the foundations of the great pulp mills at Montague (Howland)," he said with an illumination, "thirty miles away, due west; that's why we heard it at noon and night." But in justice to our porter, it should be stated that I am informed from a most trustworthy source that before a storm there is frequently heard at Nicatowis a rumbling like thunder, proceeding from the south, never explained, but conjectured to be blasting in the mines at Bluehill.

In the afternoon we ran down Nicatowis Branch to Pistol Green. For several miles the stream runs through meadows and rush grounds, with a strong current but no quick water. In places the rushes are so thick that it is hard to free a passage. Further down the right bank is low and wooded with swamp maple, while the left bank, toward which the stream sweeps and from which it retreats again with sinuous curves, is a high horseback, wooded with birch, maple, poplar and black growth. It is a part of that great Springfield-Deblois horseback which extends across the country for more than a hundred miles, perhaps the finest and most interesting horseback we have in the State.

Pistol Green, our camping ground for the night, is just above the mouth of Pistol Stream and a mile above the fork of the Passadumkeag, the most famous camp ground in the region from time immemorial.

XVII.—UP MAIN STREAM.

If it were not for telling those who have been there what they know already, the trip up Main Stream might just as well be left a blank; we saw nothing except people, did nothing except paddle against a strong current and there is nothing to tell except guide-book facts.

However, it is worth mentioning that when we reached the trout-hole which Al McLain spoiled by rolling in a rock, Father heard a partridge drumming on the ridge back from the stream and started in after him. When he returned he brought back the partridge, more pleased than if he had killed a deer. To locate a "drummer" by the sound, creep up to him on the log and kill him is the most difficult piece of hunting ever done in Maine. It requires the very best efforts of a born hunter; for the sound is very deceptive, it ceases the moment the pursuer gets in sight, they are many times shyer than a deer and for some cause unexplained shot seems to have less effect on them than at other times. Is it sportsmanlike to kill them so? Yes; and those who say it is not cannot perform the feat.

The Main Stream is principally meadow and crooks. A few rounded bushes, springing up among the grass, do not relieve the monotony of the banks; and patches of pickerel-weed, moose-ear, and lily pads do not improve the paddling on the turns, which are so frequent that a long canoe like ours needs a hinge in her, as the hunters say, to work her round the curves. On the left, going up, Wyman Brook comes in. Cold Springs, on the right, is the first camp ground. We drew up here a moment to look at the signs, and Father announced that a large party had camped here not more than two nights before, from the beds that they were fishing instead of hunting; various signs that they had at least two women with them, from new rubber tracks; that a little way up stream we should see a bright blue canoe, from paint on a rock. At Maple Growth, on the end of the carry to Spring Lake, we passed the blue canoe; at Lower Taylor Brook we passed two men, evidently of the same party, fishing; a little above we saw two women and seven men cranberrying—all as the signs had foretold.

Just above the bog where these last were, the stream grows narrower, with alders and wild raisins and, notably, the tall wild raisin (*Viburnum lentago*) which here reaches the diameter of 6 in. The high bush cranberry (*Viburnum opulus*) is abundant also, though this was not a fruitful year for them. It is one of our best native fruits, the only sauce for venison when one has learned how to prepare it; but those who do not know how may be left to experiment for themselves, thereby increasing their enjoyment when they know how.

At this part of the stream, which is more tedious than any that precedes, is an artificial cut called the Lower Dugout; then on the right comes Upper Taylor Brook, where the trout are always dark-bellied, while those in the stream just outside have pink bellies; on the left above, Brown Brook; then the Two Brothers, good-sized rocks in the middle of the stream, more crooks, taller trees, the Oxbow, where a carry of a few rods cuts off half a mile or less of stream, Dobsy Carry on the right, the Upper Dugout, and, above, the ponds in which the Passadumkeag takes its rise, and the Indian Carry to Upper Dobsy.

The way was long but not tedious; every turn suggested some incident which might or did happen there, and the succession of turns and stories rivalled in number and continuity the similar series of which the fair Scherazade made herself so agreeable. From his hunting trip here with Lon Spearer twelve years before, Jot detailed all the scenes in Lon's adventures with the fire,

and Father told with effect the story of the man at Cold Springs who mistook sandpeeps for game, while Mr. Fairbank's public-spirited service in cutting off the big end of a green ash tree which had been felled across the stream while everybody else went around the top, was not forgotten. And like Dinarzade in the story, we said of each one, "I find this the most entertaining of all; pray give us another."

Just below the carry to Upper Dobsy we shot a duck and heard a partridge drumming. To hear partridges drumming in the fall of the year bodes foul weather; but Father's treatment of all such bad signs reminds us of Tom Dana and the robin. This time, however, the partridge got away wing-broken, and probably hid in some of the rotten cedar stumps which abounded there. We trailed him five or six rods and lost the sign where the cedars were thickest.

As this was only a short distance from the carry we decided to camp here for the night. Such a bed and such a fire! Sancho Panza blesses the man who invented sleep; but no man should stand higher in the calendar of Maine saints than he who first taught the virtues and the uses of good dry poplar.

XVIII.—THE CARRY TO UPPER DOBSY.

The next morning it rained. On Machias it had been necessary to wait for the weather; but here, as we were not intending to lug on the carry but only wished to see it and the lake, a little rain could not hinder us. So, putting off the execution of our threat against rubber coats and mackintoshes until we should get where we did not need them, we called forth to cross the carry. There was a slapping of wet rubber garments, the ghostly, empty sound of rubber boots walking and the soft squish of the same withdrawn from the suck of mud and moss. Three miles and twenty rods that carry measures, and all the way over and back there was the sound of the flapping and the walking, and most of the way it rained right merry marching music.

The carry to Upper Dobsy is a good one. There is a little low land near the Passadumkeag, which, on the present occasion, was wet; but most of the way lies across a rocky ridge, rising, heavily wooded and with much good hemlock still uncut, gradually from the stream. The road is easy to travel, but would not be easy for a stranger to follow because it has been so cross-hauled and blocked by trees felled into it. Apparently it has been little used of late. If there has been much travel from Main Stream to St. Croix, it has probably gone by way of the old Indian Carry from Weir Pond to Upper Dobsy, since that is only a third the length of this.

As we went up the Passadumkeag slope, Father told us of a smuggler, who, years ago, had died on this carry when on the way across from the Provinces, and who was buried here. The spot had been marked by a fence of logs, rudely but substantially put up, as men mark Mortality, seeking to defy it. But Time had mossed the logs and gradually had mouldered them to the general level. When last he saw the place there had been nothing to mark it—a little hollow sunken like a cradle and a round-bellied beech tree once blazed with some rude mark or symbol at the head. After the years that had passed since then, he was not sure that he could recognize the place. But he knew it by intuition, though now the lusty beech showed scarcely a mark on its round trunk, and the little hollow, which is yearly growing less, will soon reach the level of the surrounding earth. The smuggler's grave—we stood by it a moment in the mist, without gloom or disheartenment. Even there Life had conquered Death; in place of the signs which marked Mortality was the living, growing tokens of the Immortality which succeeds.

There are many such graves in the woods, "under the sod and the dew, waiting the Judgment Day." Murder and accident and disease each have their graves, equally unmarked and equally indistinguishable. They say that there are four on the old Indian Carry just above; and last year at the head of Pamedumcook the pseudo-guide, whom we dubbed the Professor of Woodcraft, told us a long story about a number between Pollywog Pond and Rainbow Lake; which may not be true, for the man is the champion liar of the State since Uncle Bill Barrett died. If one were to search out all these tales of the woods there would be a strange collection of them, from the story of the retributive justice which faced Old Dirty Donald at his ending to that of Nolan's murder; from the grewsome tale of Larry Connor's skull to the simple incident at which smiles and tears are blended, of how Joe Aitteon's boots hung for years in rain and shine at Shad Pond, where they found him, viewed with respect by all the river-drivers, a strange but touching memorial of their affection for the governor.*

On the height of the ridge between the Passadumkeag and Dobsy, and about three-fourths of the way across (for the short, steep slope is toward Dobsy), is the old Dobsy Farm. For many years cattle have been pastured herein in summer and the old barn kept in repair; but when last seen the little shanty on the place was yielding to the assaults of time and the weather. Therefore we were somewhat surprised to see that the little house had been patched up for habitation, and that an effort was being made to reclaim the farm from life-everlasting to live-for-ever. They say that from this point, which is the height of land between Penobscot and St. Croix waters, there is a grand view of Katahdin; but it was lost on us. A thick mist covering everything, and the pouring rain, in which we made our appearance, must have made our little pleasure trip appear a highly quixotic proceeding to the three men in the barn, who suddenly were aware of a rubber-coated procession, armed with gun and hatchet, emerging from the mist close upon them.

We went down to the lake, but it was scarcely more visible than Katahdin. The water was very clear, and it must be a pretty lake, for there are hills about. A feature of the carry-end is a large scarlet-fruited thorn of unusual beauty, laden with fruit, the nearest to being edible of any thorn-plum I ever saw. This is damning with faint praise; but, Father to the contrary, I am persuaded that the excellencies of the thorn-plum, as Thoreau

* The antiquarian should be cautioned against mistaking for these relics a pair which I once left hanging upon a tree near the outlet of the same pond—much traveled shoes that had seen the whole of northern Maine, a good deal of the country between Glens Falls on the Hudson and the pinnacle of St. Armand, that had climbed Katahdin, and woe's the day they ever were left behind, that should have been made to travel from Shad Pond to Matawankeag that hot August weather instead of the new pair that took their place.—F. P. H.

admitted of its relative the wild apple, are not inherent, but depend on the forgiving disposition of the eater.

We called at the little farmhouse on the way back, and, finding that the eldest of the men had known Rod Parhs, with whom in his youth Father had hunted and fraternized, we spent some time there. To have known Rod Parhs is a passport to favor. A famous rifle shot and deer hunter, as well as a widely-known lumberman, popular even from the stories which such a reputation multiplies, Parhs had also that magnetic power which attracts and repels; he had enemies, but his friends he drew close to him, and those who knew him, such was his selective power, are no strangers to each other.

On the way back we noticed where a bear had been trapped in the summer—late in June or early in July we judged from the leaves on the dead alders—and from the fur around it was evident that he had spoiled while in the trap. He had been caught in the alders by the clog of the trap becoming entangled, and in his efforts to get free he had chewed and torn the bushes until they were beaten into brooms. There is, or was, at Pistol Green a hemlock tree which had the top, where it was fully six inches in diameter, gnawed entirely off by a bear that had climbed it with his trap and become caught up among the branches.

After dinner there was some delay on account of the weather and a discussion as to whether we should lie about the camp for the afternoon or, taking our chances of rain or shine, go on down stream. Our temper is of the kind which grows more valiant when the odds are against us; and we started out. It must be twelve miles to Fork and we were three hours making, for though the current was with us, the turns of the stream were so frequent that every few moments we would lose our headway. As we got to the Fork and the early twilight began to draw on we discussed the chances that some one else would have taken our camping place at the Green, as well as the good pile of dry poplar which we had left against our return; and our uneasiness increased the nearer we got, until—as we poled up the swift Nicatowis Branch, now on one side of the stream, now on the other, wherever the bottom was best and the water shoalest, searing our old heron from his perch among the maples—we became quite apprehensive. It was a relief to find our fears groundless. Wood and camping place were both undisturbed. Of course our tent poles and pins were there and our wood ready; but though we camped from 40 to 50 yds. from the stream, in seven minutes by the watch we had our tent pitched and our fire burning.

FANNIE PEARSON HARDY.

MEXICO TWO YEARS AFTERWARD.

MORE than two years ago I tried to impart to the "goodie company" around the camp-fire yclept FOREST AND STREAM, some of the novelty of a "First Hunt in Mexico." Justice to truth requires that I should refer to one or two things set forth in that narrative. Perhaps no reader of this remembers them; I hope no one does. It isn't nice to take things back. I recall, however, two, if not more, references by your correspondents to the mysterious "animals" that were supposed to inhabit Bocas Lake. One ridiculed the story, as it deserved, and the other expressed some curiosity about it.

Since that first trip I have been to Bocas many times. I can go in the morning and come back the same day. A week or two ago I was there with a pleasant little party. The old rock quarry is now abandoned, no Americans are to be found there, and the straw-thatched adobe, in which I was so well lodged and made so welcome on my first trip is going to ruins. In my Acme I have rowed again and again over the little blue lake, seen it full and wide and again almost dry. The last time I was there the choppy waves were high enough to dash over the sides of the boat, wetting our guns and rather dismaying the ladies of the party. I have killed many ducks, and passed many pleasant hours about the little lake, but never seen the "animals" since that first visit. I long ago settled down to the belief that they were only schools of small fish. There is a little insipid fellow about 6 in. long that is fairly abundant there. I don't know his name—not even his surname, I don't study fishes any more. I can scarcely bear to read the yarns in the "Sea and River" department. One can't try to go a-fishing in this country.

One other romance must go. *Sic transit gloria*. Maximilian never owned the Bocas hacienda nor had anything to do with the little church whose white towers shine in double splendor, reflected in the clear waters below and outlined against the rusty gray of the barren hills. Its present owners have had possession since about the time of the French invasion, and Don Juan told me that if Maximilian had ever had anything to do with it he certainly would have heard of it. Besides, I was told by Don Luis Espinosa, my host of Angostura, that his ancestors, who were of the Spanish nobility, long included Bocas among their possessions, which comprised a strip of land of some twenty miles in width, reaching from west of Bocas straight through eastward to the Gulf of Mexico, a distance of some four hundred miles. Think of the scion of some old Dutch family pointing out as the domain of his fathers a belt of land, wide as an ordinary county, from New York city westward to the middle of Ohio. But revolutions, a favorite diversion a few years ago in Mexico, brigandage, and the uncertainty of markets and the labor supply made such large holdings unprofitable. Much of this territory is still in the family, which is a large one, but it is now divided up. Some of the places still seem very large, but they are in the hands of large-hearted gentlemen, who love their country and their countrymen, and who meet even the stray "gringo" with a hospitality so generous that he unconsciously relaxes the severity of his views on the subject of large land-holdings.

The Maximilian story is still current among Americans here. Only last night in the post office I heard one recounting it to some new arrivals. He is a hunter and ought to know better. But for "miscellaneous misinformation," to use a felicitous phrase of Mr. Roosevelt, commend me to the American in Mexico. After he has been here a few months he knows just enough Spanish to misunderstand everything he hears. His desire to tell wonderful stories is in exact proportion to his lack of information. What he tells should usually be taken with a grain of salt—a whole sackful, in fact.

AZTECO.

Natural History.

THE WOODCOCK'S NOISE.

HALIFAX, N. S., Jan. 28.—*Editor Forest and Stream:* Kindly correct my letter in yours of Jan. 22 to read "hen" not woodcock hen, and "Robt. Morrow" not Narrow. I note that a writer in FOREST AND STREAM states that some cock do not whistle in August, in fact, are completely noiseless, while another writer states he has seen the bird flying about, opening his bill, and making sounds like *c-r-e-e-k-e*, *c-r-e-e-k-e*. Both these gentlemen confirm my views, as all sounds are vocal and are made at the will of the bird.

A woodcock flushed, when he first comes here, in March, before the snow is off the ground, and in April, May, June, July and August will make the same whistle just as loud and just as strong and long as when flushed in October and November, if he wants to, and I have heard and seen them at the different times stated. But he does not always make the whistle, for sometimes, when put up, he will go off without a sound. You catch a glimpse, mark him down, put him up again, when he will whistle loud and strong as possible. Now if this is caused by the wings why don't we hear it every time the bird is flushed, and how could the wings cause that long, tremulous, unbroken sound. The very thrill in the whistle shows that it must come from the throat and could not be controlled or caused by the wings.

Previous to '88 our cock shooting began on Aug. 1. In one cover, on first day of each year, I shot nine birds, each time in company with Dr. John F. Black, of this city, and in almost every case the cock when flushed would whistle. I have put the birds up in May, June and July, when fishing and when hunting for their nests, and the birds would whistle then just the same as in any other month.

I have seen a cock put out of the cover in August, by my spaniels, come right close by me, and alight in full view, in the open, without uttering one sound, and the bird instead of running a short distance, as is usual with them after alighting, has simply squatted down close to the earth, and kept both his wings extended to their full spread, not out straight, nor up in the air, but curved and nestling on the ground. In this position I watched him until dogs came up, and not until, as it seemed to me, they pretty nearly had him in their mouth did the bird jump, using his wings as a kind of lever, to shove him up as it were, with a bound, from the ground—as a dusky duck jumps from the water at flash of one's gun—and off he would go, whistling like fun.

Another writer in your columns says, "The cock let themselves down through the air, with their wings set edgewise, making a loud rushing noise."

What is the reason the whistle is not heard about that time? As this occurs at dusk and in the evening I have not been able to note the exact position of their wings, nor how they were set, but I state most positively that they go round and round in circles, making a vocal sound, like *two, two, two*, as described in my last letter, and exactly like the twitter made by a lot of chimney swallows, when they are chasing one another about in circles overhead, the sound goes faster and faster, until at last it is merged or lost in their long tremulous whistle, and when they alight they go *speak, speak*. This they invariably do, and it proves conclusively that the sounds are vocal.

The night hawks, when flying around in the evenings, go *speak, s-p-e-a-k*, but go near their young or nesting places, and how soon they snap their bills and *cluck, cluck, cluck*, in your face, or light on the ground, drop their tail and wings, spread them out, and drag themselves along, uttering a twittering whistle, all of which is vocal. Now see them again, way up in the blue sky, almost out of sight, hear them come swooping down, 100, 500 and 1,000 yards distant, making a tremendous whirl with their wings, but you don't catch the least sign or sound of a whistle.

The snipe when flushed discloses his whereabouts by his vocal *sneep*. His wings go with as much rapidity as the woodcock's, but you hear no whistle, and the whistle made by him of an evening in spring when flying around overhead is vocal, like his *sneep*, and the woodcock's whistle.

Not the slightest doubt but that the cock whistle is vocal. If Mr. Brewster ever gets this way in spring time, let him come to me and I will take him to grounds of the cock, my dogs will put them up, and I will guarantee the whistle is there, just the same, just as strong as in October. It is a curious bird, king of sport, makes funny sounds, but all are vocal.

H. AUSTEN.

HALIFAX, N. S.

Editor Forest and Stream:

In a recent issue of your paper I find the following statement, made by a correspondent: "No one believes the *sneep* of the snipe is made by the wings, nor are the booming notes they utter when circling around overhead of a spring evening."

Now, I am inclined to agree with Mr. Austen as to the *sneep* being vocal, but of the "booming" or "bleating" I had other ideas, and as evidence would submit the following extract from Darwin's "Descent of Man." Speaking of the bleating of the European snipe he says: "No one was able to explain the cause until M. Meves observed that on each side of the tail the outer feathers are peculiarly formed, having a stiff, sabre-shaped shaft with the oblique barbs of unusual length, the outer webs being strongly bound together. He found that by blowing on these feathers, or by fastening them to a long, thin stick and waving them rapidly through the air he could exactly reproduce the drumming noise made by the living bird."

All interested in the use of attenuated feathers should read the chapter of which the above is an extract; but for the present purpose, and remembering that the bleating of the snipe is only heard when the bird is rushing downward with quivering wings and spread tail, I think the evidence pretty good that this sound is not vocal.

The nearest relative our woodcock has is the woodcock of Europe, and the principal difference between the birds is in the structure of the point of the wing, the European woodcock not having the first three primaries attenuate, but only the first slightly narrowed. Now, as it is probable the habits of such closely allied species would be somewhat similar it would be interesting to

know if this bird, that never has those peculiar, all important feathers, moulting or not moulting, ever twitters as he jumps from cover. I have had some acquaintance with the European cock, but have no notes on this particular point, and will not trust my memory. But some of your readers who have had more experience with the bird might give us the needed information.

WM. E. PRAEGER.

KEOKUK, IOWA.

WAYS OF THE RUFFED GROUSE.

WHEN a brood of grouse separate, which they do about Sept. 1, the birds select some place apart, usually some pleasant and sunny nook near the edge of a woods and in the close vicinity of springs or running water, as they drink frequently, being naturally very thirsty birds.

They rarely leave this place, except for the purpose of betaking themselves to some feeding ground; usually not very far distant, morning and evenings, or when driven away by an intruder. In this latter case they take several flights to lead their pursuer away, even crossing fields and entering another woods, and then after an interval return by one long flight. Sometimes, instead of flying, they will walk or run the whole distance back.

One day while going along a road that ran through a grove I started a grouse and he flew toward the end of it and lit on the ground. There was quite a deep ditch that ran parallel with the road at the distance of about 20 ft. When I reached the end I was unable to find the bird and was puzzled to know what had become of him. Happening to look along the ditch or drain, which was perfectly dry at that season, I discovered in it the grouse walking deliberately back. We had passed each other at that short distance. The grouse knew I could not see him while there and had taken that means of return.

Young grouse when driven from their home have a habit of lying or sitting on the ground behind a small tree with nothing visible but their heads and thus awaiting the approach of their pursuer, sometimes not flying until he is as close as within 15 ft. of them. I have never known an old grouse to do this.

The grouse when pursued rarely, if ever, alights on spots of the same character twice in succession. If on his first flight he alights again on the ground the chances are he will on his second do so in a tree, and so as to the elevation on the ground, if on the high ground on his first, he will betake himself to the low on his second.

A covey of grouse fly from the ground in one of two ways. Either they will all rise at once in the form of a crescent and fly off in diverging lines. Or the old bird taking the lead the young will follow at intervals of two or three seconds. This latter is the more usual way.

The ruffed grouse is a bird of the forest. I have once or twice seen one walking on an open meadow, but he is generally too wary and fearful to be caught at any great distance from cover. The grouse is sometimes tempted to go out a little way from the timber or cover to visit old dead logs that may lie near. I have several times seen them in such situations. Perhaps they feed upon the grubs, perhaps they go there to sun themselves.

When the autumn is past and winter and snow are come the grouse resort to the dense dwarf evergreens, from thence on frosty mornings they go to the sunny hillsides to lie among the brown leaves and enjoy the warmth, and particularly near a spring where the grass is green through the whole season.

I have seen but one grouse sitting on her nest. It was in a large and rather open woods, where a herd of cattle were wont to roam and go to a spring within it for water. Her nest consisted of a mere depression in the ground, rather shallow, at the base of a hemlock tree. I discovered this grouse by accident, while I was walking through the woods in the latter part of May. I had passed rather close without disturbing her, when happening to turn round and look back I saw her. After that I went every day to the forest to see the sitting grouse, and standing off about 25 yds. behind a tree enjoyed the sight. I was never fortunate enough to find her away from the nest and so could not tell the exact number of her eggs. She undoubtedly left her nest for food and drink; but at what times I could not say.

After two weeks' watching, on my last visit the grouse was gone, and the nest was found deserted. A few broken egg shells were in the nest and some were scattered around. I examined the nest or depression rather critically; it appeared to be a natural depression in the earth lined with moss, and was between two roots of the tree, which projected slightly above the ground; the center was about 2 in. below the surrounding surface. There was no cover whatever around the nest, nor was it in any manner concealed. On the side leading to a dense and favorite cover for grouse adjacent to the large woods there were shells extending along for about 10 ft., and I judged this was the direction the mother and her brood had taken.

DORP.

ALMOST A TRAGEDY.—We were driving along following a winding road through the alders on the way to the Pickerel Pond, Phon, Hi and I, when Phon, leaning over the side of the sleigh, said: "See that partridge track?" It followed along the road for a rod or so when it was joined by another. No mistaking that one; that's Mr. Fox's. How slyly he crept along trailing the bird, as a hound would him. See there, that is where he jumped at the unsuspecting bird buried in the snow. But he didn't get him. All those little pieces of snow were scattered by the bird when he got up. But if it hadn't been for that little pile of alder trimmings left there by some chopper (and being partly buried in the snow Mr. Fox did not see them from his side of the house) this tale would have been different. His paws struck on them and away went the bird from beneath them. Clucking to the mare we jogged on to the pond commenting on the uncertainties of life.—DEXTER (Albany).

WINTER ROBINS IN NEW ENGLAND.—Under the head of "Winter Robins in New England" a Massachusetts writer notes with surprise a flock of these pretty songsters that wintered with him. It may be unusual in some sections of that State, but directly back of where I live, in what is known as Deep Hollow, a good-sized flock of robins have made their home, and for the past three winters have never migrated, to my certain knowledge, as I have seen them nearly every day during that time.—J. W. G.

EXPERIENCE WITH RATTLESNAKES.

WHEN I first went West, in '76, rattlers were very plenty during the summer months in certain parts of Montana, much too plenty for pleasure for one whom business, riding the range, constantly brought him in contact with them. My sheep herders would kill as many as two and three, and often more, rattlesnakes a day.

So plenty were they that the sheep were constantly being bitten by them, and although an old sheep would, if possible, steer clear of a snake, the curiosity of the lambs would lead them to investigate any peculiar moving object, and proceeding to walk up and smell a snake they were usually bitten.

The herders would carry a little paper of cooking soda or a small vial of stronger water of ammonia in their pockets for use when necessary. The sheep would invariably be bitten on some part of the head or under the jaw. When first noticed the herder would catch the sheep, lance the bitten place in several places with his pen knife and squeeze out the poisonous water, rubbing the soda or ammonia into the cuts and all around the part bitten. If bitten in a vein the poison seemed to circulate so quickly through the system that death soon followed. If bitten elsewhere, and immediately doctored, the evil effects were generally of not much consequence and the sheep was all right again in a few days. I have seen sheep which had been bitten in the head, and for which nothing was done, swell fearfully, and finally the hair and wool would come off of the head, and by degrees they would get well. One day a fine mare was bitten in the jaw, and a horse, used on a mowing machine, was bitten in the leg. Soda was the only remedy used in each case, and they soon recovered.

My herder was once using a collie pup of which he was very proud. He sent it around the sheep, when suddenly it jumped to one side and began to cry, and came back to him; he thinking she had stepped on a prickly pear was examining her foot, when he saw she had been snake-bitten and was fast swelling. He was near a spring, and taking off his drawers he tied a string around the lower end of one leg and partly filled the sack thus formed with soft mud. In this sack of mud he placed the dog, and carried her with him all day, renewing the mud as opportunity offered. At night when he reached camp he blistered the dog's leg with turpentine, but the poor thing seemed to suffer so from it that he washed the turpentine off and used soda water. The next day the dog was able to follow him, and in a few days was as well as ever. I once cured a sheep bitten by a rattler, by lancing it and using turpentine externally. Next day the sheep was all right.

A friend of mine, an old hunter, had been shooting prairie dogs, on which there was a bounty of 10 cents per head. In making his morning round he would pile up the dogs he had killed in one place, go on to another place and make another pile, and so on till he was ready to return, when he would skin each dog and take the skin to camp. A rattler was concealed beneath one heap of dogs, and as the hunter was pulling out a dog the snake bit him on the arm twice. He at once hastened toward camp, a mile distant, having previously taken the precaution to bind his handkerchief above the place bitten and around his arm, and twisting it as tightly as possible with his rifle rod. He was quite sick before reaching camp, so that he was obliged to rest several times. In his tent he always kept a cure for snake bites in a demijohn, which, although often indulged in as a preventive, was never allowed to go dry. On arrival, for once in his life he really had a good excuse for getting drunk, and started in earnest. When he felt the medicine beginning to work strongly on him he loosened the bandage on his arm, allowing the blood from his arm to circulate to his body, and having the effect of at once sobering him up. Letting the good work go on, he again resorted to his demijohn, and this time keeping it up till he was gloriously drunk. Shortly afterward his partner, returning, wished to send for a doctor, but no. He said, "I am all right." In a few days the swelling went down, and excepting a little sickness at his stomach at times he was as well as ever. I asked him if the bite of the snake was painful. He described it as the stinging of a hornet, only a hundred times worse.

While hunting with a favorite pup, I noticed him trailing and coming to a stiff point. I had all the birds I wished, and as it was getting late, I tried to call him off, but he would not come. All of a sudden he jumped five feet up in the air and nearly turned a somersault, just in time to avoid the spring of a large rattler. It was only his agility that saved the dog.

Going into my tent to cook supper I heard a rattle, and lighting a match saw his satanic majesty coiled up on the flour sack, close to the stove, and seemingly perfectly satisfied. He was not contented very long.

I could relate rattlesnake stories by the bushel, but I hate to. I dread to think about the horrible crawling things. Only a merciful Providence has kept my feet off them when it seemed as if I must have stepped on them. As everybody makes it a part of their creed to kill a snake whenever seen, their numbers are now so greatly reduced that it seems as if they also must follow the buffalo and the deer; but when one realizes that the bite of the last rattler is just as poisonous as was that of the first, it behooves him to watch his footsteps as carefully as ever, and not to "tread upon the serpent less he turn and sting thee." R. W.

MONTANA.

Editor Forest and Stream:

I was much interested in the tale in your issue of 19th inst. relating to the death from snake bite near St. Augustine, Fla. I spent the whole of last winter in Florida, in and about St. Augustine and the Indian River country. I have often wondered after a day spent about the hamaks that neither I nor my dog had received a bite from some poisonous reptile. Any one familiar with the swamps of Florida will not wonder at this, knowing as they must that these swamps are the retreating place of almost everything poisonous in the South, and in dry seasons of almost the entire animal life. It is almost impossible for a human being to penetrate these swamps, and once in your whole attention is taken clearing a passage. You might step upon or alongside of a dozen rattlers and not know it. From the time I entered a swamp until clear of it I never saw my feet or that portion of my limbs below the knees. Since reading of the death of this gentleman I have known no rest. His sad death must recall

to many of your subscribers many narrow escapes of their own. What is the jaborandi remedy for snake bite?

BUFFALO, N. Y.

ANTI SNAKE.

QUAIL IN A SKUNK TRAP.—Towanda, Pa.—A skunk has been taking too much interest in my poultry for my benefit. I found his tracks in the snow, and they were very plain and easy to follow. I found what seemed from the number of tracks to be quite a den of them. Procuring a good trap I placed it well down in the hole, and in the morning the skunk was in the trap all right. I let the trap remain in the same place until seven had been caught; and then imagine my surprise to find a quail in the same trap that all of those deadly foes of quail and all birds that roost on the ground had been caught in. Have they no instinct to tell them to keep away? There was quite a flock I should think by the tracks around the hole. I have been a reader of the FOREST AND STREAM since 1881, and wish to extend my thanks to it for the many pleasant hours I have enjoyed reading "Nessmuk" and "Kingfisher" and many others, and may it long remain as it is now, the leader of sporting papers.—A. V. R.

EVENING GROSBEEK IN PENNSYLVANIA.—Montoursville, Pa., Feb. 21.—In an article on the evening grosbeak, published in your paper May 2, 1890, I advanced the opinion that these birds would breed in Pennsylvania, but although I kept a close lookout for them, I failed to find a nest, or even see a bird through the summer. I have just been informed, however, by a reliable party, that he saw a pair of these birds as late as the last of June. They were feeding apparently on potato bugs, and came regularly, one at a time, to his potato patch; these visits were kept up for several days. Now this, together with the fact that they are quite plenty in this locality again this winter, strengthens my belief that, if they were properly protected from merciless gunners, they would become common and regular breeders here.—F. F. C.

BIRDS' NESTS AND EGGS.—St. Louis, Mo., Feb. 15.—Editor Forest and Stream: I am greatly interested in birds, and especially in their nests and eggs, but I cannot find any good work on the latter subject. What can you advise me to purchase?—ANXIOUS. [A thoroughly full and satisfactory work on oology is much needed. Several have been projected, but almost all have stopped before completion. We have Davie's "Nests and Eggs of North American Birds," 475 pp. Extra cloth. Price \$1.75.]

LINNEAN SOCIETY MEETING.—The annual business meeting of the Society will be held at the rooms of the American Geographical Society, No. 11 West Twenty-ninth street, Friday evening, March 6, 1891, at 8 o'clock. A paper will be presented by Mr. Jonathan Dwight, Jr., and Dr. C. S. Allen will make some further remarks upon venomous snakes.—JONATHAN DWIGHT, Jr., Sec'y.

BIRD NOTES.—Perth Amboy, N. J., Feb. 28.—On the 22d inst. I observed robins and red-winged blackbirds near New Brunswick, N. J. On the 24th heard bluebirds and song sparrows. To-day saw robins, bluebirds and a purple grackle, or crow blackbird. Hawks a-plenty, but quail are wintering well. Broadbills in the bay all winter.—J. L. K.

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

CLABROUGH 12, May 1, '90.	PARKER 10, hammer, June 6, '89.
COLT 12, July 25, '89.	PARKER 12, hammerless, June 6, '89.
COLT 10 and 12, Oct. 24, '89.	REMINGTON 16, May 30, '89.
FOLSON 10 and 12, Sept. 26, '89.	REMINGTON 12, Dec. 5, '89, Feb. 6, '90.
FRANCOTTE 12, Dec. 12, '89.	REMINGTON 10, Dec. 25, '89.
GREENER 12, Aug. 1, '89.	SCOTT 10, Sept. 5, '89.
GREENER 10, Sept. 12-18, '89.	L. C. SMITH 12, Oct. 10, '89.
HOLLIS 10, Nov. 7, '89.	WHITNEY SAFETY 12, M'ch 8, '90.
LEFEVER 12, March 13, '90.	WINCHESTER 10 & 12, Oct. 3, '89.

THE NEW YORK LAW.

Editor Forest and Stream:

Utterances in "J. H. R.'s" letter in your issue of the 19th inst., are of exceptional interest at this moment. "The men of St. Lawrence have worked long and earnestly for protection. * * * But if after all their work the deer are to be turned over to the dogs * * * everywhere except [in] St. Lawrence, I protest. In place of hounding give St. Lawrence floating"—by which "J. H. R." intends to express disapproval of the prohibition against floating in the report of the Commissioners.

The protestation finds an emphatic response in St. Lawrence. But it will not prevail, just now. In compensation for the water-slaughter in other counties, we have in the report prohibition of night-slaughter and protection to does. Does not "J. H. R." get a grain of comfort in this?—just a grain?

"Give St. Lawrence floating." At what cost, and at what exposure? Why at the cost of legalizing night-slaughter in all the counties, or of confining all the horrors of jacking exclusively to St. Lawrence, "the breeding ground of the State;" at the cost, too, of the provision against killing does—for jacking is an indiscriminate slaughter necessarily. Which alternative would "J. A. R." choose?

Always excepting the water butchery, this "floating" or "jacking" is the most detestable, the most degrading exhibition imaginable. Its horrors have been too often dwelt upon, are too familiar to need repetition. And had I been in quest of one whose detestation and whose sympathies run in the right direction I would certainly have sought him of the canoe and paddle.

And what an exposure of retrogression in protective sentiment in St. Lawrence, this ignoring of the two features that mark advancement in the right direction—the abolition of night-slaughter and protection to the

does. Strike these out of the codifiers' report and what's left of it? And what modification, what humiliation to the codifiers after the advanced stand they have taken in the interests of fish and game protection and an elevated sportsmanship to find in the proposed protective sentiment of the State, a carping, unreasoning, greedy selfishness that find in their labors nothing to commend and everything to find fault with.

The exhibition in this direction going on in committee rooms and likely to be repeated *in extenso* in committee of the whole, are most damaging, destructive of that popular interest in game and fish propagation and protection, which must be their life, if they are to live at all.

"Will some one tell me how we, of St. Lawrence, are to get any venison?" writes "J. H. R." Hunt and kill it like a sportsman and a man! Are you answered? By still hunting? Yes, by still hunting, *par excellence*. But no one is relegated to the moccasins in August and September—oh, no! Perhaps the average outer may need further explanation, but not "J. H. R." He knows to a certainty that the places in the woods where deer resort to water—and 'tis very, very frequent—are largely in excess of those where they may be approached by boat and jack. At such places the game may be found in the early morning, at and after sundown, and at noon, betimes, with such certainty and frequency as to reward reasonable, intelligent effort in "getting venison."

Indeed the chances, at such places, with proper attention, are in excess of those afforded to the jack-hunter. Chances, I say, not all against the game, but enough, in R.'s conceit, I'm sure; nor do I believe his commiseration will much concern the "common outer," who is either unwilling or too lazy to pursue a manly method, with a manly satisfaction to it.

Interest centers now in the fate of the codifier's recommendations. They have made an advance. Is there unselfish devotion in the professed protective interests to support it? SAINT LAWRENCE.

OGDENSBURG, N. Y.

RUBBER BOOTS FOR HUNTING.

Editor Forest and Stream:

There are many sportsmen who have never used anything but leather for covering the feet in hunting. For fishing it is almost unanimously conceded, I believe, that rubber boots are the thing.

When sporting on dry ground, and noise in traveling is not taken into consideration, low shoes or leather boots are advisable of course, but in hunting on wet ground the best thing the writer has used are rubber boots, especially so in hunting in sloughs and timber swamps, for deer. Such boots in timber, when hunting deer, are about as good as moccasins, with the advantage of keeping dry feet.

One objection raised by some to the use of such boots is that they retain the perspiration, feet becoming thereby damp and uncomfortable. All this can be easily avoided by a careful selection and a little care afterward when using the boots. Rubber boots, I believe, are generally one size larger than leather boots of the same number.

If the hunter wears a No. 7 leather boot then obtain a No. 8 rubber boot, which will be about two sizes larger than the leather, and he will be able to wear two pair of socks in colds weather, besides the feet will not, if damp, feel as uncomfortable as in a close fitting boot.

By all means have boots that are smooth inside. Felt lined ones are an abomination, because it takes so long to dry them. When smooth inside they can be dried in a few minutes by wiping them out with hot cotton rags. At night hang the boots, top upward, in a warm place and by morning, without wiping, they will be dry.

The most of my shooting friends when hunting in wet weather, and in wet places, use long-legged boots. I use both long and short legs, the long legs in wet brush and long wet grass, or if I have wading to do. I wore leather boots made specially to my order for many years.

In selecting the boots take those of medium weight, not light, fancy-legged ones, because there is danger of punching holes in light legs and feet with stubs and sharp stones.

The sportsman who has never used rubber in hunting should try it once. H. L.

SOME CURRITUCK SCORES.

FROM a circular issued by the trustees of the Swan Island Club, offering for sale a portion of their preserves in Currituck county, N. C., we take the following statement of the bags made in a series of years by the members of the Swan Island Club; also the average daily bag of ducks, geese and swan for one stand, counting every day, good and bad, for about three weeks' shooting at the same season of each year, except in 1890, when the period was shorter. The attendants are not allowed to shoot:

FOR THE ONE STAND.		TOTAL BAGS.	
1875.	20	1872-3.	634
1876.	17	1873-4.	1,421
1877.	104	1874-5.	576
1878.	194	1875-6.	1,719
1879.	294	1876-7.	1,442
1880.	18	1877-8.	1,352
1881.	16	1878-9.	2,100
1882.	32	1879-80.	1,805
1883.	23	1880-1.	2,006
1884.	21	1881-2.	1,384
1885.	23	1882-3.	2,168
1886.	245	1883-4.	2,120
1887.	392	1884-5.	2,230
1888.	40	1885-6.	2,667
1889.	30	1886-7.	1,833
1890.	30	1887-8.	2,402
		1888-9.	3,090
		1889-90.	1,800
		1890-1.	So far, 2,900

It will be seen that there has been no falling off of the shooting, but that, on the contrary, it is much better now than formerly, and has improved steadily. The highest bag of ducks and geese this season, made by a single gun in one day, was that of Dr. Charles G. Weld, eighty-eight birds; the next highest, by Dr. John Bryant, eighty-two birds. Besides the duck shooting, which is the best available in the United States, unless perhaps at the extreme South, the shooting at both English snipe and bay snipe is unsurpassed anywhere. Bags of over two hundred English snipe have been killed by a single gun in one day, and seven hundred and twenty bay snipe were killed by three guns in one day on the beach, where the great stretches of sand flats and shallow pools, lying in the line of the spring and autumn migrations, afford extensive feeding grounds of the best kind.

CHICAGO AND THE WEST.

CHICAGO, Feb. 21.—The Possum Club met last night, taking a change of venue from Werner's to French's restaurant, on State street. About fifty plates were laid, but from various causes only about half that number of members were present. The Lexington quartette of gentlemen singers entertained the guests very nicely with melodies frequent and appropriate.

Charlie Gammon was at the Possum Club, grand, gloomy and peculiar. Charlie has eaten prairie chicken numerously. Prairie chicken is now out of season. Mallard duck isn't. Mr. Nicholls, chairman of the evening, had ordered mallard duck. Charlie Gammon arose and said his'n was chicken. Then there was war, intermittent to the end of the meeting.

Judge Fields, late of the Indiana Supreme bench and now chief counsel of the Monon railway was present with several friends from Crown Point, once his home, among these Messrs. Geo. I. Maillet, M. T. Hart and Dr. Schwarz. Judge Fields was called upon for a speech before he had fairly gotten settled down to the business of the evening and promised to talk better later on. Ben Dicks told some weird incidents of the late Southern trip. Mr. George Andrews, of the *Sporting Review*, thought the Mardi Gras a farce. He was probably about right. Mr. Anderson also thought the Southern men behind the times in shooting matters. Dr. Schwarz had to speak, and so did Rolla Heikes and Leo Hamline, and by and by things got into pretty smooth working order and everybody had to make a speech. Mr. Low and Mr. Organ turned the talk in the right sort of a direction when they showed the present crisis in game law matters and urged the gentlemen of the club to be alive and earnest in the work of getting better results in game protection.

Charlie Gammon again rose. "Mr. Chairman," said he, "we wrong ourselves if we do not thoroughly investigate the question which has arisen here to-night. We have been offered illegal game, and under the circumstances such action by Mr. French is nothing short of an insult to our intelligence and our character as sportsmen. I move you we withdraw our custom from this place."

Mr. Hamline seconded. Discussion came up. Mr. Organ was certain he had been served prairie chicken. Mr. Price thought it was duck. Mr. Pfeffer and several others declared it was chicken. Mr. Nicholls once more insisted on the explicit orders given Mr. French to serve no illegal game. Mr. Gammon's motion carried.

Mr. Low spoke on the outlook for Illinois sportsmen on the pigeon law question, and mentioned the strenuous efforts now making by the Humane Society to stop pigeon shooting. Mr. Low highly eulogized Judge Fields, and called upon him to speak. The Judge responded in a humorous vein, and expressed his delight at having discovered the Possum Club. "I am a shooter myself," said he, "and have had to do with shooters. I remember that, some years ago, when the Howe and Knickerbocker cases were up, those well-known gentlemen having been arrested on a test suit for carrying game out of the State of Indiana, I was the magistrate before whom the suits were laid, and it was my pleasure as well as my duty to say to those gentlemen, 'Go, your liberty is no longer restrained. The suits are dismissed.'" Judge Fields said that after this any member of the Possum Club who traveled down Water Valley or Cumberland way must come to him and he would see that his tickets were of the most desirable sort. He then started in and made a dignified and able speech about the sportsman and the law, one which ought to be given in full, but which must have been heard to be felt fully, for there is much of the orator in this pleasant-faced and able-minded jurist. It is a question if the Possum Club has soon a better or more thoughtful evening.

Mr. Thomas Wilmarth was a friend of Mr. French, the caterer who was alleged to have sinned. Mr. Wilmarth had Mr. French bring in a pan full of dressed ducks. He offered also to bring in sundry receptacles filled with hide, hair and feathers, to prove further that the ducks just eaten were not chickens but ducks. Mr. French said, "I would not serve illegal game to men like you. Of course, I have to please the people, but I will say that as long as my competitors don't serve illegal game, I will not. I have to keep my business, but I wouldn't serve chicken to you gentlemen."

This lame and halting confession of faith from the Chicago restaurant man was received with no very polite credence, and he had some very plain denials offered him direct. The question was not settled. If that duck was not chicken, then many of the Possum Club were sadly mistaken. There was a good deal of a stir about it. The gentlemen present were Judge Fields, guest of the evening, Messrs. Maillet, Hart, Schwartz, Nicholls, Organ, Low, Mussey, Ab. Price, Wells, Stone, O'Neill, Cleaver, Andrews, Hamline, Ehlers, Place, Pfeffer, Dicks, Gammon, Heikes, Smith, Wilmarth, Loveday, O. A. Price, Stevens. Mr. R. B. Organ was chosen chairman for the next meeting.

Feb. 22.—Word from V. M. Lincoln, at the Undercliff Hotel, Lake Senachwine, dated yesterday, says that the ice is out of the lakes and ponds, plenty of ducks moving, and two good days of shooting have been had. The ducks are coming. The season is opening. The winter is over. The year of sport in the field began here Feb. 21.

Feb. 24.—Mr. Lester is in from Tollaston Club. He says the ducks were all over that marsh two days ago.

Last week I described that dramatic struggle between sentiment and money which transpired when the sportsmen's legislative committee ran up against Col. Bond and Mr. Barrett, the South Water street game dealers' committee. That hour was the time of the final sundering of all real or pretended alliance between these two diverse interests. Perhaps it might as well come first as last. Diverse interests will not blend, no sentiment can stop the tide of trade. There is more to add about all this to-day, for the result of the open split has been that the dealers have dug up the hatchet. On last Wednesday the Produce Exchange held a meeting, and the dealers took some action. Col. Bond and Mr. Barnett handed in the following report:

"Your committee met with the Illinois Sportsmen's Association as invited members to consult with them in regard to proposed changes in the game law. We went there with the understanding that we were sent by the exchange to represent its sentiment, with the order that we were satisfied with the law as it now stands, as far as game dealing is concerned, as we are now allowed the same time in which to sell game as other principal mar-

kets in the country, and that we had no change to make. It was further understood by us that the engrossing clerk in the Legislature made a mistake last year, and instead of entering up 'the season shall open on Sept. 1,' he inserted Sept. 13.

"This meeting was held last Thursday and the law question was thoroughly discussed. The matter of spring shooting of ducks was brought up and we stated that we had no preference in the matter. The matter of the protection of English sparrows was introduced, and it was decided that it was best for the country that the law should not prohibit the killing of them.

"We offered no objection to the opening of the season for the shooting of game two weeks earlier, but when it was proposed to close the season for selling game brought here from other States twenty days earlier than the law now allows we objected to any change and told them that we could not see wherein they were interested in the selling of game killed in other States. If the game did not come to Chicago it would go to St. Louis or New York, and we did not see how we could take any legislation to protect game in other States.

"Trap-shooting of pigeons was discussed. They advocated it and we strongly opposed it, believing it to be the education of hardness of feeling and to be demoralizing. We would recommend that this exchange combine forces with the Humane Society and have trap-shooting of pigeons stopped in this State."

It is said that a copy of this report will be sent to each member of the State Legislature, and as soon as the proposed amendment of the Sportsmen's Association comes before the Legislature the exchange will have a committee present to fight it. Now here's a pretty kettle! It seems to me that about all we can do is to sit down and laugh at the wholestate of affairs. So here was the outcome of the friendliness of South Water street and the Humane Society. Retaliation, reprisal and grim-visaged war. White-winged peace is not in it any more. South Water street suddenly righteous. Bless our hearts, what a lot of fun we do have out here!

The result of all this was that I had to go to headquarters at the seat of war, and therefore called on Col. Bond yesterday. I told the Colonel that I was jumping on him some this week, and had come down to get a chance to do it some more.

"Oh, that's all right," said Col. Bond, "that's all right. I'm used to it, and rather like it. You can't hurt a Christian. Jump on us all you like, if it amuses you. Our shoulders are broad. Come and see us. Pull up a chair and sit down."

Well, now, what are you going to do with a man like that? You can't do anything, but sit down and listen to him and try to get his side of the case, and see whether maybe there isn't more to his side than you at first thought. It really seemed that there was some justice in the position taken by the game dealers, of not wishing to shorten their selling season by 30 days, although there was nothing that could lead one to predict any ultimate or permanent union between the dealers and the sportsmen.

"We are out of it now," said Col. Bond, "and there will be no more alliances or joint conferences between the dealers and the sportsmen. We see no use talking with the sportsmen, for they violate their promises and agreements. From now on, we will hoe our own row. Personally I do not care about seeing this pigeon bill carried. I don't want to see trap-shooting stopped, but you may say that we are going to fight this proposed amendment to stop our selling season at Jan. 1. We are going to fight that, and we are going to beat it.

"Why do I claim a breach of faith by the sportsmen? I will tell you. Lucius Crooker is the father of the old game law, and represented the sportsmen in framing it. We met him at Springfield and held a conference. We dealers agreed to give over the Illinois game to the sportsmen, to make what laws they chose for it. In return, we were to have to Feb. 1 to sell game, thus enabling us to get the very valuable shipments of mixed game and poultry from other States, especially Missouri. We would lose all this Missouri trade if we closed our market Jan. 1, for St. Louis would gobble it, or Boston. We wouldn't make so much on the game itself, but the poultry trade mixed with it is very valuable. That was the arrangement. We were to have the other States, and the sportsmen of Illinois were to have Illinois. Now they kick that all to pieces, and ask us to agree to Jan. 1, which we cannot and will not do. The amendment they wish to pass, changing the date from Sept. 15 to Sept. 1 on chickens as it does, and closing the market Jan. 1, may properly be called 'an act to slaughter more widely the game of Illinois, and to protect the game of Iowa, Missouri, Dakota, etc.' Now, we will beat that amendment."

I presume they will. What use to talk of alliance? There is no common multiple. The shooter and the seller are not alike. There will be no union.

It is coming to be thought here that we must have uniformity in our State laws, or all the laws will be only as good as the poorest one. Much regret was expressed that the dealers of Chicago would not make the start in a movement to secure a general closing of the selling season on Jan. 1. Uniform laws have been dreamed of by sportsmen so long that they are for the most part now regarded as a purely visionary scheme. They are that, so far as sportsmen's accomplishment is concerned. But what if our sturdy friends, the game dealers, do for themselves what we can not do for ourselves, and secure a practical uniformity of dates for the larger markets? It will be startling news to hear that they are beginning to work for this. Col. Judy, the big St. Louis dealer, has written Col. Bond querying why not hold a general dealers' meeting at some spot soon. Col. Bond showed me a resolution framed by himself, which he will introduce before an early meeting of the Produce Exchange of Chicago. It reads thus:

"Resolved, That a committee of three be appointed to correspond with the dealers in game in all the Eastern cities, with the object of calling a meeting to be held in Chicago or such other place as may be agreed upon, to take into consideration the necessity of uniform game laws throughout the country."

The uniform law which the dealers are after means Oct. 1 to Feb. 1 for selling game. They will not agree to Jan. 1. It seems to me that very much should be sacrificed for the sake of uniformity. The sportsmen of the country would be far better off with the selling date fixed uniformly in St. Louis, Chicago, Boston and New York at Feb. 1 than with a date of Jan. 1 in some

markets, and no date at all in others. There never will be a game law respected in this country until it is ratified and upheld by the game dealers. When they all agree on a date, be it Feb. 1 or May 1, and then shut down, all at once, all over the country alike, the market for game will on that day be closed, and there will be no inducement to kill game for the market, and then, for the first time in America, will the people, who rest behind any law, begin to understand and to respect a game law. From this respect for any sort of game law will grow the respect for a better game law. Under the uniform date of Feb. 1, which would give the deadly trapping month of January to the game killer, our game will slowly disappear. After a time the people will see it nearly gone, and will resolve to protect it. Then the uniform market date may be changed to Jan. 1. We can not change it so now. Why fret and fume about it? It would make little difference if we did change the date to Jan. 1 in Illinois alone. The game would go. We must wait upon the dollars of the dealers. They will make the laws, or break them, or observe them if they like. Meantime, lucky the man who owns a preserve. We may say this, and still speed the agitation for a better state of things.

Feb. 28.—The first bags of ducks of the season have come in and they are good ones. Rolla Heikes and Charlie Gammon last Wednesday brought up 35 ducks, mostly pintail, from Cumberland Club grounds. A party of a dozen or so, including the above gentlemen, Messrs. McFarland, Robbins, Dicks, Freeloar, Dominico, Hoffmann, Nicholls, Matlocks and Fich, went down to Cumberland Lodge to celebrate Washington's Birthday. They had some trap-shooting, but noticing the heavy flight of ducks soon quit that and went out on the marsh shooting ducks. Mr. Heikes says he never saw ducks come in so fast. The marsh was alive with them. By working for it he thought himself and Mr. Gammon could have bagged 75 birds on Tuesday. There were a good many mallards coming in too. A tidal wave of ducks seems to have burst upon the country. Their ways of migration are past finding out.

I remember that we once had some talk about the regularity of ducks in migrating along a certain parallel. A gentleman in Nebraska thought the ducks went north on one leg of a triangle and south on the other leg. I don't know, but last night I heard a story, told by Mr. Thomas Hudson, of this city, which is at least interesting, if not conclusive, on this head. About fifteen years ago Mr. Hugh E. Steele, of the firm of Steele & Worth, was running the rolling mills at Laurel, near Coatesville, Pa., which are now run by Worth Bros. Mr. Steele had had a fine old place, and Mr. Hudson used to visit there. On the place was a pond, where Mr. Steele had a flock of ducks he was fond of feeding. One day he saw a wild duck, a mallard, hovering over the flock of tame ducks, and finally it alighted among them, and staid on the pond for weeks. It grew so tame that it came up to be fed with the other ducks, and ultimately Mr. Steele could take it up in his hands, like any of the flock. One day there came the report of a gun, and the wild duck sprang straight up into the air and flew away. It was not seen again until the next year, when it returned. It came back in this way for six years, always solitary. On the seventh year it did not reappear, and was supposed to have been killed, no one knows in what corner of the world. This bird migrated regularly, and on the same parallel without question. The case is authentic, and the facts such as to make mistake impossible.

On Feb. 24 bass were taking the minnow fairly well in the Fox River near Aurora.

Some splendid bass are being butchered now, or were while the ice held, by the ice fishers of the Fox Lake district. The men I mentioned earlier have been doing it, I suppose. At any rate, many bass have been sent down weighing 4 and 5 lbs. The leading game dealer to whom these fish are sent, told me he didn't care for this trade for what money there was in it. "It takes a lot of bass to bring much money," said he. "Those men will make maybe \$40 or \$50 during the winter at this fishing, and kill more bass than all the anglers will catch next summer. They are very short-sighted and unwise. I wish they would stop it."

Mr. Sheldon I. Kellogg, long at the head of the cartridge department of the Shelby Smelting & Lead Co., of San Francisco, writes me that he has associated himself with his brother-in-law, Mr. Hall. The new firm, Kellogg & Hall, will conduct a business as manufacturer's agents in general sporting goods for the Coast. The wide acquaintance and genuine merit of these gentlemen will stand guarantee for a good business without delay.

Mr. S. A. Tucker, the widespread man of popularity, or man of widespread popularity, was in town this week, and it is thought he came to explain to Captain Anson the way he handles his new Parker gun. By the way, this Parker, made to order for the blonde baseballist, is the gift of that always wide awake and generous firm, the Jenney & Graham Gun Co., of Chicago. I don't see what made them give Anson any gun. He can't shoot to mention. After Mr. Tucker has taught him to hit a barn door at 40 paces, he, Mr. Tucker, will start out West on his regular big trip, going to Helena, Seattle, Portland and San Francisco. Mr. W. S. Perry, of Worcester, Mass., a very warm friend of Mr. Tucker's, thinks of taking his wife and making part of the trip in company with him, revisiting some of the scenes of the old Iolanthe triumphs on last winter's U. S. Cartridge Co.'s tour.

Mr. Harvey McCurdy, the urbane diplomat who represents the L. C. Smith gun in foreign parts, will be back here now shortly and will start within the week on his annual trip to the Coast. He has promised forty ladies to send each a horned toad or a "resurrection plant" from the Gila plains, and if he don't forget it he may send one or two.

Mr. A. S. Comstock, of Evanston, has invented a tent. He put a little advertisement, one inch long, in the columns of *FOREST AND STREAM* a few weeks ago. To-day he told me that the first week brought him inquiries from fourteen different States of the Union. *FOREST AND STREAM* is well spread and well read, and it is a good thing to talk into its telephone I should think.

E. HOUGH.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nant," "Glean," "Dick Swadlow," "Sylvan" and other competent authorities to be the best treatise on the subject extant.

PENNSYLVANIA GAME.

Editor Forest and Stream:

Westmoreland occupies a prominent place in the history of western Pennsylvania, being the oldest county west of the mountains, rich in coal and iron mines, gas, oil and salt wells, well timbered and watered and in the foremost rank as an agricultural and stock raising section. Yet with all this and a population of 115,000 we still have a fair supply of game and fish. Many deer are killed every fall, an occasional bear is seen and the panther and wildcat are familiar to our mountaineers, more particularly the cats. Foxes, coons, possums and smaller vermin are plentiful. Quail, ruffed grouse and rabbits are quite abundant, while a good day's sport may be had with the turkeys, squirrels or woodcock, though these are not so numerous. A day's trout or bass fishing may be had between the rising of the sun and the setting of the same with an average catch of perhaps fifty if the angler knows his business.

Our game laws are fairly well observed, and but little market-hunting is done, but the fish do not escape so easily I am sorry to say. Most of the illegal shooting is done on Sunday by English and French who work in the coal mines and stone quarries. It is to be hoped that the present Legislature will amend the laws so that wardens may be appointed to protect game as they now apply only for the appointment of water bailiffs.

The presence of such a variety of game (I have not named all) in so thickly populated a district is undoubtedly due to the dense covers and mountain fastnesses which only the genuine hunter cares to penetrate. To hunt the deer or "Billy" Raccoon or "kittens" over chestnut and laurel hill ridges, the sportsman must bargain for many scratches from thorns and briars, badly abraded skins from climbing and crawling through immense laurel thickets, plenty of stone bruises, and occasional sprains or breaks; and he will also stand in need of a pocket edition of Roget's "Thesaurus" to which he can refer for English idioms whereby he may express his opinion of the kind of a country he has been fool enough to get tangled up in. Well! we were raised to all this and we like it just the same as we do our "sourkraut and speck," "pon-hoss" or buckwheat cakes and wild honey in the winter time, not to mention "stomped" pork and beans.

Sometimes I hope to give a little sketch of our club whose members gather nightly around the stove in the rear end of "the store" and swap stories. It is a unique crowd "for sure," but withal a sociable one, notwithstanding differences as to ages, occupations and politics.

DEACON.

GREENSBURG, Pa.

GOOSE SHOOTING ON THE ARKANSAS.—*Editor Forest and Stream:* In the afternoon of Dec. 30 Prof. H. W. Charles and I boarded a spring wagon with our hunting traps and were off for the Big Arkansas, a distance of ten miles. About one mile from the river we noticed as our boy driver remarked "great herds" of black Canada geese feeding after the cattle in the pasture. We viewed them in their majestic appearance for a little time and moved on to the river. We planted our decoys on an island, secreted ourselves in blinds and began to wait anxiously of course for the coming of the birds we left in the field. But to our disappointment, in their flight to the river they managed to steer well to our left and up the stream out of range. There was, however, one flock of eight which passed up between us and our decoys while we were looking out to the field. We did not see them as they went by until out of reach. Seeing our decoys they whirled and came moving back. We fired into them, dropping among our decoys two fat ones, my partner killing from left barrel, second shot and I from right barrel, first shot. It was now getting too dark to shoot, so we gathered our birds and plunder and made for a farmer's house for all night. We made it a point to engage lodging near by where we saw the geese feeding the evening before, so that we could be on the grounds before they came from the river in the early morning. We were up early in the morning, and after breakfasting hastened to the field. We had not more than staked our decoys and scarcely under cover when the Canadas began to come in. It was a grand sight to see them move so cautiously over our heads and in range. It was not long until we had four lying at our feet, and by 10 o'clock we were off for home with six geese and four ducks, the result of four or five hours' sport.—B. F. W. (Sedgwick, Kansas.)

A MAINE GAME PROTECTION FUND.—Salem, Mass., March 1.—I was much pleased to see that you made a note of my offer of \$40 to protect the deer about my favorite hunting grounds. Would it not have been well to have exhorted the hundreds of sportsmen who go to Maine for deer hunting to come forward like men and give some substantial proof of their appreciation of the game and the efforts being made by the Fish and Game Commissioners of that State to protect the deer and moose? In addition to the protection I am offering the deer in those six towns of Oxford county, I will be one of one hundred to raise \$2,500 to be offered for the conviction of those outlaws who are bent on the destruction of moose and deer, the above sum to be drawn upon to pay \$25 on each conviction for illegally killing deer and \$50 for moose. Each of the one hundred persons to be held to pay such a part of the above amount as shall be necessary to pay for the persons so convicted. Let us hear from one hundred of the liberal-minded at once, that no time may be lost. Each day means the killing of more or less deer.—N. C. LOCKE.

A MAINE HUNTER.—There appeared recently before the committee on Fisheries and Game at Augusta one of the most remarkable hunters living in Maine—Alexander McLain, of Mattawamkeag, 67 years of age. He gave his testimony for the protection of game and for the enforcement of honest law. Mr. McLain is remarkable from the fact that in his experience as a hunter and guide for 47 years, killing more game than any other man within our borders, he has always been a still-hunter. It is the boast of his life that he never dogged a deer, even when the law allowed persons to slaughter game in an unsportsmanlike manner. McLain always gave a deer a fair chance for his life. In outwitting them he experienced the real enjoyment of a true hunter. It does not require much skill to put a hound on the track of a deer and then to station yourself on the banks of a lake, and when the dog has driven the exhausted animal into the water to

shoot, perhaps by resting your gun over a stump. That is the mode of the pot-hunter and poacher, but not of the true hunter and guide that McLain is acknowledged to be. For ten years he was a fish and game warden, and has done as much to protect game as any man living in Maine. He never made a dollar as a warden, but brought many a poacher to justice. Mr. McLain gives the following statistics of game killed by himself: Deer 1,000, moose 125, caribou 18, bear 211, wolves 52, red fox 350, otter 165, black cat 125, sable 175, beaver 35, mink 215, raccoon 42, lynx 45. And in addition thousands of muskrats and other small game. This last fall McLain killed one moose, one caribou and two deer. McLain has had many adventures in the woods. Once he caught an Indian in a bear trap. The jaws of the trap fastened about the ankle of the Indian and held him a prisoner for 36 hours. The Indian's cries were heard a long distance before the trap was reached. Five years ago he had a fight with a bear which was caught in a trap. As he intended to take up the trap he went into the woods without his gun. When the trap was reached he found an enormous bear fastened by one foot. The bear had just got in and was ugly. McLain attempted to kill the animal with a club. The clog which held the trap gave way and the bear with the trap hanging to his foot made for McLain, and a savage fight ensued. The bear caught McLain by the arm and bit it through. His clothes were torn off and occasionally a portion of the skin with them. At this juncture the clog caught around a small tree, anchoring the trap, and McLain was able to make his escape. With the blood pouring out of his arm he walked two miles to the river, where an Indian was encamped. His arm was partially dressed, and with the Indian and a gun he started back into the woods for the bear. The animal was found, but before the Indian could shoot, the bear pulled his foot out of the trap, leaving his toes in the jaws, and made his escape. Mr. McLain has caught most all kinds of game alive. He caught a live moose and sold him to Charles Welds, of Olamont, for \$150, to whom he also sold three caribou for \$175, and thirteen deer for \$7 each. Seventeen young bears have been captured alive. Two wolves were caught in a trap and an attempt made to tame them, but without avail. In capturing them McLain piled brush on top of them and then slipped a muzzle over their heads. He says, notwithstanding his years, he is ready to put his friends on the track of game, in the season, and will warrant that the hunt will not be fruitless. He has guided Belfast sportsmen and they are loud in his praise.—*Belfast Journal.*

NOVA SCOTIA PROTECTIVE SOCIETY.—At the annual meeting of the Game and Inland Fishery Protection Society of Nova Scotia, held in Halifax, the president, Lieut.-Col. Clerke, presided, and there were present Maj. Bagot, Lieut. Macgowan, Capt. Beileau, A. M. Scott, C. S. Harrington, Geo. Piers, J. G. Seivert, Robt. Clark and others. A resolution was passed referring to the council the question of devising some means of distributing more generally over the province licenses to kill game so that strangers coming in at different points can get them more easily than under the present system. It was suggested that the pursers of the steamers Yarmouth and Evangeline be authorized to issue such licenses. The report of the council was read and adopted. The report of Treasurer A. M. Scott showed the year's receipts to have been \$462 and expenditures \$225. The report of C. S. Harrington, chief game commissioner, was most encouraging. During the year one conviction for shooting moose in the close season had been obtained. A close watch had been kept for poaching and illegal snaring, and many snares found in the woods had been destroyed by Indians and others in the employ of the society. The moose have been saved from the extermination which threatened him a few years ago, and Nova Scotia now indeed is his principal retreat on this continent. There is no doubt that moose and other game are increasing in numbers, largely owing to the efforts of the society. Officers and council for the year were elected as follows: President, Lieut.-Col. Clerke; Vice-Presidents, Geoffrey Morrow and Col. Ryan, R. A.; Secretary, George Piers; Treasurer, A. M. Scott; Council, Mr. Macgowan, R. A.; R. G. Leckie, Londonderry; J. G. Seivert, A. M. Scott, Chas. Stubbing, Major Bagot, C. S. Harrington, D. W. Archibald, Sheet Harbor; George Piers, John Bowers, Shelburne; Captain Boileru, H. T. Jones.

THE FIRST DEER IN FORTY YEARS.—Newfield, Me., Feb. 23.—Ruffed grouse seem to be wintering fairly well. I saw about twenty in one flock the other day and have seen many smaller coveys. There are twenty-one deer yarded a few miles from here, which is something uncommon, but we hope to see them plenty before many years. Wilson Abbott and brother shot a buck this fall close to this village, which weighed 125 lbs., the only one shot here for some forty years. A doe with fawn was found dead on one of our small lakes a few weeks ago with one hindquarter gone, we need a game warden badly here. I am informed that it cost two men \$40 a piece in the town of Porter, this State, for catching two deer alive that died after a few days captivity. Pickerel fishing through the ice has been very good this winter, some good catches reported.—Lo.

LYKENS, Pa., Feb. 24.—The Lykens Fish and Game Protective Association has been organized. Hon. A. F. Thompson, Pres.; W. S. Young, Vice-Pres.; F. J. Douden, Treas.; W. V. Barrett, Sec'y. Executive committee to consist of president, treasurer, and three other members. The object is to protect and propagate the fish and game in the stream and covers. We have applied to the Fish Commission for fry of rainbow and brook trout and also propose stocking our woods with Chinese pheasants. We hope, with the cooperation of similar associations and all sportsmen in Dauphin county, to fill our now depleted streams with trout and our covers with game.—W. V. BARRETT, Sec'y.

THE MONROE COUNTY QUAIL.—Rochester, N. Y., Feb. 27.—The Monroe Sportsmen's Association has taken advantage of the recent spell of fine weather in this section and put out all the birds on hand. The order has been increased 2,000, and birds will be received all through March, being sent out to the parties who are still unsupplied as soon as they arrive. This will doubtless save many birds which would die if subjected to confinement after arrival here.—OSCEOLA.

PECULIAR DEATH OF A DEER.—Metropolitan, Mich.—Last Sunday I went out to look after my wolf bait, and came to a small creek where two cedar poles were laid down to cross on. A deer had attempted to walk over on them. One of his hind legs had slipped in between the poles. He was unable to extricate it, lost his balance, fell into the creek and perished. Its legs were not broken, but twisted out of joint at the knee. That makes ten deer that have died through natural causes in this vicinity and coming under my personal observation within the past eight months—the 2 bucks I wrote you about in December last, and 7 last May and June found by rivermen between here and Foster City. They had attempted to cross the river on a jam of logs, fell or jumped in among the logs and were unable to get out. Deer are quite plenty here the present winter. The weather so far (Jan. 28) has been very favorable; not very cold, and only 8 or 10 in. of snow in the woods. The game law is being respected in this locality.—B. B.

SNAP SHOTS.—While out rabbit hunting with my beagles King Mack and King Lead I stumbled and fell, the noise flushing a ruffed grouse. Jumping to my feet I shot and wounded it, but did not see it fall; the only knowledge I had of hitting it was the usual amount of small feathers flying in the air, and if it had not been for King Mack, who trailed him up, he would have been left to die a hideous death by starvation, or worse, fall a prey to sly weasels or some stray skunk. A few days after this I made a snap shot on another grouse, and the feathers told the usual tale. He flew for over 40 rods, taking quite a curve, and as both of these shots were in the woods I could not see the birds long, this time King Lead got in his work, and I heard the flutter or would never have bagged him.—S. C. G.

STOCKTON, Kan.—There is an abundance of quail, cotton-tails, jack rabbits and prairie chickens. The latter are found only in the western part of the State, but as there was an abundant crop of wheat which was so short it could not be harvested, but which formed a good, firm berry, they are wintering splendidly; and, as this whole western country is practically depopulated, we may hope for good sport next season. I am sorry to state that the game law is wholly ignored out here, and many who profess to be sportsmen begin killing chickens as early as the latter part of June.—A. L. T.

EARLY WOODCOCK.—Meriden, Conn., Feb. 24.—While walking this afternoon with two friends in my back yard we flushed a large woodcock from a heap of old ashes. He flew about four rods and then squatted in under a bush. We flushed him again and he flew into a small field by the side of my house. We flushed him four more times in the field and then left him. I guess we could have kept on flushing him all night he seemed so tame. Is not this a rather early bird?—J. P. B. [It is not very unusual to see woodcock here in February.]

THE TRANSPORTATION OF GAME.

Editor Forest and Stream:

In *Forest and Stream*, letters he quoted from a letter of Mr. E. S. Bond of Chicago, Ill., regarding shipping game from a State. Mr. Bond said: "The point in question has been passed upon by courts of two or more States," and held "as unconstitutional on the ground that the Legislature had no right to interfere with commerce between States."

One might be led to believe that the question of unconstitutionality of State statutes to prevent the illegal killing and shipment of game within its territorial limits is not so one-sided as some would have us believe. Let us examine in the first place the commercial clause of the Constitution.

The Constitution of the United States, Section VIII., Article I., reads: "The Congress shall have the power: To regulate commerce with foreign nations, and among the several States and with the Indian tribes."

I hope to show that the non-export clause of the game laws is not in conflict with the Constitution. These laws (non-export) are merely the police powers of a State to protect certain property within its borders. We will now examine the evidence to show that this plea has some merit.

In *Rachford v. Huns* (95 U. S. 465) the United States Supreme Court said: "While we unhesitatingly admit that a State may pass sanitary laws, and laws for protection of life, liberty or property within its borders . . . it may not interfere with transportation into or through the State beyond what is absolutely necessary for its self-protection." It is "self-protection" for a State to prevent the wholesale slaughter of game for export. If not self-protection, what is it?

In *Pierce v. New Hampshire* (5 How. 503), the United States Supreme Court said: "That the police power of the States was reserved to the States, and that it is beyond the reach of Congress; but that such police power extends to articles only which do not belong to foreign commerce, or to commerce among the States, at the time the police power is exercised in regard to them; and that the fact of their condition is subject for judicial ascertainment." "That the power to regulate commerce among the States may be exercised by Congress at pleasure, and the States cut off from regulating the same commerce at the same time it stands regulated by Congress, but that until such regulation is made by Congress, the States may exercise the power within their respective limits." "That the law of New Hampshire was a regulation of commerce among the States in regard to the article [liquor] for selling of which the defendants were indicted and convicted; but that the statute was constitutionally passed, because of the power of the State thus to regulate, there being no regulation of Congress, special or general, in existence to which the State law was repugnant."

In *Machine Co. vs. Gage* (100 U. S. 678) the United States Supreme Court held that "A State statute imposing a like tax without discriminating as to the place of growth or produce of material or manufacture, was adjudged to be constitutional and valid, as made in and brought from another State."

It will be seen by the above decision of the highest court in this country that the exclusiveness of the powers of Congress to regulate commerce among the States was somewhat restricted.

In *Woodruff vs. Parham* (8 Wall. 123) the United States Supreme Court held "a State statute imposing a uniform tax on all sales by auction within it was constitutional as applied to sales of goods the product of other States, and sold in the original and unbroken packages."

The statute in question, while not aimed at inter-State commerce, must have some relation to the movement of goods from one State to another. While in the territorial limits of a State that State has the police power that extends to and controls the regulation of property—not barring game. In preventing the shipping of game from a State that State is simply maintaining the exercise of its police power, not in conflict with the Constitution. In *Coolley vs. Board of Wardens* (12 How. 299) the United States Supreme Court said: "Whatever subjects of this power [for Congress to regulate commerce] are in their scope national, or admit only of one uniform system or plan of regulation, may justly be said to be of such a nature as to require exclusive legislation by Congress until Congress should find it necessary to exercise its power, it should be left to the legislature of the States, because it was a local and substantial right, and likely to be best provided for, not by one system or plan of regulation, but by as many as the legislative discretion of the several States should deem applicable to the local peculiarities."

The idea that shipping game from a State is a national issue is certainly preposterous; it is simply a local issue. According to the opinions of the Supreme Court of the United States it certainly appears that States which have statutes forbidding the shipping of game killed within their borders are not attempting to regulate commerce, but are exercising a legitimate and appropriate exercise of their police power. These laws do not discrim-

inate against the citizens and products of other States in a matter of commerce, and do not prevent game being brought into and through the States.

In *Gibbons vs. Ogden* (9 Wheat, 203) the U. S. Supreme Court in relation to the police powers in States: "They form a portion of the immense mass of legislation which controls everything within the territory of a State not surrendered to the general Government, all which can be most advantageously controlled by the States themselves." "Inspection laws, quarantine laws, health laws, laws of every description, as well as laws regulating the internal commerce of a State." "No direct general power over these objects is granted by Congress, and consequently they remain subject to State legislation." The exclusive authority of State legislation is strikingly illustrated in the case *City of New York vs. Miln* (11 Pet. 102). In that case the defendant (Miln) was prosecuted for not complying with a statute of New York which required of every master of a vessel arriving from a foreign port in that of New York city to report the names of all his passengers, with certain particulars of their age, occupation, last place of settlement and place of their destination. It was argued this was an invasion of the exclusive rights of Congress to "regulate commerce with foreign nations and among the several States." It cannot be denied that such a statute operated at least indirectly upon commercial intercourse between the citizens of the United States and the citizens of a foreign country.

But notwithstanding the United States Supreme Court held it to be an exercise of the police power within the control of the State, and unaffected by the clause of the Constitution which conferred on Congress the right "to regulate commerce with foreign nations and among the several States." Pomroy's Constitutional Law (page 273) says: "The Constitution does not in any way transfer to Congress any absolute and unlimited power over commerce." "Only that with foreign nations, the several States and with the Indian tribes, is placed under the control of the National Legislature." "Transit and traffic therefore, which are entirely within the boundaries of a particular State, are completely subject to the jurisdiction of the Legislature."

Pomroy's Const. Law (page 311), on the police power of a State to regulate commerce, says: "It has been settled by a still more recent decision of the Supreme [U. S.] Court that a large mass of the powers of control and direction over inter-State means of traffic and transportation still remains in the State Legislature and is exclusively theirs, being beyond the competency of Congress. The measures which the States may thus adopt belong to their police power and are not regarded as true regulations of commerce, however much they may incidentally affect the process of traffic and transportation."

In *Peik vs. Chicago R. R. Co.* (94 U. S. 161) the U. S. Supreme Court decided that a State had the power to prescribe a schedule of charges to be made by railroad companies, not only for transporting persons or property within the State but also persons or property taken up outside the State and brought within it, or taken inside and carried without.

In *Prigg vs. Pennsylvania* (16 Peters 539) Mr. Justice Story, of the U. S. Supreme Court, says, in relation to the police power of a State, as follows: "The police power belonging to the States in virtue of their general sovereignty extends over all subjects within the territorial limits of the States and has never been conceded to the United States."

In *Levy vs. Hardin* (135 U. S. 128) Mr. Justice Gray, of the U. S. Supreme Court, said: "The police power of a State includes all measures for the protection of life, the health, the property and the welfare of the inhabitants, and for the promotion of good order and the public morals."

In *Sherlock vs. Alling* (93 U. S. 99) the U. S. Supreme Court said: "In conferring upon Congress the regulation of commerce it was never intended to cut the States off from legislation." " * * * though the legislation might indirectly affect the commerce of the country." "Legislation in a variety of ways may affect commerce and persons engaged in it, within the meaning of the Constitution." The U. S. Supreme Court very properly said in case of *State Tax on Railway Gross Receipts* (15 Wall, 293) that "it is not everything that affects commerce that amounts to a regulation of it, within the meaning of the Constitution." In *Munn vs. Illinois* (94 U. S. 113) the U. S. Supreme Court in relation to warehousing, and the powers of police power said: "Their regulation is a thing of domestic concern, and, certainly, until Congress acts with reference to their inter-State relations, the State may exercise all the powers of government over them, even though it may indirectly operate upon commerce outside its immediate jurisdiction."

Under these [police] powers the government (State) regulates the conduct of its citizens one toward another, and the manner in which each shall use his own property, when such regulation becomes necessary for the public good."

Mr. Chief Justice Taney, of the U. S. Supreme Court, in the *License Cases* (5 How. 523), said regarding the police powers of a State: "They are nothing more or less than the powers of government inherent in every sovereignty. * * * that is to say, * * * the power to govern men and things."

The State of Iowa had a law which read: "Section 4058. If any person bring into this State any Texas cattle, he shall be fined not exceeding one thousand dollars or imprisoned in the county jail not exceeding thirty days, unless they [cattle] have wintered at least one winter north of the southern boundary of the Missouri or Kansas line."

This law was claimed to be unconstitutional, and a case was carried to the U. S. Supreme Court in deciding this case, *Kimball vs. Ball* (129 U. S. 222), the court said: "The section in question is not unconstitutional by reason of any conflict with the commercial clause [Congress to regulate commerce among the States] of the constitution." It would appear that when a State statute which forbids the importation of Texas cattle, unless those cattle have wintered at least one winter, and the statute even specifying the limits, and the highest court of this country declares the section "not unconstitutional by reason of any conflict with the commercial clause of the constitution," a State ought, to control the transportation of game killed and shipped within its limits.

Many other cases can be cited bearing on the point that a State can legislate for the transportation of poultry within its territorial bounds without coming in conflict with the power of Congress "to regulate commerce."

HARTFORD, Conn.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

THE NEW YORK FISH COMMISSION.

Editor *Forest and Stream*:

Several articles have appeared in your paper lately adversely criticising Article I. of the proposed new game code reported by the Commissioners. The reasons for the recommendation of this article are that the present laws on this subject are meager, vague, incomplete and in as much need of revision as the game laws proper, and they are in such intimate connection with the game laws that for convenience of reference only, if there were no other reasons, they should be included in the same chapter.

The Commission of Fisheries in this State was established in 1868. The original purpose was to aid Seth Green in his then important experiments in fishculture. The Commissioners were to serve for two years, and were to make examinations of waters with reference to ascertaining whether they could be rendered "more productive of fish," and were to report at the next meeting of the Legislature, which they did, and their duties were ended. But in 1870, before their terms of office had actually expired, and in view of the success of Mr. Green's experiments, a three years' extension of their term of service was granted and they were directed to "establish the artificial propagation of shad, whitefish and salmon trout and take such other steps as they should deem necessary toward improving the fisheries of the State." In 1878 the Commissioners, then consisting of Horatio Seymour, Robert B. Roosevelt and Seth Green, were by a further act of the Legislature continued in office for three years. Mr. Green resigned in order that he might take active

charge of the operations of hatching at his own establishment at Caledonia and on the Hudson River, and Edward M. Smith, of Rochester, was appointed in his place. In 1878 an act was passed which continued the Commissioners in office indefinitely. The only further authority given to make appointments was to the Governor to fill vacancies. In 1879 a law was got through the Legislature by the efforts of a Mr. McGovern, of Long Island, and without the knowledge of the other Commissioners, requiring the appointment of an additional Commissioner to be a resident of Long Island. Mr. McGovern expected to be the Commissioner, but while he beat the bush Mr. Blackford caught the bird. In 1888, when the oyster franchise law was passed, a provision was inserted for the appointment of still another Commissioner, who should be a "practical oysterman," and under this law Commissioner Joline was appointed. The laws above referred to, the several statutes authorizing the establishment of hatcheries at Caledonia, Cold Spring, Adirondack and Sacandaga, which conferred no new general powers on the Commissioners, and the law of 1888, authorizing them to appoint game and fish protectors who should make reports to them, are all, substantially, that the statutes contain in regard to the organization duties and powers of the Commission. These powers are given in fragmentary statutes lacking cohesion, and many of them lapsed by the execution of specific acts required by them. The powers which the Commission possess to carry on their current operations are derived, not so much from the statutes referred to as from the terms currently used in the annual appropriations made by the Legislature.

Among other defects in the present laws is that they have the tenure of office uncertain. The term at first was for two years, then it was extended three years, and then made indefinite. It was the understanding of the Commissioners up to a recent time, that they held by a life tenure, and in this view Governor Seymour held for twelve years and Mr. Roosevelt for twenty, when their service ended by their respective resignations. Attorney-General O'Brien, by request of Governor Hill, for a construction on this point, gave an opinion, from an examination of all the statutes bearing on the subject, that the legal term was five years; but as there has been no appointment since the creation of the Commission to fill a vacancy except by death or resignation, there has been no judicial test on the subject. According to the Attorney-General's opinion the terms of Commissioners Blackford and Bowman have expired; so that the change proposed by the Game Code Commissioners has necessarily no bearing upon them. The Governor may make appointments in their places at any time. He could do no more under the new provision. Messrs. Burden, Joline and Huntington have yet several years to serve, and if the code bill passes in its present shape, two of them must be necessarily dropped.

It is obviously proper, with the state of facts presented, that the law should provide some definite time of service. Whether that term should be one, two, three or five years is not material as long as it is precisely specified. A life tenure is inconsistent with a republican form of government and ought not to be permitted in any office. All public offices should be amenable to the appointing power, and the nearer any official can be brought to an accountability to his constituents the better will be the safeguard to honesty and faithful service. Long tenures, even if for less than life, are also objectionable. No officer, from Governor down to constable, ought to be placed out of reach of popular discipline.

The proposed code provides that the Governor shall appoint three commissioners to serve for terms at first of one, two and three years respectively, and after the first term each serves for three years. This secures always in service two experienced commissioners and gives opportunity each year to infuse new blood if the appointing power deems it desirable. To preserve a just equilibrium between the different sections of the State it is further provided that no two commissioners shall be appointed from the same judicial department. There are five such departments, and the effect would be to give to the St. Lawrence and Adirondack regions, which now have no representative in the board, one commissioner. As the Commission is now constituted, four of the five commissioners are located in one department, and that is all at tidewater. The great interior of the State has but one representative, Mr. Bowman, of Rochester. The mode of appointment is not changed. The power is still with the Governor, to be exercised as he shall deem wise. If he chooses to appoint three of the present commissioners he may do so; but two are to be dropped. Who these two may be is no concern of the commissioners. In their work they do not represent persons, but have in view only the public interest as they regard it from an impartial standpoint. They do not at all recognize the necessity of five commissioners, but hold that the work may be more economically and better done with three. All experience goes to show that the smaller the number of any public commission the better will be the work. The larger the number the less will be the individual responsibility. The work of commissions and committees, whether the number be great or small, falls on one or two of the most earnest. A late member of the Assembly, noted for his industry and usefulness, remarked that the only committee on which he had satisfactorily served was composed of himself and one other member, and that the "other member" was too sick to do anything himself.

The case of the Commissioners of Fisheries is no exception to the general rule. It is true that each of four commissioners has a hatchery in his charge; but this charge is only nominal. It consists principally of an examination and formal approval of a monthly abstract of expense. The detail of the work is wholly in charge of the local superintendents, all of whom understand their business and give it faithful attention. The work of the Commission is legislative rather than administrative. They hold monthly meetings to receive reports, dispose of oyster applications and dispose of incidental business; but in the intervals there is but little to do except to attend to casual correspondence. One of the Commissioners, Mr. Joline, having no hatchery to supervise, is put nominally in charge of the work in the clerk's office in New York. But Mr. Doyle, the clerk, a competent officer, both directs and performs the work.

Another reason for the more equable geographical location of the Commissioners is to be found in the administration of the oyster franchise department. The oyster law of 1888 was so loosely drawn and gave such large discretion to the Board, that in order to sufficiently guard

the public interest they found it necessary to bind themselves by a rigid code of rules for the faithful administration of their trust. One of these rules required the assent to be entered on their records of three Commissioners to any grant. This was to give any one of the interior Commissioners, as it were, a veto power over the acts of the two tidewater Commissioners, who might perchance, from their location, be disposed sometimes to act from favoritism. But by the accidents of appointments, this check no longer exists, and three of the tidewater Commissioners may have the whole voice in making the grants. The change which the Commissioners propose, puts it out of the power of the tidewater men to favor or control local or personal interests.

But one more subject of criticism remains for notice. This is the objection urged against making the headquarters of the Commission at the Capitol. There is no law at present making this headquarters anywhere. For the convenience, it is alleged, of applicants for oyster franchises the Commissioners have opened an office in New York, which entails heavy expense for rent and general maintenance. All the State Commissioners except this have their headquarters at Albany, where ample office room is provided in buildings erected for public purposes. Here necessary interchange of communication with other public offices is always available. The Attorney-General is at hand to answer questions of law, in regard to which none need to be more frequently informed than the Commissioners of Fisheries. The Comptroller's and Treasurer's offices, also important adjuncts, are here. The Forestry Commission and the Chief Game Protector's office are both in the Capitol, where they ought to be, and the intimate relations between these and the Fish Commission demand that the offices should be as near to each other as may be. As to the oyster applicants, why is it not as proper for them to go to the Commissioners as for the Commissioners to go to them? But even this is not necessary. The code bill provides that every alternate monthly meeting may be held elsewhere than at the Capitol, so that if it should be more convenient in the administration of the oyster business to hold meetings at New York, Staten Island, Coney Island, the Great South Bay or anywhere else within the territory of the State, they have it in their power to do so.

It seems to me that the claim that the principal office should be held in New York, contrary to the case of all the other State Commissions, which are required to be located at Albany, has no just or even plausible basis.

RICHARD U. SHERMAN.

NEW HARTFORD, Feb. 23.

The New York Fishery Commission held a meeting on Friday morning in the office of the Chief Game and Fish Protector. The only business of importance transacted was the appointing of the president of the board, E. G. Blackford, to the vacancy existing in the Codification Commission, caused by the resignation of R. U. Sherman from the Fishery Commission.

RAINBOW AND BROOK TROUT CROSS.

Editor *Forest and Stream*:

Through the columns of the *Highland Star*, of Highlands, Macon county, N. C., I have read an article on the trout fishing of that section, from the able pen of Mr. Henry Stewart. I also note your remarks about the crossing of the *Salvelinus fontinalis* and the *Salmo irideus* in the stream of which Mr. Stewart makes mention.

Will you kindly allow one who has fished these waters for the past three summers to state that it has been his luck to capture a good many of the trout Mr. Stewart refers to, and that it is undoubtedly the case that they are crossing, the markings on the fish putting this beyond dispute. I have noted what appeared to me several degrees of crossing or at least a considerable degree of difference in the distinctness of the markings. I suppose the *irideus* being the larger and stronger fish is the reason that the crosses show more of that breed than the *fontinalis*. During the season of 1890 I noticed large quantities of these crossed fish apparently about one year old. I captured none older than that, which would lead to the conclusion that the crossing must have taken place during the season of 1889.

If you will still further permit me I would like to add my testimonial to Mr. Stewart's as to the superior quality of the trout fishing in western North Carolina. Since youth I have been an enthusiastic angler after trout, and have had the pleasure of fishing the best preserves of Scotland, and I must say that for size, numbers and fighting qualities the trout of North Carolina far surpass any I have met. The section being very little known to the fly-fisher, the trout are not very "knowing," and during the past season I have fished streams in that section on which a fly had never been cast till I arrived. The *Salmo irideus* referred to by Mr. Stewart are only to be found in one stream, a large portion of which is on that gentleman's estate, and as a game fish I must award them the palm, as I firmly believe that a 6in. *Salmo irideus* will afford more sport in the way of fighting than a 10in. *fontinalis*. They seem to have a tendency toward going down stream, as I have found large quantities of them from seven to eight miles below where they were first placed in the water, while I have never captured any above. This may be accounted for in some measure by the fact that the stream rapidly narrows down above and is much fished by pot-hunters, while below the stream as rapidly increases in size, and the nature of the glens and wild cañons that it rushes through affords the fish a better chance to escape the ravages of the "trout hog."

For beauty of scenery and reaches of water that would delight the heart of the tourist and the trout fisher it has never been my lot to see a better. Every conceivable kind of water can be found here, from the wild cascades and roaring waterfalls to the deep black pools and "wimpy" waters that chatters over gravelly bottom.

W. M. BROWN.

FLORENCE, S. C.

[We shall esteem it a favor if Mr. Brown will send us one or more of these hybrids for examination and inform us whether any artificially produced hybrids have been introduced into this region. Specimens can be safely forwarded in alcohol or strong whisky in a Mason or other glass jar and will be reported upon fully. We have never seen a natural hybrid among trout and salmon].

IN THE FRANCONIA WILDERNESS.

EIGHT o'clock of a foggy, drizzling, morning saw two friends and their guide issue from Sargent's farm house in North Woodstock, N. H., and turn their steps up the valley of the East Branch of the Pemigewasset River. The two friends had been playing at camping for a week or so on a beautiful knoll near the Hume House. They had not been strong enough for thorough camping, so they generally slept on their bed of spruce boughs, and lounged there, and spent rainy days there before a Nessmuk fire, but they turned up pretty regularly to inspect the morning and evening bill of fare at the Hume House. And in truth it bore inspection well, and never failed to materialize up to the full anticipation. Yet the two old campers longed for some genuine outdoor living in the heart of the wilderness which they had seen from the summits of their various mountain climbs.

And so here they were, wending their way toward the primeval forests which still shade the mountain springs of the East Branch of the Pemigewasset River. Their plan was to proceed northeasterly up the East Branch five miles to the Hancock Branch; then four miles up this, southeasterly, to the Forks of the Hancock. They would camp here for the night, and the next day go out by the south, through Mad River Notch, to Greeley's at Waterville, some eight miles distant.

As they tramped along the narrow but well-worn path from Pollard's up the East Branch—now by the rushing river, now just out of sight of it—they were an interesting and, withal, well-assorted trio. The two younger men were old and fast friends, who had taken many a hard tramp together, and shared at rarer intervals the same camp. We will call them the Fisherman and the Mountaineer. They both enjoyed all kinds of open-air exercise, and appreciated nature in all her moods, but the one thought the waterways led to the abodes of her fairest scenes and rarest secrets, while the other regarded her mountain tops as the right standpoint of observation. So they had impartially devoted themselves to the mountains, woods and streams of that beautiful region, nothing coming amis. Yet the Fisherman had rather the best of it, for their bodily strength was not as it had been in the days when they had taken their forty mile walk between breakfast and bedtime, or had carried their knapsacks from the Fulton Lakes of the Adirondacks to the heart of the Catskills in a week. The leisure scramble along the rocky stream beds was now a more appropriate exercise than the tough climbing which all the mountain-side imposed. Confining desk work had left their spirits still youthful, but, in spite of themselves, it had weakened their shoulders for the knapsack, and placed a limit shorter than the sunlight to their pedestrian powers. Yet they were confident that they could easily make the nine miles to the camping ground by a late dinnertime, and that the journey out could safely be tried after the next day's nooning. The intervening afternoon and morning would give a fair chance to explore the streams of that remote wilderness. So they planned.

The guide was a middle-aged man of gentle character and finer grain than one usually finds in his position. He had evidently sprung from good stock, but poor health and bodily weakness had kept him down. He could not wrestle with the rocks and stumps of his native fields as a thriving farmer must do in that region. So he had taken to fishing as a profession. His legs were his toughest part, and could carry him into the unfrequented places where trout still abounded, and his back was strong enough to take in his axe and provisions and bring out from 15 to 30 lbs. of dressed fish. Twenty pounds would net him \$5, and would take two or three days of hard work to catch and market. It was not large wages, for the season was short, but it kept him forehanded, and he had his horse in Sargent's pasture lot and his buggy in the wagon shed. He knew the wilderness through its waterways; in fact, he was half amphibious, like his companions in trade, the mink and otter. He was garrulous of himself, but was quaint and humorous in speech and clean in language, and was full of the lore of woods and water and weather. He was altogether a choice companion.

Meanwhile the party were wending their way along the trail making the most of the limited observation which a woodland path affords. A camp ground on the hillside, with its small patch of thinned trees and old bark shanty, was passed. Then the attention was taken with the foot of a slide which had come down a little brook, clearing out all of its trout, and spreading sand and stones and debris all around its mouth. Next a burnt patch was struck, where the young growth was about twenty feet high, and the trail was almost covered over by a rank growth of weeds which hung dripping with water. A little of this was passed, and the party arrived at the mouth of the Hancock Branch.

The stream came in on the opposite bank, and the travelers dimly supposed that a log bridge or some stepping stones would take them over. But they were soon enlightened. Charles quietly remarked, "Here is the best place to cross. You won't find the water more than knee-deep." He then cut a stout staff for each one and led them down. There were stepping stones, to be sure, but they were a foot under water. None the less they were highly useful, as they saved another foot of wetting. It was a curious sensation looking down through the crystal green of the water to pick the way along on the highest stones, while the current rendered the foothold uncertain and a misstep meant a douse up to the middle. The twenty or thirty yards of stream were soon crossed, and they saw before them the bed of the Hancock Branch. Here the party had expected to follow a "spotted trail" up to the Forks. Now, it takes three things to make a good wilderness trail. First, it must be blazed or "spotted." This is done by chipping a piece of bark as big as one's hand from that side of the tree which is toward a person as he walks, first on one side of the track and then on the other. Another set of blazes must also be made facing in the opposite direction to guide those going the other way. This makes a spotted trail. Next it is bushed out; that is, all the bushes and overlapping branches are cut off to make an open path. Lastly, it must be walked upon to render the track easy to follow and to make the ground firm for the feet. Now, a spotted trail is only better than the unmarked woods in that one will not lose his way. It will be rough to the feet, and tangled with bushes and overlain by logs.

On that particular day the ground was wet and slippery, and every branch and leaf hung dripping with rain drops. Progress on such a track would be slow and very

unpleasant, so the guide suggested that it would be much the best plan to go up the bed of the stream. This bed was peculiar. It was an open avenue, 30 to 40 yds. wide, paved with large cobblestones from 6 in. to 6 ft. in diameter, averaging some 18 in. Down this open space, crossing from side to side, ran the stream, in a deeper groove, similarly bottomed, and 5 to 10 yds. wide. Up the dry part of the stream bed the route now ran. It was slow work stepping from stone to stone, all slippery from the rain. After a few hundred yards the stream came so close to the wooded bank that it was necessary either to take to the woods or to ford the stream. Charles at once settled the question by quietly wading across to the open rocks on the other side. Again the feet and ankles, and even the knees, were well cooled off. This process of crossing and recrossing was repeated time after time.

Meanwhile the hours were rapidly passing, and the four miles to the falls seemed indefinitely lengthened. By noon it seemed as if they must have gone the whole distance, and yet the guide said that their camping ground was yet a long way off. So a halt was called and a cold and cheerless lunch was eaten, for there was not time enough to start a good fire.

Up to this time the novelty of the whole experience had kept it interesting, but as the hours wore away into the afternoon it became very monotonous. The fisherman's heart sank with a sense of irreparable loss as reach after reach of the stream was passed with no stop for fishing. How he longed to halt right there and set the guide to camp building while he and his friend enticed the wary trout from the crystal green of the pools. Everything made it an ideal place for a mountain camp. Of course nothing can equal a lakeside as a camp site, but most inland camps are so shut in that there is no outlook nor that sense of breadth which belongs to the woods. But here was the long stretch of open stream bed, most of it dry, opening up the sky and the distant mountains and affording long ranges for work with the rod without either bush work or wading. The fly-fisherman could stand 10 yds. from his pool on dry stones and cast 10 yds. behind him with no fear of obstructions. The user of the worm while well concealed could throw his bait into the rapids and falls and let it drift down to the deeper eddies and around the big stones in the manner most natural and taking for trout. A few logs felled across the stream would have given a mile of such fishing with neither need nor much risk of even wetting the feet. The stream was not often visited and was of size enough to insure large fish. But the travelers did not stop, for the Forks must be made without any delay if a camp was to be made there before dark. So they pushed on up the narrowing stream, which ran and now filled its bed till the last of the traveling was by wading.

At last the Forks were reached. But no map nor guide can convince those men that they had gone but four miles since wading the East Branch. They had tramped pretty steady from 10 to 3, and would have believed that the distance was eight or even ten miles. But it was now accomplished, and a little search revealed the old camp where they were to stop. Gladly they dropped their knapsacks and bundles and rested their tired frames. But time pressed them. If they were to fish now was the chance. So, leaving the camp to the guide, they took rods and creel and explored the pools of the East Fork. It was like going up stairs. Six or ten feet of rise and thirty feet level. But the trout were there, and one or two came out of every piece of deeper water. Worms and flies were both used and the fish bit equally well at each, but they hooked themselves more readily on the worm. Over boulders and drifted logs, back into the heart of the great wilderness, and up toward the tops of the high ridges the anglers pushed their way till the waning light warned them to return. Then they halted and poured out the creelful of fish on a flat rock and counted up into the nineties. It is true that they were small, but that detracted nothing from their beauty or excellence. Down, down the rocky terraces the pair rapidly proceeded. The rain had ceased some time before and the rocks were now dry, but they risked some falls in their quick descent. As the dusk of evening crept forth from the shadows of the pines and hemlocks to veil the whole landscape, the now weary trampers threw themselves before the bright fire with that delicious feeling which comes only to the true camper. The guide might gently remonstrate that they were late in getting in if they wanted trout for supper. They put fish and all further arrangements into his hands and abandoned themselves to fate, thoroughly happy except for some feeling that intimated that when the supper should be ready it would not be long neglected.

Their waterproof coats had kept the rain out as far down as their waist, and they began to consider some further lowering of the dry line. Soon a motly array of trousers, shoes, stockings and linen hung from camp poles, and improvised horses, glowing brightly in the firelight and steaming off their moisture, while the owners were trying to find the line of comfort, where they would neither shiver with cold nor scorch with heat.

Meanwhile Charles appeared with the trout. He took a tin plate and made a long handle for it by splitting the end of a sapling and inserting the edge of the plate in the cleft. Then some slices of salt pork were put in the plate and it was held over the fire until a skim of boiling grease covered the pan. Into this the trout were dropped, and the most savory of odors curled with the smoke around the camp. Meanwhile the tea can was boiling away on the fore log, and also a kettle of eggs, and it was not long before tea, eggs, trout and bread and butter began rapidly to disappear. What feast could be better? And what could equal the luxury of the repose after the meal, every sense satisfied, the body refreshed, and the tide of life rising higher and higher as the minutes passed. The only temporal thing that claimed any care was the gradual resumption of the dried clothing and the inspection of the quarters for the night.

The old camp had been much repaired by Charles's industry. It was about seven feet square and four feet high in front, sloping back nearly to the ground, thatched and sided with henlock bark, mostly freshly peeled by the guide. Close in front was the bright fire, and at the side was a generous pile of wood for the night and early morning. The bed might have been thicker, but the bushes were so wet that new browse could not be stripped. Yet the old bed had some softness left, and when it was covered with thin sheets of bark from the white birch it looked very inviting to the weary campers. The party turned in about 9 o'clock, and there was not much time

wasted between then and the next daylight. All night the fire was kept just not too hot by the occasional attention of the faithful guide, and whenever they waked it was with a sense of pleasant glow.

The next morning found them in no hurry to stir. The hard tramp, with its unusual experiences of rock climbing and wading, still affected them. Also the hearty supper eaten just before retiring left them with less than the usual appetite. But by the time some trout were fried and some tea made and a dish of corned beef frizzled, the appetites were ready for a square meal.

And now Charles prepared to take his departure down stream, leaving the two to go on southward along the trail, which from that place was both spotted and foot-worn. They bade their escort a hearty farewell, threw an extra dollar into his pay, and hoped that the next time they went into the wilderness they would have Charles Huckins for a guide and not less than a week for the trip.

It was agreed between the two that the Fisherman should have till 10 to try the stream again, while the Mountaineer rested in camp. Fisherman used this time, and in an hour and a half ten trout were brought to the creel, of which one was the largest caught on the whole trip. Even it was not more than 11 in. long. But the Fisherman found no such water as had been passed a few miles below. In due time they met at camp and packed up for their further journey. They hoped to reach Waterville by one or two in the afternoon. Still they took some bread, and butter, and salt and meat from their stores, besides the trout. Their packs also contained plates, cups, knives, forks and spoons, besides rubber clothing and a few extra garments. The Fisherman carried his duffle in a canvas knapsack made on Nessmuk's pattern. The Mountaineer was content with a shawl-trap. Thus equipped, they bade farewell to the Forks of the Hancock and took up their march.

Now the Fisherman had recently taken to wearing glasses, and was not yet so accustomed to them as always to remember to put them on again when he had laid them aside for any purpose. He had nearly lost them several times, and hoped that he had his last lesson in carefulness. But no, for when the train had stopped to rest awhile after an hour's tramp it was discovered that the glasses were again missing. After humbly appeasing the wrath of his comrade, the luckless loser cached his knapsack and rod and started back to camp to look for them. He searched the camp and the stream side; he examined minutely the places where he had performed his morning ablutions and had stopped to drink; but no glasses gladdened his anxious and now tired eyes.

By this time it was evident that Waterville would not be reached in time for dinner. So he made one more visit to the few remaining camp stores for some further supplies. This done, he paused to take a final glance at the camp, and lo! his eyes fell on the missing spectacles. These were quickly fitted to their place, and the pleased finder hurried back on the now familiar trail. Sounds of distant thunder spurred him on, and he soon rejoined his waiting comrade. It was now noon and both were ready for dinner. So a halt was soon called, and a fire built. In front of this was stuck up a stout bush with its branches trimmed short. On each of these spurs a trout was hung. An occasional turning was the only further attention they needed. Meanwhile the remaining corned beef was hashed in a plate and mixed with some stale bread duly seasoned. The edge of the plate was inserted into the cleft end of a long stick, and held by this handle over the fire. The trout were excellent and all were eaten. The corned beef scalloped tasted of coffee, from too intimate association with that article at some past time. Nevertheless there was none of it thrown away.

Refreshed by the fire and lunch, the party again took up the trail, just as the thunder storm broke over them. The ground became suddenly sticky, and the bushes were saturated with water. Their netter clothing soon was equally wet. Still they pushed on, going through the Mad River Notch and coming out on the little Greeley Ponds. Here they saw a welcome sign of 4 M. On they trudged over a beaten trail, and when they had begun to think that they must have passed unnoticed the third notch sign, they came upon the 3½ M. Then and there they revised their estimate of time for wilderness traveling. On a fine road they could make four miles per hour, but on a trail, under a knapsack, it should be cut down to 1½ or 1. Finally, at 5 o'clock, they emerged into the Waterville Clearing, soaked from the waist down. They could not go to the hotel in that plight, so they found a secluded sand bank by the Mad River, collected some dry drift wood and started a fire. Again they hung out their wash on improvised clothes poles, the fire, meanwhile, supplying the need of more extensive covering. A half hour of steaming sufficed, and, ironing being dispensed with, the garments were returned to their places. But, alas, the Fisherman learned a lesson about the rapid drying of wet leather, for his shoes were so shriveled that the whole uppers cracked open, and the soles threatened to fall off at every step.

As they sought the comfortable quarters of the hotel, they moralized on the need for proper precaution in wilderness traveling. They concluded that events might easily have happened which would have left them out in the woods all that night, with no ax or hatchet, no tent and no food. It is true they could have put together a brush shelter, and kept a fire going with dead wood, and probably caught a trout, but it would have been a very uncomfortable experience; while an ax or hatchet, and a pound of cornmeal, would have rendered them equal to any emergency of delay. So they unanimously adopted the resolution never to go into the wilderness again without some means of cutting wood and a supply of light provisions. In coming out of the primeval forest into civilization, no more fitting place for transition could be found than this settlement of Waterville.

A line of farms had crept from the open country of the Pemigewasset, 10 miles up the narrow valley of the Mad River, till it reached a broad interval of a few hundred acres, right in the heart of the wilderness, and 1,500 ft. above the sea level. On all sides of this rise the peaks of the lower Franconia Mountains, 2,500 to 3,000 ft. higher. Down the gorges between these rush the streams which here unite to make up the Mad River. The waters abound in trout and through the woods and up the mountains have been opened more than 50 miles of paths and trails. It is a most charming gateway to the untouched haunts of nature, either for entrance or exit. They tarried in it

but for the night and then tramped down to the train at Campton. The trip was over, but the memory of it is as green as the hemlock mountainside, as clear as the water that leaps down Mount Hancock and as cheering as the aroma of the evening camp.

PENN.

ANGLING NOTES.

It seems to be the universal opinion of those who have had experience in restocking trout waters that 100 yearlings will improve a pond or stream more than 10,000 fry. The only way fry seem to thrive is by placing them in tiny trickling springs, where it is impossible for their enemies to follow or see them, or else to keep them in little artificial ponds where they can be fed and protected until able to look out for themselves. Of course these small ponds should be covered with wire netting to prevent the herons, kingfishers, frogs, watersnakes, minks, etc., etc., from feeding on them. It is also said that a great many of the little fry are dead when they are turned out of the cans, but this the owner rarely hears of, they go in all the same and count as being delivered.

How severe or warm winters affect the trout and black bass seems to be an open question. When there is little or no ice on the ponds and streams the fish must get more food and air and be in better condition in the spring than when the waters are frozen up all through the winter. In very severe weather both trout and bass bury in the mud to escape freezing. There is one thing certain, many a fine bass is caught through the ice by those who fish for pickerel in the winter season.

According to reports from Maine brook trout are being caught through the ice in great numbers. No wonder anglers often find such poor fishing at the beginning of the season when they flatter themselves they are first on the ground.

The latest "fad" in trout rods is to have them colored black, ferrules and all, making the angler look as if he was in mourning. This notion is taken from the English, and is supposed to prevent the fish seeing the glister of the rod when in motion. When the angler gets so near trout or bass as to enable the fish to see him casting, it matters little whether his rod is black or white, the motion made is sufficient to render the fish suspicious. The only way when the water is low and clear is to fish up stream and approach his victim from behind.

Some one interested in Lake Edward is trying again to boom that place by giving marvelous accounts of the trout fishing there. The truth is there is little if any fly-fishing to be had excepting in the streams that empty into the lake, and they are all private and protected. To kill trout there, the angler must descend to deep bait fishing, and it is indeed rare to hear of one being caught of over 2 lbs. in weight. In fact nearly all the good trout waters back of Quebec are private property.

The first flounders of the season have been caught in Coney Island Creek. This is always considered a sure sign of the approach of spring. On the evening of Feb. 25 the peepers could be heard piping in every direction in the country, but on the 27th it was snowing, and this morning (the 28th) the thermometer marked only 11°, and felt more like winter than any time since Jan. 1.

During the month of March the weather is very uncertain, and though the strawberries, green peas and asparagus and glistening shad abound in the markets, one can not tell whether to get out his tackle or invest in snowshoes and a toboggan.

SCARLET-IBIS.

PENNSYLVANIA WATERS.

I FIND on looking over my record that the season of 1890 was not even an average one. On the opening, May 30 last, the general opinion of fishermen in this locality was that it would be a very good one, which, of course, meant that many fish would be caught. This opinion was based on the fact that the preceding winter having been mild bass would multiply and grow faster on that account. This hypothesis is certainly wrong if judged by results. In place of multiplying they appear to have diminished, both in number and size.

Early in the season I visited a favorite spot known as McCormick's Island, about two miles above Harrisburg, where the stream runs clear and deep over a rocky bottom, where small islands of sand have formed, bearing a crop of long, coarse grass. Great rocks and shelvings are here and deep pools. If the fisherman be a lover of nature, with an eye for the beautiful (and who among them has not?), he will find enough here to chase the hours away. I succeeded on this occasion in capturing one snuffish, where on previous occasions I had caught 25 and 30 bass. My experience all through the season of 1890 was of this character—very few fish. The most I took at any one time during that year was 9. The largest was 3 lbs. My experience appears to have been the same with the majority of fishermen in this locality.

HARRISBURG, Pa. T. H. J.

From Warden J. W. Hague, of Pittsburgh, Pa., we have the following interesting notes on the good results obtained by persistent and impartial enforcement of wise laws regulating the taking of fish in western Pennsylvania. We hope others may continue the good work and reap a similar reward.

"The recent floods reveal the fact that the protection of last year has increased the fish in the Allegheny and Monongahela rivers about this city. Large carp and salmon have been found in the cellars of the houses of the flooded districts after the waters receded, and large numbers of the jack salmon are seen in the eddies of the river. [Salmon and jack salmon are wall-eyed pike.] As a result, the poachers are hard at work at night to get supplies of these fish, and the silent watches of the night are employed by them to do their devilish work. For two years past the warden has been watching a place at Sewickley, twelve miles west of Pittsburgh, for parties who have been cleaning out the fish at several pools at that point; and last night succeeded in capturing the seine, which was 33yds. long and worth \$50. To-day the sportsmen are rejoicing over the event, and the matter of protection has risen in their minds.

"The weather here is warm and the song birds are making their appearance. Everything indicates an early spring."

THE SAGADAHOC ASSOCIATION.

BATH, Me., Feb. 23.—*Editor Forest and Stream:* The annual meeting of the Sagadahoc Fish and Game Association was held on Friday evening last, and the following officers elected: Dr. Chas. A. Packard, President; James Purinton and Wm. E. Hogan, Vice-Presidents; Geo. H. Nichols, Brunswick; S. W. Carr, Bowdoinham; Aug. Hatch, Bath; Chas. H. Greenleaf, Bath; Chas. B. Furber, Bath, Executive Committee; Geo. E. Newman, Secretary and Treasurer.

The following resolution was unanimously passed: *Resolved*, That we not only protest against the repeal of the present law in regard to the use of seines in our rivers and within three miles of our coast, but respectfully suggest to the members of the Legislature now in session, that the law be made so effectual in its operation as to entirely prohibit this mode of exterminating our food fishes, under the severest penalties.

A desperate and determined fight is being had in the Maine Legislature over the law in regard to the use of seines, the porgie men appearing before the committee in force. But it now looks as if their cause was a hopeless one, and there is a possibility that the present law will be cleared up so that the law breakers will have no chance of escape. It looks as if these seiners were pursuing their nefarious business utterly regardless of the law or the wishes of the people, and an employee on one of their steamers last season informed me that they were directed to follow the fish wherever they went, and they did so. A case against two steamers that fished within half a mile of the shore off Cape Small Point and in Small Point Harbor is entered for trial at the next term of the Supreme Court, at Bath. I have faith to believe that the people of Maine can no longer be deceived by the misrepresentations of unscrupulous men engaged in the destruction of the food fishes along our coast, who assert as their most convincing argument that the greater the destruction of the fish the more they multiply! Why, it was stated before the committee by a gentleman who had been for two years engaged in the business, that ninety per cent. of the mackerel caught during that time were thrown overboard as unfit for commercial purposes.

TROUT IN THE NAUGATUCK VALLEY.—Waterbury, Conn., Feb. 23.—*Editor Forest and Stream:* In the current issue of your valued journal I notice that "Notlikes" has been making a tour of the Naugatuck Valley and vicinity. And although much pleased to see mention made of this section and the sport to be had piscatorially I am forced to remark that some of his "authentic information" is inclined to be a trifle "off." We did have good fishing—the best for years—but unfortunately the prospects are not so bright for the coming season. The largest trout captured in this vicinity was taken on the opening day (and a horrible one it was) from Long Meadow by Dr. S. B. Munn and weighed 2 lbs. 6 oz. five hours after being caught. In Naugatuck the genial Col. Tolles (not Tolley) did indeed scoop one from Hop Brook which tipped down at 1½ lbs., but it was by no means the largest, as S. D. Bingham, G. C. Squires and the writer each brought in a number from the Ten-Mile River and Quinnipac section of good two-pounders. Stocking has greatly improved all these waters the past few years, but the two preceding extremely mild winters had much to do with the size of the fish.—J. W. G.

A CARD FROM COMMISSIONER BLACKFORD.—New York, March 3.—*Editor Forest and Stream:* My attention has been called to a card published by John D. Collins of Utica, in which he intimates that there is a letter or letters of mine which would show that I had written something at some time or other to some one, suggesting or urging them to violate the trout law for my personal benefit. All that I care to say in reply to this, is virtually what I said in my card in the FOREST AND STREAM two months ago: That I challenge Mr. Collins or any other one else to produce, publish or exhibit any letter of mine which would show that I had been guilty of anything inconsistent with my position as Commissioner of Fisheries of the State of New York.—E. G. BLACKFORD.

THE CHUBB FACTORY FIRE.—Thousands of anglers will sympathize with Mr. Thos. H. Chubb, of Post Mills, Vt., in the serious calamity which has come upon him in the destruction of his factory by fire on the 23d ult. The loss is put at \$65,000, with an insurance of \$20,000. Mr. Chubb is a man of grit and stout heart, as the immense business built up by him testifies. In a letter just received from him he tells us that he has set up in an empty mill what little machinery was saved from the wreck, and hopes soon to get into shape again. He is filling retail orders, and while the stock holds out he naturally hopes that his friends may not be deterred by the reports of the fire from sending their orders. We have received and will notice next week the Chubb catalogue for 1891.

PROTECTION OF POTOMAC FISHES.—An effort has been made by a majority of the committee on the District of Columbia to have referred to the committee on merchant marine and fisheries the Senate bill containing the old law intended for the protection of Potomac River fishes, especially upon their spawning grounds within the District. The latter committee has reported a bill framed for this purpose, and will call up the subject at the earliest opportunity. The opposition to the movement comes as usual from the fishery interests, and has been sufficiently powerful to delay this greatly needed legislation.

TROUT IN MEXICO.—Under date of Feb. 18, 1891, Señor Cházari, Fish Commissioner of Mexico, wrote to Col. John Gay that he now has, from the U. S. Fish Commission, eggs of brook trout, lake trout and von Behr trout (*Salmo fario*) in good condition. The hatching process was going on satisfactorily and with small loss.

FIRST NORTH RIVER SHAD.—On Saturday, Feb. 28, a fine roe shad weighing 5 lbs. was taken off Perth Amboy, New Jersey. This is the earliest date on record for the appearance of the North River shad. It was on exhibition at Blackford's, in Fulton Market, a part of the day, and then sent to Chauncey M. Depew.

A NEW HAND GRASP FOR RODS.—We have examined with interest a new cork and celluloid hand grasp for fishing rods, devised by the Syracuse Bamboo Furniture Co., of Syracuse, N. Y. This appears to us a valuable invention, comprising as it does bulk, lightness and a material which is readily held in the hand without slipping. Its size fills the hand so that it is grasped without effort; its lightness does not alter the balance of the rod, and the cork is easily held firmly, that is, it does not slip. We are informed that a patent on this improvement has been applied for.

A TROUT KILLED BY AN OAR.—The Cedars, Oakdale, Long Island, Feb. 28.—On Feb. 26 a captain of an oyster boat killed a brook trout weighing 3 lbs. in the Great South Bay near Sayville. He was killed by the stroke from an oar.—ALFRED A. FRASER.

Fishculture.

LIST OF FISH COMMISSIONERS.

- UNITED STATES—
(Office Sixth and B streets, S.W., Washington, D.C.)
Col. Marshall McDonald, Commissioner; J. W. Collins, in charge, Division of Fisheries; Richard Rathbun, in charge, Division of Scientific Inquiry; T. H. Bean, Ichthyologist and Editor; J. J. O'Connor, Chief Clerk; John Gay, Inspector of Stations; H. A. Gill, Disbursing Agent.
- ALABAMA—
Col. D. R. Hundley, Madison; Hon. Chas. F. G. Doster, Prattville.
- ARIZONA—
T. W. Otis, Chairman, Prescott; John Howard, Prescott; C. W. Stearns, Phenix.
- ARKANSAS—
H. H. Rottaken, President, Little Rock; W. B. Worthen, Secretary, Little Rock; J. W. Calloway, Little Rock.
- CALIFORNIA—
Joseph Routier, President, Sacramento; C. M. Josselyn, San Francisco; J. Downey Harvey, San Francisco.
- COLORADO—
Gordon Land, Denver.
- CONNECTICUT—
Jas. A. Bill, Lyme; Robert B. Chalker, Old Saybrook. The Shellfish Commissioners are: Dr. Wm. M. Hudson, Chairman, Hartford; George C. Waldo, Bridgeport; Bryant A. Treat, Wallingford.
- DELAWARE—
Charles H. Shubert, Odessa; Dr. E. G. Shortlidge, Assistant and Superintendent of Hatcheries, Wilmington.
- GEORGIA—
R. T. Nesbitt, Atlanta; Dr. H. H. Cary, Superintendent, La Grange.
- ILLINOIS—
N. K. Fairbank, President, Chicago; Dr. S. P. Bartlett, Secretary, Quincy; George Breuning, Centralia.
- INDIANA—
Col. W. T. Dennis, Richmond.
- *IOWA—
E. D. Carlton, Spirit Lake; Ole Bjorenson, Superintendent.
- KANSAS—
John M. Brumbaugh, Concordia.
- KENTUCKY—
This State is said to have no Commission now.
- MAINE—
E. M. Stilwell, Bangor; Henry O. Stanley, Dixfield; B. W. Counce, Thomaston, Sea and Shore Fisheries.
- MARYLAND—
G. W. Delawder, Oakland; G. R. Rider, Salisbury.
- MASSACHUSETTS—
F. A. Brackett, Winchester; E. H. Lathrop, Springfield; Isaiah C. Young, Wellfleet.
- MICHIGAN—
Herschel Whitaker, President, Detroit; Dr. J. C. Parker, Grand Rapids; Hoyt Post, Detroit; Wm. A. Butler, Jr., Treasurer, Detroit; George D. Mussey, Secretary, Detroit; Walter D. Marks, Superintendent, Paris.
- MINNESOTA—
Robert Ormsby Sweeney, President, Duluth; Niles Carpenter, Rushford; Wm. Bird, Fairmont; S. S. Watkins, Superintendent of Hatcheries, St. Paul. Assistants: Bernard Kittel and John M. Marty.
- MISSOURI—
H. M. Garlich, Chairman, St. Joseph; J. L. Smith, Kansas City; Edw. Cunningham, Jr., St. Louis; A. C. Garlich, Secretary, St. Joseph. Superintendents: Phillip Koplin, Jr., St. Louis; James W. Day, St. Joseph.
- NEBRASKA—
W. L. May, President, Fremont; J. C. McBride, Lincoln; B. E. B. Kennedy, Omaha; M. E. O'Brien, Superintendent, South Bend.
- NEVADA—
George T. Mills, Carson City; Ernest Harris, Deputy Carson City.
- NEW HAMPSHIRE—
George W. Riddle, Manchester; Elliott B. Hodge, Plymouth; John H. Kimball, Marlborough.
- NEW JERSEY—
Wm. Wright, Newark; Frank M. Ward, Newton; Robt. D. Foote, Morristown; W. A. Newell, Pennsville.
- NEW YORK—
Eugene G. Blackford, President, 80 Fulton Market, New York; L. Huntington, New Rochelle; William H. Bowman, Rochester; Henry Burden, Troy; A. S. Joline, Tottenville. Superintendents: Fred Mather, Cold Spring Harbor; Monroe A. Green, Caladonia; J. G. Roberts, Adirondack; E. F. Boehm, Sacandaga; E. L. Marks, Fulton Chain. Clerk and in charge Engineer's Department: Edward P. Doyle, Room 50, Fulton & Market Bank Building, New York. Shellfish Commissioner: Eugene G. Blackford. State Oyster Protector: Joseph W. Mersereau, 80 Fulton Market, New York. Chief Game and Fish Protector: J. Warren Pond, Albany.
- NORTH CAROLINA—
No Commission.
- OHIO—
C. V. Osborn, President, Dayton; James A. Henshall, Secretary, Cincinnati; E. D. Potter, Toledo; J. H. Newton, Newark; Wm. R. Huntington, Cleveland; G. W. Hull, Chief Warden, Lima; Wm. Lantz, Supt. of Fisheries, Sandusky.
- OREGON—
F. C. Reed, President, Clackamas; E. P. Thompson, Portland; R. C. Campbell, Ranier. (Term expires Feb. 18, 1891.)

PENNSYLVANIA—

Henry C. Ford, President, Philadelphia; James V. Long, Corresponding Secretary, Pittsburgh; Henry C. Demuth, Secretary, Lancaster; Walter L. Powell, Treasurer, Harrisburg; S. B. Stilwell, Scranton; L. Streibner, Erie, Superintendents; J. P. Creveling, Allentown; William Buller, Corry.

RHODE ISLAND—

Henry T. Root, Providence; Wm. P. Morton, Johnston; J. M. K. Southwick, Newport.

*SOUTH CAROLINA—

Hon. A. P. Butler, Columbia.

*TENNESSEE—

W. W. McDowell, Memphis; H. H. Sneed, Chattanooga; Ed. D. Hicks, Nashville.

UTAH—

A. Milton Musser, P. O. Box B, Salt Lake City.

VERMONT—

Hon. Herbert Brainerd, St. Albans; F. H. Atherton, Waterbury.

VIRGINIA—

Dr. John T. Wilkins, Jr., Bridgetown.

WEST VIRGINIA—

C. S. White, President, Romney; F. J. Baxter, Treasurer, Sutton; N. C. Prickett, Secretary, Ravenswood.

WISCONSIN—

The Governor (*ex-officio*); Philo Dunning, President, Madison; C. L. Valentine, Secretary and Treasurer, Janesville; Mark Douglas, Melrose; A. V. H. Carpenter, Milwaukee; Calvert Spensley, Mineral Point; E. S. Minor, Sturgeon Bay; Jas. Nevin, Superintendent, Madison.

WYOMING TERRITORY—

Louis Miller, Laramie.

DOMINION OF CANADA—

Hon. C. H. Tupper, Minister of Marine and Fisheries, Ottawa; Hon. John Tilton, Deputy Minister, Ottawa; S. P. Bauser, Chief Clerk, Ottawa; Samuel Wilnot, Superintendent of Fishculture, Ottawa. Inspectors of Fisheries: J. R. Kinney, Yarmouth, N. S.; R. C. Hockin, Picton, N. S.; A. C. Bertram, North Sydney, N. S.; J. H. Pratt, St. Andrews, N. B.; R. A. Chapman, Moncton, N. B.; D. Morrow, Oromocto, N. B.; E. Hackett, Tignish, P. E. I.; W. Wakeman, Gaspé Basin, P. Q.; Thos. Mowat, New Westminster, B. C.; Alex. MacQueen, Winnipeg, Manitoba; F. C. Gilchrist, Fort Qu'Appelle, N. W. T. Officers in Charge of Fish Breeding Establishments: Chas. Wilnot, Newcastle, Ont.; Wm. Parker, Sandwich, Ont.; L. N. Catellier, Tadoussac, Quebec; H. Davis, Gaspé, Quebec; A. M. Moore, Magog, Quebec; Alexander Mowat, Restigouche, Quebec; A. B. Wilnot, Bedford, N. S.; C. A. Farquharson, Sydney, N. S.; Isaac Sheasgreen, Miramichi, N. B.; Chas. McCusky, Grand Falls, N. B.; Thos. Mowat, New Westminster, B. C.

NEWFOUNDLAND—

Hon. A. W. Harvey, Chairman, St. Johns; M. Harvey, Secretary, St. Johns; Adolph Nielsen, Superintendent of Fisheries, St. Johns.

*No information was received from these commissions.

COMMISSIONER McDONALD EXONERATED.

THE Committee on Fish and Fisheries of the Senate, to whom was referred the resolution of June 3, 1890, as follows: "Resolved, That the Committee on Fish and Fisheries be, and it is hereby, instructed to make an early inquiry into the administration of the affairs of the United States Fish Commissioner's office, and especially in respect of the changes in the force, compensation paid to employees, and any alleged favoritism, or other undue administration, and report to the Senate thereon; Resolved, That the said committee have power to send for persons and papers," made the following report, which was ordered to be printed Feb. 21, 1891:

The passage of the foregoing resolution was owing to the publication of certain charges of a rather sensational character which appeared in the press of the country, seriously reflecting, not only upon the administration of the affairs of the Fish Commission, but also upon the character and integrity of some of the officials connected therewith.

The charges so made having been brought to the attention of the Commissioner, he very promptly caused an investigation.

The charges summed up can be best expressed in the words: Inefficiency, extravagance, dishonesty, political favoritism and nepotism.

Your committee, at its first meeting after the passage of the resolution of investigation, appointed a sub-committee consisting of its chairman and Senators Blodgett and Squire to investigate the affairs of the Fish Commission in respect to the charges referred to. Every person whose name was known to the committee as being in any way connected with the publication or dissemination of the said charges was notified that the committee would give him an opportunity to be heard, and would also be glad to have him submit the names of any persons whom he desired subpoenaed; also that any material and relevant interrogatories which he might desire to have propounded to witnesses would be so propounded upon filing the same in writing with the clerk of the committee.

In all sixty-three witnesses were sworn and examined, a very great majority of whom were subpoenaed at the special instance of the persons appearing to have charge of the case against the Fish Commission. In every instance the committee accepted all the interrogatories filed, and although many were of doubtful relevancy they were propounded to the witnesses designated, and also upon request of the same individuals subpoenas were issued for every person whose name was furnished, where it was in the least made to appear that the testimony of such persons would be at all relevant to the subject matter of the investigation, and great care was exercised to secure a full and impartial investigation of the pending charges without favor to any one.

The testimony so taken and submitted with this report comprises over 600 printed pages.

It will suffice to say in a general way that not one of the charges affecting the administration of the affairs of the Commission or the standing and integrity of any official connected therewith has been proven to have any foundation in fact whatever.

It is true, as has been charged, that the force of assistants employed in connection with the work of the Commission has been increased over the number employed in former years, and that there has been a corresponding increase in the cost of maintaining it; but it must be remembered that during the fiscal year ending June 30, 1887, there were but twelve fish-hatching stations in operation, while during the year ending June 30, 1890, there were twenty-one; also that the production of eggs, fry and yearling fish for the fiscal year ending June 30, 1887, was 259,000,000, while for the year ending June 30, 1890, it was 358,000,000, or an increase of 99,000,000.

It should also be remembered that the amount of money available for the propagation of food fishes and for the general administration was in 1877 \$126,614.92, while in 1890 it was only \$160,000. We feel warranted in saying that the practical and scientific results of the work of the Commission exceed anything heretofore attained and that with a very moderate increase in cost to the Government over former years.

In conclusion, your committee, in view of the great importance to the country of the work of the Commission and the urgent necessity for its continuance, ask a careful examination of the testimony herewith presented, believing that it is sufficient to convince all fair-minded persons that there is no just cause to criticize the policy of the Commission or the course of the Commissioner and his subordinates in the matter of administration, but on the contrary that they deserve commendation for the conscientious work which they are performing.

THOMAS B. STOCKBRIDGE.
WATSON C. SQUIRE.
RUTUS BLODGETT.

THE VERMONT HATCHERY.—Rutland, Vt., Feb. 23. Gov. C. S. Page has announced the appointment of two of the Hatchery Directors. Dr. H. H. Swift, of Pittsford, and Chas. C. Warren, of Waterbury. It is rumored that the

hatchery will be located in St. Johnsbury, in which case the third director will be a resident of the place. The Fairbanks of St. Johnsbury have offered to the State the use of their ponds for breeding purposes. While the location as a distributing point has disadvantages, nature has made it one of the best for breeding purposes. Both of the above directors are members of the Vermont Fish and Game League, as also is Gov. Page. The sportsmen of Vermont will not be satisfied until there are at least two hatcheries, one in the northern part and another for the southern section of the state.—WHEELLOCK.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

March 3 to 6.—Second Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart, Defender, Secretary.

March 10 to 13.—First Annual Dog Show of the Duquesne Kennel Club, at Pittsburgh, Pa. W. E. Little, Secretary.

March 16 to 19.—Inaugural Dog Show of the Washington City Kennel Club, at Washington, D. C.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

March 31 to April 3.—Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Secretary.

April 8 to 11.—Third Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 14 to 17.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Munhall, Secretary.

April 15 to 18.—Dog Show of the Southern California Kennel Club, at Los Angeles.

April 23 to May 2.—Dog Show of the California Kennel Club, at San Francisco, Cal. R. P. Kenzie, Sec'y.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

NEW YORK DOG SHOW.

THE years roll around with alarming frequency nowadays, and one W. K. C. show follows another with rapid strides on the track of time. Each succeeding show sees new faces, both human and animal, and the improvement of quality and breeding is just as apparent in the former as with the latter. Society having set its stamp of approval on such exhibitions, it is a foregone conclusion that better men—when we say better men, we speak from a financial point of view—have joined the ranks of the fancy-aye, and women too, who in years past would have thought twice before lending their names to any such publicity. Now it is a society fad, and consequently dog shows in New York are as much a part of the social programme of the *grande dame* as the opera, society balls, the horse show, or any other gatherings where wealth and fashion most do congregate. The dog show which opened on Tuesday last may be put down as one of the most successful yet held, and there is no surer indication of the popularity than the personnel of the crowds which poured into the handsome Garden, despite the worst weather that a W. K. C. show has so far experienced. The first day was a fair one, but the weather of Wednesday and Thursday could hardly be surpassed for natural perverseness. When it was not raining it was snowing, and a tearing wind blew the flakes with aggravated force till one would think that the dainty women would prefer a seat by their cosy fire places to the risking of health and silks and satins in the storm outside and the crush within. Superintendent Mortimer wore a pretty long face on Wednesday and Thursday, and visions of his European trip looked hazy indeed, but Friday pulled itself together and all was sunshine and more crush. The scramble on the home stretch, from midday to 10 at night, was a terrific one, and no doubt put the balance on the right side. The expenses incurred this year were far greater than formerly; we are told that the rental of the Garden for the week was \$6,000 alone, and this led the management to impose the large entry fee, for single dogs, of \$5. Though no doubt this kept a few dogs away, it was better, for the entry piled up to 1,527 after all, more than in any previous year, and in most of the breeds almost any one of these entries could be counted on to get a mention at outside shows. With the improved surroundings and the style in which such exhibitions are conducted in the Garden now, came an improved class of attendants, and at no time during the show did we come across such men, who attended to the wants of the dogs, as those of last year. On many sides we heard expressions of praise for the men, and during our rambles through the aisles we experienced the greatest courtesy from the attendants, who were ever ready to help us in getting the dogs up and off their benches. We are the more pleased to write this way considering the fact that last year our story was very different. It is a pity that in altering the Garden the floor room has been curtailed, and it would seem as if the old Institute building is still the best for a New York dog show, there the whole entry can be ranged on one floor and a larger space given to the judging rings than was possible this year, and which had the effect of delaying the judging. Unless some other arrangement is made, either limiting the entries to one thousand or using the American Institute building, there is little doubt that many of the principal sporting dogs will be kept away, as such seemed to be the general feeling among many of the exhibitors. The pointer and setter and spaniel men want to be on the ground floor every time, to see and be seen, but as it was, being in the basement, they were divided from the rest of the show and not half the visitors saw their dogs. The spaniels were, however, moved up on Wednesday morning and their benches arranged at the Fourth avenue end of the building. As we shall give the names of the judges when criticising the different breeds of dogs it is needless to recapitulate them here. We are sorry that we cannot say that the judging gave unbounded satisfaction, because it didn't. There was much grumbling. The English setter men were the first to feel out of sorts, and toward the end of the first day the mastiff men claimed a grievance. It is not our province here to say anything harsh about judges, the exhibitors themselves have the remedy in their own hands, and the criticisms on these classes will show where the trouble lay. We have already mentioned the names of those gentlemen who were active in attending to the many duties which arise in the running of such a large show. Messrs. Hitchcock, Terry and Cromwell were, however, noticeable in this direction and were at all times ready to confer a favor, if possible. Mr. James Mortimer had of course his hands full as superintendent, but he has got the running of his show down to a fine point, and though everything worked very smoothly and smoothly there was not that look of bustle and anxiety so generally apparent in former years, and we were able to get in many a little conversation during the week without his being bothered by six different fellows at the same time. Mr. Tallman, as assistant superintendent, was in the language of the street "all over the shop," and as a result the aisles were kept clean and sweet, dogs were well bedded, and, in fact, we never remember seeing a dog show of this size so free from dirt and objectionable litter. Walker's disinfectant seemed to do its duty well, is cleanly to handle, and, when not used too freely, is not at all offensive. Dr. Glover evidently kept an "observant eye" on the dogs as they came in, for it was remarked by more than one old exhibitor that

they had never seen so little sickness or skin complaints visible; not more than three dogs being taken sick during the show. In conclusion, we may remark that at no previous show have we seen so many out-of-town dog men, fanciers coming from ten to 1,000 miles to see the fun. The prize list of the rest of the classes and the specials, which had not been judged up to the time of our going to press last week, will be found appended, and now we may as well proceed to a criticism of the dogs present. It will be seen that our reporters in most cases aim to state the faults of the dogs exhibited rather than to question the decisions of the judges. Our idea of a report is, that those who are absent as well as those who have been at the show can, from these criticisms, form some idea of the failings and good points of the dogs exhibited. The reporter cannot, as a rule, put himself in the judge's position, and, therefore, it is manifestly unfair to rejudge the classes on paper. This rule should hold good in every report, except in a case where some very glaring or palpable error has been committed. We had almost forgotten an important feature, the breeding, which, we are told, was all that could be desired; this department of the show being, of course, in the hands of Spratts Co., whose facilities were also severely tested to supply the large quantity of benches necessary for such an entry.

MASTIFFS.—(MR. MARSHALL.)

(Report by Mr. Chas. H. Mason.)

The good class of mastiffs shown in 1889 gave one hope of still further improvement in the near future, and I regret to say that the dogs this year, taken as a whole, show a slight falling off. Not only is the quality of the dogs in more than one class worse than it was, but the judging also has taken a turn the wrong way. It was in 1889 that Mr. Marshall made his debut as a judge, and it was a great pleasure to me to have been able to say a good word for him in these columns. On that occasion I prefaced comments on the dogs by the following statement: "There were manifestations of dissatisfaction over several of the awards, but in justice to the judge, who made his debut on this occasion, we must say that but few mistakes were made, and those that we noticed were not of a serious nature." I would gladly repeat that opinion now, but Mr. Marshall's very serious blunders have made it impossible for me to do so. The inclination to say a word of encouragement is still there, but the decisions made will not permit of its being used. There is no use in mincing matters, and sloppy criticisms, which merely act as balm and benefit nobody, are out of the question with me. The judging was bad, very bad indeed, in fact as bad as I have ever seen, and I will proceed to show why, in my opinion, it was bad, hoping always that the judge will give the readers of FOREST AND STREAM his views and endeavor to make clear to us how he came to reverse previous awards to such an alarming extent. Sears' Monarch and Lady Coleus were unopposed in the challenge classes. Great credit is due somebody for the former's grand condition. This useful but by no means high-class specimen is nearly always shown as fit as hands can make him. Her Ladyship might have been looking better, especially in coat. Both are well known. Here the awards were correct, but nowhere else. The open class for dogs brought out a good lot, and the judge, after taking more than an hour to examine the competitors, got things badly mixed. The winner turned up in Ilford Chancellor, a good dog possessing many essential points. He is good in skull, fair in muzzle, strong in bone, and stands over an average amount of ground. His muzzle, while decidedly better than the average, lacks the perfect hang of lips seen in several other exhibits. In eyes he is a shade light, and the excessive dewlap and empty face skin, well enough in a bloodhound, but not the correct thing in a mastiff, are a detriment to a head that is good in outline. Ears not perfect, yet not bad. Body strong, but not cylindrical enough for me. Hooks too straight, but not actually bad. Movement only fair. Coat not in good condition. Shown too light. Merlin, second prize, is a new one, exhibited by Mrs. Chas. E. Wallack. He is a dog possessing a number of good points, and, if not placed in the best company, should score again before the show season is over. On this occasion he certainly got more than he was entitled to by merits. Head vastly better than average, though a trifle long in muzzle; lips not sufficiently forward; ears rather long; and general appearance of head not square enough; body fair; leggy; straight in hocks; light in second thighs; coarse in coat. Has plenty of size. Stands well forward. Good in stern. Lacks the quality seen in Beaufort, Lady Dorothy and others. Melrose Prince, well known and fully described in old reports, was fourth. His coat was blotchy, blood all wrong, and he was scratching most of the time, yet, notwithstanding this, I would have placed him higher on the list. Exley's Chief, vhc., is a young dog of far more than ordinary merit, although, like Merlin, not quite in the first flight. His strong points are skull, depth of chest, fore-limbs, size, coat, color and massiveness. Defects, muzzle lacking volume in proportion to size of skull, lips not sufficiently forward, forelegs too close, body not round enough, quarters rather light in proportion to foreparts, ears a shade large and hooks not sufficiently bent. He was placed equal with Czar, Olaf and Sir Minton, and can beat any one of them. Czar, vhc., lacks in width of muzzle, hang of lips, size and quality of ears, length of legs (too long for bulk and length of body), formation of ribs, position of feet, formation and position of hocks, and in addition, he is of wrong type. He was clearly over-rated in this company. Olaf, vhc., is too long in muzzle, shallow in head and generally plain. His best points are back of the occiput. He got rather more than he deserved. I see he is catalogued to be sold for \$75, which is a bit more than his worth. Sir Minton, vhc., is a better specimen than either Czar or Olaf. Defects, eyes staring, ears too large, leggy and rather light in middle (the ribs should be deeper and better sprung, and the loin should not be tucked up). His head is too small in all directions and he might be better in hocks. Through all of these defects he shows good breeding. He is not a big one. Minton Minor, hc., was first at Toronto last year and second in 1889. He was fully described in my report. He is a better dog than Olaf, though faulty in eyes, head markings, size and massiveness throughout, and in bone especially. Elskon, hc., can beat Czar and Olaf, albeit defective in muzzle, throat, skin, ears, pasterns, straightness in front, position of forelegs, depth of ribs and in quality of coat. Macduff, c., lacks in depth and width of muzzle, length of legs (they are too long for his body), ribs (they are round), formation of hindquarters, position of forefeet (they turn outward), and he lacks true character in head as well as quality throughout. Arminius, also c., is a long-faced, beagle-eared, houndy specimen, lacking true mastiff character and quality. Beaufort, third prize, was looking infinitely better than last year, when the same judge placed him over Ilford Chancellor, whereas Ilford Chancellor was not on this occasion looking nearly so well as he did last year. Placing Ilford Chancellor over Beaufort was wrong; placing Merlin over him was absurd. In head, size and quality of ears, lips, neck, chest, back, loin, set on of legs, straightness in front, feet, coat, stern, length from withers to stern, quality throughout and true mastiff character he smothered every competitor in that class. Grand dog that Beaufort undoubtedly is, I would like him better had he a somewhat shorter muzzle, better set eyes, more bone, cleaner hocks, truer formed hindlegs and a bit more wrinkle. I am informed on excellent authority that Mr. Marshall put the dog back because he has been much used in the stud. It is no part of a judge's business whether a dog has been used in the stud or not so long as the dog does not show the effects of heavy stud work, and who can say that Beaufort showed the first symptom of weakness in any part

of his grand frame. It is a question if he ever looked better in his life, and the greatest credit is due Mr. Winchell for the excellent condition in which he was shown. If Beaufort's record in the stud must be considered his defeat becomes the more remarkable. He has sired a larger number of winners than all the others in the class together, and his superb condition, as compared with Ilford Chancellor's, Merlin's and Melrose Prince's, either goes to show that Mr. Winchell is more expert than the handlers of these dogs, or that Beaufort has an iron constitution, the latter being the more probable. If judged by his appearance at the time Mr. Marshall examined him, he should have won with many points to spare. If judged by his record in the stud and appearance combined, he simply outclassed every mastiff on the benches at this show. But no judge has the right to take into consideration what a dog has done in the past or what he is going to do in the future. That is none of his business. The prize is for the best mastiff dog at the time the class is judged, and Beaufort was fairly entitled to that prize without the additional points that must be scored in his favor when his fine constitution and immense worth to the mastiff interests are considered. The bitch class brought out twelve entries, two or three of which were absent. That is a bit of quality, Lady Dorothy, was rightly placed first on this occasion, but there was a bitch in the class that should, had her true merits been discovered, have given her a close run. The mastiff men assembled about the benches seemed in such a hurry to condemn the decisions in the dog class that they failed to notice a worse decision than the wrong placing of Beaufort. This was giving fourth prize to Caution's Own Daughter, a grandly bred one (Ilford Caution—Lady Dorothy), that fairly smothered the second and third prize winners. If a decision like this is passed without the severest kind of a criticism upon it, there is no telling where we may drift to before long. It were better to call a halt on dog shows than to permit the uninitiated to suppose that indifferent specimens like Duchess and Edda can fairly beat a mastiff like Caution's Own Daughter. Such specimens are simply out-classed when placed in competition with her, and there is no room for difference of opinion among men who know what a mastiff should be like. Caution's Own Daughter has a true mastiff head which is moulded on the same lines as Beaufort's, with better wrinkle and the best kind of ears. She stands over a lot of ground and has excellent limbs. Lack of black face markings mar the beauty of her head, but do not alter its correct formation or detract from its character and quality which are as plain as the sun at noonday. Like many of Caution's get, she is throaty and lacks in massiveness of body. Judged by merit she would have been the closest kind of a second, in fact she beats Lady Dorothy in a number of essential points. Edda, third prize, is not nearly so good in head properties as the bitch just described, and is rather light in bone and defective in stern. Her body is the best part of her; she has dew-claws, her ears are not well carried, and she lacks character. Duchess, second prize, is very heavy and long in ears, defective in muzzle, light in bone, and she does not move very well behind. Like the third prize winner, her best points are in body. Caution's Own Daughter is worth a dozen like her. Cassandra, vhc., defective in skull and muzzle, but good in body, is not quite a show dog. Baby Bunting, vhc., lacks in lower jaw, is big in ear and wrong in lips. Countess, vhc., is small and has no chance of winning in good company. She is entered as having won "second, New York, 1889." Mr. Mortimer should see to it that this is not repeated. A number of dogs that have won in the novice class at New York are entered as having won first, second or third prizes at New York. This is dreadfully misleading and should be stopped. A dog might be able to win first in a novice class and yet be unable to take a commended card in a strong open class, and Countess is one of these. Ingleside Princess, unnoticed, is a better specimen than Cassandra, Baby Bunting or Countess. Defects: Stop and foreface, hocks, back ribs and ears. Pluto, first in the puppy class, is a very big one; in truth there is far more dog than mastiff, and he should have exchanged places with Exley's Chief, that shows far more true character. Ingleside Princess, vhc., here got what she deserved. Elkson, vhc., is described in the open class, where he got hc. Now, the open dog class was much stronger than the bitch class, and if Elkson was good enough for hc. in that class, why was Ingleside Princess unworthy of notice in the open bitch class, especially when she is his equal in the puppy class? This sort of thing must be stopped or the dog show of the future will be a sort of circus with the double somersault the leading feature. Ontare Breda, third prize, Rex Carolus, vhc., Caesar III., hc., Willie, hc., and Eanfrid, hc., are all of them sadly wanting in true mastiff character. Every dog but one in this class was given a card, and it is safe to say that nearly a dozen of these will never be noticed again. The cards represent not their merit but lack of it. The novice class brought Caution's Own Daughter to the front an easy winner, with Exley's Victor second, the rest being a very seedy lot. If any attention is given by breeders to the awards in these classes the result is bound to be disastrous. They had, therefore, better draw a veil over the judging and forget that in 1891 there was a show of mastiffs in New York.

RUSSIAN WOLFDOUNDS—(MR. HUNTINGTON).

(Report by Mr. Mason.)

As it is my intention to say something in regard to this breed in FOREST AND STREAM at an early date, I will now merely call attention to the points in the dogs as they appeared to me, and will take up the question of flat ribs, straight stifles, broad backs, "fur-coated feet," short necks, curly coats, etc., etc., in an article for this paper. It must, however, now and then be understood that I do not pose as "authority," but rather as an old fancier pointing out what seem to be defects and good points, and asking information about matters which I frankly admit being unable to understand. For instance, I shall want to know how a dog can have a broad back, flat ribs and a narrow chest. That is to say, the Russians will be asked to prove that the ribs are not attached to the vertebrae. If flat ribs were attached to the vertebrae the back certainly could not be broad. It will be dog talk versus "Russian authority," and I have an idea there will be some fun. Anyhow, I will try to keep up the American end of the discussion and get a standard that will be a credit to us.

Zloem, first in dogs, has a good, quality-showing head, with plenty of power in front of eyes. Neck of fair length and strength. Shoulders very badly placed and weak. Back strong and ribs much better sprung than in most specimens of the breed. Loin also stronger than average. Quarters fair. Set of forelegs all wrong. Rather light in bone. Pasterns not very strong. Feet defective and one of them damaged. Coat and feather fair. Stands over plenty of ground. Movement not correct. Above the average size. A good topped dog, weak where a sporting dog should be strong. Vladimir, second prize. Good head. Lengthy neck of average strength. Ribs rather flat and as a result the back inclined to be narrow. Feet well formed, but inclined to turn outward. Loin rather light. Fairly good and strong behind. Coat and feather of fine quality. Moves well. Good size. A youngster showing quality. Ivan, vhc. Long, clean head. Very weak in front of the eyes. Shoulders and set of legs not right. Ribs as flat as a board. Back narrow, as it is bound to be with so flat ribs. Loin narrow as it must be when the back is narrow; in addition to being narrow it is long and weak. Light in bone. Straight in hocks. Short in feather. Fair size. Movement moderate. A dog of more than average size, showing quality without strength where it is most needed. Princess Irma, first prize in bitch class. Same type as Vladimir, with feet better placed. She beats

Prokaza, second prize, in quality of head, position of shoulders, set of forelegs, straightness in front, pasterns, feet, quality of ears and carriage of same, and also scores in length and straightness of coat. Prokaza in turn scores in chest, ribs and strength of loin. Her right ear is carried down like a fox-terrier's; she is rather short and curly in coat and begins to show age. Zerry, unnoticed, was passed on account of chorea. Nice quality of head. Ears not just right. Chest shallow. Straight behind. Coat showing curliness. Fair size. I should say that the awards were correct beyond a doubt, and as the judge here made his debut he is to be congratulated.

DEERHOUNDS—(MR. HUNTINGTON).

(Report by Mr. Mason.)

This was a very strong class, notwithstanding that all the prize winners were owned by the Master of Hillside, Mr. John E. Thayer. Much credit is due Hald for the good condition in which the dogs, with few exceptions, were shown. Chieftain, Robber Chieftain, Wanda and Ramona took all the money in the challenge classes. Robber Chieftain came very nearly beating his great sire, and though I indorse the award as it stands no fault could have been found had it gone the other way. Wanda, that was all to pieces last year, has had a long rest and looks something like herself again. I feared she was going to drop out altogether, but Hald has brought her around, and as Ramona has been shedding and has not got her new coat the award in favor of Wanda is correct beyond doubt. Olga, that took the reserve, is a big grand bitch, and but for her not very good hindlegs would make it hot for the best of them. Douglas, first at the National Greyhound Club's show, won first in the open class for dogs, which was strong in point of quality. Mr. Huntington here got badly mixed, but this being his first attempt I shall let him down easy. Douglas has fairly good head, neck, legs, feet, size and expression. He is rather short in back, inclined to be flat in loin, a bit straight in hocks and not close enough in coat. Hillside Warrior, second prize, is very weak in front of eyes, a very serious defect in a dog of this breed. Ears rather large and not well carried. Travels rather close behind and is on the leggy side. He has a good body that would be improved by more length and strength of muzzle. His ears also are not just right and his hocks and movement of same are not correct. A useful young dog, good in neck and body and not wanting a great deal in legs and feet. Duncan, vhc., has not the length of head seen in the cracks, but it is not a bad head. Fair neck. Heavy shoulders. Set of legs not quite right. Stands well. Not quite straight in front, yet good in bone and strong. Good chest, loin and hind parts. Fair size. Coat too short. Allan Breck, hc., is rather heavy in ears, not first-class in head, rather leggy, light in second thighs, and does not stand over enough ground. He has excellent legs, a strong body, and as good a set of feet as were ever seen under a deerhound. Leo, unnoticed, is a curly yellow dog. "Date of birth, breeder and pedigree unknown." I should think so. This brings us to the flower of the flock, the third prize winner. When Robber Chieftain was defeated I said there was only one dog in America that could beat him, and that dog his sire. Subsequent decisions have proved that statement correct. Well, here is another Robber Chieftain. He just simply outclassed everything in the class and is a young dog with very few defects. He has size combined with strength, and his dam, Thora, has transmitted to him her superb legs and feet. I predict for him a brilliant future. Hillside Harold is his name. In bitches Mr. Huntington again went wide of the mark, placing the best in the class third. Hillside Romola, first prize, is a good young bitch with plenty of size, a fairly good head, correct body and loin, good legs and feet, clean shoulders, good quarters and strong hocks. Her ears are heavy and very badly carried, and as a rule she does not stand true in front, the elbows being confined and too much under the body. Hillside Sylvia, third prize, while not being so big a bitch as her sister, shows more quality in head and has far better ears. She is grand in body, loin, quarters, legs and feet, and is bound to go to the front. I would have placed her first, with the winner second, and Highland Lassie (well known) third. Alida, reserve, is a long way behind Sylvia in all deerhound attributes.

GREYHOUNDS—(MR. HUNTINGTON).

(Report by Mr. Mason.)

Here the judge seemed quite at home, and he got through his work in a satisfactory manner. In the challenge class for dogs Balkis had the easiest kind of a win over his kennel companion Highland Chief, beating him in head, position of shoulders, legs, feet, thighs, back, loin, ribs and gait and smothering him in stifles and hocks. This is not all for Balkis stands over several inches more ground than Chief. Balkis's most conspicuous defect is his chest, which is too wide, and in this point he is clearly beaten by Chief. The latter's flash and catchy color is at all times liable to mislead the novice, but when judged by points and not by color the black dog must always win with many points to spare. Harmony was alone in the bitch class and looking fairly well, although like all dogs from this kennel she was drawn too fine. Gem of the Season, first in the open class for dogs, is a good greyhound, and if shown will do a lot of winning. He is a white and brindle, showing much quality all through and strength along with it. Had he more power in front of the eyes, more room between the couplings, and a longer reach, he would take a world of beating. Exception is taken to his gait, but in view of the fact that many of the fastest greyhounds move exactly as he does I attach no importance to this, and look elsewhere for negative points. Charles Davis, first at the N. G. C. show, was a good second. He is a black dog, set up on the very best kind of legs and feet I imagine. In skull he is too wide, and his whole head lacks in fineness of outline, but he has got something about that head which no other greyhound in the show possessed to the same extent—a game and resolute expression which I have seldom seen surpassed. He is a trifle straight in shoulder, very flat in ribs, short in neck, and would be improved by more liberty behind; he is also wider in front than I like. He covers a lot of ground, has a well turned and powerful loin and looks like going. Jolly Ranger, reserve, was second at Toronto. He ran Davis very close for second place. Tim, vhc., I cannot stand. He is weak in face, light in bone, flat in loin and ribs and bad in pasterns and feet. Highland Warrior, hc., I like better for the place. He is defective in head, shoulders and neck, is scarcely straight in front and shows coarseness. Five of the eleven in this class were absent. In bitches, Dolly Dollar, a new one, came to the front, beating the N. G. C. winner Maud Torrington, but by the narrowest kind of a margin. Dolly's flash color and catchy appearance are liable to carry her into a too prominent position, but as color does not count under Mr. Huntington, he made it a tight fit between these two bitches and that is just what it is. Dolly has a nice quality head and neck, but her shoulders and the set of her forelegs are not only defective, but very bad. She has a fine top, deep thighs, and stands over plenty of ground, but her shoulders, set of legs, lightness of bone in proportion to her stout body, and moderate feet will always beat her in really good company. Maud Torrington is a bit weak before the eyes, upright in shoulders and her hind parts would be better if set further back. She has good body and loin, excellent legs and feet and is not without quality. I did not examine the reserve bitch Lancashire Lass. Queen in Black, vhc., is well known. Her most conspicuous defects are in loin, bone, legs and feet. Fanny M., hc., is a well-known third rater, plain as hen meat. Zoe, vhc., is a red bitch, weak in foreface, defective in shoulders, light in bone, out in feet. She is far better behind than in front.

Kismet, third, is very moderate indeed, being weak in muzzle, light in bone, wrong in shoulders and shallow in middle. Miss Rialto, first in puppy class at Boston, is not a show bitch. Short head, light in bone, flat loin and wide in front. Black Bess II., also unnoticed, is light in bone, bad in feet, straight in shoulders, narrow in front and veedy throughout. First in puppies is a bit on the coarse side, wide in front and lacking liberty behind. He stands back at the pasterns but will come right, good bone and feet. Marguerite, second prize, is bad in head, light in bone and straight in shoulder. The best part of her is below the hips. This was a very weak class. At least ten of the entries in the greyhound class were absent. As I was unable to bring Balkis and Gem of the Season together I will reserve my opinion of the awards for the specials. It was nip and tuck between Harmony and Dolly Dollar, but for the kennel prize Mr. Pope's lot were clearly ahead. The judging was carefully done and the awards in nearly all cases were correct.

POINTERS—(MR. TRACY).

(Report by Mr. Mason.)

Taken all in all the quality of these classes was better than last year, and with the exception of a few mistakes of a serious kind Mr. Tracy did better than he usually does. I have been unable until very recently to account for some of Mr. Tracy's decisions at past shows, but Mr. Luke White has explained all this in a report for a contemporary, and as he speaks on authority, having known Mr. Tracy for years, and been afield with him many a time, the cause of the peculiar awards that have been made at this and other shows is fully explained. Mr. White says: "Mr. Tracy has original and pronounced ideas about pointer and setter form." That settles it and explains everything. But the Pointer Club of America has adopted the "Stonehenge" standard, and has Mr. Tracy or any other judge the right to discard that standard and without permission introduce his own "original and pronounced ideas?" I think not. In criticising the classes I shall discard all "original" ideas, being guided only by a standard that has been good enough for old breeders, such as Whitehouse, Lord Francis, Shirley, Sam Price, Lloyd Price, Brierley, et al, and which is good enough for me. In the challenge class for dogs of large size Robert le Diable was placed first, beating Duke of Vernon and Brake. As large-size pointers there is no comparison between Robert and the Duke. Robert scores in eyes, stifles and shoulders. The Duke wins easily in head and smotherers his competitor in true type, back, loin, quarters, legs and feet. It is an unjust decision and one that could not be made under the pointer standard. Both dogs were in fine condition. Brake, that was placed over Duke of Vernon last year by Mr. Wise, on this occasion was sent out without a card. Mr. Wise, like Mr. Tracy, has "original" ideas about pointers, and that I suppose is why both of them missed the best dog. Trinket's Chief was outclassed and Graphite was absent. In the corresponding class for bitches, Revel III., better at both ends than Belle Randolph, scored a very easy win. First in the open heavy-weight class for dogs was very properly awarded to Lad of Kent. Defects: Eyes rather light. Head fairly good. Loin and quarters light in proportion to foreparts and thighs too flat. Stern carried too high, though not very much. A bit throaty. Good chest. A white and liver ticked dog showing more quality than character. Graph, second prize, was just about good enough for the place, but he ought to have been hard pressed by Lansdowne, a specimen that the judge failed to see, and a dog of exactly the same type as the winner of first. Graph has not a typical head, and his lips are not just right. He also falls too much behind the hips, is long in tail, hardly deep enough in body and not perfect in ears. Stands on fairly good legs and feet, is strong in middle, has a superb neck and shows more quality than the rest. Lansdowne, unnoticed, should certainly have been no lower than third in the list. He is a white and liver, fairly good in head, correct in chest and good in legs and feet. Defects: Fold of ears not just right; throaty; stern carried too high; loin rather flat; second thighs like Robert le Diable's. He was second at Detroit last year. Graphite, third prize, got more than he deserved. He is a white and liver, lightly ticked. Defects: Wrong in muzzle and lips. Straight behind. Falls too much from hips. Tail badly carried. Tory White, fourth prize, is quite as good a dog. Hyles of Naso, hc., was as good as any for fourth place. Defects: Head rather coarse but not bad in outlines, rather light in eyes, throaty, hang of ears not quite correct, does not stand quite true in front. Nick of Beaufort, hc., is a white and lemon. Defects: Long and light in loin, head somewhat plain and cheeks too full, leggy, stern too long and not very well carried. Gus Tammany, vhc., is a fairish white and lemon with fine expression, good type of head and nice ears. He shows much character in head. Defects: Feet inclined to turn outward, rather leggy, light in bone and only fair in middle. He is as good as the third prize winner. Duke of Richmond, c., is light in eyes, full in cheeks, and rather light in bone. I thought him worth vhc. Beaufort's Lad, unnoticed, lacks in stop, expression, neck, shoulders and set of legs. His body is the best part of him, though his pins are not bad. Dor Croxeth, unnoticed, has a fairly well-outlined head that shows coarseness, rather full eyes, light loin and quarters, his legs are not well set and he is cow-hocked. Chest and stern are his best points. Bangstone, first at Detroit, did not get a card, but his good body, legs and feet surely deserved recognition. He is not clean cut in head, and his stifles and hocks while not right are not actually bad. Royal Don, unnoticed, lacks in expression, stop under eyes, carriage of ears and hind parts. Frankfort, unnoticed, is plain in head, wide in front, bad in shoulder and lacking in character. He is not a show dog. First in bitches was correctly awarded to Woolton Game, a very useful-looking one, white and liver in color. She has a good type of head, right quality of ears, good middle, well-carried stern, good gait, and every appearance of being a worker. Her legs are not set just right, she is heavy (rather) in shoulders a bit coarse in stern and lacks some in quality throughout. I fail, however, to see why she should win over Peggy if Robert le Diable is a better dog than Duke of Vernon. It's a poor rule that only works one way, and the inference is that Mr. Tracy dropped his "original" standard when he placed the bitch first and judged by the right one. Peggy, second prize, is a white and liver ticked one of light appearance, wrong in color of eyes, faulty in muzzle, rather throaty, light in bone, light in middle, straight behind and none too good in hocks. She stands true in front, has good ears, and is a light and rather shelly-looking bitch that should have won under the "original" standard. Miss Meally, fourth prize, should have been second under the pointer standard. She is not first-class in stop, below the eyes or in the hang of ears, and her stern is not carried to any liking. Fair good shoulders, legs and feet, good body and hindquarters. Lass of Tammany, third prize, shows some character in head and expression, has good length of neck, but is a trifle throaty, defective in shoulders and set of legs, light in bone, stands a bit back at the pasterns and might be better from the hips down. Duchess of Naso, vhc., lacks in quality of head, formation of loin, substance between couplings, stern, and also in set of legs. This bitch is vastly inferior to the highly commended Pearl, that has a fair type of head, good body and good quarters. She lacks some in shoulders, straightness in front, neck and in hang of ears. Belle of Winchester, unnoticed, was in no condition for the show bench, and should have been left at home.

Mr. Tracy again shook off his "original" ideas, and in the challenge class for light-weight dogs placed the strong-limbed Duke of Hessen over the lighter built Launcelot,

The winner again in the ownership of the Hempstead Farm Kennels. Both are well known and the decision was correct. The company was too good for Spot King. The next class found the judge all at sea. He returned to the light-boned, light-jointed and rather shallow-bodied type, and cleverly missed the best bitch in the class—Sally Brass II. Juno S., unnoticed, should have been second. These bitches are well known. The winner should have been third, with Sally Brass II. the easiest kind of a winner. The open light-weight classes contained nothing of correct type. There were no Duke of Vernons, Revel III., Woolton Games or Duke of Hesseus, in fact, nothing of correct type. They were nearly all of the light, shelly, no substance order; and as the Robert le Diable type ran right through the classes, no serious errors were made, in truth the judging was vastly ahead of anything I have ever seen Mr. Tracy do. Tribulation, first in dogs, is an easy moving dog, showing quality, and is a well-known winner in the field. That structural defects do not prevent a dog from getting to the front in the trials is evident. Defects: Head dishd; muzzle lacking in depth; set of ears not just right; rather light in middle; inclined to stand back at pasterns; position of stern not first-class. Inspiration, second prize, lacks the quality of the winner. He has the dark nose and eyes of the Bang Bangs, with a better neck than that dog. Body shallow. Good stern. Plenty of bone and correct feet. Roderick, third prize, is much better in head than the second prize winner, good ears, fair good legs and feet, rather light loin, long tail and lacking in substance behind the short ribs. Einstein, fourth prize, is rather wide in front, not first-rate in shoulders or in loin and inclined to be straight behind. Fair good head and proper legs and feet. Black Spot Beaufort, he., is rather coarse in head, bad in shoulders and set of legs and stands badly. Ossining, vhc., is very throaty, too fine in muzzle, ears not well hung, loin rather flat, tail not straight, good quarters. He has won several prizes but is not a show dog. Of the unnoticed ones, Tammany Hall is a plain, coarse and wide-fronted specimen. Hickory Staunch is a white and black, very throaty, coarse, and of wrong type. Bing of Kippen is throaty, coarse and heavy where he should be light. I must not forget Bracket's Lad, vhc. He is rather strong in head, a bit wide in front, high in stern and rather light between the couplings. Celso is a bit shelly in middle, defective in feet and lacking in character of head. A big class, but not a good one. Lass of Kent first in bitches was the best provided, and Concave, second prize, could not beat her. The latter, a puppy, had been sent home before I got a chance to inspect her. The winner lacks in quality of head, in stop, below eyes, in color of eyes, loin, stern, position of hocks, spring of ribs, rump and in set of forelegs. She can stand true in front when she likes, but don't often like; has good bone and typical feet. She also shows some quality back of the head. Frivolity II. third prize, lacks in lips, expression, hang of ears, shoulders, set of legs and is not just right in stop. She is of better type than the winner, but neither is fit for good company. Lady Tammany, fourth prize, is light and staring in eyes, a trifle wide in front, none too good in shoulders and position of elbows and much too small in feet. Good in body and better than average behind. Merry Legs, vhc., Hempstead Rose and Tory Juno were not on the bench when I called. Lovell's Miss Fancy Free, vhc., has good body, but is not typical in other points. She is a broody looking bitch. Daisy, c., was worth vhc. in this company; she has fair legs, good feet, plenty of bone and average body, but lacks in brow, stern and upper quarters. Tiny, he., is big in feet, coarse in head, light in bone and wrong in hang of ears. Body and quarters will do. Among the unnoticed ones are Dora B., coarse and sour in head, wide in front and heavy in shoulders. Louisa, a boudy specimen. Bella Bangs, a chumpy-headed, coarse-sterned and poor-coated (at present) specimen. Westchester Girl, sway-backed, shallow in head, light in bone, wrong in position of elbows and not a credit to her parents, Graphic and Juno S. Dog puppies were a miserable trio. All prizes should have been withheld. Daisy, second in bitch puppies, is described in the open light weight class. Hattie Vernon, winner of first, is said to be a good one, but as I did not see her I am not in a position to say what she is. Getting notes in these classes was the hardest kind of work. The dogs were scattered all over the place, and it is useless looking for reform until some of the club members try their hands at reporting. Then, and then only, will the press and the public get a say in the matter and have the pleasure of attending a show where the dogs are benched as they should be—properly. The best pointers in the show were Duke of Vernon and Revel III.

ENGLISH SETTERS—(MAJOR TAYLOR).

(Report by Mr. Mason.)

The quality in these classes was about the same as last year, excepting in the puppy classes, here there was considerable improvement. Unfortunately the awards in many cases were of a most peculiar character, and I would be gladly excused a criticism. Intense dissatisfaction seemed to permeate the whole Garden, and this is to be regretted; more especially is it unfortunate as this was the first time the new standard had been put into operation at a prominent show. Cincinnatus, according to Major Taylor's interpretation of the standard, is the best, or at least very nearly the best, English setter in America. He may be the best, but men who have agreed to judge by that standard say that the judge has failed to interpret its meaning properly, and that they now believe it was intended to bring in such dogs as the judge brought into prominence at this show. Last year Cincinnatus, judged by a man who has had a very large experience behind good field dogs, took a vhc. card. This year he walks off with the special for the best English setter in the show. Major Taylor says he won that prize fairly and squarely under the requirements of the new standard, while other judges say he could not have won it under the new standard or under any other standard. This goes to show that the standard is useless, and instead of benefiting the breed it will work to its detriment. A standard that is only understood by one judge and which that judge forgets before he has judged three classes, is worse than no standard at all. If the new standard, before being adopted, had been mailed to setter breeders and experienced dog fanciers throughout the land, and they had been given time enough to consider and carefully weigh every suggested alteration embodied in it, none but incompetent persons would have agreed to awarding prizes to English setters with "bowed stifles" and skulls of a "peculiar character." As a matter of fact there is no breed of dog that has a skull of a less "peculiar character" than the English setters, but as the standard calls for "peculiar character" the judge has clearly the right to award prizes for "peculiar character," and he exercised that right at this show. Intelligent criticism on the awards is most difficult when the critic must deal with English setters and a standard for English setters on one hand and Tennessee setters and a standard for Tennessee setters on the other hand, so I will ask the reader's patience. In the challenge class for dogs Count Howard, an English setter, was opposed by Cincinnatus, a Tennessee setter. The latter won. Count has a fine English setter head with good skull of true, but not peculiar character, excellent body, ribs well sprung, a strong loin, good quarters, fairly good legs and feet and a fine coat. Cincinnatus has a good Tennessee head, light and bitchy, rather flat ribs, a light loin, hocks turning out, tail not carried straight, short in coat and feather, leggy. The Tennessee dog won. It is merely a matter of fancy. Both of the exhibits in the bitch class are of English type, the better one took the prize, scoring in head, body, legs, bone and quality throughout. The open class for dogs had a very large entry,

more than half of them being Tennessee setters. Breeze Gladstone has not a Tennessee head, for it is broad, short from ear to eye, and entirely different from that of the winner in the challenge class. It is a head built on the old-fashioned pointer lines, though of course lighter. He has flat loin, is short in body and couplings, carries his tail very high, and was not entitled to a prize under the Tennessee standard. Matane and Reverdy were nearest to the correct type. The former is light in eye, short in ear, has the same type of head as Cincinnatus, rather light loin, no feather or fringe, stifles and hocks not just right, a trifle throaty. He should have been a very easy winner. Reverdy, third prize, should have been second. He resembles Cincinnatus very much in size, length and quarters, but is not quite so bitchy in head: good bone, fair legs and feet, expression not very good, ears not good in quality, correct coat and stern. Gath's Mark, vhc., is coarse in head, but his body, ribs, loin, length and size bring him into this class, and he should have beaten Dan Gladstone, reserve, that is short in body, bad in head, stern, ear and feather, and not of true Tennessee type. Jean Val Jean is leggy, not good in feet, falls away behind, and is not quite of the same type as Cincinnatus. Andy, c., is bitchy and plain throughout. Antonio, he., has plenty of bone, good feet, a coarse head and average legs and feet. Goth, c., is open and curly in coat, has fair good head, forelegs and feet, short loin, and falls away too much behind the hips. The inconsistency of the award in favor of Breeze Gladstone was apparent, but as it takes some time to learn a new standard, I do not feel disposed to be severe on the judge for having forgotten it before he had finished judging the Tennessee half of the open dog class. Among the English setters in this class were such well-known winners as Sir Tatton, winner at Birmingham, Crystal Palace and a dozen other large shows in England. He also won first at Philadelphia and special for best setter in the show under Mr. Percy Ohi, who is one of the new setter club's judges. Major Taylor gave him a commendation card. Royal Kent, first at Ottawa and winner of several other prizes; Roger, a winner at New York and in the field; and Roderigo, a Tennessee bred one, but a dog of correct type with the exception of his head, which is a trifle bitchy, were undoubtedly the best English setters shown. These dogs are well known. I would have placed Sir Tatton first, Roderigo second, Roger third, and Royal Kent fourth. Gale, c., has a nasty sour head, light bone, light and flat loin, and is not a show dog. Placing him equal with Sir Tatton was a royal farce. Gunbar, c., is weak in front of the eye, not straight in front, short in neck, high in stern, has some jaw, is throaty, wrong in set of legs, sour in expression, rather straight behind, open and ragged in coat. No standard that was ever fashioned, born or hatched can place an animal like this on equality with Sir Tatton. Glen Belton, c., has deteriorated considerably. He is not a show dog. Defects: Head, neck, carriage of stern, set of legs, and not perfect quarters or in hocks, good coat. Fancy the owner being able to advertise this dog in the stud as "equal with Sir Tatton at New York, 1891." Truly a nice state of affairs. I am unable to say which standard was applied to the open bitch class, but I do know that the first prize bitch had no right to win under the English setter standard and that the Tennessee setter standard does not fit her. She is of extreme opposite type to Cincinnatus, being a bit spaniel-like in head, inclined to be cow-hocked, light in bone, wrong in knees, large in feet, not right in set of forelegs and coat not right at present. A broody-looking bitch lacking in quality for the show bench. Bessie Avert, second prize, is a short-coupled one with well-sprung ribs; she cannot win under the English setter standard, nor yet under the Tennessee, and is not a show bitch; in fact the only good show dog from the Avert Kennels was Roderigo, a dog of nice type and great quality. Bessie's defects are: Shortness in body and loin, light eyes, shallow muzzle and wrong lips. She might also be much better in set of forelegs and in carriage of ears. Myrrha II., third prize, should have won. She is worth a dozen Donna Juanitas and a shipload of Bessie Averts. Good head (though cheeks are a trifle full), excellent chest and loin, stands on proper legs and feet, fine coat, stern not well carried. A good bitch. Spectre, vhc., is a promising youngster, and notwithstanding her age, so vastly superior was she to the rest of the class that she should have been second. Good head, capital body, not perfectly straight in front, plenty of bone, well bent stifles, too long in stern, nice quality, moves well. Haphazard, unnoticed, is a well known winner and notwithstanding her not very good condition should, I think, have been third, with Blue Nell, a roomy, good-bodied, fine-coated bitch, fourth. She is a bit doggy in head, not true in front, and does not move as well as she should behind, but for type dogs like Bessie Avert, Lilly Burgess and Fanny M. have no business alongside of her. Lilly Burgess, fourth prize, Fanny M., vhc., and Esther, c., are not show dogs, though doubtless they are good in the field. Bonnie Gladstone Girl, he., is not nearly so good a bitch as Blue Nell that was chained next to her. Coarse head, sour expression; not perfectly straight in front; long in tail; ears not right; wrong movement; good chest. Canadian Lass, c., is short and sour in head, short in coat, long in tail, wrong in set of legs, and short in ear. Stray Shot, unnoticed, though weak in foreface and not in the best of condition, should have had a card. Hazel Kirk has gone off. Donna, well-known, was surely worth a card, even though she is faulty in head, tail and width of chest. The judge, who had evidently again forgotten the Tennessee standard long before he reached the puppies, did not attempt to find it, and in dog puppies Glendon, by Rockingham—Donna, was placed over Bohemian Laddie, by Dad Wilson—Bohemian Girl. Glendon has a fairish head and good chest, but lacks in neck (it is throaty), tail, set of legs and in quantity of bone. Laddie has a very plain front. Bean, third prize, has promising head, fair good legs and feet, and should certainly have been second. Bounce, he., is plain in head and leggy. He will not make a show dog. Bitch puppies were a good class and brought out a very smart one in Dimity, that got second prize. She was clearly ahead of the winner, and if all goes well will be a hard nut to crack next year. She beats the winner at both ends, has a lovely head and is brimful of quality. Prima Donna, first prize, is long in tail, rather short in ear, not quite clean cut below the eyes, legs not set just right; good body, feet, coat and quality. Spectre, unnoticed, and described in the open bitch class, should, I think, have been second, with the winner third. Gwynnie, third prize, is a short-legged, strong-boned, but rather coarse-headed pup that will not improve. She is as much like the Tennessee type as a brick is like cream cheese; but the Major had forgotten all about the standard. Spook, vhc., is a better pup than Gwynnie, and will make a better bitch. With the exception of a rather plain head she is a good one. Druidess, he., is not just right in stop, is very throaty for a puppy and carries her stern too high. Alma, he., is a better pup, notwithstanding fullness below the eyes. She has good body and nice quality. Virginia Rockingham is a white bitch, and lack of markings is apt to give one a wrong idea of her head, which is really not badly formed; good body and limbs; worth vhc. Brookside Maid is a stumpy-headed, throaty youngster, that cannot possibly develop into a show dog. The judge now took up the Tennessee standard and awarded the kennel prize to J. M. Avert, who showed one fourth prize winner (a good English setter dog), one second prize Tennessee winner (not a show bitch) and two highly commended Tennessee dogs (neither of them show dogs). The Roscroft Kennels showed two first prize English setters, and two second prize English setters. Three of these could beat the best of Mr. Avert's kennel, yet he got the prize. The decision caused intense dissatisfaction, and the owners of the best kennel

promptly lodged a protest. A friend of the judge informed me, before the judging commenced, that the Major was going to make a record for himself at that show. He did it.

IRISH SETTERS—(MR. WENZEL).

(Report by Mr. Mason.)

The judging here was in marked contrast to that in the English classes, and while there were some mistakes, Mr. Wenzel got through his work without making many glaring errors, and his decisions were fairly well received. I cannot say that there has been any improvement during the past two years; and if the breed is not on the down line it most certainly is not advancing. Typical heads especially were few and far between, and bad loins, heavy fronts, and light eyes were noticeable all along the line. Dick Swiveller, at all times an overrated dog, so far as real merit goes, was rightly placed over Max A. and Desmond II. in the challenge class for dogs. The last named was not in his best form, whereas Dick was in excellent condition. Max A. is a bit coarse in head, is not perfect in ribs, not first-class in loin and is inclined to stand back at the knees. He stands over more ground than Desmond, beats him in head and was in vastly better condition. A typical dog like old Palmerston would just smother the lot of them, and the class was much weaker than has often been seen at New York. Tim, looking better than he ever did in his life, was shown not for competition. In his present great form he can romp right away from any Irish setter on the benches to-day. Ruby Glenmore and Winnie II., both in good trim, took the money in the bitch class, Mollie Bawn being unnoticed. This decision I cannot indorse. Mollie was light in flesh and looked stale, but her vastly better type all through, better legs and feet, stouter limbs and more typical head, should have pulled her through. First in the open dog class went to Beau Brunnel, the best in the lot, though he means a flyer. Defects: Skull somewhat coarse; expression rather sour; neck a trifle throaty; not just straight in front; too much drop behind the hips, hocks too far from the ground and not sufficiently bent; would do with more length of loin; might move better behind and does not carry his stern any too well. Good chest, bone, feet and color. Huntington, second prize, is not a good one. Skull too heavy; muzzle lacking in quality; rather light in bone; body and loin very moderate; straight behind; coat showing cuteness. Fine color; stands true in front; good ears; proper feet. Henmore Shamrock, third prize, is coarse in head and he throws out his feet in front. Good stern, good color, nice straight coat and the grandest kind of a body. Jack Malone, vhc., is growing coarser in head. Hector, vhc., Checks, stop, below eyes, position of ears not correct, not quite straight in front; eyes a shade light; do with more length and arch in loin; rather coarse all through, but useful looking and strong in bone. Inchiquin, vhc.: Head lacking in length and neatness; skull fairly well up and ears well placed; good legs and feet, but inclined to get over at the knees; do with more depth of chest and width through the back ribs; loin should be longer and more arched; good bone; stern carried too high; good coat; moves very well indeed; correct color. Friar Tuck, vhc., is a shade light in color; flat in skull; not just right in expression; high in ears; rather straight behind and not sufficiently arched in loin. Useful looking and good in chest. Shamrock, reserve, is coarse in head, rather short in loin and thickish in shoulder, also very throaty for a young dog. Good bone, legs, feet and color. Luzerne, he., is fairly good between couplings, but light in bone, rather coarse in head, high in ears, light in hocks, and he moves very gingerly behind. Darragh Pat, he., is a bit coarse in skull, rather light in eyes, flat in loin, rather shallow in middle, only fair in feet, light in bone, stands back a bit at the pasterns. Ears well set and color correct. Minstrel, he., is plain in head and much too leggy. Good legs, feet and color. Pickens, unnoticed, is a better dog than Friar Tuck, that got vhc. Good head, but expression, owing to size of eye, not correct; too light in color; rather straight in hocks; too flat in ribs; proper legs and feet. Tim's Dandy and Young Glencho, a brace of thirteen months old dogs, are better than the second and third prize winners, though of course not fully matured. They were unnoticed. Young Glencho will likely beat all the class one of these days. I don't know what Mr. Wenzel was doing to overlook them. This was a large class, but not a strong one in point of quality. In bitches it was a very close thing between the first and second prize winners. Mollie Ashore, the winner, has a goodish quality of head that might be a bit clearer in one or two directions. Ears well formed and correct in set; good neck; bone of good quality; not straight in front (a bad fault); shoulders not quite the thing; and elbows not in good position; truly formed feet; excellent body, with capital loin; good quarters; nice style, carriage and quality. If right on her legs would take a lot of beating. Eudora, second prize, is good in body and very nice in front where the other fails. She has, however, plenty of defects. Lips too tight; eyes a trifle small; good body; light in bone behind; hocks not perfect; tail longer than I like; good feet. Nora, third prize, is a shade light in color, has a fair good head, average legs and feet, loin rather short and not well arched, too short in middle, good shoulders, fairly good behind and showing quality. Ruby Glencho, reserve, is well known. Her good points are back of the occiput. Gladys B., vhc., has a stumpy head that lacks quality and character, bad feet, heavy shoulders, and might be much better in set of forelegs. Body, quarters and color are her leading points. Gracie, vhc., is fairly good in head, a shade light in eyes, rather short in back, good in loin, long in tail, rather straight in hocks, somewhat light in bone and not strong in character. Her feet are so bad that they alone would beat her in good company; but this was not good company. Red Belle, vhc., is an old winner. Hazelnut III., vhc., lacks head quality, her feet are only moderate and are inclined to turn outward. Body and quarters are the best parts of her. Rye Lilly, fair in head, rather light in color, not good in carriage of ears, straight in shoulder and flat in loin, was worth a card. Beauty T. is coarse in head, wrong in coat, rather short in neck and too flat over the loin. Good quarters and fine legs and feet. Daisy, he., lacks in skull, lips, below eyes, position of feet, length of loin, and would be improved by more bend in hocks. Fairly good color and coat. Belle Ida, first at London and Toronto, was sent out without a card, which was clearly an error, for she is vastly better than a number of the commended ones. Lassie S., c., is plain in head but good in body and color. There was nothing very great in puppies. The winner in the dog class can be had for \$50 and may be less. He is rather coarse in head, shallow in body and not quite first-class in legs and feet. I shall expect the unnoticed Young Glencho to make the best dog in that class. The winner in the bitch class was first in the open class. The judge discovered some merit in Tim's Dandy by the time he got to the novice class, and placed him over dogs that had won over him in the open class.

GORDON SETTERS—(MR. GLOVER).

(Report by Mr. Mason.)

It is just ten years since I first took notes on the Gordon setters at New York. The class at that time, while not strong, was 50 per cent. better than it is now, which gives us some idea of the ability of dog men in this country to breed dogs. There has been a steady decline all the time since then, and a more miserable looking lot of characterless animals than the Gordons shown at New York, 1891, I trust it may never be my misfortune to see. There are more dogs than have been exhibited at several other shows, but where are the Gordons? Beaumont just simply towers over the rest of them, and a typical dog could give Beaumont points and a beating. Having won high honors on the bench in this class and seen all the cracks of dogs gone by, it fairly makes

my heart ache to look on these worthless fragments of true Gordon type. But giving advice to the average dog breeder is like pouring water into a sieve. He will commence at fifteen and breed from a mongrel until it dies, when he will get another of the same sort and proceed as before until his hair is gray.

Beaumont, by long odds the best dog in America to-day, was alone in the challenge class for dogs. He was well shown. Becky Sharp, in the bitch class, had no trouble in beating Madge, that must, I suppose, be a Gordon, seeing she is in the challenge class. King Item, first in the open class for dogs, was way ahead of the others. He is not first-class in head, is wrong from the second thighs down, inclined to be throaty and lacks liberty behind; good legs, feet and color, and fair in other points. This dog has improved immensely. He should do some more winning as Gordons go in this country. Doc, second prize, is of entirely a different type; long in face, light in eyes, only fair in legs and feet, rather short in coat and feather, would be improved by more depth of chest, and might be much better in color; not of correct type. Tyrus, third prize, is a better type of dog than Doc, and should have been second. This dog is well known. Comus, fourth prize, may just escape being classed as a cripple. Such a dog is worthless, and if there was nothing better in the class the prize should have been withheld. Gordon, vhc., while only fair in head, light in eyes, leggy, light and flat in loin and not perfection behind, is a better dog to-day than Comus; his type, however, is not so good. Dukemont, vhc., has an English head, is out of condition, over at the knees, breeched, and not just right in shoulders. He would have been a better bitch than dog. Chandos is coarse, plain, clumsy, straight in hocks, stands wide in front, is flat in quarters, and moderate in pasterns and feet. Cliff B., c., is light in eyes, stilty and narrow in quarters; his best points are bone and coat. In bitches Beaumont, of better type than Fly, was rightly placed first. She is good in color, flat in coat, correct in stern and shows some quality. Head only fair, quarters light, too narrow in front (not enough heart room), feet inclined to turn out, rather throaty, a bit shallow in middle and too narrow all through. Fly, second prize, is moderate in head, rather light in color, a bit flat over the loin and lacking in true character. Has better body than the winner and fewer structural defects, at the same time I think the decision a just one. Vic, vhc., is a weedy bad one of wrong type. Flomont, third prize, lacks in coat, has an English head, is not right in color, rather straight in hocks, too long in tail, travels with feet turned inward, better bone and body than the first and second prize winners, but not a good one. Vic III., fourth prize, is better in body than any where else. Sally Beaumont, reserve, has wrong type of head, is short in ear and rather straight behind. Puppies were weak, as usual. Winners in the novice class were shown in the open class.

SPANIELS—(MR. WILMERDING).

(Report by Mr. Mason).

There has been no improvement in these classes during the past year. The decisions were made in a painstaking manner, and were well received. Very few mistakes were made, in fact I have never seen Mr. Wilmerding do so good work.

Newton Abbot Don, truer to type, especially in head, than Baron, beat him and rightly so. Both are well known. Compton Bandit, in terrible condition, should have been left at home, and the judge must have been in a charitable turn of mind when he gave him the reserve card. Newton Abbot Laddie, I judge, was not shown for competition. The winning bitches are well known. First in the open class for dogs runs to the cocker type of head, which is wrong in a field spaniel. Plenty of bone; not straight in front; longer in legs than the second prize winner, but better in skull and eyes; good stern; a few white flecks on body; good ears. Bolus, second prize, is of cocker type in head, lightish in eyes; toes in when in motion; not quite straight in front. Echo, third prize, is somewhat leggy, not quite straight in front, plain in head, and would do with more coat. Compton Brigand, vhc., has the best head in the class, but is leggy and light in the middle, not quite straight in front. Eyes rather light, good ears and position of same. The winning bitch shows some quality in head, although in skull she does not equal the unnoticed Clio. Good length of ear, shoulder and set of legs not quite the thing, cheeks and lips might be much better; would be improved by more bone, stern carried too high, moves well. Dame Trot, second prize, is too cocky in head and her ears might be much better. Feet not first-rate, stern too thin and not well carried. Good in body, but her head spoils her for the field class. Clio has a neat head, with well set ears, but is leggy and carries her stern too high. Good legs and feet. She should certainly have had a card in this class. Miss Ben d'Or, unnoticed, is going all to pieces. She was never good in head, eyes and set of ears. Should not have been shown. The first and second prize winners in the class for liver-colored dogs are coarse in head. Don II., that took first, is light in eyes, very wide in skull, throaty and not straight in front, he also might be better in loin. Beau, in addition to his coarse, plain head, is curly in coat. Properly placed. Rosedale Dolly is supposed to be a black and tan, but where the tan should come in the color is yellow. Weak forefeet, feet defective, lacks character and quality. Patti, third prize, is an overgrown cocker, and a poor one at that. Saybrook Chance, c., is not a show dog. She has cocker head, high-set ears, is of wrong type and very curly. There was nothing really good in these classes.

Challenge cockers found the old family party again on hand. Jersey, an easy first, and Rabbi many points ahead of Brantford Red Jacket. I am disappointed in the last named. He is wrong at both ends. Novel and Bessie W., first and second, in the corresponding bitch class, are of better type than Bene Silk. It does not need Miss Obo II. to beat Bene, lots of others can do that. There was nothing very good in the open class for black dogs, but the competition between the first four was very keen. There could have been no room for kicking whichever had won. Black Dufferin, first prize, is not deep enough in muzzle and his lips are not what they should be. He also lacks a clean-cut appearance below the eyes, is not all that could be desired in forelegs, especially about the knees, carries his stern too high, and does not stand quite true at the elbows. He is quite a young dog but I am inclined to think he is as good as he ever will be. Obadiah, second prize, lacks in head. Oban, third prize, is rather coarse in head and undershot in the bargain, but from what I saw of him I like him as well as either of the others. As these dogs were in the "cellar" when I examined them, I do not care to express myself too freely. Examining small black dogs by gas light might easily mislead. It is, however, safe to say that they are very nearly equal in point of merit. Jersey Obo possesses a number of good points, but his long back is against him, and but for that he would undoubtedly have taken first. He is not quite straight in front, is too open in coat, throaty for a youngster and not just what is wanted in lips. In head, legs and quality he beats the others, also in feather. Truffle, hc., is large, a bit coarse in cheeks and muzzle, not good in eyes, leggy, light in bone, high in stern and short in feather. Body will do. Brush W., vhc., is small in eyes, not first class in feet or in pasterns, slightly roached in back and not perfect in front of the eyes. He has good legs and feather, and an average coat. Phil, c., is shallow in muzzle and wrong in lips. He is also leggy, curly and faulty in set of legs. Nig W. and Brad, both hc., are below Mr. Willey's usual form. Banjo, unnoticed, was worth a card. Black Duchess, first in bitches, has a niceish quality of head, not perfect in hang of lips and rather light

in eyes, chest wider than I like from front view, coat rather curly, stands back a bit at the knees, good behind, with proper quarters and correct carriage of stern, also right in ears. Amazement, second prize, is also a bitch of far more than ordinary merit, and one that will likely be heard from again. She is beaten by the winner in stop, neatness below the eyes, muzzle and one or two minor points, but she scores in coat, chest and shoulders. Woodstock Birdie, third prize, lacks in muzzle, straightness in front, hocks, and her feet are smaller than I like. She toes in considerably with the left foot. Meg Obo, though not well shown, is so much better than Woodstock Birdie that she should have been third instead of vhc., in fact I have an idea she may hustle the others one of these days. She is not perfect in eyes, lips, position of elbows, or in coat (at present), but there is a lot of good in her. Midget, vhc., has considerable white on her breast and chest, and I have my doubts about her being eligible to compete in this class. Brantford Lass, hc., is not bad in head, but she is a bit high-stationed, not straight in front and not quite straight in coat. Bandy, c., is leggy, plain and of wrong type. Canadian Girl, hc., is big enough and high enough, light in muzzle, back at the knees, rather long in back and not quite true in front. She moves well and has good quality of coat and feather. Blossom, c., is not a show dog, being flat-sided, moderate in head, light in bone, and curly in coat. Beauty B., c., was lucky, because—Dusty Dolly, hc., has a rather nice quality of head, with long ears. Nostrils very small and she stands too high. Idea, reserve, is coarse in head, the muzzle being too wide and cheeks too prominent. In hindquarters, bone, feet and carriage she will do. Meg Obo can beat her. In the open dog class for cockers other than black, Cherry Boy, rather plain in head, but good in body and fairly so in legs and feet, was the only decent specimen shown, and all other prizes should have been withheld. King Pharaoh's Sister, nearly all name and very little cocker, was the best of the bitches. Her head is bad. Silverton, first prize, is a rusty black dog with a funnel-shaped head, decorated with yellow markings. I guess Mr. Wilmerding got this class wrong end about.

In Chumbers the Ottawa Kennels took all the prizes without competition. Boss III. and Lady Bromine, the challenge class winners, are well known. Neither is quite first-class, but the bitch is much the better. Johnny Jo, that was given first in the open class for dogs, in truth is not a show dog, being all wrong in muzzle, skull, expression, carriage of ears, stern and character. He has a stout, strong good body, is a most active dog and may be an excellent fielder, but he will not do for the bench. First in bitches was won by Lady Snow, Mr. Mercer's recent importation, and she is the only really typical specimen I have seen in America. This is a sterling good bitch, and when in good condition it will need something of very high class to beat her. Lady Belle, second prize, was beaten in all points by the winner.

Irish water spaniels were weak in numbers and quality. The first prize winner, although on the coarse side throughout and open in coat, had a very easy win. Countess Bendigo, third prize, is woolly, plain in head and not up to show form. Dot, vhc., has a very bad tail with curls all the way to the end, a plain head and staring eyes. Romeo, hc., is another bad one, with heavily-coated tail, very wide front and wrong character of head.

FOX-TERRIERS—(MR. HOEY).

(Report by Mr. Mason.)

There has been no improvement in this class during the past year; in fact, one or two of the classes showed less quality than heretofore. Mr. Hoey had a full house when he stepped into the ring to pass on the merits of Blemton Rubicon, Raby Mixer, Splauger, Blemton Volunteer, Lucifer and Dusky Trap, and the fearless and commendable action taken by him to right one of the greatest wrongs ever committed in the judges' ring will not be forgotten in many a day. Two and a half years ago Blemton Rubicon, known in the dog fancy as the "robber dog," made his first howl to the public, winning three first prizes at the fox-terrier show held at Saratoga, there beating Raby Mixer, Dusky Trap, Blemton Volunteer, Reckoner, Luke, New Forest Ethel, Blemton Consequence, and a large number of other terriers. Mr. Mortimer was the judge. Since then he has won the highest honors on the bench in this country. At New York last year Mr. Hoey placed him over Raby Mixer. Last week in Madison Garden Mr. Hoey, amid a burst of applause, the like of which I have never heard at a dog show in this country, handed the blue ribbon to the handler of Raby Mixer and sent Rubicon out of the ring without a card. After the judging Mr. Hoey said to me: "I acknowledge my mistake; he is not a good one." That is right, and would it not now be a graceful and courteous act if the late owner of Rubicon were to return to Mr. Thayer the prizes won by the dog, prizes which all of us know he never won on his merits? It would heal old sores, blot out the past and cause a better feeling all around. Commencing at Chicago, 1889, I described the dog as a bad one—an impostor—and I have never missed a chance to get a whack at him. The criticisms which appeared in this paper made enemies not only for the writer but the paper as well. We were fighting in a good cause, and though justice has been retarded it has come at last, and from the Fox-Terrier Club itself. That is sufficient. Let strife and ill-feeling, if there has been any, be buried with the dog. Heald had Mixer in great shape, and Hopkins had evidently been at work on Dusky Trap. It was nip and tuck, Mixer having all the best of it in front, and the little dog outscoring Mixer behind. As the dogs appeared to me from the ringside, I thought the decision a correct one, and a further examination of the competitors strengthened that opinion: Public opinion, which, however, is not always right, was with the judge, Lucifer, reserve, has gone off, but he is still a grand dog, and in body can give the best of them points and a beating. In the bitch class, Rachel, who is going in front, was rightly placed over Richmond Dazzle, that was given second. Blemton Consequence, that has often been placed over Dazzle, was here placed behind her. FOREST AND STREAM has always said a good word for Mr. Thayer's racy-looking bitch. The open class for dogs was large and of about the same quality as last year. Raffle again took first, and had I been judge would have been very closely pressed by the third prize winner, First Flight. He has a very neat and good head, perhaps lacking a bit in expression, beautiful ears, and he can stand very true in front. He is a bit light all through, but shows nice quality, has a good outline, good coat, and is a very showy dog. Russley Joker, equal second prize, is not nearly so good a dog as First Flight, being inferior in skull, muzzle, expression, shoulders, coat and length of loin (it is too short), also in movement. Joker is owned by Mr. Thayer, but is not one of his breeding. Blemton Valour, a youngster from Mr. Belmont's kennel, is not going to take the place of either Lucifer or Dusky Trap. He has a white speck in the left eye, and I don't just know how many points to cut him for such a blemish. He is a bit round and full in skull, which makes his muzzle not look so good as it really is, and is also a bit cheeky for so young a dog. Back ribs might be deeper to his advantage. His coat is too long about the neck, but he stands on the very best of legs and feet, is very good behind, has a nice outline, stands well and has a lot of devil in him. I think him a better dog than Russley Joker, though not so good as First Flight. Warren Laird, fourth prize, is longer in face than is necessary, and he did not carry his ears right when I had him out. Coat too soft and open, shoulders rather heavy, muzzle not right, being too lumpy and bull-terrier-like. Loin flat. Stands a bit down in the middle at times; moves well. Blemton Victor II., reserve, is a niceish puppy, with fair good head and ears, stands very true in front;

might be better in feet, is a trifle leggy, but should come down; too coaty about the neck. He can beat some of those placed over him. Suffolk Risk, vhc., disappointed me very much. This is the first chance I have had to give him a really thorough overhauling. He has a plain sort of a head, large feet, rather large ears, does not suit me behind, is flat in loin, rather light in bone and off in coat. Victor II. I thought fairly outclassed him. I would not have given him more than one letter in this class. Baby Trigger, vhc., lacks in head, is rather soft in coat and is not just right in shoulders and position of feet. Hillside Regent has a very plain head, is rather short in loin and is wrong in hocks. He got all he deserved. Starden's Jack, hc., is a well-known winner that found the company too good for him. Hillside Mix, c., is cheeky, big in ear, wrong in stern and soft in coat. Hillside Dandy, c., has grown the wrong way. Brokenhurst Quick, hc., is defective in head, light in bone, not right in front—feet included—and his coat is a bit soft. Col. Coffy, c., has fair body and coat, with plenty of bone, but his head is very plain. Endcliffe Spice, hc., is a useful looking one, faulty in skull, hocks and back ribs. Le Logos, hc., is snipy and light in loin. Warren Sabre, c., is not a show dog. Dominica, first in bitches, is quite a nice puppy, with a fairish head, ears well formed but carried wide as a rule, good neck, legs and feet, a trifle low at shoulder, body only fair but ought to improve, nice quality, coat should be denser, fairly good behind, lacks some in character. This bitch will likely improve. Ebor Nettle, second prize, is well known. Warren Jasmin and Warren Cachet were placed too high. The former has a collie face, with very badly carried ears, which had been glued down and still show the effects. She is also bad behind and too open in coat. Cachet is a very poor specimen indeed and the judge clearly overrated her. Bad head, light bone, round ears, flat loin, poor coat, not a show dog. Warren Sequel, c., is simply not a show dog. Resume, vhc., is all over a better specimen than the third and fourth prize winners, albeit weak in muzzle and rather soft in coat. Dusky II, hc., is bad in feet, toes in slightly, has wrong carriage of stern. Good body, coat and bone. Rosa Casina, vhc., is way ahead of the third and fourth prize winners. Princess, hc., can beat the third and fourth. The two last named bitches are old winners and well known. Tiara, reserve, Turlaw Villanelle, hc., and Verdict, hc., can any one of them easily beat third and fourth prize winners. The judge, who took a lot of pains, seemed to get things badly mixed in this class, but there were so many different types before him that placing the dogs correctly was a difficult task. As very few of the puppies were on the bench by the time I got to these classes I shall be compelled to pass them. Mr. Belmont was first in both classes with the Rutherford second. It was a disappointment to me not being able to see the winners, as Hopkins said he had something good. Raby Mixer downed Rachel for the special for best fox-terrier in the show, but the decision leaves lots of room for a difference of opinion.

ST. BERNARDS—(MISS ANNA H. WHITNEY).

The fair judge had in these classes a task set before her more difficult than she has yet had to contend with. With 174 dogs benched and 195 entries, it needed some one thoroughly conversant with the breed to place the awards with satisfaction to herself and the expectant owners. That Miss Whitney acquitted herself well is proved by so little grumbling being heard. It was undoubtedly the finest exhibition yet seen in this country, and as we have now pretty well the best dogs from England, it would be difficult to find a better lot of St. Bernards even over there. In the challenge dog class two well known animals appeared—Hesper and Ben Lomond. The latter's excellent coat and size were hardly sufficient to offset Hesper's superior head, markings and bone, so Mr. Sears's dog was given the ribbon. In bitches Manon's superior head placed her in front of the well known Miranda, who certainly keeps her age well, her excellent body and bone being sufficient to put her in front of Lady Wellington for second place. Then came a class which filled the ring, but head and shoulders above the rest stood Sir Bedivere and Alton. As this was an important class it was doubly necessary that the lettered cards should have been attached to the owners and handlers of the dogs, to enable the visitors and reporters to distinguish one from the other. Barring Sir Bedivere's intense look of quality and splendid condition, there is little to choose between the two cracks. Bedivere loses in length of body to the other, and though Alton has a little the best of it in bone, Bedivere is straighter in front. They are about equal behind, for though Bedivere shows a slight straightness behind, and when walking does not move as freely as the other, still Alton's hocks bend in just a little when standing still. Bedivere loses in hind feet to the other, being flat and open, in body he gains somewhat by greater depth of chest, in head there is little difference except perhaps in muzzle, where Alton may lose slightly, though he gains a little in skull, and to sum them up Sir Bedivere's excellent condition and an art of showing himself off and a dignified look that he has, which I have never seen excelled, gained him the coveted ribbon. Shorn of the romance and sentiment which surrounds Sir Bedivere, and which the tremendous advertising the dog has had, condition will play an important part whenever the two dogs meet. Alton took second. From Alton to Don H. is a big stride, he is short in muzzle, has a bad expression which is not improved by his large and light-colored eye, he is small, faulty behind, has good bone and excellent coat, he is, of course, more furnished than Lord Melrose, whose great size and excellent front is marred by straight stifles and lack of markings, though his massive head and fairly good expression might well have put him in the other's place. The winner in this class last year could get no nearer than reserve, his lack of shadings and light eye, long muzzle may have put him back, but he certainly has more St. Bernard quality than the third prize winner, coat, bone and legs excellent. In the vhc. division Helfred lacks markings and is long in head, though skull is good. Sir Marmaduke is fairly good in head, faulty in front; Lothario lacks size, but little fault can be found with him otherwise; Bruie was lucky, as he is long faced, light in bone and faulty in body. Sultan III. is too black in coloring and faulty in head and body, not substance enough; Superbus has a Leonberg look about him, lacks expression and markings, but has splendid bone; White Chief has a fairly good head, though light in eye and lacking in expression, has a good body and bone. In the hc. lot were Marquis of Stafford, who is simply a big white dog and as such does not show true St. Bernard quality; Lakmond has good bone, is of nice type, but hardly massive enough in head; Bruno has too much white on face and is curly in coat, bone excellent. Jersey Ben, of the commendeds, has no markings and Ajax is narrow headed and long faced; Friesland Vizier is also long in head, curly coated, but has nice markings. Rinn is flat-faced and faulty in eye; Grover entered in mastiffs is only moderate. In bitches Ladies Livingstone and Sneerwell are both good bitches and by their look of quality and excellent coloring, they were put in front, in the order named, of the much vaunted Plevna. Though Lady Livingstone turns one foot out now and then her good bone and body and especially her excellent head just put her in front of her kennel mate, who beats Plevna considerably in head, which is faulty in stop, long in muzzle and too dark in markings, in fact a rather plain head; she beats Sneerwell slightly in depth of body and bone, but her coat is her worst fault, and this will always put her back in close competition, as in this case. Lady Melrose, like her brother, lacks shadings, otherwise is good in head, has excellent bone, is faulty in front and is also a bit sharp behind and is now out of coat; she, like her brother, needs time to fill up. Zenth, reserve,

lacks markings and is small in head, otherwise she is well formed and has excellent coat and color. Corrette in vhc. division is well known, Princess Jura is light colored, large in ears, but with this exception is of good formation all round. In the hc. lot, Lady Rosemont is too fine in muzzle and light in eye, bone only fair. Duchess II. is faulty in head, nice coat. Among the commendeds, Lady Talton is weak in pasterns and hindlegs, carries her tail badly, but has a fair head; Miss Bellina has a bad expression and is more like a thick-headed sheepdog. Belle of Halfway Brook is small, and was not shown in as good shape as she might have been. The winner in the dog puppy class proved a good one, with one of the best heads to be seen in a day's march, behind the head he has a fault, being flat-sided and, of course, not furnished up yet, excellent bone and coat; Mont Sion Guy pushed him hard though, and had he a better color is quite the other's equal, an excellent head and coat is combined with well-boned limbs, he has a much better head than his breeding would imply. Roland, Jr., is narrow and long in head, but with a fair coat and good bone deserved his place. In the vhc. division, Rector is faulty in muzzle and lacks markings; Otos is a pup of nice size, bit faulty in eye and muzzle; Count St. Vincent was spoken of before; Claudian fails in muzzle and is not too well off for bone; St. Elmo is long-faced and straight behind, but his splendid bone redeems him somewhat. Jimlimoon, in the hc. crowd, is too houndy-headed; Gosport, shown too fat, is a promising youngster of good coat, but hardly massive enough in head, faulty in muzzle, good bone; Whiteflier has only his good coat to recommend him, he was hardly worth the mention, he has very poor markings and knuckles over in front considerably; Roller got as much as he was worth, poor head. This was a large class, but there was nothing very striking except the winners. In bitch puppies, Uarda is a nice sample, has a good head, coat and front; Arline, second, we did not see; Segrid has a charming head, spoils somewhat by a light eye, good bone and coat. Princess Olga, reserve, is flat-faced; Princess Helena, faulty in muzzle and body. Rose, hc., has a light muzzle, otherwise a pretty head with some good points; Princess of Wales is flat-ribbed, and also not dark enough in eye; Sieglinda is faulty in muzzle and straight behind; Queen Marathon is too long-faced; and Karew is as yet undeveloped enough to tell much about her; Lady Ventry is Barzol-headed, and so is Blossom to some extent; Ridgewood quite got her deserts.

In challenge smooths Hector had not much difficulty in accounting for Beauchamp, especially in general type and coat, and Nevis, reserve, ran the other close. Hector was looking well. That nice-bodied bitch Cleopatra had not much trouble in beating the poor conditioned Thisbe, though the latter will never lose her intense look of quality. Wanda was outclassed. Open dogs saw the great Watch an easy winner; he was looking in good shape. Leicester was a street behind; though good in general type, he loses in head, a bit houndy. Belisarius has an excellent front, hardly bone enough behind, is well-shaped, but his color is against him. Patrol lacks markings and is straight behind. Duke of Sparta is well known. Victor Vane has poor expression and is a bit out in front. Parson is plain-faced, and Noble is faulty in head; his muzzle is deficient. Mac has a stary, light eye, ruining his looks, though his head is of good shape. Alpine Guide is light-eyed and snipy in muzzle. In bitches the winner, Empress of Contocook, is one of nice quality, albeit a little long-headed and ears slightly houndy; she is also flat-sided, faulty in tail, but is nicely boned. Burton Belle is well known and pushes the winner close, though handicapped in hind parts. Lady Gwendoline has a nice head and shows quality. Monastery Myrtle took a place further back this time; she is well known. Nora, reserve, is a well-formed bitch, though long in head. Bona II. we did not see. Thisbe Wagner is faulty in muzzle and a bit plain. Mignon is faulty in muzzle. Appolona is an old friend. Hallowe'en is straight-faced and light in bone. In dog puppies the winner, Prince Ivo, is a nice stamp, and Prelate has a fair head, but is straight behind. Rignold is faulty in skull, excellent in muzzle and bone. Caesar is not a nice type; too long in head. The winner in bitches was Nora, already spoken of. Svanhilda lacks type in head, otherwise she will do for her age. Acme lacks markings and is light in eye, but body and legs are well formed. The winners in the novice class dogs have all been commented on in other classes. Leicester the smooth beating Lord Melrose the rough, but Lady Melrose redeemed the lost laurels by beating Lady Stella handsomely in her class. Sir Bedivere and Watch met for the special, and the former, though he does not move as freely as the latter, beats him in several points—depth of body, front, hindlegs and tail—and is himself beaten in hindfeet and head.

BLOODHOUNDS—(MR. MAYHEW).

There were not many entries, only three. Burgho, Jr., is a little the better in head, though the other beats in body, but is very shy and shows himself badly. In bitches the winner last year, Judith, had the class to herself. She shows good quality.

GREAT DANES—(MR. MAYHEW).

Melac, whom we have described before at Toronto last fall, had the challenge dogs to himself, and the well known Irene, in good shape, had matters her own way. In open dogs last year's winner, Parcha, was again the best of a lot of dogs which do not show any marked improvement. Nero, the winner of second at Boston, last year, came next; he loses in body and muzzle to the other. Turk is throaty and full in eye. Harmes loses in muzzle, cleanness of throat and formation of body. Caesar could be better in legs and head. Skoal is well fronted, is faulty in ears and throaty, but is well ribbed. Flora Florida was the winner in bitches; she puts up a nice clean-cut head, a well-ribbed body and fair legs and feet. Flora, well known, was second. Minckar is too short-faced, short in neck, straight behind and was heavy in whelp. Fritz, reserve, has a fairish head, though a little too straight-faced, is faulty in quarters and ribs and was uncropped. Uma III. loses in legs and feet, and Marquise, drop-eared, is not ribbed up enough, and is faulty in muzzle. Puppies were an indifferent lot, Nora being about the best, though snipy in muzzle. Melac had little difficulty in winning the special.

NEWFOUNDLANDS—(MR. MAYHEW).

As usual quality was conspicuous by its absence. Rover, the winner, is spoiled by a light eye, but coat and bone are good; another light-eyed one is Nero, second, also bad in muzzle, coat just fair. Sailor Lad has not a correct eye either, too full and large. Newfoundlanders need a small, dark, well-sunken eye, which only one in the class seemed to have, and that was Pascha, unmentioned, though he had more Newfoundland quality in head and coat than many others, though the latter was very curly. Brunette is also a poor one. Not a very good class certainly, and a disgrace to the country.

FOXHOUNDS—(MAJOR J. M. TAYLOR).

In challenge dogs our old favorite Brave had little difficulty in beating Roseville Rover, from an American point of view; the dogs are utterly different, but as an American hound Brave is the best, and would that his stamp was more encouraged instead of the whippet animals we so often see. In the open class for English dogs, Warrior, a fine hound with excellent front beat Barrister a trifle in head and ear. Songster a little out in front coming next; Major Warlock loses in muzzle and feet and so does Forager. In bitches Clonmel Rakish, an old favorite, had to give way to Shot, Contest and Goldfinch in the order named, though there is little between them; Clonmel beats in legs and feet somewhat; they are all of nice type, good hound coats and well furnished with bone. In the American division the Cook

Kennels' dogs showed a half-way type between the Avert Kennel dogs and the English ones, but I do not feel able to mix the types and will confine myself to remarking that there is no doubt they showed speed lines and plenty of grit, though I fail to see where they show the intelligent countenance of their more massive cousins.

CHESAPEAKE BAY DOGS—(MR. J. F. PEARSON).

Mr. Mallory's dogs Mary and Flow are considered excellent specimens of the breed, and were placed in the order named, Rap taking c. I shall try and say something more about these dogs in my Baltimore report.

COLLIES—(MR. A. D. LEWIS).

Chestnut Hill supplied the two winners in challenge dogs and again the older dog Scottilla had to give way to his son Roslyn Wilkes. Scottilla begins to show age and the younger can now beat him a trifle in head and always so in quarters. Roslyn Dandy showed up well in such company. The sweet little Flurry III. had no one to oppose her in her class and was in nice feather. Open dogs saw a big class, but notwithstanding this was Mr. Lewis's debut as a judge he did not get rattled and handled his classes well throughout. The Snire took pride of place over his kennel mate Maney Trefoil, whom he excels in head and body, the latter's point being his grand coat. A youngster, Montana, by The Squire, came next, he is strong in head and coat, ears faulty; Metchley Wonder II. is full in eye and trifle strong in head, has nice carriage of ears and good coat, legs and body. Far View Donald II. has a fair head, ears poor and is flat sided; Melrose has a taking front, but ears are carried badly and is a bit coarse in head; Noble Wonder lacks quality somewhat, nice coat; Manoranian is faulty in ears, otherwise fair; Roy is a little out in front, carriage of ears not quite the thing, but has a good body. March, hc., has good length of head, is big in ear and not in good shape; Carlyle Wonder is too high in brow and open coated. Outside the winners, this was only just a fair class, showing little improvement. Wallace Wonder, also c., is coarse in head and open coated. In the bitches we were introduced to about the prettiest piece of dog flesh I ever saw. Roslyn Dolly is a bit on the small side and aptly named, but for model, carriage of ears, legs and feet she cannot be excelled, a bit fine in muzzle, this may be of course strengthen somewhat yet, as she is only nine months old, and a little rough and tumble life would harden her coat; her action is superb; the judges evidently thought well of her, too, judging by the row of blue ribbons on her chain. Bonnie's Baby, well-known and looking in nice shape, but faulty in legs and feet, came second, and Roslyn Parole, a little full in brow, but nice coat, came third. Dawn is open in coat, but is well formed. Adila Wonder I have seen before; she has a taking head and expression. Collie Belle is soft in coat and big in ear. Buttercup II. is coarse in head, ears not correct, and is soft in coat. Lothian Model is a bit short-faced and coat might be better in texture. In dog puppies Roslyn Tory proved the winner in only a moderate class. Collies are not improving as a whole; Montana I liked better for the place, and Airlie, third, might have been higher up, better in coat and body. Roslyn Regent I did not see. Glenfoyle had also gone when I came round, but in the ring he showed a bit faulty in skull as near as I could see. In bitch puppies of course Roslyn Dolly scored again, with Frida some distance away. Clove is dorny in skull, but possesses a coat of good texture. Far View Shepherdess is faulty in head and coat, a bit open, nice body. In the novice classes the winners have nearly all been described. The hc. dog Strathmore Rob Roy is only a moderate one, head poor and eyes quite wrong, coat is the best point. Dolly, of course, won again in the bitch novice class, and Vernon Gypsie, hc., is about the only one not mentioned before, she has a dense coat, but of wrong texture, and her head lacks many good collie attributes. In smooths Taffy, the winner, should have been turned out; is a coarse commoner. Roslyn Wilkes beat everything for the special for best in show.

POODLES—(MR. A. J. PEARSON).

In the absence of Mr. Hecksher, who was down to judge these dogs, Mr. Pearson undertook the duties. I cannot compliment him, however, on the outcome. Mr. Pearson evidently having an eye for bangles and mere beauty. In the challenge class there was no mistake to be made, Styx having the class to himself. In open black dogs, Darkie, under whose entry appeared the winnings of a much better dog, the well-corded Dexter, Darkie won and Dexter got vhc. Darkie has a fair head, hardly bone enough and is not well off in that poodle attribute—lengthy cords. Bob, second, is bad in loin and feet, lacks bone and coat wrong. Dexter far away the best in his class, though his splendid cords need attention, his strong head and loin and excellent front could hardly escape any one. Bendigo was of course deserving of better treatment. In open bitches the light-bodied but catchy Czarina took the blue ribbon. She is wrong in eye and muzzle as well. Topsey, undershot, came second and the woolly-coated Bess third. Purbeck Nell, whose light loin may have put her back, got nothing. When taking into consideration her head and coat, she should have been second at least, and Olga, not near so good, got hc. In any other color but black Prince Toto ran away with the judge to the extent of beating such dogs as Styx and Dexter for the special. He is poor in skull, wide in front and woolly coated. Rex is only a moderate one, small-sized, and Jap is bad in muzzle and woolly coated. There were only three good ones in the lot.

BULLDOGS—(MR. E. SHEFFIELD PORTER).

The Bulldog Club certainly worked wonders with their initial effort to bring their forces together, and their exertions were so successful that an unprecedented entry of these dogs was seen on the benches. In the challenge class for dogs I found Harper and Merry Monarch in the order named. Harper's much better body and front, to say nothing of his head, put him well in front. The very best shown well, and the Yale blue was conspicuous around Harper's stall. Old Soudan made herself at home in the front seat in her class; her only competitor being Thespian, whom she easily vanquished in her present condition. Monarch VI. took the blue ribbon in open heavy dogs. He has a good skull and chop and is well out at shoulder. Bo'svain, a new face, has hardly volume enough of skull, being a bit flat too; he loses also to winner in front, though he is well off for chest. Oswego, third, is a bit plain-faced, not broken up enough and too much bull-terrier in front. Reserve, Handsome Dan, lacks volume of skull, not deep enough in jaw, is faulty in back, but well out at elbow. Carisbrooke has come along nicely, and deserved his letters. Bombardos, also vhc., has a fair skull, is a bit straight in front and large in ear. The plain-faced Quasimodo had here to be content with hc. In bitches Lera Langtry scored over Dolly Tester. There is room for question in this, as Lena is not out enough, ears faulty, pinched in muzzle, though deep enough, excellent bone and fairly good skull. Dolly is better in front, though faulty in body and ears. Columbine, third, has a good body but is not broken up enough in stop and wants to be thrown more forward. Bathos then took the premier honors in the under 45lbs. class. He has too much of a dachshund front, skull could be improved, too flat at sides, has good layback, is well out at shoulder, but is a bit slack in back. Joker came next; he is plain-faced, could be improved in front and is flat-sided. Crib, shown fat, stands well forward and has a fair head but is faulty in ear. Quiberon was over weight. In the bitch class the recent importation, Bloater Girl, has a good head, is well off in legs and feet and is well out in front, is well ribbed but shown a little light in loin; she easily accounted for Beatrice, well known, whom she beats far away in head; Princess Mab, third, is

fairly out at shoulder but is plain-faced, not broken up enough, reserve going to Princess Crib, who stands well forward but is faulty in feet, a bit long and narrow in head and flat in skull. Princess Pedro, vhc., is faulty in eye and fore part. Darby Nancy has a small head and is too narrow in front. Duchess of Parma is hardly what I expected, skull only fair but layback and chop better than the average; nice body. There was nothing startling in puppies. Winner in dogs, Cock Robin, is a bit plain faced, but has a good body and promises to be well out. Portswood Pinch is very middling. Darby May, winner in bitches, is one of Mr. Cugle's new ones, but hardly up to good form; a fairly promising head, ears faulty, but bids fair to stand well forward. In the novice classes it is needless to go over the winners again, as they were the same dogs.

BULL-TERRIERS—(MR. E. S. PORTER).

There was hardly any improvement apparent in these terriers. Somehow the native-bred stock, with few exceptions, is not up to good form. In challenge dogs there was no entry, and Starlight, our best home bred one, in the absence of Attraction had a bloodless victory in the corresponding class, she keeps her form very well. In open dogs Diamond King was well to the front, Spotless Prince losing to him in head and front. Dick Whittington, third, is a trifle thick in skull, has good bone and stands on good pins. Protection is a bit long-cast and leggy; Pilot shows too much stop and falls away before the eye, is a bit cheeky, otherwise fair; King of Hearts is cheeky and a bit full in eye. Dufferin, reserve, has a fair head only. Enterprise accounted for the bitch class, her good head, though a little soft looking, pulling her in front of Queen Bendigo, whose faulty and only moderately well-ribbed body placed her second. Duchess of York, third, is well known, now a bit passé. In the under 30lbs. class the first to catch the judge's eye was Grand Duchess, winner last year; White Duke, second, is a bit Roman nosed, and faulty in skull; Edgewood Belle, cheeky, and might be better in front and bone; Sailor is had in front and body, might be improved; Dusty Miller, good in body, is too prominent in brow. Ruby took the ribbon in the new class of under 20lbs., she has a nice head with excellent ears, and body is good for that weight; Sailor took second this time; and Little Prince, a bit round in skull and a trifle out in front, came third. Reserve going to White Rose, full in eye and showing too much stop. Venn, hc., is faulty in eye and front. Duke is a bad 'un. Fidget won in novice class, and boasts a good head, legs and feet, might be better in body. The other winners have been mentioned.

There were no Airedales entered.

BASSET HOUNDS—(MR. E. S. PORTER).

The old winner Bertrand, in fair shape, took the prize, Chief losing in head and bone.

DACHSHUNDE—(MR. E. SHEFFIELD PORTER).

These sprightly little German dogs turned out in force, Rubenstein easily accounting for the premier position in the challenge class, Countess Lina losing in head, length and ear. Surperbus II., first in open dogs, has good length, crook, but is faulty in eyes. Zulu II. knuckles over a bit, has a fair head and nice length of body. Boss II. has too much stop, could be better in eye and body, and Royal Max, reserve, is a bit thick in skull, nicely crooked, and chest well let down. Fritz K., vhc., is coarse in head, and shown in poor shape. Joan of Arc was the winner in bitches; ears not set on right and is faulty in front. Kate has a nice head, is well crooked and chest well let down. Tiny, third, is too full in eye and faulty in ears. Daisy B. loses in muzzle and skull, but is nice type behind the head. Maggie K. is only moderate, and Gretel lacks chest development, but has good length. Joan of Arc was the winner in puppies. From what I hear there is some likelihood of these dogs becoming more popular, and I trust they will, for no better companion can a man have for a day's run in the woods.

BEAGLES—(MR. SCHELLHAAS).

There was hardly the entry here that a show like New York should command, and the members of the new beagle club thought fit to keep their dogs at home. Now that the amalgamation has been formed we shall no doubt see the breed well represented at every show of importance. Somerset Kennels had things pretty well to themselves, winning with Storm in the challenge dog class, Little Duke losing in muzzle to the other, though more of a beagle. Myrtle, shown too fat, but otherwise keeping her age well, accounted for the bitch class. In open dogs an old exhibitor, Pottinger Dorsey, showed Les II.; too large and coarse, soft in coat, head of fair shape, front good. Jupiter came second, and Roy K., faulty in muzzle and skull and rather coarse throughout, but fairly good in legs and feet, took third place; his kennel mate, Tomboy, a bit wide in front, but possessing a nice bound coat, secured the three letters. Bell Boy, thick in head, hc. Cloud, a well-known winner, took first honors in bitches, and another equally well known, Belle of Woodworth, whose fault lays in front, came next. Flora K., bit out in front, and faulty in muzzle, otherwise good, took third; Belle of Rockland, hardly straight enough in front, and a bit deficient in muzzle, was well placed at vhc. Flossy is too long in muzzle and was a bit soft in coat though of excellent type throughout. Under 12lb., had Blue Bell II. the winner, though soft in coat and flesh she is a nice model. Muggy is a bit large and shown too fat, is light in eye and of peculiar color. There was nothing very striking in puppies, Impression being the best, Emeline coming a good second.

IRISH TERRIERS—(MR. R. F. MAYHEW).

An old-time winner, Breda Tiny, had the challenge class to herself, and looked well. Breda Bill's better front no doubt influenced the judge in putting him over Mars, whose head and body I like. Breda's teeth are out in front, and this should act against him in a close finish. Roslyn Murphy is too soft in coat and looks a bit cloddy, and is faulty in muzzle. Barney's Brother is of fair type; might be improved in head and front. The new bitch Dunmurray is especially well-fronted; coat fair, and certainly the best bitch seen since Breda Florence came over. Roxy is a bit wide in front, has nice texture of coat. Exile, third, loses in skull; excellent coat. Kathleen, reserve, nice front, faulty in body. Rap bit on the large side. Biddy Mahone loses in head. Erin and Ballymoyn are faulty in head, but the latter shows up well in coat; legs and feet. Irish terriers are evidently on the move. Nora S., one of the best in her class, was said to have been fixed in coat, and was turned out.

WELSH TERRIERS—(MR. R. F. MAYHEW).

Several new importations have made this breed more conspicuous at this show, and the picture of the Welsh terrier in our last issue was eagerly scanned for points. None of those shown fill the bill, and there is not much to choose between the winners Which and Mephisto Dick; To'ther is wide in front and not well shown; Rowton Vixen we liked better.

DANDIE DINMOUNTS—(MR. R. F. MAYHEW).

The old rounders, Border Wang and Meg of the Mill had the two open classes to themselves; both are now well known. In puppies two very promising youngsters, Heath and Janie, were placed in the order named. The former beats the other in head and body.

BEDLINGTON TERRIERS—(MR. R. F. MAYHEW).

In dogs Syrup H. and Tick Tack changed places this time from last year, and rightly so, the latter won easily though beaten in muzzle by her kennel mate Polly Warkworth. Sweetbrier is a promising youngster and took third.

SKYE TERRIERS—(MR. R. F. MAYHEW).

The challenge had the two old antagonists Sir Stafford

and Lovett, the former won, and both were fully described in Charleston report. Open dogs, Rob Roy showed better type, Gladstone Boy being somewhat on the Clydesdale order, soft coat, but beating the other in body and bone. Bessie, faulty in skull and slack in loin, won over Effie Deans, too fine in muzzle.

CLYDESDALE TERRIERS.—(MR. R. F. MAYHEW).

Clydesdale Loris had to succumb to his kennel mate Belle of Clyde this year, but the dog wins all over in coat. This breed has not shown much signs of popularity as yet.

SCOTCH TERRIERS.—(MR. R. F. MAYHEW).

This class introduced us to the new crack Kilston, certainly the best yet seen here, with an excellent head and front he combines good bone and coat, beats Glencoe in head, ear and coat; Kilbrod loses slightly in head and coat, which is soft. Brownie, reserve, was a bit out-classed.

BLACK AND TAN TERRIERS.—(MR. R. F. MAYHEW).

These grand terriers are fast coming to the front, and though it is hardly time yet for a specialty club, yet the breed is fast becoming popular, and we now have about the best dogs that England has produced in late years. The Senator, looking in fine shape, had to succumb to Kaiser again, the latter's excellent front doing the trick, though beaten in marking by the other. The best bitch we have, Meerbrook Maiden, was alone in her challenge class and looked in nice shape. Open dogs brought together the two new arrivals, and the result after much examination was that the hitherto winner, Beaconsfield, had to pull his colors down to the younger dog. The decision is open to question either way. Beaconsfield's short body and excellent front and head is marred by his crippled quarters and failing mouth, color of tan might be better, but he excels the other in pencillings and thumb marks. Sultan's tan is good, but hardly bright enough, and head is a bit narrower than I like; forelegs cannot compare with the other, but is infinitely better behind in tail and quarters, and with age his body will furnish up somewhat; at present he lacks depth of chest. I shall have more to say on these two in the Boston report. Frank was outclassed in this company. In open bitches Broomfield Midge is not the correct stamp of terrier. Faulty in head, body and markings; she also moves queerly behind. Desdemona, taken all round, is of better stamp. Meersbrook Empress shows age, is small, but nicely marked. Rochelle Girl, faulty in ears and dark in tan. Spring and White Prince were placed in the order named in white English terriers, neither a good class. No whippets were entered.

YORKSHIRE TERRIERS.—(MR. MAYHEW).

Toons Royal, in excellent condition and coat, was alone in the challenge dogs, and in bitches that sweet little terrier Daisy filled her position well, afterward being sold at a long price. The North Fields Kennels had an outing in the open dog class. Toons Royal George made his debut over here. He is certainly the best coated dog we have yet been introduced to, with an excellent head and color of tan. He is a little on the large size, however. Fishpool Gem, hardly so good in head, came second. He is now too well known to need description. Merry Prince was poor in flesh, but excellent in coat and coloring. Prince Al, an old friend, looked well. Dude, vhc, has nice tan and color, but short of coat, and same owner's Star, he, quite deserved his letters. Ben II, loses in coat, as does Sargent, but is of nice color. Bob's coat is short, too, and smutty in tan. Major is too large and not class enough here. In open bitches Venus had no easy win; though rather dark in blue and tan could be better, was in good coat. Bradford Leah is better in color and has a well-shaped body. Rose is a bit round in skull, has fair blue and rich tan. Duchess needs age to furnish coat and color, and Yum Yum has a good body, coat too dark, tan coloring middling. Minnie is only moderate.

TOY TERRIERS.—(MR. MAYHEW).

Jerry was the best of a poor lot, being hardly so round-headed and full-eyed. Nellie, second, is one of the apple-headed sort, and Tiny might have well been placed higher up. These classes do not improve, considering the interest taken in them by the fair contingent.

PUGS.—(MISS ANNA H. WHITNEY).

Kash and Bob Ivy met in the challenge dogs. Competition was keen, and the blue ribbon eventually went to Kash, who showed himself much better than the other. There was some little question about the award in this class, as we believe Bob Ivy was marked first in the judge's book, though Kash certainly got the ribbon. In bitches Vesta beat her kennel mate Bessie, was nicely shown, reserve going to Bo Peep II., who is not far behind the winners. In open dogs we met a good one, Sprake, a son of Kash, his excellent head, wrinkle, body and curl placing him well ahead of Eberhart's Cashier, who is a bit lengthy, but has a fair head, ear and good curl, is a bit leggy. Saxon's good wrinkle and body placed him third. Little Jewell, an old friend, took reserve. The others were only fair, and we shall have a chance to go over them in future shows when time lags a bit. In bitches Lady Victoria, a bit faulty in muzzle and ear, beat Rustic Queen, a well-known winner, and Yuma Yuma, the winner in 1887, had to be content with third this time, the dark-colored Cossina coming in for reserve. Mabel E., vhc., is faulty in head, nice body and curl. Lady Aylesford has not much merit. Puppies were a fair lot, and nothing very startling, though Little Bessie shows some good points.

TOY SPANIELS.—(MR. R. F. MAYHEW).

In the challenge class dogs, Milwaukee Charlie had a good win over Roscius, a bit out of shape. King Victor, faulty in muzzle and wide in front, getting reserve. Most of these dogs being locked up, it was almost impossible to get at their faults or good points. The winner in open dogs, a new face, Calumet Bend 'Or, won luckily from Lady Hilary, who is shorter in face and better in tan, but not so good in eye and skull. Floss is too long in muzzle and large sized. Charley, reserve, is faulty in head and body, nice tan; Romeo, smutty in tan and the short-faced dog and winner last year, had to put up with vhc. this time; moves bad behind. He beat Lady Hilary last year. In Blenheim, Exeter Earl, a bit curly in coat, won over Calumet Lulu, whose skull could be improved, Cromwell is small in ear, but head is fairly good.

PRINCE CHARLES, RUBY AND JAPANESE SPANIELS.—(MR. R. F. MAYHEW).

In this mixed class Jenny Lind, second at Boston last year, won and was in much better condition; her good skull and better coat defeated Bell, who is a bit long in muzzle; her ears are her good point. Marguerite, third, is faulty in muzzle and legs, otherwise fair. Japanese spaniels saw a big entry and consequently the class was divided. In dogs Kioto, excellent skull and muzzle and nice coat, beat Beauty, who has hardly the face of the other. Tai-Sho, one of Mrs. Clarke's breeding and a son of Kioto, with seemingly many of his sire's good points, took third, reserve going to young Ching, whose fairly good skull, but lengthy muzzle, was all I could see. In bitches Tamah, last year known as Nellie Bly, beat Mrs. Clarke's Kura, who is not so good in skull but, like all her dogs, well off for coat, Momo, faulty in ear and eye, taking third; Ki-Ku, from the same kennel, is small yet and faulty in muzzle, only a puppy. In puppy toy spaniels Marguerite proved the winner, Sara the Superb taking second honors. It is, however, hardly necessary to criticize these youngsters yet.

ITALIAN GREYHOUNDS.—(MR. R. F. MAYHEW).

Some nice little hounds were shown in this class, our old friend Cupid just pulling through ahead of Sprite, he beats in size but is beaten in ears. Sprite being shown a little

above herself. Third went to Nixie, who is faulty in eye and ears, Tello taking reserve. Ruby, he., is a puppy.

MISCELLANEOUS.—(MR. R. F. MAYHEW).

Pippo, the Mexican hairless, winner last year, won again, second going to a nice little white Chihuahua, and Topsy, the Maltese terrier, an old friend, caught the judge's eye for third place, reserve going to Coquette, but of what breed we cannot tell, as she was *non est* when I came to her compartment and a notice to the effect that she was homesick was tacked on to the cage, which led one to infer that she had sought "all the comforts of home."

SCHIPPERKES.—(MR. R. F. MAYHEW).

Prince, Jr. beat Cople Sophia and Cople Sophia beat Dreiske and that is all I know about it, suffice to say that Mr. Connolly owned the whole six entries. H. W. L.

ADDITIONAL AWARDS.

IRISH SETTERS.—In the challenge class Geo. H. Covert's champion Dick Swiveller took 1st, instead of Max Wenzel's Chief.

YORKSHIRE TERRIERS.—OPEN.—Dogs: 1st, 2d and reserve, North Fields Yorkshire Kennels' Toons' Royal George, Fishpool Gem, 3d, Ben II, 4th, S. S. Sprague's Prince, Jr. Very high com., F. Senn's Dude, Peter Cassidy's Ben II, and Sargent, and Bernard Cummings's Bob. High com., Mrs. F. Senn's Star and Peter Cassidy's Major. Bitches: 1st, North Fields Yorkshire Kennels' Venus; 2d, P. H. Coombs's Bradford Leah; 3d, S. Smith's Rose, Reserve, Joseph Bell's Duchess. Very high com., Mrs. L. D. Cutler's Yum Yum and North Fields Yorkshire Kennels' Lulu. High com., Mrs. L. D. Cutler's Queen. Com. Peter Cassidy's Minnie.

TOY TERRIERS.—OTHER THAN YORKSHIRE. UNDER FLS.—1st and 2d, Morris Rothschild's Jerry and Nellie; 3d, Woodbury Kennels' Tiny. High com., Thos. A. Keogh's Stella.

TOY SPANIELS.—CHALLENGE—ANY VARIETY.—1st, Mrs. S. S. Blood's Milwaukee Charlie; 2d, Wm. Phillips's Roscius. Reserve, Mrs. F. Senn's King Victor. Puppies: 1st, Mrs. A. W. Lucy's Marguerite. Very high com., high com. and com., Mrs. A. Kisteman's Leo, Otto and Hero.

KING CHARLES SPANIELS.—Dogs: 1st, Calumet Kennels' Bend 'Or; 2d, Mrs. F. Senn's Golden Ball; 3d, H. Neimann's Ben-tick. Reserve, J. Hammond's Charlie. Very high com., Mrs. F. Senn's Romeo. Bitches: 1st, Calumet Kennels' Calumet Alice; 2d, Mrs. J. R. Franklin's Lady Hilary and Mrs. A. W. Lucy's Sara the Superb; 3d, J. O'Brien's Floss. Reserve, Calumet Kennels' Goldsmith's Royal Floss.

BLENNHEIM SPANIELS.—1st, Mrs. A. W. Lucy's Exeter Earl; 2d and 3d, Calumet Kennels' Calumet Lulu and Calumet Cromwell.

PRINCE CHARLES AND RUBY SPANIELS.—1st, William Phillips's Jenny Lind; 2d, Mrs. F. Senn's Bell; 3d, Wm. Phillips's King of the Fancy and Mrs. A. W. Lucy's Marguerite.

JAPANESE SPANIELS.—Dogs: 1st and 3d, Mrs. Eugene Clark's Kioto and Momo; 2d, J. Hammond's Beauty. Reserve, J. Hammond's Young Thing. Bitches: 1st, Mrs. F. Senn's Tamah; 2d, Mrs. Eugene Clark's Kura; 3d, A. C. Bond's Tai-Sho. Reserve, Mrs. Eugene Clark's Ki-Ku.

ITALIAN GREYHOUNDS.—1st, Miss E. M. Van Buren's Cupid; 2d, J. Lew's Sprite; 3d, Mrs. W. R. McKee's Nixie. Reserve and high com., Mrs. Max A. Pluecker's Tello and Ruby.

SCHIPPERKES.—1st, 2d and 3d, F. W. Connolly's Prince, Jr., Cople Sophia and Dreiske.

MISCELLANEOUS.—Mrs. L. D-G. Hurd's Pippet; 2d, Miss Marguerite Lewis's Infanta; 3d, Miss Ida Orme's Maltese terrier Topsy. Reserve, Mrs. Horace Stokes's Coquette.

SPECIALS.

MASTIFFS.—Taunton gold challenge medal, value \$50, breeders' prize for the best American-bred mastiff—Flour City Kennels' Caution's Own Daughter. Mastiff Club's silver challenge cup, value \$150, for the best American-bred dog or bitch—F. T. Underhill's Duchess. Mastiff Club's silver challenge cup, value \$100, for the best mastiff dog, the property of a member—Flour City Kennels' Hilda Challenge cup. Mastiff Club's silver challenge cup, value \$100, for the best mastiff bitch belonging to a member—Flour City Kennels' Lady Coleus. Old English Mastiff Club's 40-guinea challenge cup for the best mastiff in all classes—R. P. H. Durkee's Melrose Prince. Westminster Kennel Club's prize of \$25 for the best exhibit of four mastiffs entered and owned by one exhibitor—Flour City Kennels' Royal Guard.

ST. BERNARDS.—Silver cup for the best smooth-coated stud dog, judged by two of his get, sired in America and out of two different bitches—W. C. Reick's Hector with D. Mann's Cleopatra and T. M. Burke's Duke of Sparta. Silver cup for the best rough-coated stud dog, judged by two of his get, sired in America and out of two different bitches—E. H. Moore's Ben Lomond. Silver cup for the best smooth-coated bitch, judged by two of her produce—D. Mann's Cleopatra. Silver club medal for the best rough-coated brood bitch, judged by two of her produce—T. M. Burke's Sea View Phantia. Club medal for the best American-bred smooth dog over 18 mos.—C. F. Farney's Nevis. Ditto for best rough dog—J. F. Hawley's Duchess II. Ditto for best American-bred smooth bitch, same age—Contocook Kennels' Empress of Contocook.

FOXHOUNDS.—Best kennel in open classes—Charles Heath's Graph. Best bitch ditto—Hempstead Farm Kennels' Woolton Game. B-st dog with a field trial record—Duke of Hessen. Best kennel—Hempstead Farm Kennels. Best in the show—Duke of Hessen. ENGLISH SETTERS.—Best kennel of four with field trial records—Divided by Avert and Blue Ridge Kennels. Best English setter with field trial record—J. E. Doger's Cincinnati. Also W. K. C. special for best in show. English Setter Club special—Best dog with two of his get over 12 months old—J. M. Avert's Roderigo. Breeder of best three dogs or bitches, or both, over 12 months old—J. M. Avert kennels. Best dog or bitch with field trial record—Cincinnati. Best kennel of four—J. M. Avert. American Field cup for best in show—Cincinnati.

IRISH SETTERS.—Best kennel—Kildare Kennels. Best with field trial record—Kilmarney Kennels' Fearaway. Best brace owned by one kennel—Kildare Kennels' Beau Brummel and Ruby Glenmore. Best in open, novice or puppy classes—Beau Brummel. Best that ran in field trials of 1890-91—J. Scallan's Inchiquin.

GORDON SETTERS.—Best in show owned by exhibitor for six months prior to show—King Victor. Best Gordon setter owned and exhibited by a member of the Gordon Setter Club, and best Gordon setter with a public field trial record and best Gordon setter in the show—Dr. Meyer's Beaumont. Best kennel—Beaumont Kennels.

CHESAPEAKE BAY DOGS.—C. B. D. Club's silver medal, value \$100, for the best dog or bitch in the show—J. D. Mallory's Mary. SPANIELS.—S. C. silver cup, value \$100, best field spaniel, open to members of the Spaniel Club only; to be won four times before becoming the final property of any competitor—R. P. Keasbey's Beverley Negus. A. S. C. sweepstakes for field spaniels born in 1890—Oban 1st; Jersey Obo 2d; Pe'e Obo 3d. Rowland P. Keasbey's special for the best field spaniel brood bitch to be shown with two of her produce. The prize only to be judged. Open to members of the American Spaniel Club only—Ace of Spades with Dame Trot and Glendene. Best kennel—Clumber. Field or Sussex or water spaniels—R. H. Eggle's one's. TOY SPANIELS.—Best in show—Mrs. Samuel S. Blood's Milwaukee Charlie.

BALTIMORE DOG SHOW.

BALTIMORE, March 3, 9 P. M.—This well conducted show opened this morning. The judging was delayed by the late arrival of some of the dogs and the late hour at which the club could secure the building, not being able to get it till 11 P. M. last night. Everything was in shipshape by noon, however, and judging commenced in three rings. The brunt of the work lies on the shoulders of Messrs. Chas. D. and W. S. Diefenderfer, W. C. Furber and F. E. Lamb, who are hustlers of the first water. To Mr. Furber great credit is due for the really first-class arrangement of the bulletin board, something we have been suggesting for some time. All the awards are printed in large letters on card board slips as soon as made, and then each slip is nailed on the large board in class rotation so that one can at once mark off a catalogue without wandering in an aimless way all over the board trying to find the award you want; it is a great scheme and should be generally adopted. The prize cards were placed over the lucky winners in some cases almost before the dogs came out of the ring. The bulk of the judging has been gone through. Sir Tatton has here been put at the head of the open class of English setters, so evidently the English Setter Club special judges are not as one on the new standard.

Snow lies thick on the ground, but the attendance was fairly good throughout the day. Appended will be found the full list of awards made to-day:

MASTIFFS.—CHALLENGE—Bitches: 1st, Flour City Kennels' Lady Colens. OPEN—Dogs: 1st, Flour City Kennels' Ilford Chancellor; 2d, T. Dudley Riggs' The Moor; 3d, Linkwood Kennels' Linkwood, Chief. Bitches: 1st and 2d, Flour City Kennels' Caution's Own Daughter and Lady Dorothy. High com., Linkwood Kennels' Linkwood Lady Margaret and Linkwood Lady Catharine. NOVICE—1st, Flour City Kennels' Caution's Own Daughter.

ST. BERNARDS.—ROUGH-COATED.—CHALLENGE—Dogs: 1st, Wyoming Kennels' Ensign. Reserve, E. H. Moore's Ben Lomond. Bitches: 1st, E. H. Moore's Miranda. Reserve, Wyoming Kennels' Lady Wellington. OPEN—Dogs: 1st, E. H. Moore's Alton; 2d, Geo. J. Rupperecht's Lord Nelson; 3d, Mrs. A. A. Cobb's Lion. High com., C. Giller's Jersey Ben, V. Petrola's Count St. Vincent, Robert M. Agnew's Bruce. Bitches: 1st and 2d, E. H. Moore's Lady Livingston and Lady Sneerwell; 3d, reserve, very high com. 2d and high com., Mrs. J. H. B. Taylor's Republican Belle, Prudence, Blowden and Lakme. Com., Geo. Scala's Josephine Marie Sanderson. NOVICE—1st, Geo. J. Rupperecht's Lord Nelson; 2d, V. Petrola's Count St. Vincent. Reserve, Robert M. Agnew's Bruce. Very high com., Thos. Walther's Stonewall Jackson, Geo. Scala's Josephine Marie Sanderson. High com., H. S. Habersham's Athos.

ST. BERNARDS.—SMOOTH-COATED.—CHALLENGE—Absent.—OPEN—Dogs: 1st, J. E. Wilkinson's Adonis II; 2d, Maryland Kennels' Lord Hector; 3d, T. A. Shenbrot's Lord Giffon. Very high com., W. H. Frames's Eric. Bitches: 1st, Mrs. T. S. Wilkinson's Maud. High com., W. H. Frames's Shirley. NOVICE—Withheld.

BLOODHOUNDS.—1st, Mrs. R. V. Raebford's imported Jack the Ripper.

NEWFOUNDLANDS.—Withheld.

GREAT DANES.—CHALLENGE—1st, H. Nicholls's Melac. OPEN—Dogs: 1st and 2d, J. H. H. Maenner's Pedro and Mentor III. Very high com., H. B. Roemer's Nero. Bitches: 1st and 2d, J. H. H. Maenner's Minna Mia and Minna.

RUSSIAN WOLFHOUNDS.—Absent.

FOXHOUNDS.—ENGLISH—1st and 2d, Elk Ridge Fox Hunting Club's Stranger Lass and True Lass. High com., Alex. Brown's Rapid and Richmond. AMERICAN—1st, G. D. Wells's Bark; 2d, W. H. West's Music.

DEERHOUNDS.—Dogs: 1st, Dunrobin Kennels' Argyle; 2d, Geo. MacDougall's Breck Allan. Very high com., Miss Mary Leigh Ruby R. Noice. Bitches: 1st and 2d, Dunrobin Kennels' Olga and Alida.

GREYHOUNDS.—OPEN—Dogs: 1st, Dunrobin Kennels' Charles Davis; 2d, A. W. Purbeck's Gem of the Season. Bitches: 1st, Dunrobin Kennels' Maud Torrington.

POINTERS.—CHALLENGE—Dogs: (50lbs. or over) 1st and equal 1st, Hempstead Farm Kennels' Robert le Diable and Acme Kennels' Trinker's Chief. Bitches: (50lbs. or over) 1st, Fleetview and Reading Pointer Kennels' Belle Randolph. Dogs: (Under 50lbs.) 1st, Hempstead Farm Kennels' Duke of Hessen. Bitches: (Under 50lbs.) 1st, E. B. Bellman's Grapvine; 2d, L. A. Biddle's Glen Morgan; 3d, Hempstead Farm Kennels' Tony White. Very high com., J. A. Graham's Bangstone. High com., J. L. McCormick's Mart O'Bannon and D. W. Oyster's Dick Swiveller. Bitches: (50lbs. or over) 1st, Hempstead Farm Kennels' Woolton Game; 2d, E. P. Wilkin's Boy E.; 3d, L. A. Biddle's Cicely. Dogs: (Under 50lbs.) 1st, B. M. Stevens's Tribulation; 2d, F. G. Taylor's Inspiration; 3d, J. R. Purcell's Nick of Ion. Reserve, J. S. Summers's Bing of Knap. Very high com., E. R. Bellman's Hickory Staunch. High com., Geo. W. Massamore's Peterkin of Naso. Bitches: (Under 50lbs.) 1st, B. Holly Smith's Lizzie Porter; 2d, D. W. Oyster's Bloom III; 3d, Hempstead Farm Kennels' Merry Legs. NOVICE—1st, J. R. Purcell's Nick of Ion; 2d, C. O. Deyden's Pontiac, Jr. Very high com., J. L. McCormick's Mart O'Bannon. High com., L. M. Levering's Von Littlejohn. Com., Woodbury Kennels' Molly R.

ENGLISH SETTERS.—CHALLENGE—Absent. OPEN—Dogs: 1st, East End Kennels' Sir Tatton; 2d, Charles A. Murphy's Druid Hill; 3d, E. J. Martin's Mark Twain. Reserve, H. D. Thompson's Don of Rich Hill. Very high com., R. Berry Bull's Gawan. Com., D. S. Ellsworth's Rockford. Bitches: 1st, Philip Wolfenden's Bonnie Gladstone Girl; 2d, Joseph H. Hunter's Nelly Bly; 3d, E. J. Martin's Ruby R. Noice. Reserve, Philip Wolfenden's Bonnie Gladstone Girl; 2d, H. D. Thompson's Don of Rich Hill.

IRISH SETTERS.—CHALLENGE—Dogs: 1st, A. V. Armour's Max. Bitches: 1st, Kildare Kennels' Winnie II. OPEN—Dogs: 1st,

Killdare Kennels' Beau Brummel; 3d, Killarney Kennels' Tear-away, Reserve, E. J. Martin's Ben the Bossom. Very high com. Killarney Kennels' Ben C. St. Cloud Kennels' Minstrel; R. L. Jones's Limerick. High com., Hudson River Kennels' Darragh Pat. Bitches: 1st, Oriole Kennels' Jeannette; 2d, St. Cloud Kennels' Endora; 3d, S. H. Price's Norma. Reserve, Killarney Kennels' Quail. Very high com., Killarney Kennels' Red Belle. High com., Killarney Kennels' Hazel Nut III; St. Cloud Kennels' Ressie Glencho. Novice—1st, Killdare Kennels' Beau Brummel; 2d, St. Cloud Kennels' Endora.

GORDON SETTERS.—CHALLENGE—Dogs: 1st, Beaumont Kennels' Beaumont. Bitches: 1st, J. L. Campbell's Becky Sharp; 2d, OPEN—Dogs: 1st and reserve, B. F. Hale's Shot and Flash; 2d, Dr. Russell's Bob; 3d and very high com., Jas. B. Blossom's Comus and Gordon. Very high com., Beaumont Kennels' Duke-mont. Bitches: 1st and 2d, Beaumont Kennels' Beaumont and Belmont; 3d, B. F. Hale's Princess. Very high com., Jas. B. Blossom's Sally Belmont. Novice—1st, Dr. Russell's Bob; 2d, Beaumont Kennels' Belmont.

SPANIELS.—(ALL BREEDS OVER 25LBS.)—CHALLENGE—1st, Geo. W. Folsom's Barun.—FIELD SPANIELS—BLACK—(OVER 25LBS.)—Dogs: 1st, Roland P. Keasbey's Beverly Negus; 2d, Swiss Mountain Kennels' Tandy Obo. Bitches: 1st, Roland P. Keasbey's Miss Ben d'Or.

COCKER SPANIELS.—ANY COLOR—NOT OVER 25LBS.—1st, Luckwell & Douglas's Black Duke.—OPEN—BLACK—NOT OVER 25LBS.—Dogs: 1st, Spriss Mountain Kennels' Snowball. Bitches: 1st, Spriss Mountain Kennels' Chip K.

CLUMBER SPANIELS.—1st and 2d, The Clumber Kennels' Lady Belle and Johnny Jo.

IRISH WATER SPANIELS.—1st, B. F. Lewis's Patsy O'Connor; 2d, Mr. Washington Kennels' Countess Bendigo.

COLLIES.—CHALLENGE—Dogs: 1st, Chestnut Hill Kennels' Scilla. Bitches: 1st, Chestnut Hill Kennels' Blurry II.—OPEN—Dogs: 1st, Chestnut Hill Kennel's Wellesbourne Hero; 2d, Hempstead Farm Kennels' Hempstead Zulu; 3d, I. McKinn's Nemo. Reserve, W. G. Hoffman's Foxev. Bitches: 1st, Hempstead Farm Kennels' Zulu Princess II; 2d, Chestnut Hill Kennels' Wellesbourne Gipsy; 3d, F. K. Carswell's Lady Moll.—NOVICE—2d, Reserve and very high com., Dr. J. S. Conrad's Flungna, Dublin and Lady Grierson. High com., Dr. J. S. Conrad's Alloties. J. Scott's John Scott.

BULL-TERRIERS.—CHALLENGE—Bitches: 1st, Frank F. Dole's Starlight.—OPEN—Dogs: 1st, William J. Bryson's Dufferin; 2d, Frank F. Dole's Mr. Dick. Bitches: Frank W. Moulton's Lountum Kit; 2d, F. B. Clark's Dago.—NOVICE—1st, Frank W. Moulton's Lountum Kit.

BASSET HOUNDS.—1st, B. Gilbert's Bertrand.

DACHSHUNDE.—Dogs: 1st, Washington Kennels' Feldman K.; 2d, Iroquois Kennels' Black Prinz. High com., Bernard Cannon's Waldman I. Bitches: 1st, Iroquois Kennels' Lizetta; 2d, Mount Washington Kennels' Countess Lina. High com., Woodbury Kennels' Rosie. H. W. L.

AMERICAN KENNEL CLUB MEETING.

THE annual meeting of the American Kennel Club was held at the Madison Square Garden, Thursday, Feb. 23, Vice-President T. H. H. presiding.

The following were present: Associate members: J. L. Anthony, L. F. Whitman; American Fox-Terrier Club, W. Rutherford; American Beagle Club, H. F. Schellhass; American Pet Dog Club, M. H. Crier; Buffalo Kennel Club, George H. Bush; Columbus Fanciers Club, A. E. Pitts; English Setter Club, Wilson Piske; German M-stiff Club, J. M. Arnold; Gordon Setter Club, I. A. Van Zandt; Kansas City Kennel Club, Maj. J. M. Taylor; Michigan K-nut Club, H. E. Cook; Collie Club, J. D. Sherry; National Greyhound Club, L. C. Whilton; New England Club, E. Blackwood Fay; New Jersey Kennel Club, A. Clinton Wilmerding; Philadelphia Kennel Club, William H. Child; Rochester Kennel Club, Warham Whitney; Toledo Kennel Club, Dr. H. T. Root; Virginia Field Sports Association, John S. Wise; Westminster Kennel Club, T. H. Terry; Youngstown Kennel Club, J. A. Logan, Jr.; South Carolina Poultry and Pet Stock Association, Dr. H. C. Glover; Cleveland Kennel Club, C. M. Munhall; Mascoutah Kennel Club, J. Mortimer; Wilmington Agricultural and Industrial Association, F. R. Carswell; Continental Kennel Club, Harry E. Twyford.

The secretary read the credentials of delegates as follows: Wilmington Agricultural and Industrial Association, F. R. Carswell; Delaware and Susquehanna Association, S. B. Rathbone; Philadelphia Kennel Club, W. H. Childs; Bulldog Club of America, J. H. Matthews; Continental Kennel Club, Harry E. Twyford; Montana Kennel Club, Jos. P. Read; South Carolina Association, C. K. Westbrook.

Mr. Anthony nominated Mr. August Belmont for president. Mr. Childs nominated Mr. T. H. Terry for vice-president. On motion of Mr. Cook, seconded by Mr. Anthony, the secretary was instructed to cast a vote for Mr. Belmont for president. The secretary casting the vote Mr. Belmont was declared unanimously elected.

Mr. Anthony moved that Mr. T. H. Terry be re-elected vice-president. There being no other nominations the secretary was on motion instructed to cast a vote for Mr. Terry for vice-president. Mr. Terry was declared unanimously elected. On motion of Mr. Anthony the present members of the stud book committee, consisting of Messrs. T. H. Terry, A. D. Lewis and James Watson, were elected as members of that committee.

Messrs. John S. Wise and J. L. Anthony, the present members of the advisory committee, were on motion elected members of the advisory committee. Adjourned.

EXECUTIVE COMMITTEE.

The above named delegates were all present. The secretary read his report as follows:

New York, Feb. 23, 1891.

To the Executive Committee, American Kennel Club: GENTLEMEN—I beg to report that the day following our last meeting I received a communication from the Indiana State Poultry and Pet Stock Association, withdrawing its application for admission to this club, and requesting me to return the ten dollars deposited with it, and that it was desired that the matter being dated before the meeting at which the club was elected, they certainly are entitled to withdraw, and the money should be returned, but having been regularly elected as a member, I did not feel justified in returning said ten dollars without the official consent of this club, and I would respectfully request the adoption of a resolution at this meeting, directing me to send the amount in question to the said Indiana State Poultry and Pet Stock Association. The advisory committee of the A. K. C. met on Jan. 23, 1891, and acted upon all matters before it, a report of which will be submitted at this meeting. In two cases before said committee, to wit: Mrs. F. Smyth vs. Cincinnati Kennel Club, and Dr. M. H. Crier, W. L. Washington, German Hopkiss vs. Michigan Kennel Club, the committee granted the defendants thirty days within which to file their answers. The answers have been filed within the required time and are herewith submitted:

DETROIT, Mich., Feb. 12, 1891. A. P. Vredenburg, Esq., Secretary American Kennel Club, New York.—Dear Sir: In the matter of the special prizes offered by the Michigan Kennel Club at its late show, while it seems to the officers of our club that we have occupied the most unpleasant situation of all parties concerned, standing in the unenviable position of "between two fires," there nevertheless exists an explanation of the delay in the American Kennel Club and the winners of these special prizes for a long delay in sending out the cups. As previously stated, a majority of the winners of these specials preferred cash to these cups, and at their request Dr. Saunders and myself carried the matter before the exposition committee and used every effort to persuade that committee to substitute cash for the cups. After some delay on the part of the committee, they finally decided to give the exhibition committee, we were informed by the secretary of the association that they could not consent to substitute cash for the cups, as the same had been donated by the merchants of the city, and for the association to pay cash in place of the cups would entail upon them an unnecessary expense of several hundred dollars. The letter embodying their decision was written under date of Oct. 21, 1890. Most lately the money was given to Messrs. Wright, Kay & Company for the manufacture and shipment of the cups. The long delay was caused by no default of the Michigan Kennel Club, as the enclosed letter from Wright, Kay & Company will explain. We regret very much that our club should have been thrown in a position so apparently disadvantageous. Very respectfully yours, H. E. Cook, Delegate Michigan Kennel Club.

FEB. 12, 1891.—H. E. Cook, Esq., Superintendent Michigan Kennel Club.—Dear Sir: We have at last sent out the cups ordered by your kennel club the fore part of November. We regret exceedingly our inability to manufacture and engrave these cups within the period of time mentioned in our agreement. The order coming in the first of November found our manufacturers very busy in filling orders for Christmas goods, which caused an unexpected delay of several weeks in the manufacture. Then after the cups were made, they were returned to our engravers just before

Christmas at a time when every man was crowded to his utmost capacity on goods for the holiday trade. It was not possible, therefore, to have the inscriptions engraved upon these cups until after the close of the holiday season. But while the long delay must have been very annoying to you in not being able to forward the cups according to agreement with the winners of the same, it was not possible for us to have them completed at an earlier date. We repeat that we are very sorry for the delay in the matter, and trust this explanation will be satisfactory to all parties concerned. Very respectfully yours, W. A. P. Vredenburg, Secretary, New York.

MADEIRA, O., Feb. 2, Mr. A. P. Vredenburg, Secretary, New York.—Dear Sir: Your favor of 31st ult. just to hand. As I wrote you Jan. 31 the reason I did not answer your favor of Jan. 15 sooner was owing to my not having gone to Cincinnati for some time, consequently did not get it. I do not know what I can say in addition to what I wrote you 31st ult. in extenuation of the club's action in refusing the special class, that Mrs. F. Smyth has preferred charges against the club for other than that after the dog of Mrs. Smyth was judged the first day the telegram from the owners of the other three dogs in that class showed that the delay in their arrival was unavoidable, either owing to delay on railroad or detention in Custom House, and as Mr. B. F. Lewis, being a representative of Mrs. Smyth, had the matter explained to him, he made no objection to having the charges refused, and therefore was a consenting party and condoned the same. Mrs. Smyth's agent the irregular proceeding. And as he (Lewis) acting for Mrs. Smyth was the only party that could object to the judging and as he consented to it I sincerely trust the advisory committee will not deem the offense such under the circumstances as to recommend the suspension of the club. Very respectfully, Geo. H. Hill.

I beg to report that the officers of this club, together with some of the delegates and associate members, have received summons to answer the complaint of George B. Gallup, secretary of the late Albany Kennel Club. No cause for said action is given, but it is supposed that it refers to the disqualification of said Gallup and the persons who were disqualified for the non-payment of their prizes in full at their late show in 1890. A protest from Mr. A. W. Smith against their reinstatement is on file on the ground that he has not yet been paid the prize won by his dog at said show. I wired Mr. Smith on the 11th inst., asking if he had yet received his money and received reply on same day that he had not. Both Mr. Hudson and Mr. Gallup have been written to on several occasions, but without having the desired effect. Under date of Feb. 6 I received notice from Mr. Hudson that the Albany Kennel Club no longer exists, and I would request privilege to drop its name from our list of members.

Past experience has shown that frivolous charges are in certain cases filed against different persons, which take the time of the officers and committee to investigate, and after investigation are dismissed. In order to obviate this nuisance, and to make cause parties seeking redress to feel sure that their cause has enough merit to warrant action, I would respectfully recommend the adoption of a resolution to the effect that all charges lodged with this club must be made in duplicate, one copy for filing at this office and one copy to serve on the defendant; that all charges must be accompanied by a deposit of \$10, and that in case the charges are not sustained the said deposit shall be forfeited to the A. K. C. in case the charges are sustained the said deposit shall be returned to the appellant. I think such a resolution would have the desired effect, and its adoption is urgently requested. I beg to report that the Stud Book for the year ending Dec. 31, 1890 (Volume II.), has been published and mailed to all of the associate members and subscribers.

I am in receipt of a communication from the California Kennel Club advising that at a regular meeting of said club, held Feb. 17, inst., it adopted a resolution petitioning A. K. C. to recognize the awards of its show held in 1886. Your action in this matter is requested at this meeting, as it will be of great benefit to the club and the public. I beg to submit the enclosed petition, and to request the penalty of disqualification since Dec. 6, 1887, praying to be reinstated. He claims to have been innocent of the charges upon which he was disqualified, and feels that if he had been guilty that he has been sufficiently punished.

The secretary of the stud book committee handed me an appeal from F. Stettenbenz, together with testimony, in the matter of his suspension by the advisory committee, and having called for Europe yesterday, was unable to confer with his committee regarding the case. He personally recommends the removal of said suspension of Stettenbenz. I beg to say in this matter that I have read the letters and affidavits in the case and can join with the secretary of stud book committee in recommending the removal of the suspension of Stettenbenz. A. P. Vredenburg, Secy.

On motion report received. Mr. Anthony—In connection with the secretary's report in regard to charges preferred by one man against another, I think it would be advisable that the names of the plaintiffs and defendants should not be published in the proceedings, as it gives unnecessary publicity to matters which sometimes amount to nothing. Frequently cases are brought before the advisory committee which have been brought absolutely on false pretenses. As a member of that committee, I have listened for two or three hours to cases where there was no cause of accusation at all. It is unjust, because it gives a wrong impression to the public, all charges should be heard and acted upon before any names are made public. I therefore move that everything of a personal nature in these reports be stricken out before it goes out for publication. Motion seconded and carried.

The treasurer's report was read:

Treasurer's Account.

New York, Feb. 23, 1891.

To the Executive Committee, American Kennel Club: GENTLEMEN—I herewith submit my report of moneys received and disbursed by me during the year 1891, to date: Receipts from all sources from Jan. 1, 1891, to date.....\$5,244.81 Expenses for same period.....753.93

Balance on hand.....\$4,490.78 I beg to report the following clubs in arrears for their annual dues of 1891: Albany Kennel Club, German Mastiff or Great Dane Club, Southern Field Trial Club, and Worcester Kennel Club. A. P. Vredenburg, Treas.

The secretary presented the report of the advisory committee, published in the last Gazette.

Mr. Vredenburg moved that the reading of the report be dispensed with. Motion carried.

Mr. Whitton—I move that the report be adopted with the exception of the case of the American Kennel Club against the National Greyhound Club, and in that regard I move that the matter be referred back to the advisory committee for action. The American Kennel Club preferred a complaint against the National Greyhound Club relative to its stud book, and acted upon the same without any notification in any form or manner to the National Greyhound Club, except that it came to us in the shape of a mere rumor through one of the public prints. It seems to me that that proceeding was, to put it mildly, rather high-handed, and I would, therefore, move that the report be adopted with the exception of that portion of the same, and that that be referred back to the advisory committee. At that time I hope the advisory committee will extend to the National Greyhound Club the courtesy of notifying it to be present. Motion seconded by Mr. Childs.

Mr. Anthony—The advisory committee did just what they should have done in order to bring the matter to a head. The National Greyhound Club issued a pamphlet in which they stated baldly, without having consulted the American Kennel Club, that they were withdrawing their stud book. It seems to me that the proper mode of procedure in that case would have been for the representative of the Greyhound Club to bring that matter up at a meeting of the executive committee at which he should have stated that they intended to take that step. The advisory committee felt that as custodians of the welfare of all the clubs and of the stud book they should at least express their opinion. However, they did make a mistake. They did not say they would recommend to the executive committee that it should not be so high-handed, but Mr. Whitton moved that it be referred back to the advisory committee. The advisory committee has the interest of the Greyhound Club at heart—its heart is at the interest of all the clubs. I can assure Mr. Whitton that his club will receive the most liberal treatment, and we will hear everything that they have got to say, and the matter will be decided. Motion to refer back to advisory committee carried.

The report of the stud book committee was presented by the secretary and read as follows:

To the American Kennel Club:

Your stud book committee begs to report as follows: On Jan. 8 a meeting was held at the American Kennel Club rooms, at which were present Messrs. Terry, Lewis and Watson, and the following business was transacted:

Objection to registration of collie bitch, Hebie K. (19,13), Mr. A. R. Kyle, breeder of the bitch, called attention to this registration, and stated that she was not by The Squire out of Hebe of Neselwood. The registration was declared void on the above representation, but since this was done the owner has stated that his statements were perfectly correct, and the matter is held for further inquiry.

In the case of Fred Stettenbenz and J. G. Burns, publication of false pedigree.

Mr. Stettenbenz sent on for registration the pedigree of a litter of St. Bernard puppies, and at the same time word was received from Mr. Burns that such misrepresentation would be attempted. A large amount of correspondence was the result of the investigation, and the committee thought the false pedigree originated with Mr. Burns, and as he claimed that he had advised Mr. Stettenbenz of its incorrectness, it was deemed advisable to request the advisory committee to impose a temporary suspension, so as to force full information. No reply has been received from Mr. Burns in answer to the request for information, but Mr. Stettenbenz has given a full explanation of this part in the transaction. Your committee is of the opinion that the trouble originated with Mr. Burns, and that Mr. Stettenbenz fully believed in the correctness of the pedigree when he requested registration of the puppies. Mr. Stettenbenz has assisted the committee to the best of his ability, and is well spoken of by well-known Buffalo dog men, and your committee suggests that the penalty of suspension be in this case removed, and that Mr. Burns be permanently disqualified.

Mr. K. E. Hopf's communication as to the best means of avoiding duplication of names was read. It was not thought advisable to do more than recommend the secretary to exercise caution and to be careful in the names which would tend to mislead as to pedigree. Your committee begs to state that the Stud Book for 1890 closed with 2,866 entries for the year, and that it will be ready for distribution in a few days.

The financial statement of the treasurer is submitted herewith. As an auditing committee has examined this account, nothing has been done by the stud book committee in this respect, the committee having mainly confined its duties to looking into disputed pedigrees. Jas. Watson, Secy Stud Book Committee.

On motion, said report adopted.

At this point Mr. August Belmont took the chair. The report of the special committee, appointed at the last meeting to look into the matter of holding a show at the World's Fair, was read as follows:

To the American Kennel Club:

Your committee appointed to inquire into the expediency of holding a show at the World's Fair, at the suggestion of the American Kennel Club during the World's Fair would respectfully state that we have entered into correspondence, and have personally seen several members of the Mascoutah Kennel Club, and they generally expressed a desire to dispense with their annual show, and were also willing to co-operate with the American Kennel Club in the enterprise of holding a national show during the time of the Fair. Your committee has also corresponded with several of the Live Stock Commissioners and members of the Board of Control of the World's Fair Commission, and, from the information we can get, we believe the American Kennel Club would be justified in holding a show at that time.

JOHN A. LOGAN, Jr., Chairman. WALTER W. HATNEY, Committee. L. C. WHITTON.

After some further discussion, Mr. Munhall moved that the report be accepted and the committee continued. Motion seconded and carried.

Mr. Logan—I would suggest that Mr. Childs's name be added to the committee as a co-worker with us. He understands the matter well, and I would also suggest that another name be added, which will make a committee of five.

Mr. Anthony—I move that Mr. James Mortimer, or his successor, as representing the Mascoutah Kennel Club be added to the committee, and that Mr. Childs be also added to the committee. Motion seconded and carried.

Mr. Anthony—I move the present secretary-treasurer be elected for the ensuing year.

Mr. Belmont—Before any action in that respect is taken I would like to state that I have just been informed of my re-election as president of this club. I thank you for your renewed confidence in me. I have tried to serve you in every way I could, but through a great stress of work, which unfortunately occupies a great deal of my time, I have been unable to be present with you as often as I would like, and I hope you will excuse me for not being on my feet to-day. That was prevented by my detention down town. We have passed through a very disagreeable year so far as the officers are concerned, as you all know, in connection with Mr. Pesbuhl, and the secretary has been obliged to take steps to defend himself against his attack, and you are all aware of what has taken place. It also appears that this Mr. Pesbuhl has been instrumental in securing action on the part of parties who were not members of the Albany Kennel Club on account of their disqualification. I do not know what the nature of the complaint is, but I know that it has been done only for the purpose of annoyance and that the proceeding against the American Kennel Club is an attempt to harass the associate members by picking out any number of names at random and having the same served upon them, and I have been informed that it was the intention to do that in various other directions, so that parties who are uninformed if served with those papers, would therefore resign their associate membership in order not to be annoyed. I think it should be well understood and thoroughly circulated among the dog men that this is an absolute refusal of an attempt to injure the associate membership. That it is an attempt to injure the club, and in defending ourselves against the attacks of these members of the Albany Kennel Club we want your assistance in telling everybody that you meet that there is no harm in it, and that they will not be annoyed; that the matter will be attended to by the counsel for the club. The brunt of all this has fallen upon our secretary, and he is really suffering a great deal from overwork, and I am quite free to say that it has impaired his health, and I should like to suggest that some action be taken to give the secretary a furlough. His physicians have advised him to go away for rest, and his indisposition has been brought about very much by these troubles and annoyances, and we owe him a debt of gratitude and I would suggest that a furlough be given to him for at least a couple of months.

Mr. Anthony—I move the re-election of the secretary-treasurer, and in consideration of the amount of labor which he has undergone this year under circumstances with which you are all familiar, that he not only be re-elected, but that this committee desire to express their appreciation of his efforts during the last year, and that he be granted a leave of absence for sixty days in which to recover his health. Motion seconded by Mr. Logan. Unanimously carried.

Mr. Vredenburg—I am very much obliged to you. I have been very fortunate, I think, in keeping the confidence of the delegates as they have changed from year to year. I have now been secretary of this club for five years. I may have done a great many things, but I have not been able to do any more than I have tried to serve you as well as I could. The business of the American Kennel Club has grown to such proportion that I doubt whether there are any delegates in the club who really know its magnitude. Last year we had an actual list of over 10,000 letters which we had to write. It is a general bureau of information, and we make it a point to answer every communication, no matter how trivial, and the work of the Stud Book Committee has increased to a wonderful extent. Again I thank you for the compliment.

Mr. Anthony—I move that the Albany Kennel Club be dropped from the roll. Motion seconded and carried.

The request of the secretary as stated in his report, for permission to return to the Indiana State Poultry and Pet Stock Association \$10, for the reasons mentioned therein, was on motion, granted.

The resolution recommended by the secretary in his report in reference to a deposit of \$10 concerning the charges preferred, was on motion of Mr. Logan, adopted.

Concerning the petition of the California Kennel Club that its awards given at their show in 1886 be recognized by the American Kennel Club, was on motion of Mr. Childs, granted. In regard to the recommendation of the stud book committee to remove the suspension of Mr. Stettenbenz, in the matter of fraudulent pedigrees, and to permanently disqualify J. G. Burns, of Buffalo, for sending the fraudulent pedigrees, Mr. Anthony moved that Mr. Stettenbenz's suspension be removed by this club, and that Mr. J. G. Burns be notified by the secretary that in default of his appearing before the advisory committee at the next meeting and satisfactorily explaining his connection with those fraudulent pedigrees, he will be disqualified. Motion seconded and carried.

On motion of Mr. Schellhass, the charges referred to in the secretary's report were referred to the advisory committee.

Concerning the petition of Mr. Dan O'Shea, asking for reinstatement, Mr. Munhall moved that Mr. O'Shea be reinstated on the ground that he has been sufficiently punished. Motion carried by a vote of 12 to 6.

The following communication was read:

FEBRUARY 24, 1891.—Secretary A. K. C.: As there has never been any authoritative decision as to what constitutes one exhibitor, the high honor of the World's Fair, and the prize, and the combination known as the Mohawk-Indian Kennel Club seems so far out of the way of what has been always accepted as "one exhibitor," for all future time I should like to have an exact definition of the meaning of the phrase "one exhibitor," or one person, as expressed in the rules of the A. K. C. Very respectfully, M. H. CRYER.

HOOSICK FALLS, N. Y. Feb. 21.—Hoosick Falls Rifle Association scores at 200yds. off-hand, standard American target:

A NEW RIFLE MODEL.

BALTIMORE, Feb. 23.—Editor *Forest and Stream*: In Mr. Sneider's gun store one day this week, I had the pleasure of examining his new model magazine rifle, which I think is far superior to anything in the line of a repeating rifle that I have ever seen and I believe am pretty well acquainted with all the different systems of repeating arms, nearly all of which require a movement of the arm from 6 to 10 in. or even more, which in this new rifle is entirely done away with, requiring only a motion of the trigger finger of about 1/16 in., lever being in forward end of trigger guard in shape of a ring, thereby allowing a much steadier aim in rapid firing than is possible with a gun having so much swing of lever in loading and ejecting the magazine. The magazine is of the sliding type, to right side of barrel, ejects empty shells on left side, works very smooth and without any perceptible jar. Another advantage it can by turning small lever on left side be taken apart in an instant without the aid of a screw driver or tool of any kind and can then be packed away in a very small space, when to be used can be just as rapidly put together again.

H. A. V.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the *Forest and Stream*, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

March 24 25.—Detroit Tournament, assisted by the Inter-State Manufacturers' and Dealers' Association. \$1,000 guaranteed.
April 28-30.—New London (or New Haven) Inter-State Association.

May 5-6.—Algonka (La.) Gun Club Tournament. Open to all. John G. Smith, Sec'y.

May 5-7.—Pittsburgh Tournament. Open to all. Elmer E. Shaner, Sec'y.

May 19-21.—Washington (D. C.) Capital City Gun Club, assisted by Inter-State Manufacturers' and Dealers' Association. Club gives \$1,000. Association adds \$1,000, total \$2,000.
June 2-5.—Saratoga Gun Club Shoot, assisted by the Inter-State Manufacturers' and Dealers' Association. Association guarantees \$1,000. Club adds \$2,000. Total \$3,000.

June 15-19.—Thirty-third Annual Tournament of the New York State Association for the Protection of Fish and Game, at Rome, N. Y. M. R. Bingham, Sec'y.

THE ILLINOIS PIGEON-SHOOTING BILL.

CHICAGO, Ill., Feb. 23.—A pleasant little party met at Watson's Park, Burnside, this afternoon, for the purpose of celebrating in becoming manner the birthday of Mr. Washington, which really fell yesterday. Dressed in the most festive manner, Lord, Burton, Willard, Smith, Kent, Babueff, Foss, Kent and one or two others. Mr. H. W. Jenney, of the Jenney & Graham Gun Co., went along, but couldn't be coaxed to shoot. Charlie Willard hadn't any gun, so took a Colt out of the stock. It was too crooked, and he spent most of his time in trying to build a comb on it with leather and old newspapers. Some very decent shooting was done. Mr. Kent was the best, he was pretty well for a young one. Mr. Hollister got a considerable many, making some good two-barrel kills. Mr. Donald distinguished himself also. I have carefully disguised Mr. Donald under the pseudonym of "Donaghue," so that the public will not know his real name in case he wants to get on an important match. The birds were good at first, but fell off. When the shooting began a tremendous wind was blowing and the birds went like rockets. It veered and fell off a little toward the close. The following are the scores of the sweeps:

Sweep No. 1, 10 live birds, \$3. Illinois State rules:
F C Donaghue.....2000123010-5 F Hollister.....1222120122-9
C S Burton.....0122011112-8 C E Willard.....1007111212-8
H Foss.....1012222221-8 H Smith.....2002002211-6
C R Babueff.....2221121212-10 Wm Kent.....2220110001-7
Babueff first, Hollister second.
Sweep No. 2, same conditions:
Donaghue.....20020202-4 Willard.....0012121212-8
Burton.....0212112122-9 Kent.....0121212211-9
Foss.....1020012201-6 Hollister.....0011221027-9
Babueff.....011110222-8 Smith.....0111112112-9
Ties on first carried on to next shoot, second div. by Willard and Babueff.

Sweep No. 3, same conditions:
Willard.....1201220111-8 Smith.....1020220201-6
Babueff.....1201220111-8 Kent.....2121212112-10
Foss.....112121202-9 Donaghue.....0000102021-5
Hollister.....2201202211-8 Burton.....2201212021-8
Kent first in sweep No. 3 and No. 2, Foss second.
Miss and out, 32. Babueff 12, Babueff 21, Hollister 21, Smith 0, Kent 11, Donaghue 20, Burton 10. The birds were exhausted when the score stood as above.

To-day the shooters of Chicago, threatened by the Humane Society with a bill suppressing pigeon shooting as being a cruel and wanton sport, have read in the despatches of all the great morning dailies the following, which is respectfully submitted to the gentlemen of the society:

PHILADELPHIA, Pa., Feb. 23.—Special.—The Supreme Court today delivered a decision reversing the judgment of Judge Yerkes, of Bucks county, and holding that the shooting of pigeons liberated from a trap, provided that it is done not wantonly and cruelly, but as a test and training in marksmanship and with proper attention paid to the immediate killing of wounded birds, is a justifiable sport and not cruelty to animals.
This decision is worthy of note and comment. There are many who do not believe in shooting pigeons at the trap. Some of these are honest and some are not in their expressed belief. They should be equally honest in opposing every form of field shooting, which is more cruel, because it sees more crippled birds which escape to suffer. In trap-shooting very few crippled birds escape. The killed ones are often killed as quickly as if their heads were cut off and they are sold for food as much as turkeys whose heads have been cut off. There is only one feature about pigeon shooting which goes to make it repugnant and that is the fact that the bird has been already reduced to possession. Given the bird wild and free, and there is in most men the savage hunter's desire to kill it, to reduce it to a savage and not a civilized instinct. Therefore, there rests against the shooting of pigeons from the trap simply the weight of a repugnance which is founded not upon a civilized but upon a savage instinct. Have all the gentlemen of the Humane Society attended pigeon matches as conducted to-day? Do they really know what they are talking about?

The sportsmen of Chicago would like nothing so much as to have the members of the Humane Society come and see a pigeon shoot for themselves. If they should still wish to abolish such shooting, the sportsmen will ask them to extend their efforts also to the abolishment of all field shooting. The main thing is to be fair. Each side should try honestly to see the validity of the other's standpoint. A week or so ago I wrote some severe things about Mr. Shortall, from the standpoint of the shooters of Chicago, yet after all I was probably unwise, unkind and unjust in doing that, and violator of a principle all men too often and too easily forget—that of trying to see the other man's side of the case, and not accusing him out of hand of sheer unfitness to live and breathe because he doesn't happen to agree with one. The "pigeon bill" will not be passed. Let us hope that out of the agitation there will simply arise a better understanding between the two elements here arrayed against each other. If the Humane Society has been seeing pigeon shoots which were barbarous and brutal, let us hope honestly that they will succeed in abolishing all such forever. None will be gladder to see that done than the real sportsmen of this city and State. But not all pigeon shoots are such, and this the sportsmen who oppose Mr. Shortall's measure know very well. If it is to be carried out in the manner, are they at this time they were becoming far more wise.

This is a jarring and discordant world. There is none guiltless in it, and none without the mote. But cannot the Humane Society, if we grant it and its officials to be animated only by the purest of motives, do more good elsewhere than among pigeon shooters? Their efforts should be toward lessening the greatest amount of suffering in the most ill and the manner. Are they at this time they were becoming far more wise.

damages, and kills the injured animal, thus leaving the owner's right of suit unimpaired. No satisfactory reply could be had, though Mr. Donald telegraphed repeatedly. The Humane Society sent no agent. To destroy the horses now meant, of course, to make his company directly responsible for their value, or was in law an admission of damages without defense, yet Mr. Donald could not wait the convenience of the Humane Society, whose business it is to mitigate suffering, and therefore took the responsibility and had the horses destroyed, for humanity's sake.

There is one instance of a corporation with a soul. Mr. Fred. C. Donald, the official who couldn't get the society's agent to act, is a well-known shooter. He was last year president of our State association. I have seen him shoot a great many pigeons. How about the comparative humanity in this case? Now, his is it, the shooter, or the humane society? Now, the point I want to make is that, until the Humane Society has its work so systematized that it can promptly and efficiently handle some of these glaring cases of animal suffering, it is working wrongly and out of its sphere when it wastes its already inadequate energies by attempting a thing whose performance is not sanctioned or inspired by a rational and just humaner. It is effort like this last, leaving its proper field to go into a less fit and less urgent labor, which is drawing upon the men behind this proposed pigeon law the ready epithet of insincerity, which I confess has been all too quick upon my own lips. Let us be more far than that, more just, and, if need be, more charitable. Let us not call this anti-pigeon measure insincere, but only ill-advised, unwise, unfit, unseemly, and foredoomed to failure.

Feb. 26.—In the despatches I find another case on this question of cruelty: "MATROON, Ill., Feb. 25.—Special Telegram.—Sheriff William Checkley, of Coles county, keeps a pack of hounds and two tame deer. On Friday last he and his friends enjoyed the luxury of a chase. Parties at Windsor had the Sheriff arraigned upon the charge of cruelty to animals. The case was called at Windsor this evening and was dismissed. The spectators made up a purse to cover the Sheriff's expenses." Comment on this is difficult, because the full facts are not known. Queen Victoria, of some notoriety in England, is at much annual expense to keep the Royal Buckhounds, a pack employed for just such sport as this. As a sport it may not be high. Perhaps the Windsor magistrate holds that a Queen or a Sheriff can do no wrong.

E. HOUGH.

Feb. 26.—Score made here to-day by the Lake County Shooting Club in practice match at live pigeons. Illinois State rules:
W J Edbrooke.....111212221-10 Col Bond.....1022101110-7

The next match will be on March 20, between Hugh Devine and George Doremus.

SHORT LINE TO KANSAS CITY.—That is what the Chicago, St. Paul & Kansas City Railway announces to return of this paper regarding the completion of its own line into the cities of Leavenworth and Kansas City on Feb. 1, 1891, forming the most direct and expeditious route for passengers and freight traffic between principal commercial centers and the great States of Iowa, Northern Illinois, Wisconsin, Minnesota, Missouri and Kansas and the West and Southwest. Its splendidly equipped vestibule limited, with brand new coaches and the celebrated restaurant car, most sleeping cars and dining cars, is beyond comparison with the advantages offered by any other line. Information regarding this popular route, and particularly the new features it has recently added to its service in the interest of the traveling public, will be cheerfully furnished by its agents.—Advt.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

Yachting.

Model Yachts and Boats. Their design, making and sailing, with designs and working drawings. Postpaid, \$2.

Yachtmen who do not see what they want under this heading will please look under the hatches of the *Canoe*, peep into the *Kennel*, squint down the barrel of the *Rifle*, open the *Fish Car* and *Game Bag*, inquire of the *Sportsman Tourist*, and if their yearnings are still unsatisfied, push their explorations into the *Editorial* and *Advertising Departments*.

THE TREGURTHA SAFETY YACHT BOILER.

THE accompanying illustrations show the safety yacht boiler made by Murray & Tremutha, of Boston, builders of marine and stationary engines and of pipe boilers. The boiler is built in sections, one of which is shown in the smaller cut, which may be removed or replaced readily. Each section, consisting of a vertical pipe and a series of circulating tubes, is connected at the base to the horizontal steam pipes, or mud drums, and at the top to the steam drum, through which runs the dry pipe S. The feed enters

removed or replaced readily. Each section, consisting of a vertical pipe and a series of circulating tubes, is connected at the base to the horizontal steam pipes, or mud drums, and at the top to the steam drum, through which runs the dry pipe S. The feed enters

at T, at PG is the steam gauge, and at G, G, G, the gauge cocks. The casing is of sheet iron, lined with asbestos. Among the advantages claimed are reduced weight and floor space, safety from explosion, quick steaming and freedom from priming, and economy of fuel. The boilers are tested to 400lbs. and designed to work up to 350.

SATAN.—The centerboard is to be represented in the new 40ft. class by a Bingen boat, the owners being Mr. Chas. A. Prince, former owner of Helen, 40ft., and Shark, 30ft., Dr. John Bryant, owner of Shadow, and two other Boston yachtsmen. Captain Crocker will have charge of the boat. She will be 16ft. beam, 7ft. 6in. draft, and of light construction, with no cabin fittings, being intended solely for racing. Her name will be Satan, and the rather lurid statement has been made that she will be painted red above water. Lawley & Co. will lay her down, but as they are too busy to build her, the work will be done by Frisbie, of Salem, who built the Helen. In such good hands the centerboard will have a very good chance to show what it can do beside the keel; but the results in the 30 and 40ft. classes show that the keel boat is the faster, and the same is likely to be true in the 40ft. class.

DELAWARE CAT, "CHAS. COHILL."

A "MEAN LENGTH" RACING BOAT.

THE "length and sail area" rule is now in such general use, and the open sandbagger has in so many localities given place to better types, that awful examples of the bad tendencies of the various length rules under which such boats once flourished are fortunately no longer necessary. As this is the time, however, when changes of rules are in order, the accompanying design is of interest as showing the extreme tendencies of a rule that is still fondly adhered to by a number of the smaller clubs.

The Charles Cohill was a Delaware River hiker, built at a time when the racing in this type of boat was at its height, and when the measurement was of the simplest kind, without even a "plus" in it, being the length from the rabbet at stem to the inside of the sternpost, with no restrictions on beam or sail area, the allowance being 2 minutes per foot in a 30 mile race. The Cohill was built by Capt. R. G. Wilkins, of Philadelphia, to the limit of length of her class, 17ft., and with no more beam than the boat she was intended to beat, but with more depth and freeboard. As the waterline was entirely untaxed, it was lengthened as much as possible by means of the projecting stem and absurdly wide sternpost, the effort being to build a longer and bigger boat on the same deck measurement. Her dimensions were:

Length by club rule.....	17ft.
L.w.l.....	20ft.
Beam, extreme.....	6ft. 10 in.
L.w.l.....	5ft. 5 in.
Least freeboard.....	10 1/2 in.
Sheer, bow.....	1ft.
Stern.....	3 in.
Draft.....	2ft.
Mast.....	33ft.
Boom.....	23ft.
Gaff.....	10ft.

In racing she carried a crew of 8 men, each with a 35lb. sand bag, the crew "biking" out to windward by means of short lines, spliced into eyebolts in the keel and with a toggle or handle in the outer end of each, by which a man could throw his whole weight well outside the boat, as on the sliding seat of a canoe.

As a racer the Cohill was entirely successful, and effectually served the purpose of her designer, to kill a bad rule. As the result of her sailing the rule was abandoned in favor of one based on length over all and beam, which is still used, though the "tuck-up," built under a rule which limits length and sail, has driven the hiker out of the racing. The lines were sent to France by Capt. Wilkins, and a very successful boat was built there from them.

From the point of view of simplicity, which has been so often urged, even by those who should know better, against the length and sail area rule; that under which the Cohill was built was an ideal rule. It was absolutely free from cube root, square root, or even addition, and the boats might be measured by a man who could not add 2 and 2 together. From this standpoint it was even better than the common "mean length," which at least necessitates a knowledge of addition and division. Though it placed a still higher penalty on deck length than the latter rule, the tendencies were the same, and in any club in which the racing was kept under the mean-length rule, the boats being built solely for racing, the ram stem and projecting stern of the Cohill would soon be developed. Now there is not sufficient racing in any one club using the mean-length rule to induce the building of a special boat of this type, and the matter rests with the encouragement of plumb-stemmed and square-sterned boats, and the exclusion of all modern craft with some pretensions to grace and beauty. Even in this form the rule is out of date, and is gradually giving way to more modern ideas.

THE FALL RIVER LINE.

IT is becoming more and more apparent, as the yachting season approaches and no new keels are laid, that if New York yachtsmen wish to see any racing they will have to go to Marblehead for it; a fact that is feelingly commented upon by the Boston Globe as follows: "It is really about as convenient for a New York yacht owner to keep his boat at Marblehead as at Bay Ridge. He could take the night boat on, get a pleasant sail and a good rest, breakfast in Boston, and take the train for Marblehead, arriving in good season to go aboard his yacht and start her in the race. At Marblehead he is right out to sea, and there is no need of getting a tug to tow down the bay, or fighting with baffling winds or tides early in the morning."

Of the 8 yachts that will race in the 46ft. class but three will be owned about New York, and the bulk of the racing is certain to gravitate to Marblehead, whose natural advantages certainly surpass those of any other point on the coast. If, as the usual story goes, the New York Y. C. is still hunting for an out-of-town site, it might be worth while to go further east than City Island or New Haven, to Hiker's Island or Marblehead Rock, where members could view the races from the club house piazza.

SIR RICHARD SUTTON.

THE news has been received by cable of the death on Feb. 25 of Sir Richard Sutton, the second British challenger for the America's Cup. Sir Richard Francis Sutton was born on Dec. 20, 1834, and succeeded his father, an old yachtsman and owner of the schooner *Elimia*, in 1878. In 1884 he built the cutter *Genesta* from designs by Mr. J. Beavor Webb, and in the fall of the same year he sent a challenge to the New York Y. C. for a series of races for the America's Cup. He was on board the yacht for nearly two months in American waters, during which time the races were sailed with Puritan, in both of which *Genesta* was defeated, but her owner made many friends here by his courtesy and sportsmanlike conduct. In 1888 he was married, and since then has done no yacht racing, having sold *Genesta*. His action in refusing to accept a sailover after his yacht had been fouled and disabled by Puritan is one of the memorable incidents of the contests for the Cup and will long be remembered by American yachtsmen.

LARCHMONT Y. C.—The Larchmont Y. C. will retain the classification by corrected length, adopted last year, but with some changes in the limits of the classes, which will give a better division of the fleet, and will be specially advantageous in case of new yachts being built to the rule at any time. As we pointed out last spring, it would have been possible to build a very much larger boat than the *Titania* or *Katrina* for the limit of the class, 81ft., and similarly the limit of Liris's class, 84ft., would permit a boat far larger than any of the existing forties. The new limits, 77 and 49ft., keeps existing boats just at the top of their classes, and so are much fairer than the old. The amended rule reads: Cabin yachts shall be classified according to their racing length, and open yachts according to their actual load waterline length, as follows: Cabin yachts—schooners—Class A, over 90ft.; Class B, 90ft. and over 81ft.; Class C, 81ft. and over 77ft.; Class D, 77ft. and over 60ft.; Class E, 60ft. and under. Sloops, cutters and yawls—Class 1, over 77ft.; Class 2, 77ft. and over 69ft.; Class 3, 69ft. and over 60ft.; Class 4, 60ft. and over 55ft.; Class 5, 55ft. and over 49ft.; Class 6, 49ft. and over 43ft.; Class 7, 43ft. and over 36ft.; Class 8, 36ft. and over 30ft.; Class 11, mainsail yachts (yachts carrying main and mizen sails only shall be entitled to enter in this class and shall be rated as yawls). The other classes to remain as at present. After Class 16 add the following: The regatta committee may, if the number of entries warrant, divide Class 11 into two classes, dividing it at 25ft. The regatta committee, with the approval of the commodore, may establish special classes for any regatta.

SING SING Y. C.—Officers: Com., Ralph Brandreth; Vice-Com., Francis Larkin, Jr.; Rear Com., Benjamin Jenks; Sec'y, Robert T. Dennis; Treas., Joseph Thompson; Meas., William B. Hafl; Regatta Committee, Colonel B. S. Gibson, chairman, Pierre Reynolds and Charles S. Gowen; House Committee, Joseph Thompson, chairman; James Bedell, Robert T. Dennis, E. S. Pelham and Charles S. Raymond; Committee on Admission, Dr. E. B. Sherwood, chairman; W. I. Townsend, Francis Larkin, Jr.; Edwin L. Todd and Joseph Thompson; Auditing Committee, Dr. E. B. Sherman, chairman; W. I. Townsend and S. Olin Washburn; Trustees, Ralph Brandreth, Dr. E. B. Sherwood, Isaac B. Noxon, Gilbert M. Todd, Edwin L. Todd, Francis Larkin, Jr.; S. Olin Washburn, Colonel B. S. Gibson and Joseph Thompson.

SEMIRAMIS.—Mr. Jos. Pulitzer, of the New York World, has lately chartered the fine steam yacht *Semiramis* in England for use abroad. The *Semiramis*, designed by Mr. A. H. Brown, is a steel yacht, 185ft. l.w.l., 27.2ft. beam, 16ft. hold, with triple expansion engines 18, 29 and 47x33. She is rigged as a two masted schooner with yards on foremast. Mr. Brown is now engaged on a design for a smaller yacht for Mr. John Lysaght, owner of *Semiramis*.

NEW ROCHELLE Y. C.—Officers: Com., Leon Abbott; Vice-Com., John F. Black; Rear Com., F. M. Hausling; Sec'y, R. Condit Eddy; Treas., F. T. Youngs; Meas., Charles T. Miller; Trustees, Walter Large and Frank S. Brady; Membership Committee, Charles Chamberlain, Edward E. Lambden and H. Thompson; Regatta Committee, Edward H. Sturges, F. W. Schoonmaker and E. B. Louder; Law Committee, Martin J. Keogh and John F. Lambden.

YARROW'S WATER-TUBE BOILER.

THE CORINTHIAN SWEEPSTAKES.

WE have received from Mr. Chas. Stewart Davidson, acting secretary of the sailing committee of the Corinthian Y. C. of New York, the following minutes of a meeting of the sailing committee at which the matter of the sweepstakes race sailed last August was finally decided. The dispute over the measurements of Minerva and Gossoon gives conclusive evidence, if any more be needed, of the necessity for one uniform system of measurement and classification for all the large clubs, and also the measurement of every yacht prior to starting in a race. In the present case the rules of the Corinthian, New York and Eastern Y. C., all of which were to a certain extent involved, differ from each other in some minor details, though nominally the same. The minutes of the meeting are as follows:

At an adjourned meeting of the sailing committee of the Corinthian Y. C. of New York, held pursuant to notice on Feb. 9, at 56 Wall street, New York city. Present: In the chair, Mr. E. B. Clarke, measurer, Mr. Wm. Gardner and Mr. Charles Stewart Davidson (acting secretary).

The meeting being called to order, the chairman, Mr. Clarke, states that the business of the meeting is the matter of the sweepstakes for 40-footers held on Aug. 11, 1890, at Newport, R. I., and the awarding of prizes thereon, and that the long delay in calling the committee together for final action has been due to his own protracted and serious illness and to his subsequent absence in Bermuda during convalescence.

On motion of Mr. Gardner, the (1) original circular, (2) instructions for the race and (3) copy sailing regulations of the Corinthian Y. C. of New York are read.

Upon like motion the (4) schedule of the official times of the boats as taken at the race by the committee is also read. Mr. Clarke further states that a question in relation to measurements was raised by Gossoon shortly after the race, in relation to which he calls the committee's attention to the fact that immediately upon the termination of the race and the return to the harbor at Newport, upon its appearing that the race had been very close between Gossoon and Minerva the entire committee visited Minerva and Gossoon for the purpose of obtaining from them their official measurements (the boats having started under approximate measurements furnished to the committee verbally prior to the start by those in charge subject to production of official figures later).

Mr. Clarke stated that on the committee's visiting Minerva those in charge of the boat stated that she had been recently measured by and had sailed on the preceding Friday (Aug. 9) under the measurement of Mr. John Hyslop, measurer of the New York Y. C., and that they would have the certificate found and handed to the committee. That immediately thereafter on visiting Gossoon and stating to Mr. Adams that the race had been very close between Gossoon and Minerva and that the committee's decision would not be rendered until official measurements were handed in, Mr. Adams stated that Gossoon also had been measured very recently by Mr. Hyslop and had also sailed under that measurement on the preceding Friday in the New York Y. C. race, and that he thought that that would be a fair measurement for her for all parties to take for the race, and asked if that would be satisfactory. Thereupon the committee agreed to accept Mr. Hyslop's measurement for both boats, and so notified Mr. Adams and those on board the Minerva.

During the course of the afternoon the certificate of Minerva's measurement by Mr. Hyslop was handed to the committee.

Mr. Clarke further states that on Aug. 21 he received a letter from Mr. Burgess, Measurer of the Eastern Yacht Club, inclosing Mr. Hyslop's measurement of Gossoon above referred to.

Mr. Clarke further states that in the letter handing him this certificate Mr. Burgess stated that Messrs. Adams, owners of Gossoon, would doubtless object to Mr. Hyslop's measurement for either of the boats being taken if it was intended to figure the time to decimal fractions of a foot, and that he had replied that it had been the rule of the C. Y. C. in all races to figure to the decimal fraction.

Mr. Clarke also stated, in relation to Mariquita, that during the race a member of the committee, on this boat's rounding the first mark (a C. Y. C. flag on a pole and raft), called attention to the fact that the main boom had touched the pole; and also called attention to the fact that a protest against Mariquita for such fouling was made by a competitor at the termination of the race.

Mr. Clarke further states that Minerva had been subsequently re-measured by himself and found within $\frac{1}{16}$ of a foot (corrected sailing length) of Mr. Hyslop's measurement, which would make 1.9310 seconds difference over a 25 mile course.

He also stated he had had considerable correspondence with Mr. Burgess in relation to the measurement of Gossoon. That Gossoon, having gone to Eastern waters immediately after the race, having carried away the main spars and shipped others in their place, having then gone further East upon a cruise, and it not being practicable for him to be in Boston for the purpose of measuring her until quite late in the season, at which time the boat was found wholly stripped, he with Mr. Burgess's assistance, had then made various measurements of the boat and her spars, lying on the adjacent dock, but that it had been impossible for him to arrive at any definite or absolute figures as having been her actual measurement at the time of the race. Messrs. Gardner and Davidson each stated their recollection of Mr. Adams's expressed desire at the termination of the sweepstakes race that the measurements used for the New York Y. C. race on the Friday, Aug. 8, preceding the sweepstakes Aug. 11, should be accepted by all parties, and of the acquiescence of Minerva therein.

Mr. Gardner stated that he thought in view of the uncertainty that would attach to the adoption of any other measurements the only fair method of disposing of the question would be to award the prizes on the measurements as quiesced in at the time by all parties.

Mr. Davidson moved that the certificates of measurement by Mr. John Hyslop handed the committee by Mr. Carroll and Mr. Adams respecting Minerva and Gossoon and produced here by Mr. Clarke be accepted as the true sailing measurements on that day of those boats respectively.

Mr. Gardner seconded the motion. The motion being put by the chairman was carried.

Mr. Davidson then moved that Mariquita be disqualified for having fouled the first mark in rounding. The motion was seconded by Mr. Gardner. The motion being put by the chairman was carried.

Mr. Gardner then called for the computation of the corrected time based on the elapsed time and the time allowances as figured upon the respective measurements of the various boats,

Mr. Clarke produced the figures, which being examined and verified by the committee were found to be as follows:

	Length.	Start.	Finish.	Elapsed.	Allow- ances.	Cor- rected.
Choctaw.....	47.20	11 59 01	3 31 42	3 32 41	2 20	3 30 21
Gossoon.....	47.34	11 57 04	3 14 08	3 17 04	1 20	3 15 35
Liris.....	48.00	11 57 17	3 16 12	3 18 55	0 00	3 18 55
Mariquita.....	48.18	11 57 24	3 14 42	3 17 18	1 03	3 16 15
Minerva.....	46.14	12 01 55	3 21 12	3 19 17	3 45	3 15 31
Moccasin.....	11 57 36		Withdrawn disabled.			
Ventura.....	47.00	12 01 20	3 32 56	3 31 36	2 36	3 29 00

* Disqualified.
Mr. Davidson then called the attention of the committee to the fact that the order of the boats as shown by the above figures was: Minerva first, Gossoon second, Mariquita third (disqualified), Liris fourth, Ventura fifth, Choctaw sixth, Moccasin disabled, and moved that the first prize be awarded to Minerva, the second prize to Gossoon and the third prize to Liris on account of Mariquita's disqualification. Mr. Gardner seconded the motion. The motion being put by the chair was carried.

The chairman states that the prizes, to be awarded in silver plate, are as follows:
Number of starters—seven, at \$100 each..... \$700.00
Number of entries that paid forfeit—one (Tomahawk), at \$25..... 25.00

Total amount of sweepstakes..... \$725.00
Whereof 10 per cent. to expenses..... 72.50

Leaving for the three prizes..... \$652.50
Under the conditions of the race the value of the first prize is 60 per cent. \$391.50
Of the second prize, 18 per cent. 117.45
Of the third prize, 12 per cent. 77.55
Total..... \$652.50

The chairman then suggested that Mr. Davidson be requested to consult the Whiting Manufacturing Company, the silversmiths who had heretofore furnished the prizes to the club, with a view to having sketches made for the above prizes, and that he submit the same to the respective owners, and if their approval be obtained forward the same to the secretary of the club to cause them to be made.

There being no other business before the meeting, on motion the meeting adjourned.
CHAS. STEWART DAVIDSON, Acting Sec'y.

YARROW'S WATER-TUBE BOILER.

THE accompanying illustrations show a type of water-tube boiler which has lately been introduced by Messrs. Yarrow & Co., of Poplar, for use in the torpedo boats built by this firm. The particular boiler represented in our illustration has been placed in a second torpedo boat, which is one of a number that the firm has lately constructed for the Argentine Government.

Although this form of boiler has only recently been brought forward by Messrs. Yarrow, it can hardly be described as new; for the design has been worked out for some time past, and is the result of a large number of trials and experiments which have extended over the last ten years or more. It is now about that time since Mr. Yarrow patented a water-tube boiler which we believe was fairly successful in working, and it is two years or more since we were shown a smaller boiler practically identical in form with that which we now illustrate, but which possesses certain additional features that have since been proved by practical experience to be necessary.

The arrangement and general design are fairly well shown by our illustration. There is a horizontal upper chamber or receiver and two lower chambers, each of the latter occupying the space at the sides of the fire grate. The receiver is connected to the lower chambers by numerous straight lengths of pipe, composed of welded steel tube. The parts of the chambers into which these tubes are inserted are flattened so that several rows of the tubes are possible. The tubes are expanded into the chambers in the ordinary way. Each chamber is made in two parts, which are flanged out and joined by nuts and bolts, a copper wire serving as packing to make a steam-tight joint. The water-gauge glasses and other fittings are attached to the upper cylinder. The whole is inclosed by a smoke jacket, and the products of combustion pass upward among the tubes to the uptake on the top of the boiler. In the boiler fitted to the second-class boat to which reference has been made, the length of the cylinders is about 6ft., and the diameter of the top receiver is 20in. The tubes are galvanized, and we understand Messrs. Yarrow & Co. have made arrangements whereby the whole of the boiler can be galvanized complete.

When running, the water level is kept half way up the receiver, and the top of the tubes is therefore always below the water level. In connection with this point the question of circulation—the crucial point in design of all water-tube boilers—will arise, and in regard to this point the long continued experiments of Messrs. Yarrow have brought some curious facts to light. As first designed this water-tube boiler had certain exterior pipes which were intended to aid the circulation by allowing the cooler water in them to fall, while the hotter water and steam in the tubes subject to the heat of the furnace flowed upward, in a manner already familiar. The boiler from which our illustration has been taken has these exterior pipes. It has been found, however, by recent experiments that the exterior pipes are unnecessary, a sufficient circulation being obtained by the difference in heat to which the rows of pipes respectively near to, and furthest removed from, the radiant heat of the furnace are subjected, and the consequent difference in specific gravity of the contents of the pipes or tubes. The fact is interesting, as showing the greater simplicity in design which can often be obtained in engineering structures by further research.

Another important point which will strike the engineer acquainted with the history of past water-tube boilers is that which depends on unequal expansion and contraction. The tubes being straight, if one expands under the influence of heat more than the rest, a compressive stress will be put upon the tube, while the colder length of pipe will be subject to a tensile stress. This, it would be thought, should lead to a loosening of the joints and consequent leakage. It is unreasonable to expect any boiler to work without stress of some kind, and the question arises whether the structure is sufficiently strong to resist the stresses to which allusion has been made. The recent experience with certain boilers of the more ordinary type fitted in some of Her Majesty's vessels, would lead to misgiving on this point; but is doubtful how far the compression and tension of tubes, due to unequal temperature, causes tube ends to leak in shell boilers. At any rate, the boiler

under notice stands on a different footing, and the experience of Messrs. Yarrow is that their new type of boiler neither leaks nor primes when put to the high duty required in torpedo boats. That that duty is up to the average may be taken as granted from the fact that the boat in which the water-tube boiler has been placed made a knot an hour more than her sister ships. The annexed table contains a copy of the official record of the trial.

OFFICIAL TRIAL OF SECOND-CLASS TORPEDO BOAT FOR THE ARGENTINE GOVERNMENT, BY MESSRS. YARROW & CO., DEC. 23, 1890.

Fitted with Yarrow's tubular boiler. Load on board, 2 tons. The trial took place at Long Reach on the Admiralty measured mile.

Steam.	Vacuum.	Air Pressure.	Revolutions per minute.	Time.	Speed.	First Means.	Second Means.
lbs.	in.	lb.		H. M.	knots.		
170	23	2.7	570	3 3	19.672	17.765	
170	23	3.2	577	3 47	15.859		
170	22.7	3.5	568	3 1	19.890	17.909	
171	22.5	3.3	680	3 46	15.929	18.133	18.021
172	22.7	3.2	597	2 57	20.338	18.063	18.908
172	23	3.0	578	3 48	15.789	18.121	
174	22.5	3.1	582	2 55	20.571	18.180	18.215
173	23	3.4	583	3 46	15.929	18.250	
means 172	22.7	3.35	578				Admiralty means 18.113 knots.

The boat is 60ft. long by 9ft. 3in. broad. Her displacement when fully loaded is about 15 tons. The engines are of the triple-compound type, and work up to about 250 horse power. The average speed attained with the same type of boats with locomotive boilers is 17 knots.

The advantages claimed for the boiler by its makers are that it is free from complicated and intricate parts, there being neither heads, elbows or intermediate obstruction to the free flow of steam and water through the tubes. By unscrewing the nuts and dividing the chambers at the flanges, a straight length of pipe becomes accessible, thus allowing of freedom for cleansing purposes. The boiler is light, easy to repair, and has high steaming powers for the surface exposed and fuel burned. Steam can be raised in a very short time—about twenty minutes, we believe, starting with all cold. The great point that remains to be considered in this boiler is its durability, and on that subject it is evident that no one can speak with authority for the next nine or ten years—at least authoritatively as comparing it with the locomotive type with which it is brought into competition. Messrs. Yarrow have, however, constructed a few of these boilers which have been at work for some years with satisfactory results, and they are only now bringing the design forward after having satisfied themselves that there is no serious doubt as to its practical success. Probably we should have heard more of the invention ere this, had it not been for the satisfactory results Messrs. Yarrow & Co. always seem to get from their old and tried friend the locomotive type of boiler.—Engineering.

THE RACING OUTLOOK.

ALTHOUGH spring is almost here, and there are indications of an early season, the outlook for yacht racing is less promising than it has been for twenty years. International racing is dead for the year, no challenge has been received for the America's Cup and none is expected; there is no prospect of a visit from a British yacht to contest for the Paine cup or to take part in the regular races; nor is there any talk of challenging on the part of American yachts for the New Royal Victoria cup or either of the American trophies now held in England. The stagnation in international racing is accompanied, perhaps as a natural consequence, by similar inactivity at home, there is no talk of racing on the part of the owners of any of the large yachts, and the meagre entry lists of last season are likely to be still smaller this year in the 50ft. class and in all sizes above up to the largest schooners.

The only signs of life are in the 46ft. class, for which seven racing craft are now building, while one or two more are likely to be ordered; but this is peculiarly an Eastern class, and though three of the boats will hail from New York, the cream of the racing is certain to be kept about Marblehead. In New York there is no prospect of any good racing, either by the means of the regatta, or by the racing in the New York, Seawanna and Larchmont clubs are already at work on various schemes to arouse and interest owners and secure entries. Various methods of handicapping, rules for cruising trim, etc., have been discussed and the Seawanna C. Y. C. will make a canvas of the yacht owners in order to ascertain their views. A similar work has already been done in Boston by the committee of the Eastern Y. C., which has sent out the following circular to all yacht owners.

EASTERN Y. C.

Boston, Feb. 23.—Dear Sir: Your regatta committee are con-

E. E. W., Neihart, Montana.—We can supply back numbers at ten cents each. New York fur dealers are C. G. Cunther's Sons, 184 Fifth avenue.

JACK, Washington, D. C.—You will find design small yachts and sailboats in the book. For canoes and cruising boats see "Canoe and Boat Building."

R. J., Buffalo, N. Y.—We know of no dealer who keeps large bamboos in stock. They are sometimes to be had in New York, but are difficult to find.

C. W. H., Albany, N. Y.—Is there such a thing as a list of St. Bernard breeders published, and if so, where can I obtain one? Ans. Write to Mr. K. E. Hopf, Arlington, N. J.

J. W. G.—Please inform the depth of chamber to order for my Parker hammerless, 74 lbs., 30 in., 12 gauge gun, and oblige. Ans. The chamber should fit the shell, generally made 2 5/8 in.

E. B. P., Brooklyn.—You can make the greatest part of the trip by water, but there are some very small bridges, and a portage must be made at one point. The ad. will cost about \$1.

CONSTANT READER, who asked last week for dog trainer within 100 miles of Chicago, is advised that the Riverside (Ind.) Kennels (see advertisement) are 90 miles from Chicago, and will doubtless answer his purpose.

D. G., Oswego, N. Y.—1. Where can I procure St. Bernard pups? 2. What is the general price for them? Ans. 1. Consult our advertising columns. 2. Anywhere from \$25 to \$75, according to reputation of sire and dam.

LIGHTHOUSE, Summit, O.—How can a person secure a position as lighthouse keeper and to whom should they apply for such a position? How much is the salary paid lighthouse keepers? Ans. Application should be made to the Lighthouse Board at Washington. The salaries vary.

1. Please let me know if the pups whelped by the bitch Fannie are eligible to registry, and cost, also send blanks to be filled out. 2. Will you oblige by giving the address of Mr. Naylor, breeder of Scotch terriers. Inclosed find pedigree of dog and bitch. Ans. 1. Yes; write for blanks to A. P. Vredenburg, 44 Broadway, New York city. The fee is \$1. 2. John H. Naylor, Mount Forest, Ill.

INQUIRER.—What caliber rifle is most used by Western hunters and frontier men? Which sight is most used in hunting large game? Can you give me description of strap and method of attaching it to the rifle, worn by hunters and cavalry men, moss used when riding it is worn over the shoulder? Does the Mills belt come for any size rifle cartridge? Ans. 1. 45. 2. The Lyman 3. See any military rifle for style of strap. 4. Yes.

C. M. W., Providence, R. I.—I have a very slight dent in the cylinder barrel of my gun. Do you think that it would be better to have it removed? I took it to the gun shop here and there they said it would not hurt the shooting at all, and that it being such small brass it would be rather hard to get out. However that may be, one can see it quite easily when the barrel is clean. As the gun is a very valuable one, I should feel obliged if you would give me your opinion about it. Ans. You may well enough have it taken out for the satisfaction of appearances, but it will not affect the shooting to any appreciable extent.

DOCTOR, Oswego, N. Y.—Can you tell me the greatest length of gun barrel constructed in former years? If information is not at hand perhaps some of your numerous correspondents can assist

you. There is in a museum at Florence a single barrel of extraordinary length. I would like to know just how long it is. Our representative in that city would doubtless be pleased to send you its dimensions, which, I think, would be of interest to your readers. The museum is in a former city hall, where there is a large collection of arms. The gun was evidently used for sporting purposes. Ans. Some of the old wall-pieces had barrels 11 ft. long.

D. F. C., Tampa, Fla.—1. Which do you consider the most practical and best State game laws? We are about to attempt to have one put through in this State, and it is with regard to its framing that I ask the question. 2. What do you think is the best thing that can be done to rid settlers of fleas and vermin and keep them free, or that will come nearest doing so? 3. Where can I obtain for a reasonable price a good strain of Irish setters? Ans. 1. It is certainly high time that Florida had a game law that amounted to something. Of course the same law will not answer for Florida and Maine. Your best course would be to procure a copy of the *Book of the Game Laws*, study the laws of the different States, and with the help of a lawyer draw up a bill for your Legislature. Let it be simple, as free as possible from legal verbiage, and so, easily to be comprehended. 2. Any of the advertised dog soaps are good; we have also found whale oil soap an excellent thing. 3. Consult our advertising columns.

It also applies to men. Says Mr. Lawson Valentine: "The dog that goes hunting with his master for a day has a good time. The dog that stays at home has nothing to do but scratch fleas. The fleas don't bother the dog that goes hunting."

Dogs: Their Management and Treatment in Disease. By Ashmont. Price \$2. *Kennel Record and Account Book.* Price \$3. *Training vs. Breaking.* By S. T. Hammond. Price \$1. *First Lessons in Dog Training, with Points of all Breeds.* Price 50 cents.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk Tales," giving a table of contents and specimen illustrations from the volume.—Ad.

"THERE'S MANY A SLIP 'TWIXT THE CUP AND THE LIP."

To avoid losing big fish—Use only ABBEY & IMBRIE'S HIGHEST QUALITY MIST COLOR LEADERS—Every one of which is carefully tested. A prominent angler tells us that our salmon leaders were beyond question the best he saw in use on the Restigouche last season. 18 VESEY ST. NEW YORK.

NOTICE TO LIMIT CREDITORS.

To the Creditors of the F. L. Sheldon Company: Notice is hereby given that on the tenth day of February, 1891, an order was made by the Chancellor of the State of New Jersey, that the creditors of the F. L. Sheldon Company present to the undersigned, the receiver thereof, and prove before him under oath, to his satisfaction, their several claims and demands against said corporation within two months from the tenth day of February, 1891, and that in default thereof, such creditors shall be excluded from the benefit of such dividends as may hereafter be made and declared by the court upon the proceeds of the effects of the said corporation, and notice is hereby given to all the creditors accordingly. WILLIAM H. LEMASSEN, Receiver, 802 Broad st. Newark, N. J.

GUNNERS.

Gunners, read this and practice till you can hit anything that hops, runs or flies. One pound of No. 1 shot gives you 120 rounds with your own gun. Practice limited only by shooters enthusiasm. Our pneumatic auxiliary gun barrels can be inserted in any ordinary breech-loading shotgun in a moment, converting your gun into an air gun to practice with. By pulling trigger of your gun precisely as if using shells, a single pellet or No. 1 shot is discharged that will break any clay pigeon or kill small game at short range. No fire, smoke or noise, and no trouble to load; can be used anywhere. Will teach you to hit with centre of load and kill neatly instead of crippling. Such practice is invaluable to any club shooter or sportsman. When ordering give gauge and length of your gun barrels. Sold by dealers or samples sent on receipt of price, \$3.50; 10, 12 and 14 gauge only.
P. O. Box 1127. VAUGHAN & CO., Philadelphia, Pa.

Canoe and Camp Cookery

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outdoors. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 98 pages. Price \$1.00.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. -10 CTS. A COPY. }
SIX MONTHS, \$2. }

NEW YORK, MARCH 12, 1891.

{ VOL. XXXVI.—No. 8.
No. 318 BROADWAY, NEW YORK. }

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices \$1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price for single copy \$4 per year, \$2 for six months. Rates for clubs of annual subscribers:

Three Copies, \$10. Five Copies, \$16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Seales and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, \$5 per year; \$2.50 for six months.

	ANSWERS TO CORRESPONDENTS.

AMATEUR REVOLVER CHAMPIONSHIP.

MR. WALTER WINANS, who is well known to American marksmen as the best revolver shot of Great Britain, has asked FOREST AND STREAM to act as his representative in fixing the amateur revolver championship of America. In his letter to FOREST AND STREAM he announces his desire to offer a piece of bronze as the emblem of that championship. The *objet d'art* which he contributes will be of his own make. For years it has been a work of loving pleasure on the part of Mr. Winans to fashion the daintiest bits of sculpture in wax, have them cast in enduring bronze and present them to appreciative and specially honored friends. It is not impossible that in a response to a demand which has been often repeated, some of these works may find their way into the regular channels of art sale and thus come within the reach of those who would gladly possess these quaint artistic samples of wax sculpture. It is one of these pieces, a figure of a mounted cowboy, we believe, which is to come over here as the emblem of the championship.

The problem now is, and one which we invite our revolver-shooting friends to share with us in solving, to fix the conditions; our own notion is to make the conditions so free that no one will feel that he is shooting under a handicap of any sort in striving for the honor of being the first revolver shot of America. Briefly stated, the conditions will probably be fixed so as to have the shooting at 20yds., by any revolver, with any sight, with any trigger pull, with any ammunition, strictly off-hand, 6 shots, at a target which will enable the shots to be measured each in inches and fractions from the fixed center. With such a target it will be possible to translate the record into the scores of any target of the dozens now in use. An open match first, with scores from anywhere, and then a final struggle of the leading ten or a dozen

shooters, under strict scrutiny at a fixed time and place, will determine who shall have the honor of first holding the trophy, to be defended for a certain length of time against challenge before becoming personal and permanent property.

These, in a general way, are the conditions which strike us as about right for such a match, and likely to give the widest satisfaction. On these and all points, however, we shall be glad, before fixing finally the rules of the contest, to hear from the Massachusetts Rifle Association's revolver shots, from those who do such fine work of this sort at Conlin's famous New York gallery, or the members of the New York Revolver Club meeting at the Zettler gallery. St. Louis has revolver marksmen whose opinion will be welcome as prospective competitors, and the Philadelphia galleries are also to be heard from. We invite the widest discussion and, by a prompt expression of opinion from all sides, hope to have the competition on at a very early date.

THE NATIONAL PARK BILL.

THE lobby which was working to obtain the right of way for the Montana Mineral Railway through the National Park has again succeeded in preventing Congressional action on the bill for the enlargement and protection of that reservation. Almost up to the last hour of the session there was some slight hope that the Senate bill might come up for action, but in the hurry of conference reports and other matters this important measure was crowded into the background. The lobby—if their agents are correctly quoted—do not hesitate to boast of the means which they employed in their attempts to monopolize the National Park; and in a recent interview Col. May, the "promoter" of the Montana Mineral Railroad, is reported to have said: "We had a powerful lobby, * * but the opposition was too strong." Except for the efforts of the railroad lobby to put through their iniquitous scheme the measure would probably have become law before now, and the next season would have seen the surveying of the boundaries of the Park and the establishment there of a form of government which would have been not only a great benefit to the Park at large, but also a security to each individual who might visit it. All this is now indefinitely postponed, as is also the prospect for building any railway from Cinnabar to Cooke City, something which might have been done had the Montana Mineral Railway people been willing to assent to the cutting off the northeast corner of the Park.

The statement is now made that the road will be constructed, but that a new route is to be selected, which will not enter the Yellowstone Park. It is said that the work of construction will be begun as soon as the surveys are completed, which last seems to us to have a familiar sound.

The mine owners at Cooke have only that lobby to thank for their present isolation. If they want an outlet to the Northern Pacific R. R. we would suggest that they now take an active interest in pushing the construction of some railroad between Cooke City and the Northern Pacific which shall not threaten the integrity of the Park.

THE CORBIN GAME PARK.

MR. AUSTIN CORBIN'S game park in New Hampshire is an enterprise so generous in scope, so praiseworthy in spirit, and so important in its bearings on game preservation, that it has excited widespread interest among sportsmen and naturalists. In response to our request Mr. John R. Spears has written an account of what has been accomplished up to the present time; and the story is printed in our game columns to-day. Mr. Corbin is engaged in an attempt to bring together all the large game species of our continent adapted to the climate of New Hampshire, and to maintain them there under conditions as nearly as practicable approaching their native haunts. His great preserve is admirably adapted to the purpose, since there are within its boundaries diversities of cover fitted for each species. The results sure to follow the successful maintenance of game under these conditions will be of immeasurable value; and we speak for every sportsman in the land when we bespeak for the promoters of this New Hampshire enterprise every encouragement and a cordial public support.

The market hunters of the lower Potomac call canvas-back ducks "white-backs." And sportsmen they call "sports."

SNAP SHOTS.

THE telegraph brings us the news of the death on Tuesday last, at Neosho, Kansas, of Col. N. S. Goss, the State ornithologist of Kansas, and a member of the American Ornithologists' Union. Col. Goss was one of the best known men in Kansas, and had a wide acquaintance among ornithologists. In the pursuit of his favorite science he had traveled over a great deal of the North American continent, for he was anxious to have a personal acquaintance with each species of our birds. His collection of birds, and also of insects, was very large, and the results of his ornithological labors was seen in the papers which he has published on the birds of Kansas, and the numerous additions to the avifauna of that State which he had recorded. A much more ambitious work from Col. Goss's pen on the Birds of Kansas was received at this office only the day before his sad death, and is now on our table for review. Col. Goss, who was no longer a young man, died of heart disease. When his death was announced to the Legislature, the Senate adopted resolutions setting forth his invaluable services and the irreparable loss to the State by his death.

A well known Boston commission merchant has a letter from a merchant down in the Province, asking for a bid on a live caribou. The owner desires to sell him. He is tame, will eat hay, oats and turnips like a horse, would be likely to run faster than any of the trotters of Beacon Park. He is three years old, or believed to be. Has a fine pair of antlers. Some of the boys in the produce trade think of forming a stock company and bringing that caribou to Boston. The game laws of the Provinces permit of taking and sending deer and caribou out of the country in close time if alive. Some of the dime museums will doubtless get the animal, but Mr. Austin Corbin can doubtless have him, if he will bid against the showmen and pay enough.

Now that the cartridge trust has removed all restrictions as to the selling price of cartridges, it is to be expected that ammunition will be to the dealer in sporting goods what sugar is to the grocer, a line on while the profits are nil. Under the old rule, which the Ammunition Association held up prices, the rates fixed by them were such that on all ammunition there was a profit of at least 10 per cent. There are so many dealers who will cut prices down to bare cost, to make a "leader" of ammunition, that the prices will inevitably drop all around. The buyer will gain, to be sure, but the individual purchaser's benefit will be so slight, after all, that he will hardly feel it.

Whether or not the trout season will open in New York on April 1 is something nobody can tell. The codification bill retains the date of May 1 as the opening day. The bill provides that the new law shall take effect immediately upon its enactment. If the Legislature shall retain the date of May 1 and shall pass the bill sometime in April, say the 10th, after the season under the present law shall have opened, it will complicate things for the angler who may have left home for the trout streams on the 9th. But this is borrowing trouble. There is time enough yet for the opening to be put back to April 1, where it belongs.

Why should the New England States not have uniform game laws, or so nearly uniform as to secure the advantages of coöperative protection? The Massachusetts Association for the Protection of Fish and Game, through its secretary, Mr. Richard O. Harding, invites correspondence from other societies on this subject. It is hoped that a convention may be held in Boston at an early date.

The work of the Boston society toward stocking the covers of the Old Bay State with game birds is going bravely on. The acclimatization committee has received over 1,000 quail and 143 prairie chickens, with more to come. It is to be hoped that the spirit of the association and its object in increasing the game supply of the State may be so thoroughly appreciated that the birds may have necessary protection.

The New York codification game bill has been largely modified; and numerous concessions have been made to suit local interests. The bill is now in the printer's hands. We hope to give the details of the changes next week.

The Sportsman Tourist.

A STAMPEDE IN THE STORM.

"ANOTHER stampede, by all that's holy!" And springing to his feet Taylor gazed anxiously out into the night in the direction of the herd, whence the sound of a thundering thousand hoofs mingled with the faint shouts of the herders fully demonstrated the truth of the Texan's exclamation.

To the reader inexperienced in all the phases of nomadic life the dread significance of the above remark may not be at once apparent, but to the freighters and cowboys upon our Western plains that strange, indescribable and often inexplicable panic, which sometimes seized their stock, was one of the worst calamities connected with their hazardous calling. One of the favorite methods employed by hostile Indians to harass the trappers, traders or immigrants passing through their country was by creating this panic among their animals; and descriptions of how it was accomplished by crawling into the herds on all fours, or dashing down upon them on horseback, hideously accoutered and yelling like demons, are familiar to all who take pleasure in tales of Western adventure.

But a stampede in one of the great herds of cattle which were formerly driven from Texas to markets in the North and West, that were many hundreds of miles distant, possessed some features that were essentially unique and which are not perhaps as generally known. One singular fact in this connection was that the most disastrous stampede always occurred in those herds composed entirely of full-grown beefs, four years old or upward; while mixed herds, containing cows, calves, yearlings, etc., seldom stampeded without some excuse therefor. The selected droves of great steers that had possibly never been touched by the hand of man since they were branded when calves, among which it was as much as a man's life was worth to go on foot, and which in the daytime would with a slight provocation give battle to a grizzly, will when driven far away from their ranges into wild and to them unknown regions, often acquire at night a timidity surpassing that of the most defenseless animals with which I am acquainted.

These panics usually occurred when there was little or no moon, and unless the first one was promptly checked in its incipient stages, was sure to be followed by others, each more easily created than the last, until only a vigilant, strongly-mounted guard in constant attendance could prevent them from occurring nightly. Strange to say, the human voice had at such times a most tranquilizing effect even upon the wildest cattle, and although of but little influence after the stampede had fairly started, a continuous talking, shouting or singing was one of the best preventives that could be employed. It was in times of the greatest quiet, when everything seemed most secure, that the greatest danger was to be apprehended. Along toward midnight the whole herd, tired from the long day's drive over the dusty trail, lies down to rest, not a sound in all that vast solitude around breaks upon the listening ear, the melancholy howl of the gray wolf that an hour before arose at intervals like the wail of a lost spirit, is hushed, and even the jackal-like voice of the coyote for the moment is still, all nature seems to have sunk into repose, and the silence is oppressive in its intensity. To the inexperienced herder, who has perhaps been constantly riding since sunrise, this seems to be a most favorable opportunity to relieve his aching limbs. He slips quietly to the ground, and the horse, equally relieved, gives the heavy Spanish saddle a vigorous shake. The effect upon that great motionless mass can only be described by a simile. It is like the action of a flock of shore birds at the report of the fowler's gun, or the electric shock that runs through a school of menhaden when struck by the bluefish. Where a moment before many hundreds of cattle were quietly dozing, not one now remains. Every instinct, every faculty seems swallowed up in the one that prompts them to flee from a horror, whose unknown character makes it tenfold more terrible than any actual danger that ever existed. The herders stationed in the direction of the stampede spur their trained horses to either flank. Both horse and rider are fully aware of their danger. Both know the futility of attempting to check that resistless surge, that like a mighty flood bears everything in its course to destruction and death; they would be safer in the path of a cyclone. To skirt the sides of that flying phalanx of hoofs and horns and go with it wherever it shall lead them is all they can hope for now.

By this time the sleepers at the camp are all upon their feet. The sounds that come from the herd are too familiar to be mistaken or to need explanation. Each man has at least three horses at his disposal, and at night one is kept staked and saddled near by for just such emergencies. For weeks the men have ridden sixteen or eighteen hours a day, and during that time have snatched the little sleep they could get with their boots on and their bridles by their sides; and without waiting for directions or company, each as he mounts dashes off into the darkness after the fugitive cattle, with no prospect of a moment's rest until the light of day shall allay their mad frenzy.

It was under conditions such as I have attempted to delineate that the writer found himself during the summer of '67, while endeavoring to drive a band of cattle from Texas to southern California. The journey had from the beginning been a disastrous one and this fatality attended it to the end. We had started with 1,500 head of full-grown beefs gathered in Lampases, San Saba and Llano counties, with an outfit of two wagons, sixty horses and twenty men. The men had been mostly recruited in Austin, which was filled at that period like many other frontier towns with disbanded soldiers, criminals and refugees of all descriptions from the older States. Subsequently we found to our sorrow that we had secured the services of several of these gentry, who proved worthless in the drive and dangerous to the peace of the camp. Two marked exceptions, however, were Taylor and Coffee, both experienced cattlemen and splendid specimens of the native-born Texan. These two men were a host in themselves, and their sterling qualities and valuable services gained for them our warmest consideration to the end. Considerable game it was expected would be found along the trail, and as the Comanches were at that time making frequent raids into the border counties for horse stealing purposes, some

arms were considered necessary; but as my partner, who was the principal owner, was no sportsman and intended to go round all the Indians, a dozen or so old Spencer carbines were the only addition made to the side arms of the herders.

It was the middle of May before we were beyond the settlements and fairly started on our journey, and very soon after we began to suffer from the incompetency of our men. Before we had reached Kickapoo Springs we had lost more than a hundred head of cattle, mostly by their eluding the guards and running back to their old ranges. On our way we had passed Phantom Hill, a place whose singular name had often attracted my attention and excited my curiosity while looking at the map. No one lived within many miles of it at the time, but there were the remains of a large fort with many detached buildings. The houses had disappeared, but the chimneys, built of a very white limestone, were still standing, and their weird outlines among the scattering trees gave them a spectral appearance, especially at night, which doubtless suggested the name. Deer and antelope were quite plentiful, and we saw several bands of wild horses, but the turkeys dwindled in numbers as the timber to the west grew less abundant.

Soon after we passed the springs two of the worthies we had hired in Austin concluded they had gone far enough with the outfit and decamped one bright moonlight night, taking two horses, two of our best saddles, two guns, four revolvers, and a few other trifles, none of which were their own. Recalling their talk and actions during the evening, it was apparent that they had intended to take the two fastest horses in the band and thus defy pursuit, but fortunately these happened to be staked so near the camp-fire that their removal could not be effected without great danger of discovery. Their flight was discovered at midnight. The cattle had already shown signs of stampeding and half the entire force was on guard until that time, and the remainder then went on until morning.

Taylor and Coffee volunteered to pursue the deserters at once; and, well armed and mounted, they took the track before it was two hours old. The men were shaping their course for the settlements; and as a heavy dew had fallen in the evening their trail through the long grass could be followed on a lope for miles. Taylor rode a gray mare, his own property, and the assistance she rendered in the chase was as surprising as it was unexpected. The sagacious animal soon comprehended the object of this midnight ride, and, without breaking her gait, followed the trail like a hound over ground where its faint impression would otherwise have caused much delay. Shortly after sunrise they came in sight of the quarry, and succeeded in getting within a few hundred yards before they were discovered by the runaways, who, not dreaming of any pursuit before morning, were riding very carelessly and leisurely along. A running fight ensued, in which Taylor and Coffee, from their superior position, marksmanship and horses, had decidedly the advantage. The fugitives then endeavored to reach a river bottom a short distance ahead, where there was a small growth of timber, but they never got there alive; and by noon the same day Taylor and Coffee were back to our camp with all the plunder intact, a striking example of the swift and terrible retribution that sometimes overtakes the horse thieves of the border.

Our intention was to cross the Staked Plains from the headwaters of the Concho, and when we arrived at the latter point we went into camp to rest the stock for a couple of days before attempting the ninety mile drive that lay between us and the Horsehead crossing of the Pecos. In the evening of the same day two men, nearly dead from exhaustion, came into our camp and reported that a band of Indians on the Pecos had already captured the three herds which we knew had crossed a few days ahead of us and that they would serve us the same as soon as we reached the river. From their account the reds did not seem inclined to kill the herders when it could be avoided, fearful, no doubt, of drawing the attention of the troops there, by jeopardizing the profitable speculation they were engaged in of running the stolen stock over the line and selling it to the Mexicans. All the preliminary steps to this transaction were manipulated with the greatest ease. The drive over is made, of course, without stoppages; for forty consecutive hours the cattle are hurried over that waterless waste as fast as they can be forced along. When still several miles from the river—some put it as high as ten—they smell the water and hasten forward with all their remaining energy, some of the stronger ones breaking into a brisk trot. The herders do not attempt to restrain them and could not if they should; they only try to urge along the laggards. The result is that when the foremost reach the river the remainder, with a herder here and there, are scattered along the road for three or four miles. At the proper time a strong force of Indians show themselves, make a few hostile demonstrations, the herders disappear as if by magic, and after the cattle have refreshed themselves they are started by the Indians on their way to Mexico.

This startling news threw the camp into a state of great consternation. A council was held and it was decided that the writer should go to Fort Chadbourne and endeavor to get a cavalry escort over the dangerous divide. There was some little risk attending this move. It was quite certain that Indian scouts were watching the herd, and if they discovered the move the scalp of the messenger would be likely to adorn their girdles. But there seemed to be no other alternative; and accordingly, well mounted and armed, with a little jerked beef tied to the cantle of my saddle, I left camp by starlight the next morning, and by sunrise was many miles away. No startling incident relieved the monotony of my lonely journey. The country was favorable for fast riding and my mission admitted of no delay. Long low swells with broad shallow ravines and occasionally a rather elevated plateau almost perfectly level were the general features of the landscape. In one essential respect it differed from the Northern plains. It was not entirely destitute of timber. Trees, mostly post oak and mesquit, were thinly scattered everywhere, but seldom in groups dense enough to obscure the vision. Deer and antelope were in sight most of the time, and from a low thicket I routed two of the curious little wild pigs, similar to the peccaries I subsequently saw in Costa Rica, but smaller, being about the size of coons.

Soon after sunset I selected my camping place for the night in a shallow gulch containing patches of low brush, but rode slowly on until dark, when I retraced

my steps, staked my horse in the grassy bottom and spread my blankets in the bushes 200 yds. away. A portion of the jerked meat answered for supper; and without fire or water I lay down to rest. Daylight the next morning found me in motion buoyed up by the hope of reaching the fort that night. But in this I was disappointed, for the sun again went down without my having seen a sign of civilized life since I left the herd, and what was still worse, I found that the remainder of my meat, which in my haste I had tied carelessly, had disappeared. I made camp under an oak in the midst of a great level plain with a feeling of comparative security, knowing that the fort could not be many miles away; and weary from the long ride was reclining on the grass with my saddle for a pillow, when a fine buck antelope came trotting along not 75 yds. away. Seeing a strange object, but not being able to make out what it was, he stopped and began to snort. Silently I reached for my rifle, which lay near me, and the next instant he dropped in his tracks with a bullet through the breast. Hungry as I was I did not feel quite safe enough to build a fire and cook supper in that exposed position; so after cutting a large chunk from one of the hams and hanging it in the tree above me as a safety precaution I went supperless to bed.

During the night nothing disturbed my slumbers, and it was broad daylight when I awoke. As I arose to my feet I noticed that the dead antelope, which had been in plain sight the evening before, had disappeared. Somewhat astonished at this, especially as the country about was so open that I could have seen it for half a mile had it been dragged off, I proceeded to investigate. It was easy to find the spot where he had lain by the blood, and it was evident that he had not been dragged off, but had been torn to pieces and devoured there. Nothing remained but a few shivers of bone an inch or two long; and I have never ceased to wonder how this was accomplished without my knowledge. Certainly I must have slept very soundly that night.

Moving on to a little gulch I cooked and ate a hearty breakfast of antelope, and then pushed on to the fort, which proved to be only five or six miles beyond. My mission, however, proved a failure. The commandant informed me that all the troops that could be spared were already out; and that it would be at least two weeks before any of them would return. So after a night's rest in the quarters I set out for camp again, where I arrived in safety.

Another long discussion then took place, which resulted in our deciding to relinquish that route, turn to the northeast, cross the Indian Territory, and winter the stock in Kansas. Our route to the Red River lay through Shackelford and Jack counties; and from the day we left the Concho until fifteen emaciated, fever-stricken men, with about thirty horses, drove what remained of the herd through a blinding snow storm down into the rich bottoms of the Marias de Cygène, the journey was a series of hardships surpassing anything that had ever fallen to the lot of any of our number. Five of our original party were dead. Of the last three, some pieces of boards torn from the wagons, upon which the name of each was rudely carved with a jackknife, marked the shallow graves in which we had lain them down to their final rest on the rich rolling lands of the Indian Territory. Constant toil, exposure and loss of sleep had made us all an easy prey to miasmatic influences; and the deadly malaria in the vicinity of Fort Arbuckle left its impress upon the survivors for years after.

Among the many stampedes that occurred during this latter portion of the drive, none have left so vivid an impression upon my mind as that with which I began this episode of Western life. All that afternoon an immense bank of inky clouds capped with thunder heads had been slowly rising. There was not a single garment in the whole outfit that made any pretensions of being waterproof, and those who had the watch below (to use a nautical term) until 12 o'clock, were discussing the brilliant prospect for a soaking, when Taylor's exclamation, as given above, extinguished any hope of escape that may have lingered in our breasts. Darkness was prematurely coming on, and big drops of rain were already falling as one by one we vaulted into the saddle and rode to the fray. Coming right from the fire we could see nothing. But that was immaterial. Our horses knew as well as ourselves what there was to do. They needed no guiding to take us to the herd as fast as we cared to ride. The only fear was that they would fall and maim or kill themselves or their riders.

The herders had concentrated their whole force on one of the flanks as soon as the stampede began, and until the assistance which they knew would soon come arrived, were endeavoring to "mill" the cattle or keep them running in a circle. This was really the only effective course to pursue that promised any good results, and as fast as our eyes became accustomed to the gloom, we all dashed into that living tornado of hoofs and horns, each being immediately lost in the darkness and able to locate the others only by their shouts. Gradually the storm increased in violence; the rain descended in torrents and the steady roll of thunder, with frequent flashes of lightning burst from the heavy banks of clouds that seemed to be concentrating over us from more than one direction. The lay of the land was fortunately quite favorable for our operations, or the situation would have indeed been deplorable. It was a rolling prairie, nearly destitute of timber, with but few ravines and no ledges or precipitous banks. Badger and prairie dog holes were, however, uncomfortably numerous, and we were in constant fear of being thrown by them in our headlong ride. The ground soon became soft, and the sides of some of the small gulches slippery with mud, while the splash of water beneath the hoofs of our horses revealed many a pool that we could not see. Once or twice the whole herd came for an instant to a dead stop. They seemed to be listening as a hare listens for the beagle that is hot upon her trail. But it was only as the momentary lull of a gale; and then the panic, like the shock of a galvanic battery, struck them again, sending them off in a flight wilder if possible than before.

What frightful visions of impending evil must have been theirs to drive them to such madness; surely the fear of death cannot wholly account for it. Something supernatural, demoniac or ghoulish there must have been, a fear perchance akin to that which filled the breast of Tam O'Shanter when fleeing from the goblins whose revelries he had disturbed in "Alloways auld haunted kirk." In the glare of the lightning we could see them

with their eyes bulging from the sockets, their great horns striking together like the clashing of a thousand sabers, crowding against each other as if for safety, in a mass so compact that we could have crossed over the backs of the whole herd on our horses. Now and then one of the multitude would stumble and disappear; a dog hole or some slight inequality of the ground had snared his feet, and the chances of his never rising again after the herd had passed over him was as two to one.

The situation shortly after midnight was one calculated to appal the stoutest heart among us. The tempest then had reached its climax, and I do not remember that I have ever seen its equal even in the tropics; the flood gates of the skies were thrown wide open, drenching us with the waters of a deluge, peal after peal of thunder immediately over head and apparently not further off than the top of a tall tree, smote upon our ears like the crash of worlds; the sharp flashes of lightning followed each other so rapidly that at times a constant sheet of flame seemed to be playing all about us, illuminating the landscape with the light of day; and its momentary absence left us with a vision entirely destroyed. The neck of the horse we rode was not visible; the open hand held a foot from the face could not be seen. Concerted action on the part of the herders became impossible. Our voices drowned in the roar of the tempest no longer reached the ears of the cattle, and deprived of this stay the herd began to break into small bands, each taking a different direction. This really was the crisis of the stampede. If a band escaped unattended is loss was almost a certainty; therefore as soon as this occurred some one of the herders made the detached bunch the object of his special attention.

With one of these bands, numbering about 150, went the writer. By the lightning's aid we scanned the ground between us and the flying cattle, and if it looked tolerably safe urged our horses into a gallop, trusting to another flash to come in time to enable us to continue it without a break. When this failed, we slowed down until it did come. There was no expectation of turning them again to the herd; our greatest desire was to be able to locate them at daybreak, and to do this we must keep ourselves somewhere in their vicinity, for the rain would obliterate every vestige of a trail.

The storm waned with the night, the rain ceased and here and there the stars appeared, until with the first faint blush of morn I found myself with my little band in a small bottom where we all appeared to have stopped from sheer inability to go any further. Where I was I had no idea, only that I was probably several miles from camp. My horse was trembling beneath me, his drooping head and smoking, sunken flanks painfully attesting the terrific strain of the night's work. It was my favorite mount, for such we always reserved for the dreaded stampede, sparing them when possible all other duty, and his piteous condition excited my liveliest sympathy. It was evident that it would be many days before he recovered from the wear and tear of this single night.

As the sun rose the panic entirely subsided, the cattle became obedient; and leaving them in the bottom, I rode to the highest point near me for observation. About two miles away I discovered one of the herders with a small bunch of stock; and I lost no time in bringing the two herds together. This left one of us at liberty to ride in different direction, until familiar landmarks were discovered by which to shape our course toward the camp. The subaqueous condition of the prairie seriously impeded our progress. Ponds and pools confronted us in every direction; and the dry gulches of yesterday were waist-deep with running water to-day. On our way we passed five or six victims of the panic, two of which were dead and the others lying helpless with broken limbs, the bones projecting for inches beyond the flesh. These looked up to us so beseechingly with their great liquid eyes that the hardest heart could hardly have refused the act of mercy; and putting them out of their misery with our revolvers we hurried on to camp, where we found that a number of the men with a majority of the cattle had arrived before us, and several had already been dispatched upon fresh horses to hunt up and aid those still out.

It was noon before all the stragglers came in, and we were able to ascertain the losses of that memorable and disastrous night. Nearly 200 head were missing; rather more than a score of these had been killed outright or had their legs broken, which practically amounted to the same thing; and the rest had escaped unseen, or at least unattended at the breaking up of the herd and were never recovered. Besides this there were quite a number whose horns had been broken off close to their heads; they were continually moving about with forequarters bathed in blood, apparently in too much pain to permit a moment's rest; and the entire herd, wild-eyed and gaunt, presented a picture of utter demoralization that afforded us not even the shadow of a hope for the future.

My observations during this journey enable me to correct a mistaken idea entertained by many at the present day. It is, I believe, a quite common impression that the great grassy plains of western Texas were until the beginning of the skin-hunting era in '69 or '70 crowded with buffalo at all seasons of the year. I have often heard this asserted and have also occasionally seen articles in the *FOREST AND STREAM* where the writers made similar statements. Such, however, was by no means the case, for in this drive, covering over 1,600 miles of travel, every rod of which was in a fine buffalo country, we neither saw nor heard of one until we had crossed the Red River into the Indian Territory, where we saw a few old bulls, never more than three or four together, and frequently only one. These were stragglers, or had been driven from the main herd, which was at that season in the Yellowstone country, where they invariably spent the summer. What was known as the great Kansas herd, before civilization had driven them further west, migrated north in the spring and south in the fall yearly, and while it is hardly exaggerating to estimate its number in millions; it practically took all there was, the only exceptions being a few in the Colorado parks and similar places, which never seemed to migrate.

FORKED DEER.

OAKLAND, California.

THE HARSHIPS OF SPORT.—As a rule, says an English writer, a sportsman may take great liberties with himself without being much the worse. No man was ever harmed by wet feet on a moor, though if he comes home and contemplates them for an hour over a gunroom fire he may be reminded of the indiscretion. A deer stalker has to put up with great exposure and temporary discomfort, but he is rarely the worse for it.

IN THE REGION ROUND NICATOWIS.

XIX.—COOKING.

THE next day we had duck stew for dinner; partridge also, I suppose; for, though small game was very scarce we got two of each on our way up and down Main Stream. But in these days the bill of fare was not of prime importance, and the journal ceases to mention it. Jot's best efforts were now expended in the preparation instead of in the provision of food.

There are people who do not consider cooking a profession; but Jot had a higher idea of it. He was master of half a dozen trades; but if he had a point of pride, I believe it was his cooking. He went about it most methodically. A given amount of hair combing and hand washing was the initial step; then the food was prepared with equal neatness and system; the kettles were put on, and the cooking proceeded to the accompaniment of some appropriate tune like "O think of the home over there." No interruptions or difficulties ever seemed to interfere, and fried, boiled, broiled or stewed, the food came to the table neither underdone nor overdone. I think it was science that accomplished this, for my own humble endeavors were always unsuccessful and I laid the failure to lack of science; but Jot knew it all and could explain every wherefore. When I tried to make a dish of the cheerful beverage warranted to do no harm, it tasted of the tannery rather than of the tea caddy; they told me that it was smoked because I had not put the cover on the kettle. What town-born cook would ever think of her tea being smoked? I have done more things than that which are set down as sins against Hygeia—let us not talk of them.

At home, economy consists in using every scrap of food and the least possible fuel; in the woods, it means the preparation of what you have in the least time and in the simplest manner. At the last reduction, one becomes a question of money and the other of dishes. In the woods we call dishes of all sorts "cooking tools." There is a homely candor about the phrase which I admire; it makes no attempt to raise these useful articles to the rank of ornaments and unessentials; it does not seek to disguise the fact that their utility is the sole excuse for their existence; it expresses in the most satisfactory way this principle of economy and selection; for if any one word contains the whole sum and substance of true economy of time, labor and money, it is that word "tool."

Many years and more experiments have reduced our kit of "cooking tools" to such shape that it is neither heavy, bulky, nor inconvenient. Excepting two or three odd articles, the whole is packed in a heavy ten-quart camp kettle with straight sides and a pointed cover—three large tin plates, two small ditto, two straight-sided tin basins of three and four quarts' capacity, two camp kettles holding corresponding amounts (one kettle iron, the other of tin for tea, both with covers and with ears riveted on to prevent melting), four tin dippers with handles nesting inside each other, three large spoons, three small ditto, three knives and forks, and besides these, when convenient, pepper and salt shakers and the dish cloths and wipers. It takes three days' practice to learn how to pack that pail. When this is done, the cover is tied on to prevent the loss of time or articles in case of a stumble or an accident. In camp the large pail is used for a water pail and the cover becomes a hand basin.

A few articles are not included with the rest of the kit. The frying pan is always tied up in a piece of burlap kept for the purpose, so that it goes very well, only when swung on the end of the setting pole it acts like an insane pendulum—for, of course, it is a long-handled frying pan, as all which are used in the woods must be. In the old-time lumber camps, before stoves were used, 4ft. was the regulation length of the frying pan handle, and a boy was often employed to tend it. Far more useful than the frying pan is a little ten or fifteen-cent bread toaster, of the sort which fashion at one time allowed to appear on parlor tables as a photograph holder when decorously appareled in a bow of orange ribbon. It is perfectly flat, weighs but a few ounces, is easily cleaned, and is a great advance on the primitive sharpened stick for broiling fish, fowl, or venison. A folding baker is also a great convenience. Ours is made in exactly the shape of the old-fashioned baker which was formerly used in cooking before open fires. After the baking pan is removed it can be folded into a flat sheet of tin, the sides lapping in, the narrow back falling so that the long legs on its lower edge come flat against the lower reflecting tin, and the upper reflector dropping over all. The baker serves not only for bread but also for baking fish and meat. The reflection from the two sloping sides, above and beneath, upon the baking sheet cooks quickly and evenly, and when the surfaces have become dull a little scouring quickly restores the brightness and good cooking qualities.

With these simple "tools" Jot could prepare a dinner fit for a king, and never was monarch more liberal of his praises to his cooks than we to ours, as Jot himself will testify.

XX.—CLEAR WATER AND WOODS HOSPITALITY.

The peculiar feature of Pistol Green is the soft green sward and white clover which cover it. Grass is a rarity in the woods; the weeds come early, almost before the lumberman, but only the lapse of many years and the frequent presence of man will make these civilized grasses grow in the wilderness. Pistol Green from time immemorial has been a favorite ground for camping, and this is attested by its deserving the name of Green, which, in our State, is very uncommon. Another sign was a part of the thigh bone of some large animal, which we dug up from several inches beneath our camp floor. Moose, ox, horse?—we asked which it was, and all judged it to be moose; for it had been cracked Indian-fashion to obtain the marrow. It is a long time since there were any moose in this region, except as infrequent stragglers.

From the Green several paths diverge; most are drivers' paths used only in the spring; the central one is the carry to Pistol Lake—two miles if we go all the way by land, but on high water like that of this year, it is not necessary to carry beyond the head of the roughest water.

I asked why Pistol Stream got its name, and was told that it was because "it went just as if it had been shot out of a little gun." An entire stranger would know it at once from this description. It is what woodsmen call "smart water" with a good strong "spring" in it. (Has it never impressed any one unused to our Maine woods and ways that we have a very peculiar feeling toward running water, calling it "good," "bad," "mean," "wicked looking" and so forth with a seriousness which so far exceeds

any figurative or rhetorical intention that it seems to impute personality and moral responsibility to the element? There is something Greek in this: so came the gods about.)

Pistol is beautiful water, clear enough and beautiful enough to make dear old Garvin Douglass, could he but have seen it, as I wish he might have, write an epilogue to every book in the *Æneid* in its especial praise, telling us more about

"The sylver scalyt fyschis on the greit

Ourthwort cleir streamys sprynkland for the heyt."

Abol has richer colors, more of the crystalline iridescence of the iceberg, as if it held an imprisoned rainbow, more of the translucent emeraldine tints of cold caverns brought with it from its birth out of the side of old Katahdin, more absolute purity; but Abol is not navigable. And Millinockett has the spring and the impetuosity, but without the same pellucidity. The charm of Pistol is that it is itself. We poled up it in the clear, cool air of the morning, as much delighted as if it were a fresh creation made for us alone. The stream came down like a highway through the trees; ferns on the shores, waving half-vines, which we call "buck bean," in the water, and the tall stalks of the cardinal flowers, now brown with ripeness that erewhile had lighted up the banks with their flames; clean gravel in the shallows where the water was clearest, a rock-ribbed channel where it flowed faster. Great granite boulders lay along the stream, worn concavely to the height of several feet by logs and spring freshets, and rocks in the bed of the stream made it give continual little hops and leaps to get over or around them, as it ran from one side to the other along its devious course, like a Naiad pursued by the great god Pan.

The first Pistol is a beautiful, rounded lake, apparently about two miles long, with high wooded shores, partly pineland and partly hardwood, rising highest on the side toward Nicatowis. The edges, especially near the outlet, are set with great granites both above and beneath the water, which in a heavy sea would make canoeing difficult.

As we knew that Alonzo Spearen, of Passadumkeag (the Lonz so often referred to), and his partner, Sanford Hodgkins, of Burlington, had a camp here, we hunted it up. Lonz was not at home and his partner we did not know personally, but, woods fashion, nothing would satisfy him unless we promised to come back to dinner. There is a heartiness and cordiality about such a welcome that entirely masters me. This man did not consider the difficulty of getting supplies in to the camp, hauling, boating, lugging and poling them so many miles, it did not matter that he did not know us, we were friends and welcome to half of the last biscuit if it came to that. And that is the kind of cordiality to be found everywhere through the woods unless it has been chilled by unresponsiveness of those who, ignorant of our native customs, have failed to return the welcome extended or, as some unfortunately have done, have taken unfair advantage of hospitalities offered them.

Less is expected of strangers now than formerly; but it used to be a common complaint among hunters, explorers and others that the élite of society who came here "hadn't no manners; they didn't know enough to invite a man to eat with them." As long ago as Thoreau's day Joe Polis felt called on to reproach him for his discourtesy in not visiting old blind Thurlotte in his hut on Mud Pond Carry, for this is the true significance of the incident which Thoreau himself relates. Much experience has caused the gradual remission of civilities to strangers unless by speech and action they prove themselves of native stock; but thirty years ago the same were extended to all, and no one asked the name of his guest unless he chose to give it.

After promising to return to dinner, we set out for Spring Lake, which lies between the inlet to Pistol and the Main Stream, outletting into the latter. It can be reached either by a short carry or a long one. We went by the latter, going up the sluggish inlet, where we saw signs of otter, until we got to the foot of the quick water, where a horseback comes down. The first part of the carry lies along this horseback through an open growth of Norway pines. We saw a number of bear-biting trees along this ridge and several bear traps adapted to all grades of ursine stupidity—none of Hodgkin's and Spearen's work, however, who know how to set a trap. The rest of the way is wet and boggy underfoot, though not an open bog.

Spring Lake is a jewel, the perfection of regular shape, clear water and shining white bottom—a little gem, with a cincture of prismatic colors, from the autumn-changed leaves upon the shore, playing about its margin in reflections of red, green and yellow, like the lambent flames of a noble opal. The shores are of broken granite, and the bottom being of the same, finely crushed, shows better than sand would the clearness and sparkle of the water, which welling up from springs beneath, fills this granite bowl with liquor brighter than any wine. It may not look on all days as it looked on this; but never on any day did I see so much beautiful water as here about Pistol; it was an experience not to be communicated by words.

There are large trout in Spring Lake. A man whom we met said he caught one the day before that measured 19in. in length and 5in. in depth. We were told that in Pistol they got white perch measuring 15in.

When we got back to the camp Long had arrived with the gentlemen who were staying there. We were even more warmly welcomed than at first. Nothing was too good for us. The "wicket" was ours while we stayed, everybody in it was at our service. It was like having a crowd of powerful genii spring up at the rubbing of the ring or of the lamp to do our bidding. They prepared us a dinner of the best the land afforded, fully equal to Jot's best efforts. They showed us the camp and offered us anything they had. We did want some salt and had brought a little box to get it in; but when we made known our want, our entertainers would not think of giving any one so little and packed up a large baking powder canister, as much as we should have used in a month, bidding us not to think of taking less, for salt was cheap—cheap after it had been brought all that distance!—and we had much ado to escape carrying off ten times what we wanted. We were urged to stay over night, pressed to remain, and our refusal was barely accepted; indeed, it was a temptation when we thought of the stories that would be told about the fire that evening—Jot with downright earnestness, Long with irresistible drollery, Hodgkins with quiet gravity equally entertaining, Father

Natural History.

HORN SNAKE-FOX SPARROW.

Editor Forest and Stream:

I desire knowledge on two points in natural history, and confidently turn to FOREST AND STREAM for the needed information.

Is there a work on natural history in which a snake, with a horn on the end of its tail, is described and named? The works which I possess, and others to which I have access, fail to mention such a snake.

Will some correspondent tell me where the fox sparrow (*Passerella iliaca*) winters? The fox sparrow comes to my cabin home (in the woods) twice a year. He arrives in the fall, about Oct. 1, and leaves for the south about Nov. 15. I have fed the birds spring and fall for the last six years. This season they left Nov. 16, but after a month's absence one bird returned. He remained here ten days and then left, or perhaps was shot. HERMIT.

GLOUCESTER, Mass., Feb. 28.

[The snake with a horn or spine in its tail is mentioned in more than one work on natural history and undoubtedly exists, but that this horn is used as a weapon of defense is another matter. This is, however, a popular belief which is hundreds of years old. One of the best known of the American spine-tailed snakes is *Trigonocephalus piscivorus*, described in Lawson's "History of Carolina," 1707, and again in Catesby's "Natural History of Carolina," 1731. Holbrook, in his "N. A. Herpetology," New York, 1842, also describes it quite fully. Another spine-tailed snake is *Lachesis mutus*, a South American species. There are others. The fox colored sparrow winters not very far south, and on warm days in winter may often be seen in New Jersey, New York and even Connecticut. Probably the great majority of the birds go further south. We have seen them in Virginia and North Carolina in winter.]

DRAGON FLIES AND MOSQUITOES.

Editor Forest and Stream:

Doubtless hundreds of Maine people scattered throughout the land have read and enjoyed "In the Region Round Nicasotwis" by your spirited correspondent, Fannie Pearson Hardy.

The perusal of her article has been a source of much pleasure to me. First, because all things relating to my native State are of interest; second, because many of the localities described are familiar; and third, because of the glimpses of natural history sparkling through every sentence.

That description of the pickerel is perfect. The people of Maine do appreciate the good qualities of this fish. For one, I remember it with genuine pleasure, and even now I respect it for the numerous frights it gave me in my boyhood.

But after all your correspondent has sinned almost beyond forgiveness. She has made light of my pets, the dragon flies. Read what she says: "I never yet saw a dragon fly do anything worth mentioning, except to whizz about like a portable windmill, or to sit on a stick and duck his head and rub it just like a fat bald-headed man."

If your correspondent could drop down on Cape Ann some May or June afternoon, at twilight, and see the "Hermit" sitting before his log cabin with half a dozen dragon flies whizzing about his head preying upon mosquitoes, she would change her mind and admit that a dragon fly can do something worth mentioning.

GLOUCESTER, March 4.

HERMIT.

NOTE ON THE WHITE GOAT.—New York, March 8.—Editor Forest and Stream: It may be remembered that in FOREST AND STREAM of Feb. 19, 1890 (Vol. XXXIV. 62), I printed some notes on the range of the "white goat" (*Mazama montana*), in which I spoke of the reported occurrence of this species in the Bull Mountains of Montana. These Bull Mountains are a range of low buttes out in the prairie at a considerable distance from the main range of the Rocky Mountains. They are on the southeast side of the Musselshell River in Yellowstone county, Montana, and being low and in a very dry climate seem not at all fitted to be the home of this species. The evidence of its occurrence in these hills came from Mr. J. W. Schultz and Mr. Henry Norris, and was in each case secondhand, and so a little doubtful. An additional bit of testimony on this point has just been sent me by Mr. Schultz, who under date of Feb. 12 writes me as follows: "Last night we were talking about a number of goats which have been seen lately on Birch Creek. A rail-roader, Chas. Ross, who was present, said: 'I saw some goats last fall in the Bull Mountains.' 'How many?' I asked. 'Not many, but lots of sign. I believe I saw six head, also a number of sheep.' 'What are the Bull Mountains?' I said. He replied, 'They are buttes, most of them with rocky walls and flat prairie tops.' It is possible that among those who read this note there may be some who have actual knowledge of the occurrence of this species in the region referred to. If so I should be greatly obliged to any one who would send me a full and detailed statement of the occurrence, giving date, place, number killed and all particulars possible.—GEO. BIRD GRINNELL.

ANOTHER PET FLYING SQUIRREL.—Montreal.—Reading the article signed "F. B., Ottawa, Kansas," about flying squirrels, moved me to write of one I had for a pet when a boy living in Worcester county, Mass. I discovered a nest of two which looked like youngsters. One soon died, but the other we raised—we—that is my mother, for she ran the culinary department and always claimed the credit of keeping alive any animals or birds that I brought home from my wanderings through the woods or fields. As he grew older he made his home in my pockets, and was my constant companion in my gambols and at school. I often sent him up into trees, and as soon as I called he would come sailing down and catch on to some part of my body. It was a very sad day for the boys when he was drowned by a careless servant. I was very much surprised to read in your issue of Feb. 12 that coons capture and eat rabbits, and would like to see some more direct evidence on the subject. Perhaps that coon was red and had a large bushy tail.—IRVING.

carrying a free lance on all topics, and the rest of us joining in or listening as the ball of conversation came to us or rebounded.

The camp is, as its constructors claim, "a snug little wicket" of logs, with a roof of split cedar, large enough for at least a dozen men and several ladies. It is in the midst of a fine hunting and fishing country, the best of scenery on all sides, and within easy reach of four lakes besides First Pistol. Built primarily for the use of sporting parties, it is resorted to by some who care only for the scenery and rest. Many ladies go there. The gentlemen whom we met at the place declared in their enthusiasm that the next year should see not only themselves but their wives there. We were told that next year the camp was to be improved by the addition of a separate cook room; though, if I were to be there, I would beg the privilege of sitting in the kitchen to look on, for both the partners are famous cooks, as well as first-class watermen, workmen and hunters. Somewhere on the trip Jot told us a story of Long which I had heard before from another source, of how, when a boy of sixteen working in a lumber camp on Birch Stream, he saw a moose track, and starting out with nothing but a three-dollar shotgun, a half-pint tin cup and a little uncooked oatmeal, followed on the track for five days, sleeping in the snow without blankets and crossing both the Piscataquis and main Penobscot rivers, where they were open, on rude rafts, at last overtaking the moose in the town of Lee, where he killed him and sold him for a good price before returning.

In the afternoon we started out to see Side Lake, which lies to the right of the Pistol Inlet at the end of a two-mile carry; but we were not permitted to go before promising to return to camp again.

The carry to Side Lake, which is one of the Pistols, was partly bog, though most of the way good walking through tall growth, hemlock partly, I should say, with a vague remembrance of feathery saplings; but some of the undergrowth was beech. Near the end the carry divides, one part going to the Third Pistol and the new right-hand branch to Side Lake. With the sun in the quarter where it now was, Side Lake was softer in its color than the glowing gem of the morning, but even clearer in its transparency. It was absolutely calm, and looking down we could see the bottom for a long distance from the shore. A canoe and paddles lay near by but we would not ruffle its tranquility. To me such clear, still water suggests solidity more strongly than anything else, so that the comparison to glass or marble seems not only highly expressive, but the only allusion properly explanatory. It is not the surface of the water alone, Milton's "clear hyaline, the glassy sea," but its depth and body, so to speak, which, in proportion to the transparency of the water, gives it more and more this appearance of being a solid block of glass, an under world in which the fish are imprisoned. Our clearest ice looks scarcely more impenetrable than such pure still water to which may be given the fine Horatian phrase, *splendidior vitro*, not of surface only but of depth. We tarried awhile, watching the little fishes, and tossing in bits of moss and dry twigs to see them rise and draw under the coveted but disappointing morsels. We wished we had something better to give them; but finding that they learned nothing from experience, gradually withdrew our repentance and kept up our sport. They were beautiful, both clubs and breams, though the latter had put off their brilliant summer garb of green and copper color and scarlet, and were now but shadows of their former splendor, recognizable only by the black spots on their gill covers and their pretty motion. A fish out of water is a coarse, clumsy, limbless creature; in its element it is sylph-like.

We stopped again at the camp, according to our promise, and again were entertained. The camp and all that was in it was ours to control, use, or carry away. But we had a tent standing with open doors on the Green, and westered out into the blaze of the declining sun.

Father walked down the carry, not to overload the canoe, as the water seemed to be falling, and Jot and I went down by stream. A changing color hung in the treetops, amethyst or purple, or between the two; the first chill of early evening lay along the stream; from the shadows of the trees the great rocks stood out more boldly, and the little ones lifted up their heads where the waters parted round them to rejoin in a trailing ripple; and others hid beneath the crowning current which mounted them smoothly on one side to run away in white-curling wavelets on the other. There was no sound above the voice of the stream but the ring of the metal-shed pole on the rocks as, now dipped on one side now on the other, it directed or restrained our progress.

We went back across the lower part of the carry at the time when, earlier in the season, the hermit thrushes would have been at vespers; but it was too late in the year for their music. Instead of their melody there was stillness throughout the woods, until Jot, coming after with the canoe on his head, gave a cheery hail as he passed on down to the landing.

FANNIE PEARSON HARDY.

CORRECTION.—I will not mention all the errata. I wrote worse than usual and deserved it; but, gentle reader, for "Rod Parhs" in the last issue, please read Rod Park. I shall have more to tell about him later.—F. P. H.

Camp-Fire Glimpsings.

"That reminds me."

IT is well known that most animals, quadrupeds, are natural swimmers, but I know of an exception which is as well authenticated as it is peculiar. A gentleman of our neighborhood had a foxhound which was mortally afraid of deep water and could swim but a few strokes. His head would invariably go down and his hindquarters up, when he would have to be rescued. A friend who well knew the dog's failing, made a bet with the owner that the unfortunate beast could not swim across a good-sized stream which they had to cross. When the stake was put up the proprietor of the phenomenon calmly attached a good-sized stone to the canine's tail, and with equilibrium thus restored in this novel manner he successfully swam the stream with head and shoulders triumphantly poised, winning the wager for his ingenious master. DEACON.

DRUMMING OF THE GROUSE.—Bay Farm, Essex Co., N. Y.—In this locality ruffed grouse have repeatedly been seen drumming on a stone. The general opinion is that the male always selects a log, generally a hollow log, on which to perform. Many think the hollowness of the log has a good deal to do with the peculiar sound; but the noise was exactly the same made by the one drumming on a stone as one drumming on a hollow log. [This subject is one that has been pretty thoroughly threshed out in past issues of FOREST AND STREAM, and many observers have contributed notes on it. The grouse drums on a log, a stone or a stump, but it may be doubted if this position is assumed for any other purpose than that of raising itself above the ground so that it may have a wider outlook.]

BIRDS OF MINNESOTA.—We have received from Mr. George G. Cantwell, of Colorado Springs, Col., a copy of his "List of the Birds of Minnesota," published in 1890. The material for this list was accumulated during six years' field collecting in the vicinity of Minneapolis, near Lake Minnetonka, and in Lacquiparle county, supplemented by the local lists which have been issued from time to time by Dr. Roberts, Mr. Bonner, Dr. Hatch and by the notes of other observers whose names are given. The list, which is briefly annotated, makes mention of 295 species and sub-species of birds, two or three of which appear to be now included in the State fauna for the first time.

SNOWY OWL IN NEW YORK.—Red Hook, N. Y., March 9.—About three weeks ago a snowy owl was seen in this neighborhood. It soon disappeared and was supposed to have gone to a climate better suited to its taste. To-day, however, it appeared again, and three gunners started in search of it. One of them, John W. Bain, was fortunate enough to get a shot at the bird. At a distance of 120 yds. he made a center shot. Though the rifle was a .38 cal., the specimen was not injured. The bird goes to John Wallace, 16 North William street, New York, to be set up.—C.

SNOWY OWL.—Westfield, Mass., March 5.—There is on exhibition in the show window of Conner's stationery store, a magnificent specimen of the Canadian snowy owl (*Nyctea scandiaca*), which attracts considerable attention, as it is quite a rare thing to see so fine a specimen of this beautiful bird. The mounting was done by "Prof. Scott," of this place. The owl was shot in Greenville about Christmas time, by John D. Ripley of that place.—WORONOCO.

ENGLISH PHEASANTS FOR VERMONT.—Dr. W. Seward Webb, of this city, has received at his Shelburne Farms, Vt., twenty-three English pheasants, which will be turned out there. Gamekeeper Liddiard, of Yorkshire, Eng., came over with the birds, and will have charge of them.

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

THE CORBIN GAME PARK.

HERE is an interesting study in human nature—a picture of the inception and growth of an enterprise of great moment to the naturalist and sportsman and of interest to every one. Six years ago a friend presented to Austin Corbin, the well-known railroad man, a few young deer. Mr. Corbin accepted them, and having a great country seat that included many acres of woods as well as cleared fields out on Long Island, he caused a part of the woods to be suitably fenced and turned the deer into the inclosure. Mr. Corbin at that time was neither a sportsman nor a naturalist in the sense in which those terms are understood by the readers of FOREST AND STREAM. He had no special interest in wild animals of any kind. Nevertheless, as a lad he had lived on a farm in New Hampshire among the foothills of the White Mountains and had trapped woodchucks, and shot partridges and chased foxes, and the good healthy delights of those days lingered in his memory. Small wonder then that the gentle pets his friend had given to him won their way into his affections from the moment they became his. It was a new pleasure—something he had never known before—to go and watch their graceful motions and gaze upon the beauty of their forms. Moreover, Mr. Corbin had a son, a lad, almost a man grown, in whose veins runs a deal of the energetic blood generated in back country of New Hampshire, the sort of blood that makes young gentlemen take as kindly to athletic and out-of-door sports as they do to a square meal after a day in the field. Austin junior was as much (if not more) delighted with the pets as his father was, while the father was delighted because the boy was delighted.

There was ample room on the Long Island farm for more than the few deer, and the Corbins decided that more should be had. This led to the examination of sundry books on the subject of deer culture, if one may use the term—books like Judge Caton's, for instance, while the FOREST AND STREAM and other periodicals printed for men who know how to live were necessarily read regularly. Certainly the love of nature grows with what it feeds upon if any emotion of the heart does. If deer could be kept, why not the deer's cousins, the elk, the moose, the antelope and the buffalo—especially the buffalo.

Mr. Corbin had lived in Iowa when a young man, and in the days when his law office shingle was becoming weather-beaten in Davenport the herds of buffalo on the plains of Nebraska, Kansas and Texas numbered untold thousands. It was a great pity that such noble animals were likely to become extinct, and the Corbins determined to join in the effort to perpetuate the species. They had begun with a few deer, and they added the elk, the antelope and the buffalo, and then it became apparent that the Long Island estate was too small for the proper care of these animals, or at least for the care which the owners desired to give them.

It is to be particularly noticed that the Long Island estate was not suited to the sort of care that the Corbins wished the animals to have. From caring for the few pets had grown the desire to rear herds of these animals

under such conditions of freedom as would leave them with all their natural characteristics. A pet deer was beautiful, but it was not the deer of the wild woods after all. A pure-bred buffalo in a barnyard was, in fact, a buffalo, but he was too much like a Durham bull to be perfectly satisfactory. On the Long Island farm the animals could scarcely become anything more than pets.

So the thoughts of the elder Corbin went back to the days of his youth and the foothills of the White Mountains. As most of the readers know, there is plenty of land in New Hampshire that is just as wild now as it was when Hudson first looked on the ground where the Statue of Liberty now stands. There was a deal of it in Sullivan county—perhaps not the wildest in the State, but certainly a plenty of unbroken forest that covered hills and valleys and surrounded little lakes—forests of birch and beech and maple and pine and spruce and hemlock and balsam—forests beautiful and fragrant enough to give a city man the heart ache when he thinks of them. Mr. Corbin determined to buy from 20,000 to 30,000 acres of these hills and valleys and there establish a park for his new found four-footed friends in which they would find the conditions as near as possible to which they were best suited.

Everybody knows that New Hampshire farms in the back country will not bring the price of the buildings at ordinary sale, but Mr. Corbin could not buy all that land without people learning that much land was wanted. Thereat prices rose amazingly and soil that wouldn't raise oats brought the prices of truck farms in Jersey. It takes a stack of money to buy a game park where 500 different people hold the titles to the tract. Still, the location was suitable for the purpose, and moreover, there was the old home. Mr. Corbin had to have it at any price, and he eventually got 22,000 acres in one tract.

The next thing was to fence it, and only those who have tried building elk-tight fences can appreciate the job. Here was a tract of over thirty-five square miles of land to inclose. They started out with a wire net 6 ft. high secured to stout posts 10 ft. apart. Above the net they strung ten lines of barbed wire, and that made a right good fence. But when eighteen miles had been erected they abandoned the wire net and used barbed wire only for the rest of the way. That was cheaper and just as good. It is not uninteresting to note that the fencing cost \$74,000.

In all nine gates are to be placed in this fence, with a keeper's lodge at each gate, something made necessary by the presence in every community of the skulking lout who will steal or destroy the property of the well-to-do and especially such property as this fence will inclose. Mr. Corbin is sure his park will not in any way interfere with the rights of legitimate sportsmen.

Here in this tract of woodland with only enough cleared land on it to afford meadows over which the animals would like to wander at times, are gathered twenty-five buffalo, sixty elk, over seventy deer, half a dozen each of caribou and antelope, eighteen wild boars imported from Germany, and an unknown number of moose—perhaps a dozen. He had four reindeer brought from Labrador, but all died. He expects to have a community of beavers, for the lakes and streams of the park are admirably adapted for these beautiful animals.

Quite as interesting as any description of the park and its inhabitants is the story of the gathering of the specimens. It is too long to tell in full, but room remains for enough. The agent employed to gather a large part of the animals from Canada was Thomas H. Ryan, who has served Mr. Corbin in a number of capacities for the past twelve years. Along in October last Mr. Ryan was commissioned to go to Canada to see what could be done about getting "any wild animals there except bears, panthers, wolves and foxes."

Without knowing exactly where he ought to go he got a letter from Mr. Erastus Wiman introducing him to Mr. H. P. Dwight, general manager of a great telegraph system in the Dominion, with headquarters at Toronto, and then went up to Sherbrooke, in the Province of Quebec. He had a notion that some deer might be found down near the United States line thereabouts. At Sherbrooke a friendly newspaper man said one Dan Ball, of Megantic, knew all about the deer of that country, and so to Megantic posted Mr. Ryan. He met Ball and found him able and willing to get the deer, but Ball was a little doubtful about the law. He knew that the law prohibited the transportation of a carcass of a deer or any part thereof out of the Queen's domain, and he thought Mr. Ryan should look up the point. Mr. Ryan found that the open season in Ontario was from Oct. 15 to Nov. 20, while that in Quebec was from Oct. 1 to Jan. 1. That was good as far as it went. The next thing was to see about the meaning of the word carcass.

At Montreal Deputy Collector of Customs Riley thought the word meant the dead body of a deer, and that no one in framing the law had contemplated the possibility of live deer being exported, nevertheless he would not give a permit passing the deer. Thereat Mr. Ryan went to Ottawa and saw Sir John MacDonald himself. Sir John considered the matter and said he thought Mr. Ryan's interpretation of the law good. From Sir John Mr. Ryan had to go to the Minister of Customs, whom he had no difficulty in seeing, and his coincided with the views of Sir John. Thereat Mr. Ryan addressed a letter to the Minister, and next day received the following reply:

CUSTOMS DEPARTMENT, CANADA.
OTTAWA, Oct. 14, 1890.
{
[In reply refer to file No. 4222.]

T. H. Ryan, Esq., Ottawa, Ont.

SIR—I have the honor to acknowledge receipt of your letter of the 13th inst., addressed to the Hon. the Minister of Customs, respecting the exportation of live deer, moose and caribou to the United States.

In reply I am directed to inform you that there is nothing in the Canadian law to prohibit exportation of these animals alive; the law now in force prohibits the exportation of these animals in the carcass. I have the honor to be, sir, your obedient servant,
J. J. JOHNSON, Commissioner of Customs.

With this in hand Mr. Ryan wrote to Dan Ball to go ahead with his deer catching. Then he went to Toronto and met Mr. Dwight. Mr. Dwight is a sportsman and was just ready to start with three others for a hunt in the Mu-cogee region. Mr. Ryan on invitation joined the party, and that night took train for Huntsville. How they arrived at Huntsville at night, how the rain fell, how they walked to the hotel, how they couldn't eat breakfast, how they waded to a steamer, how they crossed portages in farm wagons to other boats, how they at last reached a comfortable camp with comforting fire and grub on a point in Long Lake, is a tale which Mr. Ryan tells

picturesquely. Here he remained two days but got no deer, and then went fifty miles to North Bay, 200 miles west, and from there to Mattawa on the verge of a region where moose abound, deer are plentiful, and beaver possible to obtain alive. A contract was made with a trapper, whose name Mr. Ryan does not wish to mention, for a supply of all of these animals—at least twenty of each if that number be possible.

Meantime Dan Ball had gone to work at Megantic by selecting a few friends and looking over the woods to see where the deer were yarding. Along in December the snow became five feet deep in the woods, and Dan knew of one yard where at least 800 deer were gathered together.

Then he and six others went on snowshoes with buckskin thongs and one gun loaded with powder only. Locating a bunch of deer in a thicket, six of the men crept up as near as possible to leeward without alarming them. Then the seventh came tearing down with the wind and with a wild yell and the discharge of the gun scattered the bunch like a flock of quails before a cur pup. Some of the fleeing beauties plumped into the snow that was so deep and so fluffy that they sank out of sight at the first struggle, nor could they escape till Dan and his friends kindly lent a hand. In all a dozen were captured thus, and with legs bound with the soft leather thongs were carried to an old shanty in the woods some distance from Megantic.

So word was sent to Ryan, and along in January he went away to bring the deer to the park in New Hampshire. Megantic is on the Canadian Pacific road. A box car was sent to a siding formerly used by a lumber mill, and there carpeted with hay, straw and no end of browse. The ends were then partitioned off from the space between the doors by means of poles and within the spaces thus formed the deer were placed—simply lifted in. They had been kept in the meantime in the old mill unbound.

With Dan Ball to look after and especially to water the deer, the car was hauled to Newport, Vt., the location of the United States Customs Office. Mr. Ryan found he would have to go back to a Canadian customs officer for certain documents, and as trains do not run very often he drove in a sleigh. It cost him \$1.50 to drive 23 miles in a cutter behind a team that the owner refused \$450 for. The deer were passed duty free, and were sent on to Newport, N. H., by the way of Concord; nearly 100 miles further than necessary. The extra ride proved disastrous, for one deer died *en route* and two after arrival. The nine are now as well and frisky as when in their native forests.

The importing of these animals has made a stir that has reached Boston, and perhaps New York, for there is a Megantic Club of American sportsmen there, and its members do not like to have the woods round about their haunts depleted even by a score or two of deer, and what the outcome will be no one can tell now.

The buffalo in the park came originally from Montana, but were purchased of a Minnesota man. The moose, elk and caribou came from Minnesota also, and were captured along the Canadian border.

Among the interesting experiences in the transportation of the animals for this park may be mentioned these: Moose have been carried 2,000 miles in four days without apparent injury. The last consignment included 16 moose, 3 deer and 1 caribou. All arrived in good condition, but 8 moose died afterward, because, it is thought, of the change in their diet or water, or both. On one occasion when 30 deer were *en route* over the Nickel Plate a collision with another train killed 22 of them outright, and 4 more died afterward.

It is noticed that the largest deer most easily succumb to railroad travel. None of the animals ever eat or sleep while the car is in motion. On a side track they will eat a little. There seems to be more danger of their suffering from heat in a box car than from cold, but the worst trouble is in the jerking to and fro of the car when the train is stopping or starting. They are fed barley, corn, bran and hay. In the woods they are expected to live as they would naturally, but places will be established where feed will be left for them so that none shall lack.

Beginning with a few pet deer in a paddock, the Corbins now have a private zoölogical garden, where, if at any such place in the world, the animals on hand can be seen and studied under natural conditions. What it will be in the future Mr. Corbin cannot say, but that he will, as fast as convenient to do so, add all the animals of the world that can live there harmoniously need not be doubted. His outlay up to the completing of the park is not far from \$400,000. Some of his friends say he is likely to spend half as much more on it and make of it a place to fairly delight the naturalist. They say that the work of Judge Caton will be supplemented and added to by that to be done at the Corbin park to the great benefit of all investigators into the habits of wild animals.

JOHN R. SPEARS.

ADIRONDACK DEER KILLING METHODS

Editor Forest and Stream:

Kindly grant me space to answer the criticism of "Saint Lawrence" and define my own position more clearly. I did not intend to express disapproval of the prohibition against floating except as taken in connection with hounding. The last sentence of my former letter reads, "Treat all alike, and to do it you must give St. Lawrence more or the rest of the State less than there is in the proposed law." There is the point. It was proposed to give the rest of the State forty days' hounding and St. Lawrence nothing. I asked that St. Lawrence have floating in place of hounding. (It is the less destructive of the two.) Now, instead of giving St. Lawrence floating in place of hounding, they give us floating, but also give it to the rest of the State in addition to hounding.

"Saint Lawrence" detests floating. If I mistake not, "Saint Lawrence" has eaten salt pork many a time in honor to his convictions, and while others less scrupulous have feasted on venison; also, that he has not camped in the wilderness for several years. He says, "Its horrors (floating) have been too often dwelt upon." Yes, and I will add, exaggerated; and it is because I have never seen its "horrors" that I do not condemn it. I have been a "floater" over thirty years; I have also killed deer by still-hunting, and by watching a pond. I never killed a deer in winter or early spring, nor wasted a pound of the meat. The first deer I ever floated jumped twice after the rifle cracked—the last one ran perhaps twenty yards,

Will "Saint Lawrence" tell me what "horror" there was in that kind of killing? "Saint Lawrence" will ask, "Were all shots as successful?" and I will answer, no. I can now recall but one deer wounded that escaped, but I am willing to grant that there were more. But are not deer wounded in all kinds of hunting and do not some escape? As regards the killing of does by floating—if the law says we must not kill does, I for one will not pull trigger until I see horns. Easy enough to fix that.

I asked "How are we to get venison" and "Saint Lawrence" says, "Hunt and kill it like a sportsman and a man," and then suggests watching where deer come to water. Let us see. "Saint Lawrence" watches a pond where he feels sure a deer will come, and when it does come he draws a bead and fires—he may only wound it. I am paddled up to a deer on the same pond a couple of hours later and I only wound it. Are we not quits?

Now in regard to does. The proposed law will not protect them because it is so easy to destroy proof of sex. Mr. Editor, as proof that this section of St. Lawrence is not "retrogressing in protection sentiment" I will propose the following enactment:

No deer except it have horns shall be killed at any time. No deer shall be killed save between the 15th day of August and the 1st day of November of any year. No deer shall be killed while swimming in any water of the State of New York. No deer shall be killed from any boat or other device floating upon the waters of any stream, pond or lake.

This will stop floating, this will protect does, this will stop club hunting. Give the whole State (if you please) the privilege of hounding, but let the hunter stand on the runways and take his chances—once the deer is in the water let it be safe.

Under such a law, enforced, deer would increase. I know "Saint Lawrence" will only too gladly agree to such a law. Will the hounders? I can answer the question, no. Then, while they ask and receive forty days privilege to hunt by the most destructive method known, I ask for myself, and I think many more, that St. Lawrence be given something.

J. H. R.

CANTON, N. Y., March 7.

THE MAINE GAME LAWS.

THE committee on fisheries and game of the Maine Legislature has voted to report a bill containing substantially the amendments proposed by the Commissioners, already given in detail in the FOREST AND STREAM. In the committee there was not much opposition to the amendments, as I am informed, in spite of the force brought to bear by the enemies of wholesome fish and game legislation. Mr. Darling and others were given a respectful hearing, but their demands for greater license in the killing of game have not been heeded in the committee. The result, when the measure comes before the full bodies of both branches of the Legislature, is of course still in doubt, but the case is more hopeful than appearances indicated early in the session. A letter from a gentleman well informed in fish and game matters in that State says that there is rather a growth of better sentiment within a few weeks in some parts of Maine, and that it is having its influence upon the Legislature, even if that body, in its majority, was not already favorable to the wholesome amendments asked for by the able Commissioners. The deer-hounding element is receiving a setback from a force of its own nature that is striking stronger blows than its advocates are aware of.

The Maine newspapers are giving a good deal of attention to game matters, and it has been made plain to the people of the State, and to members of the Legislature, that a number of hounds are owned in the State for the purpose of dogging deer. The newspapers have done much of late in disseminating this information, and the spreading of the news has come in a form that is not doing the cause of the deer hounders any good. A number of items like the following, besides those already published in the FOREST AND STREAM, have lately appeared in the Maine papers: "L. O. Dudley and his wife were crossing Upper Jackson Lake in a sleigh the other day. Suddenly a deer bounded out of the thicket on the opposite shore, closely followed by a hound. At the urgent request of his wife Mr. Dudley turned his horse, and with all possible speed followed the chase, hoping to save the life of the deer. Gyp, the mare, trotted nobly, considering that there were 3 in. of water on the ice, and the chase was a very exciting one for the lady. But the deer seemed exhausted, and the dog soon brought down his game, and had its throat bleeding before they reached the spot. The sight of the deer floundering in the water on the ice, which was crimsoned with its blood, frightened the horse, and Mr. Dudley was obliged to hold her, while his wife got out of the sleigh and drove off the dog, which went sneaking toward shore with the blood dripping from his jaws. A man working in one of Mr. Dudley's logging camps now came up and the deer was left in his care. It was doubtless killed by the bite of the dog at its throat." Another Maine paper says that Mrs. Dudley has written a strong letter to the Legislature, against the cruelties of dogging deer. If she has not, there is not the least doubt but what she desires to, and when the women of Maine declare against a form of cruelty, there is little danger but what legislation will be pronounced in their favor.

Game Warden French arrived at Calais the other morning and gave the substance of the following report: "I have just got home from a trip up the lakes and I never saw the game laws so grossly violated since I have held my commission as they have been the last month. A number of parties consisting of from two to four persons hunting deer with dogs and making a wholesale slaughter of them. While away I arrested Frank Graham and Charles Gilpatrick, of Weston, for the above named offense. They were arraigned before Justice Dresser, at Forrest City, found guilty and fined \$40 each and costs. I also arrested Charles Eaton and E. Tupper, of Princeton, for dogging deer at Pleasant Lake. They were found guilty and gave bonds to appear at the April term of the S. J. Court. I found Pete Newell selling trout and fined him. I also found two more men dogging deer but was unable to catch them. I am familiar with their names and will arrest them on my next trip up river."

It is unfortunate for the cause of the deer doggers that these items are being promulgated through the Maine papers at this time. But the good often prevails through the adverse action of evil itself and it is now to be hoped that deer hounding will receive the worst setback it has ever had at the present session of the Maine Legislature.

MARCH 9.

SPECIAL.

CHICAGO AND THE WEST.

CHICAGO, Ill., March 6.—Heavy snow is falling here to-day and though the thermometer is not low it looks more like winter here now than it has at any time. It is very likely that the storm on this latitude will hold back that big burst of the spring flight which invaded the country from Illinois to Kansas at just about the same time—Feb. 21 to 25. The Kankakee and the Illinois countries were free of ice last week and thousands of ducks were in. Charlie Gammon and Billy Mussey were to go to Cumberland country to-morrow after an old-fashioned duck shoot, but unless this storm moderates quickly they may have to wait a few days before they meet good shooting. The same is true for Mr. Cleaver and his friends, who plan a trip to Putnam, in the Senachwine country.

It is impossible to say how the flight will hold out, but from all that can be told now the promise seems unusually good for wildfowl in the West this spring. I have just been out in Iowa this week and they report birds in unaccustomed quantities along the old Skunk bottom, so long nearly deserted by the flight. At Reasnor, Jasper county, ducks were in numbers a week and a half ago. They have appeared also in great quantities along the Missouri bottom above Sioux City. At Des Moines I found plans going on for a special car party to Sioux City, to start at an early date. Our friend Charlie Budd will probably go, also Messrs. Royal, Converse, Chase, Burnett, Reed, McClintock, Harris, Eason, Yearsshaw, Perkins, Martin, Vertrees and Kercher. That is to say that most of 'em probably won't go. These gentlemen tell me that ducks are in or were in last week over a great part of Iowa.

At Des Moines I met my friend John Hamilton, editor of the *Daily News*. He was just back from a goose trip to Kansas, and I helped eat a Canada honker which he brought back with him. Mr. Hamilton is young at this shooting business, and openly declares himself not above potting a goose whenever he gets a chance. He gave us at table a thrilling account of how he crawled a quarter of a mile through the grass to get a "settin' shot" at a flock on a sand bar, the result of which nefarious deed was four geese. "I hope this goose wasn't killed in that way," remarked one of the party, "for if so, we cannot eat any more of it." But Mr. Hamilton relieved such fears by declaring that the taking off of this fowl was quite legitimate. This party numbered three guns, and they bagged 31 geese in four days. They were at Mrs. Dodge's place, 12 miles below Hutchinson, on the Arkansas River. They report the fields and bars full of geese last week, and the flight along the Arkansas is said to be heavier than for five years.

"Doesn't it make you feel awfully bad to see the poor geese fall down out of the air all shot up?" asked one of the ladies at the goose dinner aforesaid.

"No," replied Mr. Hamilton deliberately and naively. "The first bird I ever killed on the wing was a wild goose, and when I saw him falling down, although I knew I must lose him across the river, I think I never felt so good in all my life."

I take the extreme pleasure in telling of the exploits of my friend, Mr. Hamilton, because he is a good specimen of the terrible example reformed through saving grace. For years he was the strictest utilitarian, thinking nothing in the world was good but plain hard work. I am glad to see he has nearly killed himself at that. Finally he had to get outdoors or die. He went outdoors. His shooting dates back for a very few years, and barring his still rather utilitarian notions about pot shots, I have some hopes for him.

Now I want to show the reverse of this cheerful picture. About two weeks ago Mr. James Reynolds, a business man of this city, took his own life, under circumstances the most distressing, in that he left a wife and family who loved him. This is what the papers here say of the matter:

"As to the cause of the suicide there seems to be but one opinion. The man had worked himself to death. In speaking of the matter to T. G. Otis, a neighbor said: 'I have known Reynolds for twenty years. I am positive that overwork had rendered him temporarily insane. He was the first at the store and the last one away. Nature had to give way some time, and poor Reynolds went crazy.'"

Too much work doesn't pay. Read the wholesome sporting papers. Go out of doors. You will be nearer manhood through it, and the time is passing when people will sneer at you for that.

In this connection I am reminded of a talk I had lately with a gentleman of this city, who is somewhat known as a shooter and sportsman, and who is now holding for a second term a position of high trust as an officer of the Illinois State Sportsmen's Association. This gentleman told me that he did not read *FOREST AND STREAM* nor any other sporting paper, because he did not have time, his business was so pressing. He represented himself to me as a hard-driven man, with scarce time enough left to get acquainted with his family. This only shows how amusing some men can get to be, and also how far they can get away from the paths of right living. I don't think my friend is any busier than plenty of other men in Chicago, who find plenty of time to read *FOREST AND STREAM* and other fresh, modern literature. If he is so very busy I scarcely see how he can spare time for any official duties outside of his office. But, I say, all this is simply amusing; for every one knows that any man has time to do just what he wants to do, and no man was ever so busy he couldn't be busier. If my friend the official of the State Sportsmen's Association will take time of an evening at home to read some good journal of outdoor sports, I think he will find the pressure lighten at times, and he will not feel so busy. He will do just as much, but will be freer from that strain of energy which makes a worse than slave of many and many a man. I doubt if the world is so very much better off for these overbusy men. Indeed, they seem to realize this themselves, and once in a while they seek another world by gate of self-destruction. I have reported several just such cases here in Chicago. I will warrant not one of them was a reader of *FOREST AND STREAM* or a breather of good outdoor air.

March 7.—The marshes are reported frozen. The shooting is not yet.

Mr. Julius DeLong, of New York, spent a day in town this week. He and Mr. A. Hirth have some sort of a mascalonge scheme on the fire for this spring.

Mr. A. Von Lengerke, of the well known New York firm, fitted across the Chicago horizon last week, leaving a smell of Schulze behind him.

Mr. Gardner Thatcher, of this city, has outfitted here for tarpon and goes to Florida.

Some unknown friend has sent me a copy of the *Beardstown Illinoisan*, with the following marked: "A. M. Smith made a large haul of fish in Sangamon Bay last week, aggregating some 30,000lbs." There is a brevity and directness of assertion about this which we could wish less conspicuous.

Br'er Hank Kleinman went out behind Br'er Abe's house, down on Lake Calumet, for a little while last Monday and bagged 19 bluebills, 1 goldeneye and 3 canvasbacks. The birds still hang about that persecuted lake. Br'er Gawge killed 7 bluebills that same morning.

I take pleasure in forwarding to the kennel editor of the *FOREST AND STREAM* a cutting from the *Commercial Gazette* of Cincinnati, sent me and I think, written by the hand of that remarkable greyhound enthusiast Mr. M. Phister, of that city. The article speaks of the third winning of the Waterloo Cup by the phenomenon Fullerton, a feat unparalleled in coursing. Mr. Phister is fortunate in having a half brother of Fullerton, the big brindle Norwegian.

Within 30 days we shall have good shooting and some fishing around Chicago. The Kankakee at Momence is one of the earliest streams to offer any fishing.

E. HOUGH.

ST. LOUIS NOTES.

ST. LOUIS, March 2.—At a stand in Union Market I noticed the other day a fine string of croppies, the fish averaging 2lbs. in weight. They came from some point down the river, and were netted, of course. It makes the gorge of the angler rise to see the fine game fish, bass especially, which are shipped to Union Market from local waters and caught by means of nets and seines, but there has been no slaughter this year from fishing through the ice, for the very good reason that no ice has formed in this section of the country.

Now that the quail season is over, it will do no harm to "give away the soft snap" of a St. Louis sportsman who last fall killed nearly 200 quail within two miles of the western limits of the city. While other hunters went out many miles looking for quail, he had fine shooting literally at his own door. No one thought of looking for game so near home, and the favored party was too smart to say anything about it until the season was over. But what chance will these quail have next year?

There never has been a better winter for the preservation of game birds than the one just ending. It has been extremely dry all over this section, with no extremely cold weather and but few snow storms, so that the birds will winter over in good condition, and should increase and multiply at the maximum limit. The absence of ice will also insure the safety of the fish in the shallower streams and lakes. The prospects of a good game season the coming fall are consequently most excellent.

Numerous petitions have been sent to the Legislature to pass a law prohibiting all seining of fish in the State of Missouri. The House recently passed the following bill, and, as there is a similar one pending in the Senate, it is probable that we will soon have a law prohibiting all seining:

SEC. 3,910. If any person shall place or maintain, or cause to be placed or maintained, in any of the waters of the State, any seine, net, gill-net, trammel net, wire or other device, or by any such means shall take or catch a fish in the waters of this State, he shall be deemed guilty of a misdemeanor, and upon conviction thereof be fined in a sum of not less than \$5 nor more than \$100, provided the provisions of this section shall not apply to persons who own land adjoining such waters from taking fish for their own family use, and provided, further, that they shall not prevent the free passage of fish up and down such waters.

Ducks struck in here quite freely last week, and there was a rush for the favorite shooting grounds.

Cropper fishing with hook and line has been carried on all winter at Creve Coeur Lake owing to the mild weather.

The State Senate has shortened the deer shooting season by knocking February out of the old law.

There will probably be amendments to the game law of the State. The Hawkins bill has received a favorable report in the House and will probably pass. The bill provides that game shall not be killed during the following seasons: Wild turkey, between March 1 and Sept. 15; prairie chicken, between Feb. 1 and Aug. 15; quail and grouse, between Feb. 15 and Oct. 1; woodcock, between Jan. 10 and July 1; and wild ducks and geese, between April 1 and Sept. 1. The bill also makes it a misdemeanor to trap or net prairie chickens or quail at any time.

The following bit of genuine news I clip from a San Francisco market paper: "Japanese pheasants from Oregon have been quite common in the game market during the past fortnight. The male pheasant of this variety is of handsome plumage. These birds were imported into Oregon and for years were protected by very strict game laws, until now they are quite plentiful and are allowed to be hunted. The meat is in favor with lovers of game. Sales were made this week at \$9 to \$12 per dozen wholesale." ABERDEEN.

A WEST VIRGINIA RESORT.

Editor *Forest and Stream*:

I notice in your columns, under date of Feb. 19, a communication from "L. R. S." Scranton, Pa., who refers to an article from the pen of Mr. T. B. Wilson, Capon Iron Works, W. Va., which was published in your paper some weeks ago, who desires to know if the reports of T. B. Wilson can be relied on. I wish to say a few words in corroboration of Mr. Wilson's statements. It has been my good fortune for the past ten years to spend my annual hunt and fish with Mr. Wilson. I have fished all the streams mentioned by him, viz., Wait's Run, Trout Run, Pond Run and Stoney Creek; and have taken many fine specimens of brook trout from these streams. The trout of Wait's Run and Trout Run are fine in point of size and flavor. Mr. P. Johnston, of Linden, Va., an old disciple of Izaak Walton and a very intimate friend of Mr. Wilson's, has perhaps taken more large trout from the latter than any other angler; and he informs me that on one day he took from a single pool in this stream thirty-six trout, varying in size from 14in. to 18in. in length, and on the day following took twenty-six trout equally as large. While he had no means of ascertaining the weight of these trout, it is safe to say some of them would have weighed 3lbs. Four years later Mr. Johnston and I

took from this same pool one day seventeen very fine ones. On one occasion Dr. John McKeever, of Wardensville, W. Va., took a trout from this stream weighing 4lbs. One peculiarity of these large trout is that they are seldom, if at all, taken with the fly, but bite on the bottom.

Game is abundant in the mountains and valleys surrounding the hospitable home of Mr. Wilson, as I can testify from personal experience, and deer, bear, turkeys and pheasants can be had in season; and with Tom, or the "General" as he is more familiarly known, as guide, the sportsman is sure to get a shot. The name and fame of Tom and his achievements with his "bone smasher" (Manton rifle) cannot be touched on here, but will endure as long as the mountains which he has hunted. In one hunting season Mr. Wilson, J. W. Thorp and I killed twenty-two deer, turkeys and pheasants not being taken into account, though we bagged great numbers of them. This was done by still-hunting, and on no occasion do we use dogs.

A few shots made by Mr. Wilson will to the "kid glove" hunter seem incredulous. I speak truth, however. In 1874 he killed at three shots two four-prong buck and fifteen turkeys. A few years after bagged eighteen turkeys at three shots!

Visitors are always cordially received and every hospitality extended toward them. It is, indeed, "a region full of interest to the sportsman and naturalist," and in no other country will he find a more contented, congenial and true-hearted people.

I beg to refer you to an article by the late Alexander Moseley, late editor of the *Richmond Whig*, relative to the trout of this stream, published in *FOREST AND STREAM* in the fall of 1879. A. M.

LINDEN, Warren County, Va.

REARING PHEASANTS.

AN English correspondent writes: "The period has now arrived for making preparations for the pheasant rearing season. The results produced in many parts of the country by the semi-artificial culture of these birds are certainly encouraging, and are in part due to the increasing experience of game keepers in rearing them. The pheasant shooting season of 1890 I was on the whole satisfactory, and would doubtless have been one of the best on record but for the bad weather that prevailed during the summer. The weather was favorable during the early part of the summer, and the young birds had a fair start, but the effect of the wet and cold which supervened during June was disastrous to them. Heavy bags were, however, recorded in many parts, and the condition of the birds proved to be good on the whole."

The practice of rearing by hand, which obtains on many estates, has prevented a great amount of depletion which otherwise must occur. When nearly 4,000 pheasants are killed on one estate in two days, as was the case last season, it is apparent that these birds would speedily be exterminated but for the system of cultivation now in vogue.

As is generally known, the game keeper is responsible for this work, and the uninitiated have no idea what anxiety and labor it causes him, nor of the nights that he spends with the young birds when sickness demands his attendance. In the matter of feeding he has to exercise incessant zeal at all times, providing them with food carefully and skillfully prepared. In conversation with the well-known pheasant rearer, Mr. Wm. Burgess, of Malvern Wells, Worcestershire, the other day, I was informed that the acclimatization of the British variety is being actively prosecuted abroad and that he (Mr. Burgess) has, for many years past, assisted in the work by sending eggs from his pheasantry. In the matter of fish he has also done the same, and has by way of experiment successfully transmitted living examples of perch to Japan. The Chinese pheasant had, I learnt, succeeded in nearly every country, and I can speak from experience as to the favorable results attending its introduction in England.

NEW JERSEY CODIFICATION.

Editor *Forest and Stream*:

Among the bills introduced in the Senate is one providing for the creation of a fish and game commission whose duty shall be to revise the fish and game laws of the State and report a comprehensive bill to the next Legislature. The bill provides that the Governor shall appoint three commissioners, who shall hold sittings in various parts of the State during the recess of the Legislature for the purpose of hearing the views of all persons who may desire to present the same. The commission is then to prepare a bill, embodying the present laws with such amendments and alterations as the commission may deem proper, and report the bill to the next Legislature. The object of the bill is to follow in the wake of the States of Pennsylvania and New York, where commissions of this kind have been created by legislative action; in Pennsylvania the work has been completed; in New York the commission is still in session.

There has always been serious complaint concerning the fish and game laws of this State, and no laws could be more contradictory. Thus, according to one law, a man taking perch out of lakes or ponds is liable to go to State prison for six months, but there is no law against persons taking the same kind of fish out of streams. There is a law which prohibits catching trout during a close season, but there is no law prohibiting the possession of trout during this close season, so that the former law is rendered practically worthless, it being a difficult matter to capture a person while in the act of hauling in the fish. According to one law, persons polluting rivers or allowing anything to flow into any stream which will injure or kill fish are subject to a penalty of two years in State prison and a fine of a thousand dollars, and by another law justices of the peace are given jurisdiction in all these cases; the law in relation to the pollution of rivers applies to corporations, so that justices of the peace are given authority to send not only private individuals but corporations to State prison. These are only a few of the absurdities of the fish and game laws as they stand at present. In fact, these laws are in so badly mixed up a state that nothing but a revision will unravel the tangle, and it is this that is sought by Senator Mallon's bill. That the laws are defective and contradictory is apparent, for the State provides no way of enforcing the laws in relation to game, although several thousand dollars are annually expended for protecting and propagating fish. Wardens who do their duty do so at their own pecuniary risk,

The laws of New York and Pennsylvania differ materially from the laws of this State, but by coöperation the laws of New York and Pennsylvania have been made as near alike as territorial reasons will permit. It has always been a subject of complaint that the laws of New York open the season some time before the season opens in New Jersey, the New York sportsmen shooting off their own game and then coming into New Jersey and getting their share of the game here. If the seasons opened about the same time it would be of great advantage to Jerseymen who cannot afford to travel long distances in quest of their favorite sport. It is consequently that now is the proper time for a general revision, which would result not only in better protection, but also be of convenience to all concerned.

PATERSON, N. J., Feb. 25.

NEW SYSTEM OF SIGHTING SHOTGUNS.

THERE has always existed a serious difficulty in aiming shotguns, and this difficulty has increased with our modern chokebore guns. When shooting, the attention of the gunner should be chiefly directed on the flying bird, and any arrangement of sights which interfere with a full view ahead, or sights that require to be looked at, are worse than no sights at all. In fact, good work with the shotgun has required that the gun should fit the shooter well, i. e., come up in good alignment with little attention at aiming. One of the difficulties of shooting is that the gun is not used from the same position, the shooter often having to take a sharp right or left position which makes it difficult to align the gun the same. I have found that a small and short ivory sight placed not more than 18in. from my large muzzle sight gives wonderfully good results on a shotgun. Not only is the vertical alignment readily obtained, but as the two sights are seen quite distinct and away from each other, the lateral alignment is made at the same time. This is a most important point, for one of the common mistakes is sighting too close to the gun rib, which results in under shooting. In very quick shooting neither of these sights are much noticed, but the eye is more or less guided by them in the quickest work quite unconsciously, and when shooting more deliberately one forms the habit of bringing the gun up in the right position. There is no better test as to whether the gun is a good fit or not, than to look over it with these sights on. This method of sighting can be applied to a rifle, though I would not recommend it except possibly at short distances and where great accuracy is not required. This target which was made with the rifle on a Daly gun shows a fair degree of accuracy. The sights are easily applied by any gunsmith. As many shooters have my muzzle sight they now will only require the new rear sight to make their gun perfect.

This cut shows the large muzzle sight on gun.

Cut of the small rear sight on the gun. This sight is placed 18in. from the muzzle sight.

This engraving gives the appearance of the sights when aiming at a straightaway bird. It will be noticed that the muzzle sight is the most prominent and when the aim is taken should be seen above the rear sight and in line with it. In this cut the elevation of the gun is right, but the rear sight shows that the gun is out of line, which would not be discovered if these sights were not used.

A large proportion of the sportsmen who use the Lyman rear tang sight do so with the ordinary crotch sight on the barrel. This crotch sight is much in the way of the rear tang sight and the shooting is done at a great disadvantage. To overcome this trouble I have invented a folding leaf sight to take the place of the crotch sight. This new sight has no notch in it, being straight across its top. In this respect it is a bar sight. This sight folds down close to the barrel, allowing the shooter to use the Lyman combination sight or the wind-gauge sight in an unobstructed manner, and the result is that the shooting is twice as good as when the ordinary crotch sight is on the barrel.

Although the shooter should in any case use the Lyman tang sights for nearly all shooting, he has the satisfaction in knowing that if he wishes to use this leaf sight, that it is a better sight than any rear barrel or crotch sight in use, both as regards accuracy and quick-

ness in aiming. The left hand engraving shows the sight on the gun barrel folded down. The right hand cut gives the appearance of the sight when in use and shows the bead or top of the ivory muzzle or front sight when aiming.

In taking a long shot the front sight should be seen high above the bar of the leaf sight depending on the distance of the game. The shooter needs to make no effort to see the front sight in the middle of the bar, for the eye will centralize the front sight with the bar sight unconsciously while the shooter is getting the front sight on the target. The top of this sight has a knife edge slot on its face which prevents any reflection from rays of light and always gives the bar a black appearance. This edge also gives the thumb nail a hold in turning up the sight. The sight has also a horizontal bar of ivory "partly exposed" below the square top which allows the sight to be seen when shooting in a dim light. The folding part is regulated by the right hand screw to move as firmly as desired.

MIDDLEFIELD, Conn.

WILLIAM LYMAN.

BEARS AND BEAR HUNTING.

Editor Forest and Stream:

Reading "Hunter's" dissertation on trapping bears reminds me of old hunting days when the wild woods were my happiest abode and trapping bears my specialty. I have killed seventy-three bears, trapped the most part of them, and the manner and kind of bait are a desideratum worthy of note.

In the spring of the year I never used bait, but set traps in wild animal trails or paths, which are to be found around ponds and beside rivers and brooks where the bears inhabit.

Later on I found that fresh fish was the best bait. Some hunters use stinking meat or waste scraps or bones of any animal, thinking that the smell of the decaying meat would entice brui, but I have always found that the fresher the bait the better. I think bears have a delicate sensitiveness in their organs of smell, and I have found honey to be a great attraction to them. I have also bored auger holes in roots of trees near my traps, and filled them with molasses and rum, for be it known, the black bear, although a native of Maine, never consented to her prohibition statute, and can be made as drunk as any two-legged animal.

There is, however, in my humble opinion, more in setting the trap than in the kind of bait, and at different seasons of the year in different ways.

As to the time they breed, I see hunters vary in their opinions. I have kept them in confinement, but they do not breed the same as they would in their native wilds. Friend "Hunter" thinks they drop their young the first part of February, but says he found four in a den in March. Well, if anybody finds a female bear in a den in January, he will find the cubs, for immediately on being disturbed the mother will drop her cubs. You cannot get a bear out of her den before she drops them. Yes, he found four cubs in March, that is the month she naturally has them.

I like the talk of that Maine "Hunter;" it sounds like my own experience, and here is my hand. Shake!

J. G. R.

BETHEL, Maine.

SPORT IN MISSOURI.—Marshall, Mich.—I arrived in Keytesville, Mo., Dec. 24. The weather was fine; and the next morning I called upon my friend Mr. Wm. Hill, and I told him I wanted to have a good hunt. He introduced me to two of the best hunters, Ward brothers. That afternoon one of them, John Ward, and I went out a short time and bagged 20 fine quails; and for two weeks we kept it up, and had splendid shooting. My Gordon setter was only 13 months old, but she was a "daisy." Two of us bagged in one day, I think, 93 birds. In the early fall and spring there is splendid duck and geese shooting. I once was advocating a 10lb. gun and 10 bore, but I do not want any more of them, nor do I advise their use for small game. A gun which weighs from 5 to 64lbs. is heavy enough, and toward evening the gunner will think even that weight is too heavy. I believe that a person can kill just as much, if not more, with a 16-bore, using 2drs. of powder and 4oz. of shot. It is all useless to shoot so much ammunition when less will do, and besides I do not want to carry 3½ to 5drs. of powder around with me when ½ will do. To me it seems ridiculous to use 4drs. of powder for one bird and to blow him all to pieces, while all is required is to kill the game. From what I heard, the bird crop is very abundant all through the southern part of Missouri. There are some wild turkeys there, and I saw quite a few geese. The day I arrived there James Ward killed a goose at 180yds. with a 84in. muzzleloader. The game is too wild to shoot with a shotgun at that season.—M. R.

WYOMING GAME.—Big Piney, Uinta county, Wyoming.—This section is the home of the elk, deer and antelope, bear of several kinds, mountain lion, mountain sheep, cat, lynx, beaver and a few timber buffalo in the mountains, wolf and coyote of the plains; ducks and geese in summer and fall; sage hens, grouse in large quantities at all times of the year. In all streams and lakes are the mountain trout and they are very gamy. Sometimes the noble elk get very poor in winter and have been killed in large numbers for their hides, although there is a strict law against this. Last winter we had some rare sport roping elk on horseback. We sold several which were shipped to Austin Corbin, of Newport, New Hampshire. This country must forever remain an irreclaimable wilderness. Here hunters may live in tents and follow the migrations of the game and lead a life of savage independence.—C. V. B.

A GAME CLUB which appears to be earnestly endeavoring to do some good in its neighborhood writes: "Can you not suggest some way for us to increase our treasury? Do not some of the Western associations receive something in the shape of contributions from the different gun dealers and sporting goods houses?" The gun dealers and sporting goods houses contribute to trap shooting tournament prize lists; but most houses that we know anything about are invited to contribute to an extent far beyond their means. We have never known of their contributing to a game protective club. It is hardly to be expected that they would. Perhaps some one can suggest to our inquirers a method of raising funds for game and fish protection purposes.

THE DOG BROUGHT OUT THE GAME.—The story of the man who bet that his pup could bring the coon out of the barrel, and won his bet by throwing in the dog backward, which triumphantly emerged with the coon fast to his hindquarters, is matched by the story which F. B. sends from Kansas: Several days ago the Bacon boys, who live about four miles west of Ottawa, started out to hunt coons. They had three hounds and were soon on the trail of an animal which turned out to be a large and fierce wildcat. He led them a long chase and finally came to bay under a dark railroad culvert, and here the two older dogs stopped. The other dog was just learning to hunt and had never had any experience in this line, so he started boldly in to bring out the game. He brought it out a great deal quicker than any one expected and made a considerable noise about it too. When the hunters caught sight of the dog he was coming toward them like mad with the wildcat standing straight up on his back. The other hounds now took hold of the cat and soon finished him, but he gave them some ugly wounds in the fight. The pup that brought the wildcat out will probably remember the feat for a long time.

WORCESTER, Mass., March 6.—The annual meeting this week of the Worcester Sportsmen's Club resulted in the election of E. F. Swan as secretary. Last year he was dropped and Henry W. Webber elected. This year Mr. Webber declined a reelection and the only other man nominated withdrew from the contest. The result of the annual election of officers follows: President, Gilbert J. Rugg; Vice-Presidents, A. B. F. Kenney, E. S. Knowles, M. D. Gilmore; Secretary, E. F. Swan; Executive Committee—John B. Goodell, W. R. Dean, C. Harry Morse, O. A. Benoit; Committee to Revise the By-Laws—A. B. F. Kenney, C. H. Morse, F. M. Harris, O. A. Benoit. The following were elected members of the club: Geo. Cutting, Wm. Brown, Geo. W. Purington, Henry W. Smith, Geo. Langdon, W. L. Smith, A. P. Cutting and Geo. I. McClellan.

NEW YORK RESTAURATEURS.—At the monthly meeting of the New York Association for the Protection of Game, last Monday evening, Messrs. H. T. Carey and Chas. F. Inbrie, of the executive committee, reported that through the efforts of Mr. W. Holberton, a member of the association, and State Protector Dr. Willet Kidd, they had obtained evidence against Morello's restaurant and the Hotel Brunswick for serving game out of season. Whereupon it was unanimously voted that the counsel of the association should begin suit immediately against the offending parties. Why does the District Attorney not go on with the suit against Delmonico, who is charged by Dr. Kidd with having served woodcock out of season?

HE BRAGGED NOT WISELY.—A Hartford man, George J. Helm, recently wrote to a Western paper, bragging of his being out shooting on Sunday and escaping the game warden. The case was followed up by Game Warden Collins, Helm was arrested, found guilty, and fined \$7 and costs of \$20 or more. Helm's attorney wanted to take an appeal, and Attorney Markham strongly objected and read Section 693, Revised Statutes, 1888, which says: "Any person, convicted by a justice of the peace of any offense, except profane swearing, cursing or Sabbath breaking, may appeal from the judgment." Good lawyers claim that the case is not appealable, and that the justice's decision must stand.

"BOOK OF THE GAME LAWS."—It speaks well for the *Book of the Game Laws* that although it is now nearly six months since its first number was published, neither in the October, 1890, number nor in the January, 1891, number has any serious error been discovered. There was one stupid critic who averred that the *Book of the Game Laws* gave the Long Island quail season incorrectly; but in this case it was the critic who erred. The January number, by the way, contains the full text of the recent Illinois decision respecting the sale of quail killed for market. It is a pleasure to record that the *Book of the Game Laws* is appreciated for accuracy and completeness.

IOWA ASSOCIATION.—J. G. Smith's trip to Forest City last week was not a fruitless one, after all. He set the ball in motion by which, two days later, a fellow was caught attempting to ship prairie chickens, and was convicted and fined \$20 and costs. When the State Association for the Protection of Game in Iowa gets after a fellow, it is very likely to run him down before it is through with him. It has been the means of saving up much of our game which was formerly killed and shipped out of the State during the closed season, and has done much good in a general way.—*Alzona Upper Des Moines, Feb. 25.*

GAME PROTECTOR KIDD.—New York, March 4.—State Game Warden Dr. Willet Kidd, of Newburgh, has just notified me that Carl Smith and Smith Vance were lodged in Kingston jail March 2. They will now have to pay \$240 or serve out 240 days. They were arrested at Ellenville for netting trout in the Sandburgh Stream in Ulster county. I think Dr. Kidd is very efficient, and deserves great credit. Last season he brought sixteen suits to a successful termination, three of which were in this city.—W. H.

BIRDS IN NEBASKA.—Loup River.—The quail are having a hard time this winter, but are so abundant that I fear no great depreciation in numbers for next season. Prairie chicken were not plenty last season, but I have about 200 located in the hills just back from the river, and with a good spring and no prairie fires I think they will be as abundant next fall as formerly.—C. P. H.

SPRING SHOOTING.—When the Illinois Legislature was considering a bill to prohibit spring shooting of wildfowl in 1887, petitions were sent in to the General Assembly opposing the measure, and bearing something like 10,000 signatures.

TROUBLE WITH THEIR EYES.—A correspondent puts it thus: "Game is scarce about here; too many sportsmen who cannot read when it comes to the game laws; their eyesight gives out all at once."

RUST IN GUN BARRELS.—My recipe for preventing it may not be original, but I recommend it to gunners. I have tried all the zinc arrangements mentioned in the *FOREST AND STREAM*, but always find that there will be more or less rust. I use a round stick one inch longer than the barrels and a quarter-inch smaller; cut a strip of soft, thick cloth as wide as the circumference of stick, sew the edges together from end to end, soak in sweet oil and place in gun. There will be an even pressure on all parts. I have examined my gun several times this winter and there is not the slightest sign of rust.—*IRVING (Montreal).*

MEMPHIS, Tenn.—The *Commercial* of March 4 says: "It is very rarely that the canvasback duck ventures to the Southland, but there are lots of them within a radius of fifty miles of Memphis at the present writing, and the grounds of the Oakdornick Club are fairly alive with them. Several good bags have been made, and the slaughtered ones are as fat as butter. The presence of the 'backs' in this locality is accounted for by the recent storms, which have driven them from their usual haunts."

NEW ENGLAND GAME AND FISH CLUBS are requested to communicate with Mr. Richard O. Harding, secretary of the Massachusetts Fish and Game Protective Association, 304 Washington street, Boston. The association hopes to have representatives from many sections and States of the New England district at an April meeting, to discuss the feasibility and desirability of uniform or consistent game and fish laws.

"TRANSPORTATION OF GAME."—In this paper by Mr. Collins, last issue, concluding paragraph, for "poultry" read property.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

THE UNKNOWN RIVER.

HERE we are again on the banks of the Unknown. The very scenes lie before us which we had thought of so many times during the past year, and wished with all our heart that we would be permitted to see again. We did not care a straw that we were eighteen miles from a post office and probably would not hear from the outside world for some time. The road to our camping place led along the river bank for about a mile, and we watched the river all along, noting the changes the water had made since the year before. We found the river perfectly clear of logs, trees and brush, and we knew that if the trout were on the rise we should have some splendid sport.

Riding over corduroy roads and through pine woods for eighteen miles had given us appetites that could only be excelled by larger capacity than we possessed, and when we arrived at the farm house at the mouth of the river we were ready to make a clean sweep of anything Mrs. R. might set before us. The dinner was excellent and we ate long and hearty. After this we made several live-boxes and got our fishing tackle ready for use, and at 3 o'clock we all started up the river, each with a live-box, intending to place them along the river at convenient places. We found the river in splendid condition and full of trout. Mr. W., who is from England and had never before fished in American trout waters, was stationed at one of the best pools, where in three hours he took ten trout; seven of them averaged 1½ lbs. each. This he said was the finest trout fishing he ever had, and beat England all to pieces. We all had good success and returned to the house in high spirits. The man with our tent and blankets did not come that night, so we had to sleep at the house.

The next morning we made a fish pond just below the old mill, where we could lead the water from the spring and the river through it. We found it quite a big undertaking, as it was hard digging and the mosquitoes bothered us a good deal, but we finished it in about two hours, and we felt proud of having a place to keep our trout alive. George said this was really building a dam by a mill site, and we all voted that we would rather have it this way than the other way at present. The next thing was to float the live-boxes down the river and put the fish we had caught the day before into the pond. We found some of them nearly dead, but they soon revived when placed in the pond, and swam around enjoying themselves as if nothing was wrong.

That afternoon was favorable for casting, and we had glorious sport, taking about twenty trout altogether. The trout run quite as large as the year before, and it was rare to hook one smaller than 1 lb.

The next morning it was raining when we got up, and we had to stay indoors. For amusement we tried whist, but Mr. W. did not play American whist, so we abandoned that and tried cribbage, and Schlapper Hannes. Just before noon the rain stopped, and we all went down to the mouth of the river, where a dock reaches out into the bay about 400 ft. Getting to the end of this we sat down and enjoyed an hour of cool delight.

The bay here is five miles wide, and on the opposite shore several Indian villages are located. The people farm a little and fish and hunt a good deal, but some of them make good hands getting out logs in the winter season. The fish they catch are principally whitefish, which are cleaned and packed with pounded ice in large boxes on stationary trucks, and taken by small steamers to the nearest point, where large boats land, and shipped south.

Just outside the bay we could see a steam barge towing a schooner, and beyond that a large sailing vessel almost hulled down. In several places where the sky and water met only smoke could be seen, and some one suggested that these vessels "were out of sight." While we were taking in the enchanting scene around us the dinner bell rang, and before the second tap every man was on his feet and moving toward the house. Romance and dreams were forgotten, castles came tumbling down, and however different our thoughts had been a few moments before, they were unanimous now, and there was no division until we got up from the dinner table.

The afternoon was fine for casting and all took about as many trout as they wanted. All that we could possibly save alive were put into the live-boxes and the remainder were bled and put in the ice house for present use.

Bright and early next morning I started with Jim, one of the teamsters, to a point up the river six miles, called Two-mile Rapids. The road is along the river for the last two miles and I could see that the river was a succession of rapids and pools the entire distance. About two-thirds of the way up the rapids I left the wagon and started in to fish. The only regret I have for this day's fishing was that I was alone, I wished forty times that the others had come, for it was the finest sport I ever had and I wanted some one to enjoy it with me. Where I started in there is a deep pool with a big rock on one side, and just above and below this pool the water rushes like mad. In three hours I took 43 trout, the lot weighing 80 lbs., from this one pool. I first filled my creel, and then taking the hoop from my landing net I filled that as full as I could carry it. I am sure I could have taken as many more, as the trout were rising just the same when I left as when I started in. When I reached the wagon Jim had returned from his errand up the river and was feeding the horses, and while he built smudges around the horses I got out the lunch. It was a pretty wild looking place where we were, a dense forest of pine and hemlock would not permit of seeing very far in any direction. There was a fresh bear track in the road 3 ft. from us and deer tracks were thick along the river bank. After dinner we took a short rest and talk over our pipes. Jim stated that eight miles north of this point there was quite a large lake which an old bear hunter had told him was full of big trout. I lost interest in the lake full of big trout when Jim told me there was no road to it, for I did not fancy a walk of eight miles through those woods.

I began to get uneasy about my fishing rod; was afraid some porcupine might come across it and take a notion to climb, so telling Jim I would be at the bridge at five o'clock I hastened back to the river.

I walked along the bank and in the edge of the river for half a mile, for I felt sure I could get all the trout I wanted close to the bridge and I would not have to carry them so far. Nor was I mistaken, for long before I got in sight of the bridge I had my creel as full as it would hold. I passed a number of fine-looking pools, and at the last one above the bridge I took off my creel and began filling my landing net, and by the time Jim came with the wagon I had both creel and net full. No time was lost in transferring the fish and myself in the wagon and we were soon on the road. The remainder of the noon lunch was disposed of and then pipes and tobacco until we reached the farm. I should not have taken but one creel full of trout that day, but there was a party at the farm who intended to start for the southern part of the State the next morning and wanted to take some trout with them. I gave them all that I caught that day and cleaned and packed them in ice, and we learned afterward that they got them home in good shape.

The following day we did not do much of anything but lay around and read and smoke. We put in part of the day out on the dock as, on account of the mosquitoes, it was the only place we could loaf in peace. Monday was a big day with all of us. Mr. W. caught the largest trout on the trip to-day, weight 3½ lbs., but we were all after him with several weighing from 2½ to 3 lbs. each.

For the next three or four days we gave the lower rapids a rest, and visited several points up the river. At a place called Short Rapids, three miles up, we had excellent sport. The first day we were there George, Charlie and I all hooked at the same time and in the same pool, Charlie with two on and George and I with one. How we did yell as the rods bent and the lines sailed through the water. I can see the boys now—George biting his under lip feeling sure that he would save his trout (but he didn't), Charlie with bent form trying to steady himself in the swift water, and with a pleased look on his face as he slipped the landing net under the two beauties. George's fish was a big one, and after two or three leaps in the air he sailed down through the tail of the rapids and did not stop when he came to the end of the line. These rapids extend about half a mile and was the prettiest place to fish we had struck. We had only come half way down the rapids and our creels were already as heavy as we wanted to carry back to camp. We came back here several times and always with good success.

Some of the best flies we used were royal-coachman, chippie, Montreal, professor, governor, bee, Martin, queen-of-the-water, Proctor, gray and brown hackles.

One morning three weeks after our arrival we pulled up stakes and started for home. We had over a hundred trout in the pond and these were killed and packed in ice and taken with us. Arriving home in due time the trout were distributed among friends, who seemed to think it a great treat to have fresh brook trout.

Our trip had been a grand success in every way and one long to be remembered by us. JACK.

COLUMBUS, Ohio.

THE PICKEREL FISHERMEN.

BOSTON, Mass.—The pickerel fishermen are out; that is, if the weather is not too cold and the ice is not too thick. One gentleman, he does not wish his name mentioned, fished the Charles River above the dam, with plenty of live bait, all day Saturday of last week, and the day following, and not a pickerel. Another fisherman, with permit, fished the Cambridge reservoir on the same day, following Saturday, and he got no pickerel. His ill success he gives as his reason why his name is not to appear in the *FOREST AND STREAM*. But in both of the above cases it is possible that the day following Saturday may have something to do with the matter. Others have been fishing, however, and they did not fish the day following Saturday. Mr. R. S. Foster, of the commission firm of Foster & Weeks, was born in the Pine Tree State, and he dearly loves the rod and line, and what son of that State does not? He, with Mr. John H. Farnham, in the fruit trade in Boston, took the train a week ago on Saturday morning for a pickerel pond in Connecticut. They went down to Hampton station, several miles from Willimantic. There a team was waiting for them, by previous engagement. It was a light Concord wagon. Would it carry them, the driver and all their traps? The driver declared it would. It was dark and the road was

rough and muddy. They started with some misgivings on the part of the fishermen, but the driver was sure. "Three miles of darkness, wheels in ruts to the hubs, and the worst road," Mr. Foster says, "I ever passed over, brought us to the house." The house is the dwelling of the owner of the farm and the pond. This pond is artificial. It was dammed for a sawmill, and the stumps of overflowed trees are sticking through the ice. The morning came. The pond was covered with several inches of snow and several more of water on top of the ice. It did not look like pickerel fishing, and the sportsmen were minded to take the train home. But consultation of time tables proved that no Boston train was reachable till well toward night. They concluded to try the pond. They wet their feet, through overshoes, in getting on to the pond. Again they were minded to start for home. No pickerel would bite with a dark ooze of surface water running down through every hole in the ice. But the lines were set. Pickerel enough were taken to fry for breakfast on Sunday morning, the day they were not to fish. Sunday, they did not start back to Boston, the weather looked better. The water had nearly disappeared from the ice. Monday they fished till it was time to start for Willimantic, twelve miles, where an express could be touched that would take the happy fishermen home to Boston that night. They were happy with their catch of pickerel—over seventy, with several monsters weighing 3 lbs. and up to 4 lbs. Mr. Foster is in favor of an artificial pond for gamey and handsome pickerel of large size, and one of the desires nearest his heart is to troll that pond in summer time. The local fishermen claim that there is a monster pickerel in that pond that has broken every sort of a rigging—silk lines and linen lines. Mr. Foster would like to try that same pickerel with pliant rod in summer time. SPECIAL.

TARPON AT FORT MYERS.

FORT MYERS, Fla., Feb. 26.—*Editor Forest and Stream:* I have noticed in sailing on the Caloosahatchie numbers of tarpon; and have wondered at our Northern anglers stopping at points of so little attraction simply to fish for tarpon, when Fort Myers not only offers the finest tarpon fishing, but also gratifies the eye with her beautiful homes surrounded by purely tropical verdure equaled by no other point in Florida. The river is here 1½ miles wide, the banks covered with guavas, sappodillos, grape fruit, shaddock, oranges, coconuts, bananas, date palms, roses and a myriad of other flowers, rendering it most beautiful.

On the 15th inst. Mr. H. N. Brooks, of Meriden, Conn., landed a tarpon weighing 80 lbs.; length, 4 ft. 9 in. He wired his brother anglers and the next steamer brought them with rod and reel. On the 20th Mr. R. B. Duykinck brought to gaff one that weighed 110 lbs., 5 ft. 4 in. in length. On the 24th Mr. H. N. Brooks landed two that tipped the scales at 120 lbs., 6 ft. in length each. Mr. Brooks is a thorough master of the rod and reel. On the same day Mr. J. N. Stevenson, of Chicago, safely landed a tarpon weighing 110 lbs., after a hard fight lasting 3½ hours. Mr. Stevenson caught another on the 25th, weighing 125 lbs., 6 ft. 7 in. in length. Mr. Prindell was unfortunate, having several strikes, and after playing one noble fellow over two hours his tackle parted.

Besides the tarpon, black bass are plentiful, weighing up to 15 lbs. Redfish, snappers, sand perch, sheepshead, rovalie, jackfish and other fish abound; in fact, the waters are filled with them.

The gunner can find ample pastime in quail, deer and turkey shooting. Quail are so plenty that numbers are seen in the yards of our town.

The Plant Steamship Line have established a line of steamers from Port Tampa, and the sportsman tourist can be assured of transportation that is very satisfactory. Should any of the readers of *FOREST AND STREAM* wish sporting information we will cheerfully reply to any inquiries. MICKLE & ROE (Lock Box 29).

TROUT AND MOUSE.

WE have recently learned some interesting facts concerning Colorado trout and trout streams from Mr. Thomas Withers, Civil Engineer and Deputy U. S. Land Surveyor for the State of Colorado. Mr. Withers has been in Washington and while there collected some useful information preparatory to establishing a trout hatchery on a beautiful stream owned by him near Denver. He will probably make a special effort to get the native red-bellied trout (*Salmo purpuratus*), and devote considerable attention to its propagation. Mr. Withers is an enthusiastic fisherman and well posted as to the habits of the trout. He states that the helgramite is extremely common in the north fork of the Platte and its fly form, which is there known as the willow fly, is one of the best natural foods for trout and, also, one of the most excellent baits of the region.

Mr. Withers gives a very amusing account of the capture of large trout at Buffalo, near Denver, on the South Fork Railroad. There is in that vicinity a so-called mouse which has the habit of going into the water very freely, and on this account we suppose the animal to be one of the shrews, probably the common water shrew (*Neosorex palustris*), which is the largest of the shrews aquatic in their habits. It grows to a length of 6 in. including the tail, which is 2½ in. long. It is found from Massachusetts to the Rocky Mountains and northward. The muzzle of this shrew is very long and abundantly supplied with whiskers. Its feet are very long and have a fringe of hair. The ears are valvular and adapted for life in the water. It feeds upon insects and also upon other larvae, as we may gather from the description of a kind of stick bait mentioned by Mr. Withers. But to take up Mr. Withers's description of the capture of a big trout with a live mouse. He says: "We were led to try the mouse from the fact that on cutting open a large trout we were very much astonished by finding a mouse in its stomach. A hook was passed through the skin of the neck and the leader was attached to a large chip in such a manner that the mouse could not get away from its float. Then the chip with its live freight was liberated in the creek at some distance above the bridge under which the big trout was known to secrete himself. The chip went merrily dancing down the stream, the mouse meanwhile running backward and forward as far as the limits of his raft would allow, and things went swimmingly until the bridge was reached. Here we saw a sudden commotion, which we knew was caused by the

big trout. His troutship seemed to hit the chip with his tail, for it flew out into the air a foot or more above the surface of the water, and he swallowed the mouse. The fisherman in charge of the line succeeded, after some difficulty, in landing the trout, which proved to be a fine pounder." Afterward Mr. Withers learned that the live mouse was known to many of the fishermen as one of the most killing baits for the black-spotted trout, and its use is very general in that part of Colorado.

ANGLING NOTES.

NOW and then justice, though slow, does seem to reach the wicked, and the two individuals who indulged in netting the Sandburgh Brook are probably wishing they had confined themselves to legitimate fishing. We also hear that another poacher came to grief over on the Wallkill for netting black bass. He was fined over one hundred dollars through the evidence of a "chum" with whom he had quarreled. That "chum" will have to fish fair now, for the other fellow says he is going to catch him next season.

Mr. W. R. Cook, who purchased the famous Saterly stretch of the west branch of the Neversink, has added to his property by buying Biscuit Brook from the mouth to the falls. This brook in its best days, or even a few years ago, was alive with trout, and the lower stretch contained some charming pools which afforded excellent fly-fishing. With the building of the Ontario & Western R. R. came along the usual gang of loafers who spent Sunday in poaching the trout streams and robbing the farmers of fruit and poultry, etc. Giant powder soon finished the fish, but of late years these waters have improved, and under the protection of Mr. Cook, will not only afford himself and friends good fishing, but supply the public waters below with a never failing stock of trout.

Though it is yet weeks before the anxious angler can wet his line and the weather not at all suggestive of fishing, yet trout fishermen are getting uneasy. The annual spring fever is beginning to show itself, and, as it is very contagious, it will soon spread over the whole community. Already it seems to me that I can hear the tinkling of the cow bells and the sweet song of the wood robin, while a perfume of spruce and hemlock, and the damp, fragrant odor of moss and dead leaves mingles with the cloud of tobacco sent up from my old briarwood. I must overhaul my rods and traps, and as I do so the "good wife" wants to know, "For gracious sakes, what are you getting out that rubbish for? It's months yet before you can go to the woods, do put the old stuff away!"

The usual rubbish about best flies for April, and May, and June, etc., begins to appear in the papers. One list we read was undoubtedly copied from Sarah McBride's old catalogue, no where else can you find such high-flown descriptions of "hyaline" and "sub-hyaline" wings, etc. Most people discovered years ago that a good fly in April was a good fly any time when the same conditions existed as to height of water. SCARLET IBIS.

RIPARIAN RIGHTS.

Editor Forest and Stream:

Fifty years ago a small natural stream flowed through a certain Connecticut section. About thirty-five years ago a manufacturer bought the right of flowage from the land owners bordering on the same, forming a lake of some fifty acres. About five years ago this lake was stocked with fish by parties, asking no permission of the flowers or land owners. Can the flowers control the fishing in this lake, or do the land owners bordering have the right to do this? The flowers own a little land bordering on the lake. Can the flowers prevent boating on the lake? ENQUIRER.

[Our correspondent must be aware, if he will think a little, that questions such as these are not to be answered off hand. They require to be brought up in the courts and to be ruled upon by the highest judicial authority. The statutes bearing on this subject are as follows:

2500. Every person who shall take or carry away any eatable fish from any stream, pond or reservoir without the consent of the owner of the land covered by and adjoining such water, shall be fined not less than three nor more than fifty dollars, or imprisoned not more than thirty days or both.

2501. Every person who shall enter on the land of another for the purpose of taking fish from any private pond, stream or spring thereon, after the owner or occupant of such land or pond, stream or spring, shall have posted a notice adjacent thereto, forbidding such entry, shall be fined not more than one hundred dollars.

2502. All waters, the shores of which are owned or leased by any one person or corporation, and all artificial ponds or ponds formed entirely by erecting dams across streams, such ponds and dams being owned or leased either by private parties or by corporations, except ponds now owned, or in part owned by the State, in which they are situated, or which have been stocked by the Fish Commissioners, shall be private ponds or streams within the meaning of this chapter, but nothing contained in this section shall be construed to apply to North Pond in the towns of Lebanon, Hebron and Colchester.

The above are the statutes on the subject, and we may add that the North Pond mentioned in the last statute has been the cause of litigation for many years. One P. W. Turner leased all the land bordering on the pond and has attempted to prevent all persons from fishing therein. The people of the adjacent towns are so indignant that after many years' contest in the courts they have petitioned for the lay out of a public highway to the border of the pond, so that they can reach the water without trespassing upon any one's land. The decision has not yet been made public. In view of these statutes the answers to the lay mind seem plain, and competent Connecticut authority agrees with us that (1) The parties who stocked the pond with fish without the permission of the flowers or land owners acquired no rights whatever. (2) From the statutes quoted above that owners of the land bordering upon the lake can control the fishing by preventing any one reaching the pond by crossing their lands. (3) That the flowers have no rights whatever, except such as they derive from their ownership of land adjacent to the pond.]

The North Pond case has just been decided, and Dr. Wm. M. Hudson sends us this report of the finding as given in the Hartford Times of March 3: "WILLIMANTIC, March 3.—There is great rejoicing among the people of Hebron and in the adjoining towns at the result of the so-called Hebron Pond case. Ex-Chief Justice Park,

the Hon. Luzon B. Morris and the Hon. Chas. E. Searls, the committee appointed by the Superior Court for Tolland county to hear and report the facts in the case, have made their report. They find that Mr. P. W. Turner does not own North Pond, as he claimed, from the time that he purchased the land all around the pond up to and during the time of trial; but that the town of Hebron itself owns a considerable portion of the land covered by the waters of the pond, and that the title to the greater portion of land covered by the waters of the pond has become lost and abandoned. The committee say in their report:

Joshua Chappell conveyed all his right and title to said pond to Abigail Bosworth, in the year 1773. The most diligent search of all the town, Court of Probate and other records has failed to discover that the title of said pond, within the five mile square of land, ever passed from the said Abigail Bosworth, and so the committee find that the said title never passed from her to any party or parties, but the same became lost and abandoned.

True it is, that no party has ever appeared during the past 117 years, claiming title or any interest in this part of said pond, from or through the said Abigail Bosworth; and during this long period of time 106 deeds have been given of the land contiguous to this part of the pond, which have, in every instance, bounded the grantee or grantees by the shore of the pond.

The only land covered by any of the water of the pond which the committee find Mr. Turner owns is a small strip lying near his dam and extending northerly a little way along the shore of the pond.

The committee further say:

From time immemorial, all members of the great unorganized public, both near the pond and remote from it, whenever and wherever disposed so to do, fished in North Pond as a matter of right, at all seasons of the year, in boats during the spring, summer and fall, and through the ice during the winter. This was done without objection from any source whatever down to the time when the plaintiff (Turner) bought all the land adjoining the pond, when he only made complaint.

This conclusion of the committee has been reached after a long and exhaustive trial in which able counsel were engaged on both sides, and will give thorough satisfaction to all sections of the State favored by large bodies of inland water, from the fact that the number of these natural lakes in our State where people may resort for the cherished sports of fishing, boating, picnicking and other healthful recreations, in accord with the custom of their fathers, are none too numerous; and if the late tendency of crafty men to lease and buy the land surrounding these lakes, and thereby exclude all persons from access to them is to become general, the greatest injustice would result therefrom.

It is unusual that a committee is composed of so able and experienced men, and when such have passed upon Mr. Turner's title it would seem that it would put at rest further attempts on his part to monopolize North Pond.

Charles E. Perkins, of Hartford, and Solomon Lucas, of Norwich, were counsel for Mr. Turner. Messrs. Buck and Eggleston, of Hartford, and Charles Phelps, of Rockville, were counsel for the town of Hebron.

FLY-FISHING FOR SHAD.

Editor Forest and Stream:

Having seen several inquiries of late about flies for shad, and being interested myself, I have asked some friends about the matter, and, so far as I can ascertain, fly-fishing for this species is rather unsatisfactory. Way back in the 80's Dr. John D. Hyer, of the U. S. Patent Office, took a few young shad in the Potomac at the Virginia end of the long bridge, Washington, D. C. These were very small fish, about 4oz. in weight, and were taken on a light colored fly. Mr. Hyer is not certain, but thinks it was a white-miller. Under date of Feb. 26, 1891, the well-known Baltimore angler, Mr. A. F. Dresel, writes my friend D. H. Mohler, of this city, as follows: concerning his fly-fishing for hickory shad: "I have had some little luck with the Montreal fly. Almost all the fish were taken in the moderately strong water, from thirty to sixty feet below the dam at the Relay House. On receipt of your letter of Jan. 14, I immediately wrote to Mr. John J. Donaldson, who has fished more for 'hickories' than any one I know of, and I now inclose his answer." Mr. Donaldson writes as follows: "With regard to fly-fishing for shad in the Patapsco River, I have never known any to be taken with the fly in that stream. Hickory shad will rise to the fly whenever they are running. They generally begin to come into the Patapsco River between April 15 and May 1, and run from one to three weeks. The conditions of water and weather that are best are very much those that suit other kinds of fly-fishing. The flies that are most killing, according to my experience, are in the following order: 1. The fly that Dukehart named after me, the 'Donaldson.' 2. The red and white fly (Dukehart). 3. The Pennell gold salmon fly. All these dressed on Pennell eyed hooks, about No. 9 or 10. I never have had much success with any other flies. The largest catch that I have ever known was on April 21, 1885, I think, when I basketed thirty-six, ranging in weight from 1½ to 2lbs. Since that year the largest catch I have made was ten."

The size of the Pennell books mentioned are Nos. 5 and 6, usual style of measurement. I am very anxious to learn if there are good flies for shad and hope some of the readers of FOREST AND STREAM can give us accounts of success in fly-fishing for that savory species which is just coming into season in the Potomac. RELPA.

WASHINGTON, D. C.

NEW JERSEY PICKEREL.—Among the big pickerel hauled through the ice last week was one of 55lbs, caught by John G. Budd, at Budd's lake; one of 64lbs, taken at Morris lake by J. H. Sutton, of Sparta, and one of 5lbs, caught at Swartswood lake by Joseph Brickner, of Newton. He and his friends caught 55lbs. of pickerel, Myron H. Cook, of Dover, caught 47 pickerel at Pickett's lake on Wednesday and 18 the day before.—*Newark Sunday Call, March 1.*

EARLY CATCH OF SAUGERS.—Mr. Henry Douglass, of Sandusky, Ohio, under date of March 1, writes Col. John Gay, of the U. S. Fish Commission, that the fishing has begun unusually early in Lake Erie this year. Eight tugs, belonging in Huron, Ohio, are now fishing with gill-nets, and although the work is very cold and disagreeable, it is actively carried on and with good results. The fish principally taken is the sauger (*Stizostedion canadense*),

THE NEW YORK GAME LAW BILL.

THE Assembly Committee on Fish and Game has finally reported the codification bill, with many amendments. At a hearing before the committee last Wednesday Fish Commissioner Blackford, of New York, said his Commission was responsible for the creation of the revision commission, and it was expected that its members would call upon the members of the Commission to meet with them and exchange views, and together draw up a codification bill looking toward the best interest of fish and game protection. This, however, had not been done, and as a result we have a bill which, judging from numerous amendments already incorporated, will cease to be a codification bill by the time of the committee's action.

He objected to the provision abolishing his Commission and for removing the office from New York to Albany. He proposed an amendment to secure a gradual change in the personnel of the Commission by providing that the present five members shall determine by lot which one shall go out of office on Oct. 1, 1891, and one each year thereafter, the vacancy thus provided to be filled by the Governor. He said the New York office was an absolute necessity for the convenience of those employed in oyster culture.

The Commission had no power under the law under which they are acting to abolish this Commission, and their action was inspired by petty malice on the part of one of the members of the Commission, who recently resigned as a State Fish and Game Commissioner. He proposed several amendments. One provided that the open season for brook trout should be from April 1 to Sept. 15, except in the forest preserve, where the season shall open May 1. He thought the bill should go into effect not before July 1.

CAMP COMFORT, a Vermont fishing resort, near Bennington, is highly recommended by a recent correspondent of the *Troy Times*. "Little Pond, or Lake Placid as some have called it, is one of those beautiful sheets of water which occasionally gem the highest valleys of Vermont. It is somewhat octagonal in form, and covers about fifty acres of land. The water, which is perfectly clear, varies from 2 to 12ft. in depth. Trout are the only kind of fish that inhabit these waters. They are plentiful and some will weigh from 3 to 5lbs. About 18,000 yearling trout were put into the little lake a few weeks ago, and that number will be supplemented in a short time by the addition of several thousand half-pound fellows, thus insuring excellent fishing through the season."

IDAHO TROUT FISHING.—A Coeur d'Alene correspondent, who has contributed many entertaining sketches to FOREST AND STREAM, writes that he proposes to spend May and June fly-fishing on a fine sheet of water in that vicinity, and will gladly accommodate a party of six or eight gentlemen in his camp. Later in the year he proposes to visit a good hunting country.

Fishculture.

NEW YORK FISHCULTURE.

WE have received the report of the Commissioners of Fisheries of New York for the year ending Sept. 30, 1890, and find in it a vast number of items of great public importance. The enormous expansion of the work of the Commission is fully expressed in this valuable document.

The results obtained in the State hatcheries were greater than in 1889, although that year was a remarkably successful one, and the work of fish and game protection was wonderfully efficient. Owing to numerous freshets in the Hudson in the spring of 1890, the water was unusually muddy and interfered seriously with the shad hatching operations. The success of stocking rivers with shad was made evident by the enormous catch in the Delaware in 1890. The fish ascended the fishways at Lackawaxen and deposited their spawn in the natural breeding grounds above these obstructions. The increased distribution of lake trout and whitefish was especially noteworthy, and a great number of whitefish and ciscoes were deposited in Lake Ontario. Great care has been bestowed on the selection of localities for planting fish in order to prevent the enormous waste of fry, which often follows careless stocking. Applicants frequently ask for pickerel and brook trout to be associated in the same body of water, and, of course, such applications were refused.

A fish car was provided for by the Legislature of 1890, and will greatly facilitate the distribution of fry and the investigation of streams to learn the result of previous stocking. It is the intention of the Commissioners in the future to deposit fish only in public waters, when the work is done at the public expense. Attention is called to the excellent work performed at the several hatcheries, and especially at the Caledonia hatchery, the site of which is regarded as a most fortunate purchase by the State. The hatching of wall-eyed pike was carried on this year at Clayton under the supervision of Monroe A. Green, and a large number of fry were deposited in Lake Ontario. During the coming year it is proposed to stock the Mohawk River with wall-eyed pike. The Commissioners believe that the propagation of food fish should be the main object of their work.

After numerous experiments, Messrs. Green and Mason succeeded in rearing nasacalange on Chataqua Lake. It is now considered practicable to collect and hatch millions of eggs during the coming season.

The total number of fry and eggs distributed in 1890 was about 40,000,000. The details of this distribution have already been published in our columns.

In the engineer's department there has been much activity in surveying the oyster grounds. The oyster protector finds continual improvement in the condition of the waters of the State, but owing to the want of power to compel corporations to come into court and plead to an indictment he has been unable to stop the gas companies from emptying refuse into public waters.

The attention of the Legislature is again called to the necessity of preserving the Adirondacks as a public park. The health-giving properties of the region and its advantages as a summer and winter resort have been recommended of late years by many distinguished physicians. Much of this territory, which should be permanently kept and improved for the benefit of the people, is passing into the possession of corporations and will benefit only the few individuals interested in its purchase.

Two fishways of the Rogers pattern have been built on the Hudson River at Mechanicsville and Northumberland, and the river is now accessible to anadromous fishes to a point fifty miles above Troy. The reports of the stocking of the Hudson with salmon continue to give great satisfaction, and it is believed that complete success will attend the experiment of making this a salmon river. The Commissioners remind the fishermen that the law prohibiting the taking of salmon in nets is intended for their own benefit, and its

abolition will be recommended as soon as the general system of fishways can be perfected. They recommend the passage of a law making it obligatory to place fishways in all dams across any of the streams in the State whenever they act as a barrier to the ascent of fish to their spawning grounds. The Commissioners are gratified with the growth of public sentiment throughout the State in favor of liberal appropriations for fish propagation and distribution.

"The excellent trout fishing in the Adirondacks and Catskills during the past year and the large numbers of lake trout taken throughout the State, and especially at Lake George, have shown the value of their work." They acknowledge the valuable assistance rendered by the U. S. Fish Commission, and express their thanks to the Hon. Robert Lennox Banks, of Albany, for his synopsis of the game laws of the State, and to the several railroad companies who have furnished transportation for fry and the men in charge.

The reports of the hatcheries contain many items of interest. The Caledonia hatchery has the enormous number of 80,000 breeding brook trout. It has also 30,000 brown trout, many of which weigh from 3 to 6 lbs. In Spring Creek trout of this kind, weighing 6½ lbs. and not more than five years old, have been caught. It is believed that from eight to ten millions of eggs will be furnished by the breeding brook trout. Mr. Green makes the following statement as to their quality: "They are equally as good a table fish as the native trout, and can be kept and shipped fully as well as natives. Many fishermen would hardly know the difference when taking them, and I believe that no one could distinguish between them when caught and placed on the table."

The ponds at Caledonia contain about 8,000 California trout. Mr. Green makes the following observations concerning this species: "Mountain trout are a very game fish and furnish the angler more sport than any other variety. They are a fine fish for eating at once. After being taken from the water they become soft and lose their flavor quicker than any other variety. They also roam from pond to pond if they can do so, and are not always found where they have been planted. In lakes where they can be confined they make a good and game fish. They will live in warmer water than native trout and brown trout."

The black bass which were distributed in New York waters were obtained at the foot of Lake Ontario.

Mr. Green recommends the planting of a large number of lake trout in the lakes of the Adirondacks. "Many of the lakes in the immediate vicinity of Caledonia and heretofore stocked have furnished excellent fishing during the past season. Most of them would now be stocked plentifully with both lake trout and black bass if poachers could be kept from taking them unlawfully."

In attempting to hatch masalonge Mr. Mason had some difficulty in obtaining ripe fish for the want of proper nets. He used a box and placed the eggs in the lake about 4 ft. from the bottom in about 18 ft. of water, instead of using jars or trays as before.

The Adirondack hatchery developed 950,000 brook trout eggs, 1,850,000 lake trout, 1,600,000 brook trout and 245,000 brown trout. There was practically no loss in hatching the eggs. "The results of artificial stocking are being seen in surrounding lakes. In Big Clear Lake trout were common this year for the first time and in Lake Placid fishing is better than ever before. The same is true of the neighboring streams and lakes, and this in the face of the fact that there are one hundred fishermen to-day where ten years ago there was but one."

At the Sacandaga hatchery it has not been necessary to buy fish food because of the abundance of suckers and chubs. The fish planted last year in Mill Creek have already done well. Some of the brown trout were 6 in. long at the time of Supt. Boehm's report. At the Fulton Chain hatchery trap nets are used for catching trout and suckers. The net does not injure the trout for breeding purposes and it has proved very effective in taking bullheads and other inferior fish, which destroy the trout. Nine hundred and thirty thousand lake trout were hatched and distributed at the expense of sportsmen, guides and camp owners. "The largest catch of this species during the past year was 64 lbs. 7 oz., caught by what we term a fish hog. There were many catches of from 15 to 35 lbs. to each boat."

In the report of Mr. Mather, on the Cold Spring Harbor station, we find an account of Pleasant Lake and Sackett Lake, in Sullivan county. In Pleasant Lake the water is deep and cold. The fishes found in it are small-mouthed black bass, yellow perch, sunfish, pickerel, suckers, catfish and eels. It is believed that lake trout and possibly landlocked salmon might thrive in this body of water. Sackett Lake is similar to Pleasant Lake.

In feeding old and young fish at Cold Spring Harbor soft clams were freely used, the raw clams being chopped fine for the fry, and cooked whole clams fed to large fish. Among the brook trout Mr. Mather found many barren ones in 1889 and the year before and he begins to think it possible that trout do not all spawn every year. Some of the Loch Leven trout did not spawn until five years old, when they weighed from 8 to 4 lbs., and then only three of them yielded eggs. Mr. Mather succeeded in hatching 62 per cent. of the eggs of smelt, which they obtained at Northport from a stream belonging to Hewlett Scudder and Henry J. Scudder. In Adirondack waters smelt were introduced as food for the landlocked salmon, and it is hoped they will thrive in these lakes as well as in lakes of Maine, Vermont and New Hampshire. Mr. Mather is now positive that his belief that the male black bass guards the nest is correct, and he finds the same to be the case with the pond sunfishes and the rock bass.

The State oyster protector, Mr. Mersereau, reports an improved condition of the waters of the oyster region. "The plentiful oyster set of the past year, the general good quality of matured oysters, the unusual abundance of fish and crabs are signal evidences of the decrease of the volume of poisonous matter heretofore militating against profits from fish and shellfish industries and the pleasure of anglers."

From July 7 to Aug. 29, 1890, the summer school of biology, which originated under the auspices of the Brooklyn Institute of Arts and Sciences, assembled at the fish hatchery at Cold Spring Harbor and utilized the buildings for laboratory and office purposes. Sixteen students, mainly from colleges, attended the lectures given by the various professors. Dr. Bashford Dean, of the College of the City of New York, is the director of the school. The success of this establishment was apparent and its continuance is more than probable.

Among the papers in the appendix of this valuable report are Observations upon Fishes of Great South Bay, by Dr. T. H. Bean, with twenty-six plates, and notes on the common catfish and a thesis on the Pinal Pontanella of Placoderm and catfish, by Dr. Bashford Dean, accompanied by fourteen plates. The discussion of these papers must be reserved for a future occasion.

WRITTEN and sprung on us by Dayton National Bank, Dayton, Ohio: The "shoe-rest" made by Brown is the nicest thing in town. And we use the one you sent us with much pleasure; it is handy and it's nice. At a very moderate price. And the man who has a "shoe-rest" has a treasure.—Dayton, O., Jan. 12, 1891.—See Ad.

A BOOK ABOUT INDIANS.—THE FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—Ad.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES. DOG SHOWS.

March 10 to 13.—First Annual Dog Show of the Duquesne Kennel Club, at Pittsburgh, Pa. W. E. Liffitt, Secretary.

March 16 to 18.—Inaugural Dog Show of the Washington City Kennel Club, at Washington, D. C.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

March 31 to April 5.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Secretary.

April 8 to 11.—Third Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 14 to 17.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Munhall, Secretary.

April 15 to 18.—Dog Show of the Southern California Kennel Club, at Los Angeles.

April 23 to May 2.—Dog Show of the California Kennel Club, at San Francisco, Cal. R. P. Rennie, Sec'y.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

THE BALTIMORE DOG SHOW.

ONE of the best managed shows it has ever been my good fortune to attend was held last week at Baltimore, under the auspices of the Maryland Kennel Club. The three active promoters of the show, Messrs. W. C. Farber and D. C. and W. S. Diffenderfer, no doubt, in view of the troublesome times their club is passing through just now, felt some anxiety as to the outcome of their second venture, but with the hearty response of 503 entries to their call, it showed that dog men in general were with them in their fight for independent action. They deserved this confidence, for a better managed show has yet to be seen. For this part John Read, the superintendent, is of course partly responsible. Owing to the late hour at which the club secured the building, 11 P. M. Monday night, it was impossible to have the benching well set up by early morning, and then the late arrival of dogs retarded the judging, so that it was 1 P. M. before the three judges, Messrs. Mortimer, Glover and Lacy, got to work. There were plenty of attendants, but at first a lack of stewards, but this was soon remedied, and for myself I must say a word of thanks to Mr. Lamb for his efficient services in that capacity in Ring 3. As stated last week, the way the bulletin board was arranged and the prize cards expeditiously affixed to the stalls of the lucky winners was worthy of much praise. Spratts Co. attended to the benching and feeding with their usual efficiency. In only one respect was there any drawback; that was the weather of Tuesday. With snow overhead and under foot the good people of the Monumental City did not feel like venturing out, and consequently the attendance was not what was expected, but Old Sol saw fit to put a good face on the matter and on Wednesday and the succeeding days sunshine reigned supreme, and the bells of the bulletin rang out in great shape, so that the crowds at the show every afternoon and evening brought smiles to the faces of the management. It was reported when I left Thursday night that they were just about even, and that Friday's crowd would put the financial balance where it should be. The 5th Regiment Armory is fairly well adapted to the requirements of a bench show, though at times the building was quite cold, and when stoves were set going those dogs nearest the fire suffered slightly from the heat. The building was at all times free from odor, "Sanitas" being the disinfectant used. The dogs were generally in good condition and skin disease was not perceptible in any of the dogs I came across. The quality of the dogs benched was very good; in fact, in many of the classes, sporting dogs especially, it was a simple reflection of New York the week before. Mr. I. T. Norris, in consequence of illness, could not judge Chesapeake Bay dogs, so Mr. J. F. Pearson took his place, and Mr. Chas. D. Cagle judged the bulldogs. There was no "milk route" this year, and in point of propriety and steadiness the show would compare favorably with a church festival. Thanks are due the three gentlemen of the committee named above for their kind courtesy to your representative during the show. Prof. Parker's troupe of performing dogs were on hand to go through their tricks, and this part of the programme always draws as many, if not more, people than the show of canine celebrities.

As a means of attraction, an auction was arranged for Thursday night, but despite the efforts of both the professional and the amateur auctioneer, no healthy bid could be secured on several nice fox-terriers and setters, Baltimore people evidently not being a dog-buying people. One of the features of the show was the display of beagles, no less than 47 entries being made, more, I believe, than has ever yet been brought together at a show in this country. With these few remarks I will pass on to a criticism of the dogs present.

MASTIFFS—(H. W. LACY).

As usual, this breed headed the list of breeds in the catalogue. Though the entries only numbered 17 some of the best mastiffs in the country were on hand, as the Flour City Kennels showed its choicest stock. Lady Coleus was the only claimant for challenge honors. Ilford Chancellor was sheets ahead of the others in open dogs, a local dog, The Moor, coming a moderate second; he is a bit narrow in head, not deep enough in body and hardly stands right in front. Linkwood Chief, third, has a good skull and fair front and there his good points end, as his muzzle, light eye and straight stifles will always put him back. Clito, vhc., deserves the letters for good legs and body, but head and ears are very faulty. The others in the class went early to their benches. In bitches that lovely specimen Caution's Own Daughter, one of the truest formed mastiffs in the country and a native bred one at that, was here placed where she should have been at New York the week before. For true formation of head and mastiff character she is excellent; she was placed over the New York winner Lady Dorothy, whom she beats in head, wrinkle and front, losing a little in body only. Third prize, after this taste of quality, was withheld and he. generously given to Linkwood Lady Catharine, who is a little better in head than the other, Linkwood Lady Margaret, given c. both are weedy specimens. In the novice class Caution's Own Daughter had a walkover, the other prize and mentions being withheld for want of any merit at all, seemed as if they had a touch of St. Bernard in them. The Flour City Kennel took the kennel prize.

ST. BERNARDS—(H. W. LACY).

An excellent entry of fifty-three faced the judge in these classes, and the local contingent showed up in force. In the rough challenge class for dogs the gallant Hesper was well ahead of Ben Lomond, who loses to the winner back and front. In bitches Miranda's excellent body, bone, legs and skull placed her well in front of Lady Wellington. In open dogs Alton, in the absence of Sir Bedivere, who was entered for specials only, was quickly marked for first, his nearest competitor being Lord Nelson, a very well formed dog, with good coat, body and bone, but rather plain-faced from lack of markings and a wide blaze; his rather long muzzle, deficient in depth, spoils his good skull; eyes are also faulty. Lion, third, has a good skull, might be better in muzzle; markings good, though dark in coloring throughout; too short in body, but has good bone. The next, Jersey Ben,

was given ha.; he is a big, well-formed dog, but of the Leonberg type, no markings, and would have been sent out in a better class. Bruce is roached-backed and bad behind, but fairly good in head, though a trifle long. A splendid line of bitches faced the judge in the next class and much quality was to be seen. Mr. Moore's two titled dames, Lady Livingston and Lady Sneerwell, occupied the same position as at New York, and then Mr. Diffenderfer's Republican Belle came third, though very closely pushed by his Pleiad, reserve. The former beats her in front, Pleiad turning out one foot rather badly, neither is she so strong in loin and back, nor as good a mover. Prudence, vhc., has an excellent skull, front and length of body, and were she in better condition might have been put in front of Belle. Blodwen, vhc., an old friend, of excellent type, hardly had the size and substance of the others. Lakme is well known, though deficient in good head qualities, she deserved her two letters for her good bone and body. These five all belong to the Maryland Kennels, and Mr. Diffenderfer has a band of good brood bitches of which he may feel proud. Josephine Marie Sanderson; we have in our experience come across many peculiar names, but this takes the Spratts, but a c. card was all she was entitled to in this company, carried her tail badly, too long a head, and coat inclined to be curly, nice markings, and good front and bone. In the novice class Lord Nelson won hands down; Count St. Vincent, whose slack back and somewhat curly coat put him back to c. in the open class dogs, was given second here, chiefly on account of his head, which is rather good, though too long. Bruce was reserve; Stonewall Jackson, vhc., has good body and legs but is not massive enough in head, nor likely to be; Atheros has a poor head, no markings, but excellent body and legs, coat not right.

Neither of the challenge smooths, Nevis and Hector, put in an appearance and Thibe was absent when her class was called. In open dogs three fair ones came forward. Adonis II., by his better bone, body and head, beat Lord Hector, who, though brimful of quality and an old friend from suckling puppyhood upward, is not straight enough in front and too straight behind. Lord Clifton, third, excellent in body and legs, has a broad blaze which added to a stary eye and a too pronounced stop gives him a bad expression. Eric, vhc., a promising three months old puppy, shows excellent bone and markings. In smooth bitches Maud, faulty in ear, hue in muzzle and bad tail, was given the blue; body and bone redeeming features. Shirley, hc., is a three months old puppy, bit weak in pastern, faulty in head. Novice class prizes withheld: dogs lack type and are bad fore and aft. E. H. Moore's kennel won the kennel prize. This was a reversal of last week's decision. The two crack teams of the country were gone over very carefully and this is how I came to the conclusion that Alton and his consorts had a trifle the best of Mr. Sears's "big four." Hesper beats Ben Lomond and Lady Livingston beats Plevna in about the same ratio, Lady Sneerwell beats Lady Wellington more than Sir Bedivere beats Alton, that is presuming that he does every time; then putting the four opposite each other, the general average is slightly in favor of Mr. Moore's kennel, as Mr. Sears's two bitches and especially Plevna are considerably behind the two dogs in type and quality. The St. Bernard Club medal for the best American bred rough bitch went to Mr. Diffenderfer's Lakme, and that for best smooth dog to same owner's Lord Baltimore. The other specials did not fill.

BLOODHOUNDS AND NEWFOUNDLANDS—(H. W. LACY).

The only entry was the much-talked-of Jack the Ripper, a rather large coarse dog, lacking in wrinkle and quality and faulty in tail.

Newfoundlands were curly-coated—a bad lot—therefore prizes were withheld.

GREAT DANES—(H. W. LACY).

In the absence of Greene, Melac, about the best ever seen in this country, walked off with the blue ribbon. In open dogs, Pedro, well-known, was hard pushed by his eight-months-old son, who had he shown himself better, might have won. He has excellent legs and feet, well formed, is a bit throaty and dips a trifle behind the shoulder at present; he beats Nero, vhc., however, for he is short-faced and faulty in eye and tail. Minca beat Minca Mia in head. The only Barzoi entered was absent.

FOXHOUNDS—(H. W. LACY).

Nothing very striking was shown in these classes. In English hounds the winner, Stranger Lass, beats her kennel mate, True Lass, in body and head, neither very good in front. In native hounds only two poor ones showed up; Hark beats the other, Music, in body and back. Hark (American) won the special for best dog and Stranger Lass (English) the same for best bitch.

DEERHOUNDS—(H. W. LACY).

In dogs, Breck Allan, first, is a well-built dog, with excellent loin, more length of head, and better ribs, legs and feet than Argyle, second. Venar II., vhc., is a trifle pig-jawed, has a fair head, good legs and feet, and nice coat. Ernle, vhc., is light and too full in eye, snipy muzzle, soft in coat, and legs not quite the thing. In the bitch class, Olga was a good winner over Alida from the same kennel. Dunrobin Kennels took the kennel prize.

GREYHOUNDS—(H. W. LACY).

Though the entry was small those present were high-class enough for any one. In dogs Gem of the Season again asserted his superiority to Chas. Davis in ribs, head and loin. Mr. Mason's criticism of these two dogs in the New York report covers the ground, and in the matter of Gem's hind action he is also right. In bitches Maud Torrington, described last week, had it all to herself in the absence of Lady Clare. The kennel special did not fill.

POINTERS—(JAS. MORTIMER).

An entry of forty-one in this breed was a compliment to the judge, and lots of good ones were on hand. In challenge heavy-weight dogs Robert le Diable had little difficulty in defeating Trinker's Chief, who is coarse, light in eye and full in skull. Belle Randolph was alone in the corresponding class. Graphite caught the judge's eye in the open dog class; he has been repeatedly described. Glen Morgan is throaty and might be better in muzzle, but has excellent legs and feet and ribs. Tory White came third. Bangstone, vhc., is too thick in skull, is throaty, just fair in body points but legs and feet are good. Dick Swiveller, hc., is coarse in head and light-eyed, has a good front and a well-ribbed body. Mart O'Bannon, also hc., is too fine in muzzle, nice skull, excellent ribs, legs and feet, but hardly enough depth of chest. In bitches Woolton Game took the ribbon nicely over Bev R.; she was described in New York report. Bev R. loses in muzzle, otherwise she is well formed. Cicely, third, is flat-faced, light in bone and shown too fat. Only three in the class. In challenge light-weight dogs, that good field dog Duke of Hessen beat Spot Sting easily, and Stella B. beating Rosa May in body and won in the corresponding challenge class. Tribulation again took premier honors in the open dog class. Inspiration, second, has a fair head though light in eye, legs and feet good, body lacks depth and substance. Nick of Ion, third, is faulty in head, good legs and feet. Bing of Kippen, reserve, is light of eye, bad in stop and expression, and rather coarse throughout. Hickory Staunch, vhc., is thick in skull, light-eyed, heavy in shoulders, but otherwise well formed. Peterkin of Naso loses in head and front. Lizzie Porter, third last year, won the blue this time. She has a nicely formed head, good neck and shoulders, nicely turned body, but is faulty in feet and a bit straight in stifle. Bloomie II., faulty in head and does not stand quite true, came second, followed by Dora B., whose loaded shoulders and poor muzzle puts her

back. In the novice class Nick of Ion took first. Pontiac, Jr., too short in muzzle and light boned, came next. Mart O'Bannon, vhc. Von Littlejohn, he., is coarse in skull and straight in stiles. The Hempstead Farm Kennels won the kennel special and Woolton Game the Pointer Club specials for best in show and best in her class, Graphite winning the special for best in open dogs.

ENGLISH SETTERS—(DR. H. CLAY GLOVER).

There was, in the absence of the challenge entries, Count Howard and Princess Beatrice, little quality present, of course excepting Sir Tatton. In open dogs the last named had an easy win over Druid Hill, whose faulty muzzle and quarters could not compensate for his good legs and feet. Mark Twain, third, has a plain head and is heavy in shoulders. Dna of Rich Hill is a fairly-made dog, slack in loin, a bit out in front, but legs and feet of good formation. In bitches, Bonnie Gladstone Girl, a racily-formed bitch of nice quality, beat Nelly Bly, who is faulty in muzzle and only moderate in body, legs and feet are her best points. Ruby R. came third, these were the only entries. The novice class winners have been commented upon, excepting Hustling Hannah II., he., too long in body, and faulty in head and ear. Specials did not fill.

IRISH SETTERS—(DR. H. CLAY GLOVER).

There was an excellent show of the red dogs, and this time the Doctor thought Max a better dog than Dick Swiveler by giving him the ribbon, though where he excels him unless it be in quarters is hard to tell. In bitches, Ruby Glenmore and Molly Bawn being reserved for specials only, left the honors to Winnie II., a much inferior bitch to either. In open dogs, Beau Brummel easily beats Ben C. for first, who is coarse in skull and faulty in ears; coat, body, legs and feet fairly good. Henmore Shamrock's coarse head and faulty front must be responsible for his falling into third place. Dennis the Gossoon is pinched in muzzle, faulty in loin and ribs. Pickens, vhc., is a nice stamp, good in body, legs and feet, faulty in head. Darragh Pat, in same division, is coarse in head, faulty in pasterns, ribs and loin, and Limerick is wrong in muzzle.

Jeannette, the winner in bitches, got her due this time. She has been repeatedly described. Eudora, second, is a bitch of nice type, her defects were explained last week. Norna, third, is hardly straight enough in front and a bit weak in muzzle. Quail, reserve, is faulty in head and light in bone. Bessie Glencho, vhc., is well known as a very fair bitch. Red Belle, vhc., is well known. In novice class Beau Brummel and Eudora were the winners. Kildare Kennels won the kennel prize: Kildare Kennels' Tearaway (2) best Irish setter with a field trial record; best brace, Beau Brummel and Ruby Glenmore.

GORDON SETTERS.

Quite a nice display faced the judge in these classes, Beaumont taking the challenge prize again, and Dr. Meyer resumed his cheerful smile which had vanished at sight of that awful summons. Becky Sharp was the only entry in her class and Canada claimed the prize. In open dogs, Shot, too dark in face tan, light eye, but excellent otherwise, won over Bob, good in face, fine head. Comus, third, is a dog of fair type, but faulty in legs and feet. Flash, reserve, is too round and coarse in skull, rich tan. Dukemont, vhc., is out of shape and faulty in head. Gordon, vhc., lacks substance. In bitches, Beaumont, rich tan, light eye, not sprung enough in ribs, beat Flomont from same kennels, described last week. Princess, light in tan, weak in muzzle, came third. Sally Beaumont, faulty in head, eye not right, took reserve. In novice class Bob beat Flomont in head, though he does not stand true in front. Beaumont Kennels took the kennel prize and Mr. Hale's Princess the Beaumont Kennels' special, the other club specials ran with the awards in the open classes.

CHESAPEAKE BAY DOGS—(J. F. PEARSON).

These were poor, only third being given in open dogs to Duke, who comes nearest the Baltimore type, and Dundee Plunder, vhc., loses in head and coat to the other. In bitches, the only entry, Dundee Lily, could do no better than third. Specials did not fill, excepting for best bitch, awarded as above. In puppies Bush took third and Dundee Lucy vhc. There were 12 entries all told but the exhibition was not as good as last year, the quarrels of the club, no doubt, having something to do with it.

SPANIELS—(JAMES MORTIMER).

In the challenge class the well-known Baron beat Lady somewhat easily and in open black field dogs Beverly Negus had little difficulty in accounting for the other entry, Toady Obo, he beats him in head, coat and front. In bitches Miss Ben D'O' was alone. Any other color class did not fill. Black Duke, now well known, but showing signs of his constant traveling lately, was the only one present of the four entries. In open black dogs Snowball, a little fine in muzzle and a dachshund front, was the only one present, and so was Chip K. in her class, she is gone in mouth, faulty in muzzle, good body and front. There were several absentees in these classes. Clumbers saw Lady Belle the winner over Johnny, Jr., both described last week. Patsey O'Conner, an old rounder, beat Countess Bendigo in water spaniels. The Spaniel Club did not support the show, as the classification did not suit. No specials.

COLLIES—(JAMES MORTIMER).

A fair lot of dogs faced the judge in this breed. The old winners, Scollia and Flurry II., taking the challenge prizes. Wellesbourne Hero, a new face, a bit strong in head, but excellent coat, body and front, won well over the rather plain-faced Hempstead Zulu, whose black color is against him. Nemo, third, coat inclined to curl and too open. Foxey, vhc., has bad ears, and is coarse in head, coat soft and open. In bitches Wellesbourne Gypsey, nicely fronted, but with a bad carriage of ears and fair coat, had to succumb to Zulu Princess II., oply coated, wide in front, excellent carriage of ears. Lady Moll, third, loses in quarters. Other entries absent. The novice class brought out a good entry, Wellesbourne Gypsey taking the ribbon. Flungna, second, too short-faced and snipy-muzzled, ears faulty, coat good. Dublin, reserve, was lame, otherwise would have been higher up, no doubt. The others were just fair specimens, several of them faulty in ears. Chestnut Hill Kennels took the kennel prize. The Collie Club special for best dog in open class not over two years, went to Wellesbourne Hero. Hempstead Zulu won the medal for second best in open class, and Wellesbourne Gypsey that for best in novice class.

BULLDOGS—(CHAS. D. CUGLE).

These classes were just a reflex of the New York show, and as many of them were commented on then, it is no use going into them fully here. Harper and Soudan accounted for the challenge classes. In open dogs African Monarch beat Bo Swain in head and front. Foker took reserve; Quibron vhc., and Troit, he., has a bad expression, not broken up enough in stop, fairly out at shoulders. In bitches The Graven Image has a nice head and is well out in front, beating in these respects Cleopatra II. Beatrice took reserve, and Princess Crib vhc. The other entries were entered as property of the judge. In novice class Cleopatra II. proved the winner over Troit. Messrs. Woodward and Herrick won the kennel prize. The Bulldog Club medal for best bitch, Soudan. Best American-bred dog or bitch in the show went to Beatrice.

BULL-TERRIERS—(H. W. LACY).

Nothing very good, with the exception of Starlight, was shown, she winning the challenge prize for bitches without

competition. In open dogs Dufferin beat his only competitor, Mr. Dick, in head, front and movement; one is large and the other is small sized. In bitches Lomont Kit, a bit cheeky, beats everywhere but in tail the second winner, Lady Melville, patched on ear.

BASSET HOUNDS—(H. W. LACY).

The old winner Bertrand was the only entry.

DACHSHUNDE—(H. W. LACY).

The well known Feldman K. beat Black Prince in head and front; the latter knuckles over a bit also. Waldman I. is only a poor one, not length enough. In bitches Countess Lina ran second to Lizetta; the former is a bit coarse and not so good in front as the latter. Rosie, vhc., not good enough in head or crook.

BEAGLES—(H. W. LACY).

A capital entry of forty-three came together in this breed. There was a little overturning of previous winners who run too much on the large size. We want a medium sized beagle without lumber, and not a dog that may be fairly classed as a harrier or small foxhound, and with this end in view, Storm, a many times winner, and a hound of good formation, was disqualified for oversize; he measures at least 15 3/4 in. and is heavily built. This left Little Duke a clear winner over Racer, Jr., in the challenge dog class, though he loses in muzzle he gains tremendously in hind parts and action. The sweet little hound champion Lou went ahead of Myrtle, shown fat and aging rapidly. A big class came out in open dogs, but when the measure went round several had to walk. Roy K. turned out the winner, though he has his faults in head he came nearest to type; good legs and feet. Jim Simmons, second, is a bit faulty in ears and head, but has a good front and excellent well-ribbed body, and fair hound coat. Lee II. just came under the standard, and though coarse, is a well-fronted hound with good coat. Stonehall Jackson, vhc., is a little out at elbow and weak in muzzle, soft in coat, nice skull and ear, and fair legs and feet. In bitches several pig-jawed and frail-looking animals were disposed of, and the winner turned up in certainly about the best beagle in the show as regards working type. This was Twintwo, excellently formed in body, good legs and feet, good coat and well carried stern, head a bit long but skull good. Emeline, second, has a nice front, fair skull, bit long in muzzle and hardly square enough, nice action. Belle of Woodbrook is a bit coarse now, and her bad front will always put her back in decent company. Venus III, vhc., is long in muzzle, fair coat, well ribbed and has good action. Flossy, a bit light throughout, was he., and so was Glenrose Topsy from the same kennel as the winner; she is a bit cloddy, head nicely formed, but she stands too wide in front. Letter must thank her well ribbed body for the single letter; head and front not up to the standard. In the novice class Twintwo had an easy win, and The Bard, one of the best of the Somerset Kennel pack, has a well-made body and stands fairly well, but head could be improved. Impression stands a bit out in front, otherwise she has some good points, especially in legs and feet. Lady Thorn, c., is faulty in front and muzzle. Glenrose Kennels won the two specials for best kennel, and the competition for this prize was a very pretty sight. The Glenrose pack was more even sized than the Rockland one, its nearest competitor. Little Duke took the special for best dog, and Twintwo that for best bitch. If judges will stick to a certain type in making awards we shall soon have an even class of workmanlike-looking beagles, and this I take it is what the N. B. C. wishes to attain.

FOX-TERRIERS—(JAMES MORTIMER).

A capital lot of these game 'uns came together, especially so for a second-class show. Lucifer and Dusky Trap fought the battle for challenge dog class honors, and Lucifer pulled it off; and the peerless Rachel easily beat Blenton Consequence in her class. In open dogs Warren Laird played the trump card, beating Blenton Racket in body, head and front. Baby Trigger here took third; faulty in head and loin. Blenton Corporal reserve. Endcliffe Spice, vhc., too thick and coarse in head; has good coat, body, legs and feet. Brockenhurst Quick, vhc., and Le Logos, both described last week, he. Valens, faulty in head and front, c., as was Regent Domo, too long cast and poor front, also a bit under-shot. In bitches, a neat little bitch, Dona, took premium honors over her kennel mate, Dominica; she has a nice head, of good expression, fair front, but might be better behind. Dominica, by the crack Dominie, is a very promising pup; good head, legs and feet, and of course needs time on her body yet. Tiara, third, is well known. Verdict, reserve, is also an old winner. Tunlaw Villanelle, vhc., is not quite straight enough in front. Warren Cachet, he., was described in New York report. The winners in the novice class were Warren Dapper and Regent Rocket; the former is faulty in muzzle, bit round in skull, nice legs and feet; Rocket faulty in skull, loses in body and coat to the other. Rowdy, vhc., is coarse in head, ears wrongly set on, good legs and feet. Rienzi is poor in head and front. Wire-hairs had two entries, the winner being Carlisle Vamp, a terrier all over; bit big in ear and stands a bit wide in front, nice coat, but could be longer in face with benefit. Phasa, second, loses in coat, but I like the head better than the winner's, and is better in front. Blenton Kennels won the special for best kennel, and Rachel for best in show. Best smooth in open classes, Warren Laird. The winner of the Apollo Stakes was Warren Dapper, and special for second in novice class went to Regent Rocket.

IRISH TERRIERS—(H. W. LACY).

The entries were few, but good. Dummurey beat his kennel mate Mars in head, coat, legs and feet, Breda Tiney, well known, getting vhc., beating the puppy Kildare, he., in coat and substance. No Dandie Dinmonts were entered and Skye terriers saw Sir Stafford the only winner, the others being simply wooly terriers of no particular breed.

BLACK AND TAN TERRIERS—(H. W. LACY).

The Senator caught cold the first day and was quite a sick dog, but by careful treatment showed an improvement during the week. He was, however, unable to compete, the winner proved to be Beaconfield, easily, second going to Meersbrook Empress, who beats Brown Madge, vhc., in head, ears, front, tan, body, tail and movement.

YORKSHIRE TERRIERS—(H. W. LACY).

Toon's Royal proved to be the winner, beating his companion Venus in coat and color. The other entry was marked N. G. in judge's book.

TOY TERRIERS—(H. W. LACY).

Tiny though almost hairless is of so much better stamp than Frances that they were placed as named.

PUGS—(JAMES MORTIMER).

Kash, looking well, was alone in challenge dogs, and Bo Peep beat Nelly Bly in bitches. Sprake had an easy win in open dogs, beating Lord Baltimore in skull, ears and curl, Penrice absent. Dollie, in bitches, beats Trilxie in muzzle and body, the latter is better in ear. Koni, reserve, is faulty in muzzle and front, Rustic Katti is long in muzzle and skin might be better. Babe, he., is poor. Dottie, in novice class, beat Bippo in head and curl. Major, vhc., is long in muzzle.

TOY SPANIELS—(JAMES MORTIMER).

Bendick was the only entry in King Charles spaniels, has a nice head and tan, coat fair. In Blenheim's a good headed one a bit large sized took the ribbon, only entry. Italian greyhounds had Sprite, well known, a winner over Cute, large size and faulty in front and head. Prince, vhc., bad in ears. Duke was the winner in Mexican hairless.

MISCELLANEOUS—(JAMES MORTIMER).

Kilston, the best Scotch we now have, was placed first, beating another, Brownie, of same breed in head, coat and bone.

PITTSBURGH DOG SHOW.

THIS show opened this morning with 435 entries, and, comparatively speaking, absentees are few. Owing to the late arrival of some of the dogs, judging did not commence till 1 P. M. Space in the hall, which is known as the Skating Rink, is rather limited, and judging rings are, therefore, set up on the stage, which, while affording visitors a good view of the proceedings, is somewhat awkward for the dogs, especially the large ones, as the stairs are too steep. Messrs. S. L. Boggs, the O'Hara Brothers, W. E. Littell, J. A. Horne, John Moorehead, Jr., D. J. S. Phillips and W. E. Patrick are conspicuous in their endeavors to make everything run in the right groove. The class of dogs present is excellent. Pointers and setters are especially well represented, the pointer classes being well filled with dogs of good quality; Sir Tatton, Monk of Furness and Count Howard are on hand. Mastiffs have filled well, the Whitney and Cook Kennels supplying the quality. With the two Melrose kennels, the St. Bernards are a capital show. Mr. Mortimer placed Plevna over Lady Sneerwell, reversing New York positions. Sir Bedivere is on hand and the center of attraction.

The beagles are well represented, and bull-terriers are an excellent lot, Starlight, Enterprise and Marguerite being in the challenge bitches. Irish setters are very good, and Mack N. spread the others in the challenge class; he is an excellent dog of the correct type and color. Fox-terriers are strong with Blenton and Oriole kennels out in force. Among those present from the East are Messrs. James Mortimer, Frank Windholz, C. W. Twyford, Henry Jarrett, German Hopkins, Arthur Tucker, F. Loveland, Frank F. Dole, S. Mann, Ben Lewis, S. Wilcox and Fred Kirby. A drawback to the building is the poor ventilation and poor light, requiring the gas to be lighted during the day; at night it will be better. Since the show opened the building has been crowded, admission being only 25 cents, and this makes the management pleased with the venture. An event which has caused some comment is the disqualification of Dick Swiveler, the Irish setter, or rather the veterinary would not pass him in; said to have mangled on the nose! The weather is beautiful and everything is running nicely. Messrs. Davidson and Mortimer getting along with their work with little kicking to be heard. The prizes awarded to-day are as follows, the judges stopping at 6 P. M.:

MASTIFFS—CHALLENGE—Dogs: 1st, Chas. C. Cook's Moses. **Bitches:** 1st, Flour City Kennels' Lady Colons. **OPEN—Dogs:** 1st, Flour City Kennels' Iford Chancelor. **Bitches:** 1st, Chas. Sellers' Major Sellers; 3d and very high com., John M. Chaplin's Benedict Neville and Reginald Neville. **Bitches:** 1st and 2d, Flour City Kennels' Lady Dorothy and Caution's Own Daughter; 3d and very high com., Chas. C. Cook's Duchess of York and Miss Beaufort. **Puppies—Dogs:** 1st and 2d, Chas. C. Cook's Wilkes and Dunde. **Bitches:** 1st and 2d, Chas. C. Cook's Beaufort Queen and Duchess of York.

ST. BERNARDS—ROUGH-COATED—CHALLENGE—Dogs: 1st, Wyoming Kennels' Hesper; 2d, E. H. Moore's Ben Lomond. **Bitches:** 1st, Wyoming Kennels' Lady Wellington; 2d, E. H. Moore's Miranda. **OPEN—Dogs:** 1st, E. H. Moore's Alton; 2d, Keystone Kennels' Prince Victor; 3d, withheld. Com., John Welthaus's Donnis. **Bitches:** 1st, E. H. Moore's Lady Livingston; 2d, Wyoming Kennels' Plevna; 3d, E. H. Moore's Lady Superwell. Very high com., Frank Haslag's Warwick Abbes. **Puppies:** Prizes withheld.

ST. BERNARDS—SMOOTH-COATED—CHALLENGE—Bitches: 1st, Daniel Mann's Cleopatra; 2d, Keystone Kennels' Lola. **OPEN—Bitches:** 1st, withheld; 2d, F. E. Lamb's Keepsake; 3d, S. A. Bryce's Irma Keystone. **POINTERS—CHALLENGE—Dogs (over 55lbs.):** 1st, Chas. Heath's Graphic; 2d, L. Gardner's Duke of Vernon. Reserve, Acme Kennels' Trinker's Chief. **Bitches (over 50lbs.):** 1st, Chas. Heath's Revel III. **OPEN—Dogs (over 55lbs.):** 1st, Chas. Heath's Pontiac; 2d, Louis A. Birdie's Glamorgan; 3d, Hempstead Farm Kennels' Tom's White Rose; 4th, Wm. Seager, Don. Very high com., Lieut. E. S. Aris's Trinker's Chief, Jr. High com., Albany Pointer Club's Dick Swiveler. Com., H. R. Parker's Rex. **Bitches (over 50lbs.):** 1st, Albert Davis's Dell; 2d, Louis A. Birdie's Cicel; 3d, Howard S. Paine's Faustina.

POINTERS—CHALLENGE—Dogs (under 55lbs.): 1st, Chas. Heath's Lancelot; 2d, J. P. Cartwright's Spot Sling. **Bitches (under 50lbs.):** 1st, Chas. Heath's Sally Brass II; 2d, J. P. Cartwright's Bossy May. Reserve, Fleet View & Reading Pointer Kennels' Belle Randolph. **OPEN—Dogs (under 55lbs.):** 1st, E. M. Stevenson's Tribulation; 2d, J. L. Sumners's Bing of Kipper; 3d, John R. Daniels's Graphic Foxie. Reserve, J. A. Hartman's Nick Nasso. High com., J. A. Hartman's Mark Nasso. Com., J. Fawcett's Duke Fawcett Graphic. **Bitches (under 50lbs.):** 1st, H. S. Paine's Miss Meally; 2d, J. Fawcett's Lon Croxeth Nellie; 3d, Chas. Mack's Rosy. Reserve, C. E. Engel's Lady Trinker. Very high com., H. K. Derereux's Fleet. **OPEN—Dogs (under 55lbs.):** 1st, E. B. Buchanan's Belle Comfort and J. Fawcett's Nellie Fawcett Graphic. Com., J. Fawcett's Nellie II. **PUPPIES—Dogs:** 1st, Theo. Sproull's Nod; 2d, J. A. Hartman's Nick Nasso; 3d, Roscoe T. Ong's Dunde N. Very high com., Frank Cole's Claude Curtis. High com., Miss Josie Engel's Romeo. Com., J. A. Hartman's Mark Nasso. Reserve, J. Fawcett's Lon Croxeth Nellie; 2d, Josie Engel's Juliet; 3d, M. B. Marshall's Mary Kilp. High com., J. Fawcett's Miss Fawcett Croxeth Graphic.

IRISH SETTERS—CHALLENGE—Dogs: 1st, W. N. Kuhns's Mack N.; 2d, A. V. Armour's Max A. Reserve, Kildare Kennels' Kildare. **Bitches:** 1st, 2d and reserve, Kildare Kennels' Ruby Glenmore, Mollie Bawn and Winnie II. **OPEN—Dogs:** 1st, Kildare Kennels' Beau Brummel; 2d, Glendyne Kennels' Glen Jarvis; 3d, St. Cloud Kennels' Minstrel. Reserve, F. F. Capers's Pickens. Very high com., Kildare Kennels' Endora and Bessie Glencho; 2d, Kildare Kennels' Red Bell and Hazel Nut II. High com., Fred P. Noma. **Puppies:** 1st, Seminole Kennels' Saddy; 2d, C. E. Stewart's Buffalo Tim.

CLUMBER SPANIELS—CHALLENGE—1st, Mercer & Middleton's Boss II. OPEN—1st and 2d, Mercer & Middleton's Lady Belle and Johnny, Jr.

FIELD SPANIELS—ANY COLOR—Dogs: 1st, J. W. Folsom's Baron; 2d, Roland P. Keasber's Beverly Negus; 3d, Swiss Mountain Kennels' Toady Obo. Very high com., Geo. Demmel's Nick Whiffles. **Bitches:** 1st, Roland P. Keasber's Lady.

COLLIES—CHALLENGE—Dogs: 1st, Chestnut Hill Kennels' Roslyn Wilkes; 2d, Wm. M. Gormley's Bob Roy. **Bitches:** 1st, Chestnut Hill Kennels' Flurry III. **OPEN—Dogs:** 1st, Chestnut Hill Kennels' Wellesbourne Hero; 2d, Hempstead Farm Kennels' Hempstead Zulu; 3d, withheld. **Bitches:** 1st, Chestnut Hill Kennels' Wellesbourne Gypsy; 2d and 3d, withheld. Very high com., Wm. E. Kimberlin's Nell. **Puppies:** 1st, Theo. Sproull's Robin; 2d, withheld.

BULLDOGS—1st, F. W. Sackett's The Graven Image; other prizes withheld.

BULL-TERRIERS—CHALLENGE—1st, F. F. Dole's Starlight; 2d, W. F. Hobbie's Enterprise. OPEN—OVER 30lbs.—Dogs: 1st, R. L. Stevens's Dick Whittington; 2d, W. F. Hobbie's Spotted Prince; 3d, W. J. Bryson's Dufferin. Very high com., J. C. Mahler's Vale and J. H. Kramer, Jr.'s Nelson. **UNDER 30lbs.—1st, F. F. Dole's Mister Dick; 2d, James Gibbons's Rogue; 3d and very high com., James Massey's Jim and Scamp. Bitches:** 1st, Geo. House's Duchess of York; 2d, Frank W. Moulton's Lomont Kit; 3d, F. Miller's Lill II. Very high com., James Massey's Busy. **Puppies:** 1st, J. C. Mahler's Lady Dinah; 2d, James Massey's Rose.

DACHSHUNDE—Dogs: 1st and 2d, Lewis & Klocke's Fritz K. and Feldman K. **Bitches:** 1st and 2d, Lewis & Klocke's Maggie K. and Lena, Jr.

PITTSBURGH, March 10.—Special to Forest and Stream: Judging was resumed after supper and the hall was very crowded, over 3,000 people having paid admission.

DEERHOUNDS—Dogs: 1st, McDougall's Allan Breck; 2d and 3d, Geo. Page's Argyle and Benar I. **Bitches:** 1st, Geo. Page's Alida.

GREYHOUNDS—Dogs: 1st, Purbeck's Gem of the Season; 2d,

A. L. Page's Charles Davis. Bitches: 1st, A. L. Page's Maud Torrington; 2d, Knight Greyhound Kennels' Lady Clare.

FOX-TERRIERS.—CHALLENGE—Dogs: 1st, Blanton Kennels' Lucifer; 2d, Oriole Kennels' Blanton Volunteer. Bitches: 1st, Blanton Kennels' Rachel; 2d, Oriole Kennels' Blanton Brilliant. **OPEN—Dogs:** 1st, Blanton Kennels' Blanton Victor I; 2d, Bernheimer's Ruby Tiger; 3d, Northfield Kennels' Endlife Spice. Very high com. Oriole Kennels' Le Logo. Bitches: 1st and 2d, Oriole Kennels' Dona and Dominica; 3d, Blanton Kennels' Endlife High com. Northwood's B. & C. Shifty, and Moorhead's Betsy Splaiger. Com., Will's Cricket. Puppies: 1st, Oriole Kennels' Dominica; 2d, Moorhead's Betsy Splaiger. Com., Unk's Muncie Lily. **WIRE-HAIRS—Bitches:** 1st, Capsicum.

IRISH TERRIERS.—1st and 2d, Park Kennels' Mars and Dunmurry; 3d and very high com. Chesnut Hill Kennels' Breda Bill and Tiney. High com., Keystone Kennels' Nevermore Gessala.

SCOTCH TERRIERS.—1st, Northfield Kennels' Kilston; 2d, Hertzler's Glencoe.

DANDIE DINMONTs.—1st, Naylor's Border Clunker.

Latest.—Judging resumed this morning. Crowd of people pouring into the building. Weather splendid. Awards made up to 12 noon:

GORDON SETTERS.—CHALLENGE—Dogs: 1st and 2d, Dixon's Inchoe and Leo B. Bitches: 1st, Campbell's Recky Sharp; 2d, Dixon's Blossom. **OPEN—Dogs:** 1st, Smith's King Fern; 2d, Pesse's Tyrus; 3d, Mont Kennels' R. Mont. Reserve, Lewis's Boy. Very high com. and high com., Parker's Entry and Quail. Bitches: 1st and 2d, Parker's Gyp and Jess.

ENGLISH SETTERS.—CHALLENGE—1st, Windholz's Princess Beatrice II.—OPEN—Dogs: 1st, Flmo Kennels' Monk of Furness; 2d, Weiss's Sir Tattler; 3d, Aven Kennels' Roderigo. Reserve, Gardner's Rogers. Very high com., Joe Noble and Gladstone II. High com., River View Kennels' D. & Wilson's Boy, Tony Gladstone and E. & H. Hur. Bitches: 1st, Hartman's Albert N. II.; 2d, Williams' Lily; 3d, Wolfenden's Bonnie Gladstone Girl. Reserve, Senger's Lily. Very high com., Rosa Lee and Bessie Aven. High com., Lily B. and Evans's Flirt. Puppies: 1st, Joe Noble; 2d, Dr. Sud; 3d, Ponto. Bitches: 1st, Nettie Novice; 2d, Regan's Belle.

BLACK AND TAN TERRIERS.—Dogs: 1st, North Fields Yorkshire Kennels' Beaconsfield; others withheld. Bitches: 1st, Rochelle Kennels' Mersbrook Maiden; 2d, North Fields Yorkshire Kennels' Mersbrook Empress. Reserve, Rochelle Nadij. Very high com., Letta. High com., Pansy. Com., Tiny. Puppies: 1st, Nellie.

YORKSHIRE TERRIERS.—Dogs: 1st, Toons Royal. Bitches: 1st, Venus.

PUGS.—CHALLENGE—Dogs: 1st, Bob Ivy. Bitches: 1st and 2d, B. & V. and Vest. Reserve, Nellie Bly. **OPEN—Dogs:** 1st, Howard's Prince; 2d, Gillivan's East Lake Curtis. Very high com., Cryer's Ben Hur. Bitches: 1st and 2d, Cryer's Cassina and Little Bessie.

ITALIAN GREYHOUNDS.—Dogs: 1st, Lewis's Spring; 2d, Van Buren's Cupid. Bitches: 1st, Stemmler's Lady Lee; 2d, Lewis's Star. Reserve, Sprite. Very high com., Lady.

WOLFEHOUNDS.—1st and 2d, Hack's Zloem and Ivan.

COCKER SPANIELS.—CHALLENGE—Entries absent. OPEN—Dogs: 1st, Wolfenden's Dan Brown; 2d, Swiss Mountain Kennels' Snowball; 3d, Wilson's P. P. Bitches: 1st, Wolfenden's Vera; 2d, Arthur's Dimple; 3d, Swiss Mountain Kennels' Chip K. Puppies: 1st, Brooks' Maud; 2d, Wolfenden's Queen.

MISCELLANEOUS—Prizes withheld.

These are the regular classes judged so far. Specials this afternoon. H. W. L.

THINGS AND MASTIFFS AT NEW YORK.

Editor Forest and Stream:

The howls of disapproval and the supererogatory rebuke by the American Mastiff Club (which I hold to have been in very bad taste) stop further comments on the most unfortunate judging of mastiffs at New York show, but a few comments may be in order. That ten months puppy Ingleside Maximilian is both a parody and a wonder; we hear of mastiffs being "too bulky," but he is more "bulky" than any bulldog in the show. A muzzle $2\frac{1}{2}$ in. long, a skull $6\frac{1}{2}$ in. long and $2\frac{1}{2}$ in. in girth, is enough to distance any bulldog in America, as far as "bulyness" is concerned. His dewlap is monstrous, equal to that of a cow, his body and forelegs are very good, but show a bit of shortness, while his hindlegs do not figure as any definite quality. By Ilford Chancellor out of a Minting bitch. It is hard to see where he gets such abnormal properties from.

While his preposterous exaggerations of mastiff type and miserable hindquarters should keep him "out of it" as a specimen, his real faults of headshape make him a most valuable stud dog, promising great results, bred to bitches long in head, lacking volume of skull or snipy in muzzle, but I should fear the results if bred to bitches of the Ilford Caution blood, or even those deep in Crown Prince blood. The only well bred bitch I can think of likely to nick with him are those of the Clement or Hero II. blood, or from Dr. Perry's Juno.

In this connection it may be well to point out that nearly all Ilford Caution's successes in the stud were with poor bitches, as I can now recall only the bitch Caution's Own Daughter (what a name!), exhibited at this same show. This bitch suffers a trifle from ginger face and some lack of size, but for true formation of head, excellence of body and legs, beautiful movement and general symmetry, I have never seen her superior. Cambrian Princess beats her in volume of skull and size, but loses to her in formation of head and general symmetry. It was only his greater size and advantages from sex that put Beaufort much ahead of her.

Beaufort still stands unequalled, and I cannot see how he is to be surpassed. How in the world was he ever said to be extreme in shortness of face? He is certainly very, very far from long-faced, but is as certainly not extreme in shortness. For elegance, length, hocks and general symmetry, how is he to be improved on? Some say that Minting was a better dog; but Beaufort is decidedly the better in hocks, his being broad and flat, while Minting's were too round, and Beaufort has better length. The only dog that I can recall as being Beaufort's equal in properties of body and legs was Mr. Mason's Salisbury, the latter being the larger dog, but not as good in second thighs. I see it stated that Beaufort is "weak behind," but this is utterly wrong. He is not hog fat, with hams like those of bacon; nor should he be, considering his value in the stud; but his muscles of loins and thighs are full and as hard as dried beef. That he is as active as a cat without a trace of weakness I know most positively, having the best of opportunities of seeing this.

While it should be very flattering to Mr. Winchell that a dog of his breeding should beat Beaufort, I looked in vain for any sign of satisfaction in his looks and conversation. We all owe thanks to Mr. Mortimer for the excellent quality of the helpers he provided. A neater, cleaner, more attentive body of men I have never seen in a dog show, and following the suggestion of our old mutual friend Wash Moore by uniforming the men resulted most satisfactorily. I suggest that in future all judges of ladies' pet dogs at New York show refuse to judge them unless their names are withheld and their personality disguised. This is the third year in succession that judges of this class have been insulted by irate women whose dogs did not win. Two years since a feminine said to Mr. Fay, a gentleman in every line, and who possesses more dollars than this person probably did cents, "We have decided you were paid for your decisions and wish to know your price!" Last year one told Mr. Mayhew that after exhibiting under an English judge she hated the name of England or Englishman! And this year some circulated a petition round the show, praying the W. K. C. to forbid Mr. Mayhew's ever judging again!! How are women to get their dogs judged? There is no

judge in their own sex, and where are they to find the man who will accept a position that insures his receiving insults from parties whose position protects them from proper and just rebuke? Do not women know that to be cowardly is not to be womanly, and that nothing is "ladylike" that is not "womanly?" W. WADE.

DOG CHAT.

DR. H. CLAY GLOVER, interviewed on the muzzling question by a New York Herald man, was asked why the muzzle was unnecessary. "Because," said Dr. Glover, "it is of no possible benefit either to the dog or the public. The mad dog scare, which has been so long agitated, is a myth and one calculated to do much injury by the production of a false hydrophobia induced by fear. During my long experience in canine practice I have never seen but one case of authenticated rabies. I have been called to see hundreds of so-called mad dogs and found they were merely in convulsions, afflicted by epilepsy, or suffering from an attack of indigestion or from over excitement, all of which yield to proper treatment."

Toronto, Canada, is a veritable hotbed of the fancy, and it has often been a subject for comment why this go-ahead town has not, so far, indulged in a kennel club, especially as they give the best show in Canada. Feeling the want of an organization, several members of the fraternity called a meeting for Thursday night, at the Rossin House, when a club will be organized. Following the course taken by the Hamilton Club, they intend to inaugurate monthly members' shows, where the owners of dogs can pick up points from those calculated to instruct them on the subject.

The English papers not yet having come to hand containing the particulars of the Waterloo Cup Meeting, we take the following gossip from the Toronto Globe: "The winners of cup, purse and plate, Fullerton, Simonian and Rhymes, were all by E. F. Gladstone's dog Greentick, and the owner had the old dog on hand to witness the triumphs of his progeny. The Northumbrian kennel of Col. North is now far ahead of all competitors with its Waterloo record. It was first and second with Miss Glendyne and Bit of Fashion in 1885, then won with Miss Glendyne in 1886. It was again first and second with Fullerton and Troughend in 1889, first with Fullerton in 1890, and now again in 1891. A remarkable circumstance in connection with this year's Waterloo is the fact that all the final quartette in the cup, as well as the winner of the purse, claim the Northumbrian bitch, Gallant Fox, as their grand-dam or great-grand-dam. Bit of Fashion, the dam of Fullerton and Simonian, was by Paris (daughter of Gallant Fox). Easter and Easter is by Northern Express (son of Prenez Garde, own sister to Paris), and while Button Park is by Jester (Gallant Fox's son), Bovril is from Jester's daughter, Lady Jester. On the night of the draw for the Waterloo cup, a well-known supporter of coursing from Ireland took a double-event wager of £200 to £25 that Fullerton and Simonian would not win both cup and purse. This nice bet was comfortably landed." On perusing the above, one is led naturally to the question as to whether the National Greyhound Club should be allowed to have a stud book of its own and still retain its membership in the A. K. C. Greyhounds being used now so extensively in coursing in this country and with every indication that the sport will increase in popularity, it is incumbent upon those having the best interests of the sport at heart to insure, by every means in its power, the accuracy of the pedigrees, for upon the correct interpretation of these blood lines rests, in a great measure, the successful courser. As the A. K. C. cannot be expected to give the subject more than general supervision, we think that in this case an exception should be made with the distinct understanding that it should not form a precedent for other specialty clubs. We do not think, and those with whom we have conversed on the matter are of the same opinion, that the A. K. C. stud book will lose any registration on account of the separate book, but keeping the good will of the greyhound men will tend to increase rather than diminish the registrations.

The new Pennbrook hunt, from the Chestnut Hill Kennels, seemed to be quite popular, the third meet of the hounds last Saturday at Mr. Fell's residence having a greater turnout of members than on the previous one.

The Mayor of Newark, N. J., in view of the recent cases of children having been bitten by worthless curs on the streets, is advocating the establishment of a dog pound and the destruction of a few hundred of these roaming canines. Several children are now under treatment by Dr. Gibier, whose price, \$60 per patient, being too high for most of the subjects to pay, the balance of the hydrophobia fund of 1887 has been turned over to the institution on condition that he treat free for the next five years all indigent Newark patients.

We are sorry to hear that the Cincinnati Kennel Club is not in the most flourishing condition imaginable. It is said that out of fourteen letters opened by the secretary one day last week, only two contained substantial evidence as to the annual dues, while the other twelve were resignations of disgruntled members.

We are pleased to see that some one has some appreciation of the merits of one of the gamiest and most companionable terriers one can have—the Dandie Dinmont. The splendid special offered by a friend of the breed at the coming Boston show should bring together all the dogs of the breed in the country. There is one good man in the breed already, Mr. Carnochan, and we trust that others will follow suit.

In coming to the Baltimore show last week, the Somerset Kennels' challenge beagle bitch Cloud was so severely hurt in her box that she could not be shown.

When Pinlimmon was undergoing treatment for furor recently, Mr. Emmett was at a loss for a dog to take his place. While in this quandary Mrs. H. C. Miner loaned him her own St. Bernard, Pop. In appreciation of the courtesy, Mr. Emmett presented Mrs. Miner the other day with a superb whip mounted with a massive gold handle and whistle, studded with jewels.

A letter from one of the committee of the Maryland Kennel Club informs us that the club came out a little on the wrong side, but that they were still in the running. Increased expenses and the wretched weather of the first day is mainly accountable for any loss they may have incurred. During the last day of the show there was a bit of a rumpus on account of Mr. W. H. Child's attachment of the English setter Sir Tatton and the Irish setter Desmond II. for a bill of \$150 on some dog deal with Mr. Weiss. Fred Kirby, who had the dogs in charge, melodramatically proclaimed to the sheriff, that if he took the dogs it would have to be over his dead body. Mr. Weiss has his dogs, Mr. Child got his money and Kirby is still alive, so everything is serene again.

We regret to hear that the black and tan terrier The Senator is dead. He caught cold the first day at the Baltimore show. The diagnosis was hardly correct, and our suggestion that it looked like a case of pneumonia and a mustard plaster was not far wrong after all. Dr. Foote is, indeed, most unfortunate, and if he had not the true fancier grit in him, he would find his losses hard to bear. He has our sincere sympathy.

The Cleveland Kennel Club is making every effort to insure the success of their coming show. Mr. H. W. Lacy has been engaged to judge those classes not already announced in the sporting papers. Proper arrangements with express companies and railroads centering in Cleveland have been made. The building will hold 600 dogs, so that following Chicago, as it does, there is likely to be an excellent entry. The premium list is now out and is quite a good one. Challenge prizes \$10 for each sex are made for most breeds, and in the important classes \$15 and \$10 are the prizes given, the others getting \$10 and \$5. Spaniels have classification No. 2 and the small breeds are well taken care of. Entries close April 1, with Mr. C. M. Munhall, 141 Superior street, Cleveland, O.

A rather amusing incident happened the third day of the show at Baltimore. A fashionably dressed young lady appeared before the dog keeper with a ribbon bedecked "sort of" a Yorkshire in her arms. On being told that dogs not regularly entered could not be allowed in the building, she made quite a scene, and Will Farber coming up at the time politely told her he would have the dog put in a box till she made the round of the show. This did not appease her, and turning with tears in her eyes which friend Farber found hard to withstand, said, "I did so want Dick to see the dogs!"

A new venture is on the tapis at Philadelphia. Following the style of Aldridge's in London, the Philadelphia Tattersalls intend holding periodical sales of dogs, the first of which will take place March 27, and entries for which will close March 16. The sale is limited to thoroughbred dogs only, and the number put up is not to exceed 200. Several dogs which have been winning at late shows are already entered. The dogs will be on exhibition March 24 till day of sale, and the sale will take place in the afternoon and evening of March 27 and 28, and catalogues will be ready ten days before the sale. This is a venture which no doubt many fanciers will avail themselves of, though we hardly think there will be enough money in it for the sales to become regular.

Friend Jarrett, the genial manager of the Chestnut Hill Kennels, seeks a relief from the lengthy heads he is so accustomed to see around him, and intends branching out as a pug breeder. He has already purchased several bitches, among them Cassina, quite a winner, from Dr. Cryer's kennel.

The protest against the bull-terrier Ruby at New York, for deafness, has been sustained.

At New York we were shown a medal which at a casual glance one would take to be gold. It is presumed to represent the gold medal of the Mastiff Club, but it won't wash, or rather it has been washed, and in a very careless manner. It seems Lady Coleus became entitled to the gold medal of the club, and after repeated application this medal was sent to Mr. Moore. In the language of the Gordon men, it is rich in tan, but it goes no further than the surface, for on the edge is the silver stamp mark and "sterling" in the customary form. Glancing sideways at the lettering on the face of the medal the "silver threads among the gold" are as plain as the noonday sun. The question is, what are you going to do about it? The A. K. C. rule states that medals and so forth shall be made of the materials called for. Some action should certainly be taken in the matter, and the affair not be smoothed over with hush!

The Chestnut Hill Kennels want to swim with the tide of popularity which St. Bernards are now enjoying, and reap some of the "kudos" an investment in that breed is pretty nearly sure to bring. Mr. Harrison, in other words, is buying a few St. Bernard bitches for breeding purposes.

There was one happy woman at New York, Mrs. Nicholson, of Albany, who brought seven St. Bernard puppies to the show and sold every one of them at good prices. Now, if Mr. Nicholson had come down with them, very likely he would have had to take them home again.

Mr. W. Stewart Diffenderfer has sold his big St. Bernard Lord Baltimore, by Burns out of Lady Valentine, to May Howard, the variety actress. We hear his Lordship was to make his debut on the boards last Saturday evening in his native town. What is that saying about a prophet in his own country? However, we expect he will need an able manager, for as a star he will necessarily feel the importance of his position.

Query—When is a foxhound said to have leather at throat?

The registrations for January and February of this year in the A. K. C. Stud Book number 735, against 354 for the corresponding months in 1890. Speaking of the stud book reminds us that the secretary has started on his two months' furlough. He holds himself bound, however, not to go outside of reach of the telegraph, as it is very likely that his friend Peshall will demand his presence very shortly in Oyer and Terminer when the noted case comes off.

During his visit to Baltimore Dr. "Beaumont" Meyer gave two lectures on dentistry at the Baltimore College, and though he had an innings at the Gordon Club specials at the show, the faculty, to show their appreciation of him, presented him with a handsome silver cup as a token of the esteem in which they hold him. Dr. Meyer, therefore, cannot complain of the attentions he received at the hands of the Baltimoreans, though they were a little mixed.

We were pleased to see that our suggestion that when charges are made against individuals before the Kennel Club, they shall be accompanied by a fee of \$10 as a guarantee of good faith, has been adopted. This will, we trust, have a salutary effect.

We were exceedingly pleased to have a lady remark during the Baltimore show that there was nothing in the pages of the FOREST AND STREAM but what a lady could read, and that from reading it every week she felt just as much interest in the dogs as her husband. This is praise indeed, and repays us doubly for all our efforts to give to dogmen and every one a clean paper.

We welcome another young fancier into the fox-terrier ranks. This is Mr. Harry Granger, owner of the Regent Kennels. That he is getting hold of good material is proved by his purchase last week of the well-known winner Dusky Trap and Blanton Wrangle. We wish him every success.

Frank Dole received a very good bull-terrier from Mr. Fred Hinks of Birmingham, England, on Tuesday last. His name is Top Sparkle, by Gully the Great. As the dog is said to be a certain winner, the name is peculiarly appropriate.

The Maryland Kennel Club held its annual meeting at the Fifth Regiment armory on Wednesday, March 4, at 8:30 P. M. In the absence of the vice-president (the president, Mr. Harry Malcolm, being under suspension at present) Dr. B. Holly Smith was called to the chair, and Mr. Jas. E. Wilkinson was requested to act as secretary. The roll call was answered by a large majority of the members of the club. Four new members, Messrs. Guest, Williams, Ryan

and Hauzsch, were elected. A vote of thanks, on motion of Mr. Lamb, was tendered to the bench show committee for the successful show now being held. The following officers were then elected: W. Gilmer Hoffman, President; Geo. W. Massamore, Vice-President; W. Stewart Diffenderfer, Secretary; W. C. Farber, Treasurer; Board of Governors, W. T. Spring, Chas. D. Cagle, Henry M. Walker, Jas. Thompson, B. Holly Smith, M. D., Chas. R. Diffenderfer, Edw. J. Farber, Thos. J. Sheubrooks. Col. H. D. Loney, delegate to American Kennel Club; Jas. Thompson, alternate.

The use and abuse of specials is beautifully shown in the Pittsburgh premium list, by the Monongahela House offering a special for the bull-terrier "with the best fighting record," and the impression that has obtained among the boys that this hotel must be a very tough one, devoted to tough sports generally. The fact is, that this hotel is peculiarly the respectable house of the city, one that has inherited fifty years of reputation as the leading house, and no where in the country is there a house with a longer record of character. The presumption is that the hotel merely contributed the money for the special, and the show committee blundered in the placing of it. In fact, what business has a "fighting record" in a premium list, anyhow?

In changing his advertisement of stud fox-terriers, Mr. John E. Thayer writes: "I have put the stud fees of these dogs very low, not because I could not get more, but because it will allow every one the use of a grand dog very cheap. Mixer, by his victory in New York, is the best terrier in America. No one can say my dogs are not but the best." Quite right too.

"We have the hottest class in challenge heavy-weight pointers that ever faced a judge in America," writes Mr. W. E. Littell, secretary of the Duquesne Kennel Club. "The following are in it: Graphic, Robert le Diable, Trinket's Chief, Duke of Vernon, and Lord Graphic. They think this is the greatest show ever held in this city." Pittsburgh always was a good dog show town, and we hope that this year their venture will prove no exception.

A meeting of the Eastern Coursing and National Greyhound Club will be held at the office of Mr. G. S. Page, 69 Wall street, New York, at 8:30 P. M. sharp, Friday, March 13.

The bench show committee of the New England Kennel Club writes: "It looks as though we should have a rattling good show, if anything comes from the number of inquiries we have had, especially from the Canadians, for premium lists and entry blanks. Our bench show committee, Messrs. Fay and Moore, on their return from New York, brought back very favorable reports: every one seemed anxious to show. Perhaps it was accounted for by a totally different slate of judges from those who are to officiate at preceding shows. The Brunswick Fur Club, Brunswick, Me., offer the following specials for American foxhounds: \$16 for the best dog, \$10 for the best bitch, \$5 for the best dog or bitch under 18 mos. This certainly ought to bring together some good dogs of this breed. Now that the beagle clubs have settled all disputes and joined hands, we ought to have a good entry. The Chesapeake Bay dogs will be judged by Mr. John Davidson, of Monroe, Michigan.

Mr. Geo. H. Covert calls our attention to a mistake in the awards printed in our issue of Feb. 26, when Chief was placed first in the challenge Irish setter dogs. This is wrong; his Dick Swiveller held that proud position. The incorrectly marked steward's slip was the cause of the error; the official marked catalogue had the same mistake. Another mistake in the award list was the printing of Douglass II and Sprake, the pugs, as equal firsts in the open dog class. This was a careless slip of the pencil in marking the catalogue in the hurry of going to press. It can't hurt Sprake, neither will it do harm to Douglass II.

The Mascoutah Kennel Club announce that Mr. Chas. M. Nelles, of Brantford, Canada, has been appointed judge of the spaniel classes, excepting toy spaniels. Also that the club offers an additional special prize of \$10 for the best exhibit of not less than four bulldogs entered and owned by one exhibitor. The club's special prize of \$25 for the largest kennel of sporting dogs and the same for non-sporting dogs, should read in both cases, "for the largest and best kennel," etc. All entries must be mailed previous to March 23.

Mr. C. P. Hubbard writes us that he has established the Loup Kennels at Tuckerville, Nebraska, upon the South Loup River. He has 160 acres of land upon the banks of the river with timber and springs of living water. He controls a shooting right upon upward of 10,000 acres of fine quail and chicken country. The dogs have an unlimited run and every opportunity to develop their natural hunting qualities.

The New England Kennel Club announce the following additional classes, changes and donation of special prizes for their coming show. There will be a class, 93A, for Dandie Dinmont terriers, dogs and bitches, with prizes \$10 and \$5. A friend of the club has offered a special prize of \$25 for the best dog or bitch and if there are 5 of each entered they will divide the classes by sex, offering the same money prizes, and the donor of the above special will then give \$50, making it \$25 for the best dog and \$25 for the best bitch. They also make a class, 94A, for Irish terrier challenge dogs and bitches, offering one prize of \$10. The following are the conditions of the competition for the American Field pointer cup to be awarded at this show: The cup will be competed for once each year and at a show to be designated by the Pointer Club of America. It is open to competition to members of the Pointer Club of America only and must be won three times, not necessarily in succession, to become the property of any one member. A member must have owned a dog with which he competes for it six months prior to the closing of the entries of the show at which it is competed for. The person winning it will be required to file a bond with the Pointer Club of America, signed by himself and two responsible guarantees for producing the cup or its value in money whenever required to do so. Entries for this show close March 18.

[The following paragraphs were crowded out last week.]

We never saw so many new faces at a New York show as this last one, and this fact reminded us of the question we were asked some time since—Is the kennel interest of this country really increasing? This is easily answered. Take up a prominent New York paper, or in fact of any other city, and there is hardly a Sunday issue which does not contain either a syndicate article on dogs of one breed or another, with more or less accurate illustrations, or kennel paragraphs of news. The success of the New York show is in a great measure due to the enterprise of the dailies, which have lately devoted columns of valuable space to kennel matters, and the way they wrote up the show must have been very gratifying to the W. K. C. people. Would that papers in other cities in which shows are held would do the same, and we should hear of less financial loss which many plucky dog fanciers have had to make good. The kennel world do move and there is no mistake about it.

Many of the dogs at the show were benched in the old style more with a view to the convenience of the owners

than to that of the public, and there was much complaint about the getting up of prize cards over the stalls after judging, but in the case of the specials this was not the fault of the club, as there were no cards supplied them; and when we say that the catalogue was hardly so accurate as in years past, several mistakes occurring in the printing, we have about exhausted all criticism and must vote the show a big success.

The boys appreciated the café at the entrance of the building, and we are pleased to write that for the honor of dog men in no instance did we see this privilege abused. So many club meetings were held at once that the café came in very useful for the purpose.

A man who, if he has not had experience at English shows, has at least had a good deal to do with American ones, got ahead of the vet. at the New York show. Taking a greyhound in at the door, Dr. Glover refused to pass it on account of skin disease. Not to be outdone he stepped to the side door leading to the basement, and telling the man in charge that he had been passed by Mr. Tallman, was allowed through and benched the dog. Now this was knowingly a direct violation of the rules, and a menace to the health of the other animals in the show. The dog was, we believe, taken into the ring, but was eventually ordered out of the building. Such work must not be countenanced for an instant.

The Pointer Club deserves great credit for the resolution adopted to abandon the list of specialty judges, and allow bench show committees to choose their own. This shows they have the true interest of the breed at heart, and their move should be followed by other clubs.

Drs. Glover and Meyer had no sooner entered the show building at Baltimore, than they personally, and the rest of the Gordon Club officers by proxy, were served with a summons on account of Harry Malcolm in a suit for \$10,000 damages which he brings against them for their recent resolution expelling him from the Gordon Setter Club. The action met with much adverse comment, these gentlemen being guests of the Maryland Club at the time. It has served to put a damper on everything, and where all this petty spite will end one can hardly tell, but that it will work much harm to kennel interests is very certain, as no one feels safe for an instant.

Col. Ruppert, one of Gov. Hill's staff, purchased at the New York show two good St. Bernard bitches, Ellen Terry and Empress of Contocook. The former has already produced some very good stock in England, and Empress is one of our best smooth bitches. This gentleman intends starting a small breeding kennel.

The Spaniel Club had a very pleasant reunion at the Murray Hill Hotel on the Wednesday night of the New York show. Those who partook of the good things provided were President Wilmerding, Arthur E. Rendie, Geo. Bell, A. W. Smith, W. T. Payne, E. M. Oldham, J. P. Willey, Andrew Laidlaw, F. H. F. Mercer, several other gentlemen whose names we do not recall, and your representative. After the cloth was removed and cigar smoke permeated the room, toasts were in order and several happy speeches were well received. Mr. Mercer explained matters to the satisfaction of all, and the conversation drifting naturally to the question of the hour, the "long and low," each one had his theory as to their working capabilities. The utmost good feeling prevailed and all were pleased to see friend Oldham and once more hear his cheery voice in the songs he only knows how to render. The party broke up in the "wee sma' hours with the grand old song of "Auld Lang Syne." In the words of "Peto," it is to be hoped that "hardy annual," the cocker question, may always seek its settlement in a similar manner. It was unanimously voted that the discussion be resumed at the W. K. C. show of '92.

Mr. Carnochan purchased from Mr. F. R. Hitchcock the noted Dandie Dinmonts Border Wang and Meg of the Mill. This will make his kennel a strong one indeed.

Mr. Renshaw Mason Jones bought the bulldogs Darby Nancy, Darby May and Bombardos from Mr. Chas. D. Cagle during the show.

The Bulldog Club, it may be remarked, held their show in connection with the W. K. C. At any rate, the "get up and get" of this club secured a splendid entry. The different bulldog cups were displayed under glass in the middle of the benching, and they were admitted to be the handsomest collection yet seen in this respect. The Parke cup was a very handsome trophy, with an excellent engraving of the late Dimple (formerly Mischief) on the cup and two bulldogs on the chain at the base, very "rampant" indeed. Over every stall was a large, round, illuminated card, with the number of the dog's entry in the middle and the name of the club round the edge. Souvenir catalogues of tasteful design were distributed for the asking; in fact, everything was done in good style.

We learn that Mr. Stewart, of England, has sold the noted collie brood bitch Barbry Rose, dam of Caractacus, Petrunia, Clifton Chief, Clifton Crack and Clifton Charm, all winners, in one litter, to a gentleman in St. Louis. She comes out in whelp to Metchley Wonder.

Stock-Keeper publishes excellent pictures of D'Orsay and Dominie, the noted fox-terriers, in the issue to hand.

PROTECTIVE UNION.—The following is a call for a meeting of honest dog breeders, to perfect an organization for protection against dishonest ones: All breeders of fine dogs in the United States and Canada are requested to meet the undersigned on April 9, 1891, at 2 P. M., at the office of the secretary of the Mascoutah Kennel Club, Chicago, Ill., for the purpose above stated. All breeders in sympathy with this movement who cannot attend in person, but desire to become charter members may send their applications by letter with \$5 membership fee, to H. Thompson, supt. of Money Order Dept., Chicago, Ill. Dated Feb. 16, 1891. (Signed) Dr. J. B. Lewis, Fernwood Kennels, Belleville, Ohio; Dr. H. J. Thomas, Greenwood, Wis.; Dr. G. H. Grummell, Onaga, Kas.; Dr. W. W. Bradley, Richmond Kennels, Milnor, N. Dak.; W. F. Edelbrock, St. Cloud, Minn.; C. H. Babcock, Cordova, Neb.; Orton Gifford, Kickapoo Kennels, Vashpeton, N. Dak.; W. H. Case, Lockport, N. Y.; F. H. Perry, Des Moines, Iowa; J. F. Pinches, Shakopee, Minn.; L. B. Ash, Mankato, Minn.; C. B. Jorgenson, Milnor Kennels, Milnor, N. Dak.; Paul Koeppen, Hector, Minn.

CHESAPEAKE BAY DOG CLUB MEETING.—Baltimore, Md.—*Editor Forest and Stream*: Our annual meeting of the Chesapeake Bay Dog Club took place yesterday, March 4, and officers for the year were elected as follows: President, Edward L. Bartlett; Vice-President, J. Olney Norris; Secretary, James F. Pearson; Treasurer, Thomas J. Hayward. Board of Governors—Edward L. Bartlett, J. Olney Norris, James F. Pearson, James Swan Fickett, J. D. Mallory, H. Malcolm, Isaac T. Norris and Wm. T. Leverinz. Delegate to A. K. C.—Isaac T. Norris.—JAMES F. NORRIS, Sec'y.

THE OMAHA KENNEL CLUB.

Editor Forest and Stream:

For years the dog-loving people of this city have been trying to organize a kennel club, but it would seem from one cause or another the right time had not come. Things took a turn in November, 1890, however, when the Nebraska Poultry and Bench Show people held an exhibit here in the Grand Opera House Annex. While the show was not financially a success, it gave the fanciers of this vicinity a good chance to meet daily—particularly the doggy portion, which developed into the Omaha Kennel Club. It may not be out of place to mention the principal names of those gentlemen who worked hard to organize it. They were Messrs. J. H. Short, Cadogan, Waterman, Wm. Meldrum and R. F. Maher. On the last day of the show twelve or thirteen of us organized with the following officers: John T. Evans, President; John C. Morrison, Vice-President; R. F. Maher, Secretary; Max J. Baer, Treasurer.

The club held since then five regular meetings, has a membership of fifty and of the best material to be obtained. The club tenders a cordial invitation to all true lovers of the dog residing in Nebraska, Dakota, Iowa, Kansas and Wyoming. Steps are being taken to come into the A. K. C., and we purpose giving yearly bench shows under the A. K. C. rules. The secretary will be pleased to forward a copy of the rules and by-laws at any time called upon. At some future time I will give you a list of the dogs now being purchased by the members. A MEMBER OF THE O. K. C.

OMAHA, Neb., March 5.

GORDON SETTER CLUB MEETING.—*Editor Forest and Stream*: At the annual meeting of the Gordon Setter Club of America, held Wednesday, Feb. 25, at Madison Square Garden, New York, the following business was transacted: The minutes of the last meeting were read and approved. Communications from Duquesne, Cleveland and American Pet Dog clubs were held for further action. It was resolved to donate \$10 to the Mascoutah Kennel Club as a special prize for best Gordon setter in the show. The following resignations were accepted: I. T. Norris, Baltimore; Capt. O. H. Day, Jersey City; R. Schmidt, St. Louis; J. W. Orear, Downieville, Cal.; Frank Phillips, Lynn, Mass.; John Umberline, St. Louis, Mo.; J. Whitaker, St. Louis, Mo.; Richard Cromwell, Jr., Baltimore, Md. Election of officers for the ensuing year was then proceeded with, and the following were elected: President, Dr. H. Clay Glover; Vice-President, Dr. J. M. Lordy; Sec'y and Treas., L. A. Van Zandt. Executive Committee, G. W. Collins, Dr. John H. Meyer, James B. Blossom, George Bleistau, C. H. Pepper, and A. Quackenbush. The treasurer's report was submitted and approved. The meeting then adjourned.—L. A. VAN ZANDT, Sec'y.

"THE AMERICAN BOOK OF THE DOG."—*Editor Forest and Stream*: Even at the risk of suggesting remembrances of recent comicities in England, I must put in my protest against sundry matters appearing as of my authorship in Mr. Shields's recent work. I certainly am not responsible for Mr. Sperber being stated as the owner of the Russian wolfhound Czar, and I distinctly remember having noted the name of Mr. P. H. Hacke as owner on the proof of the picture sent me. Nor did I state that Messrs. Milliken, Kelly and Bowditch imported mastiffs early in the eighteenth century, and distinctly remember correcting this in the proofs sent me. In the list of mastiff breeders given on page 577, the upper section only were supplied by me, most of those in the second section are totally unknown to me. The only proofs received by me were those on the mastiff section, and singularly it is in these that the mistakes occur.—W. WADE.

BULL AND TERRIERS.—*Editor Forest and Stream*: May I take up a little of your valuable space to say a word for the round head bull and terriers, as they are called in Boston, or the "Boston" terriers, as they have been named elsewhere. These dogs are rapidly gaining favor in this neighborhood, and it seems likely that they will take the place of the fox terrier as a gentleman's dog. With all the courage of the latter and with perfect ability to take care of themselves in a "scrap," they are of a most gentle disposition and never try to pick a quarrel. Their vivacity and intelligence, which is perhaps not even exceeded by that of the poodle, make them very quick to learn tricks and most amusing companions. In appearance they are the most stylish of dogs, and a club to establish a greater uniformity of type is all that is needed to bring to their due prominence the best of small dogs.—R. B. P.

NEW YORK SHOW REPORT.—New York, March 10, 1891.—*Editor Forest and Stream*: Kindly make the following corrections in my report of the New York show. Mastiffs: "Macduff, c., lacks in depth and width of muzzle, length of legs (they are too long for his body), ribs (they are round)," should be, ("they are not round enough"). Pointers: "Lass of Kent, first in bitches, was the best provided, and Concave, second prize, could not beat her." Make it read, "provided that Concave, second prize," etc. Fox-terriers: The criticism following the reference to Raffle and First Flight belongs to the latter. Instead of "He has a very neat and good head" read "First Flight has a very neat," etc.—CHARLES H. MASON.

HARTFORD DOG STEALERS.—Hartford, Conn., March 7.—There seems to be an epidemic of dog stealing in this city. I have lost a valuable trained pointer and an imported Yorkshire terrier within a year. A week ago two Gordon setters were stolen. One of them was lame in his right fore leg, the leg having been broken and he is "out at the elbow" in consequence. The other had a scar on his left hind leg. Both good "lookers." Will the sportsmen have an eye "out" for these dogs and notify me?—A. C. COLLINS.

CALIFORNIA NOTES.—P. D. Nolan's greyhound Scout is recovering rapidly. Col. S. O. Gregory's well-known greyhound Davy Crockett broke his neck while coursing last week. He was undoubtedly one of the fastest hounds ever in this country. Mr. A. B. Truman's purchase of Molton Baron has fallen through. The affair is very much mixed and does not reflect very favorably on Mr. Miner. Specials are pouring in for the California Kennel Club's show, and the prospects of a good show continue.

DANDIE DINMONTS LOOKING UP.—*Editor Forest and Stream*: Where are the Dandie Dinmonts? If the New England Kennel Club have enough to divide the classes by sex, we have been offered by a friend \$50, but there is \$25 offered anyhow. This ought to stir up those people who have some at home resting on their laurels. Where is Baillie? and don't they own some in Chicago? Where is J. H. Naylor? It ought to bring some of them out.—BENCH SHOW COMMITTEE.

Advertising That Pays.

LYNN, Mass., March 3.—*Forest and Stream Publishing Company*: I find that your paper is a much better one for kennel advertising than any other one, and I have tried them all. I received more answers to-day from the adv. in FOREST AND STREAM than I have ever received from any in any other.—W. M. SANBORN, 25 Forest Hill Avenue.

[illegible]

THE CRUISING CAT YAWL KUMA.

THE craft here shown is an adaptation of the full-bodied hull of the Eastern catboat, such as is found along the coast from Newport to Boston, the after end being carried out into a longer overhang than is usual. The Kuma was designed by the Boston Yacht Agency for Mr. James Notman, of Boston, who used her about the Bay of Chaleur, P. Q., last season with excellent results, as she has proved fast, strong and comfortable. She was intended solely for cruising, and though a singlehander has very good accommodations for four persons in her cabin, while the 7½ ft. cockpit gives room about the deck. Her dimensions are as follows:

Length over all	25ft. 7in.
L.W.L.	22ft.
Beam extreme	10ft.
L.W.L.	8ft. 5in.
Least freeboard	1ft. 8in.
Sheer, bow	1ft. 10in.
stern	5in.
Draft	2ft. 6in.
with board	6ft.
Mainmast, deck to truck	31ft. 9in.
Mizzenmast, deck to truck	16ft. 8in.
Mainboom	21ft. 3in.
Mizzenboom	10ft.
Main sail	560 sq. ft.
Mizzen	120 sq. ft.

The cat yawl rig has much to recommend it in the way of simplicity, hardness and effectiveness. The sails are battened, as in a canoe, a sprit batten serving to set the peak. It will be seen that the pull of the halliards, only one being needed to each sail, serves to set up the peak by means of the sprit, and causes the whole sail to sit flat.

DEMURRAGE ON YACHTS.

THE following decision, which we copy from the *American Shipbuilder*, cannot fail to be of interest to yachtsmen. The decision was rendered Dec. 17, 1890, by Judge Benedict in the case of Mathisen v. tug Jas. A. Garfield, and decides, first, that demurrage may be recovered for the detention of a yacht, caused by a wrongful act, at the market rate of such craft, though the yacht was never let to hire, and a substitute was employed during the period of such detention. Second, that the amount of demurrage to be recovered by such yacht may be ascertained from the testimony of those engaged in chartering yachts as to what in their opinion the owner could have obtained for her use during the period of detention.

R. D. Benedict, for the Lagonda; Goodrich, Deady & Goodrich, for the Garfield.

In rendering the decision, Judge Benedict said: This case comes before the court upon exceptions to the commissioner's report. The action is brought to recover damages sustained by the libellant by reasons of injuries done to the steam yacht Lagonda in a collision between that yacht and the tug James A. Garfield. An interlocutory decree in favor of the libellant was entered and the case referred to a commissioner to ascertain and report the amount of the libellant's damages. The commissioner, among other things, reported that the yacht had been detained eight days while undergoing repairs made necessary by the collision and allowed the sum of \$48 for such detention, being interest for eight days on \$36,000, the cost of the yacht. To this the libellant excepts. It appeared before the commissioner that the Lagonda was a pleasure boat kept for the personal use of her owner, and without any intention to use her for profit. That the yacht was in commission at the time of the collision. No evidence was introduced to show that the owner desired or sought a substitute for the yacht during that period. Upon the evidence before him the commissioner found that there was no market rate for the use of yachts of the size and character of the Lagonda, and accordingly he allowed as damages for the detention of the yacht eight days interest on the amount she cost the owner.

It cannot be doubted that demurrage is recoverable for the detention of a yacht caused by a wrongful act. In the case of the *Walter W. Pharo* (1 Low, 437), Judge Lowell gave demurrage for a yacht kept, as this one was, for pleasure and never for hire. It was there said: "It is no concern of the respondents what use the libellant chose to put his vessel to. He had the right to change his mind at any moment." So here, although it may be that the owner of this yacht at the time she was run into had no intention of chartering her or employing her for profit, still he was at liberty to charter her at any moment. Death, sickness, loss of fortune, mere whim, might have impelled him to put her to some profitable use. If it appears, therefore, that the yacht could have been chartered by her owner during the time of the detention in question then any sum he could have realized by chartering her may be recovered by him from the wrong doer who had caused her detention.

The evidence taken by the Commissioner was sufficient to show that this yacht could have been chartered for hire at the time she was run into. For instance, one witness called by the claimant to the question, "What is the market demand for yachts of this class in this port," says: "The demand is greater than the supply, there is no trouble about chartering." The testimony of other witnesses was to the same effect. I cannot doubt upon the evidence that if the owner of this yacht had concluded to offer her for hire he could have done so, and I judge from the testimony that it would have been possible to charter her for eight days only. But that fact is not necessary to a recovery. It was open to the owner to charter his yacht for the month or for the season. It is sufficient to entitle him to recover for her detention, if it appears that he could have realized money from her during the period of her detention. The ground upon which the Commissioner seems to have found his decision is absence of proof of an established rate at which yachts were chartered, and evidence that the rate in every instance depends upon the personal inclination of the owner, and so he allowed the libellant's eight days interest on the cost of the yacht, and this, although it is manifest that the owner had no intention of realizing interest on his investment. But proof of a rate established by custom or by repeated similar transactions cannot be required in a case of this description. If it appears that the yacht could have been chartered for hire, the amount lost to her owner by being deprived of ability to charter her may be shown by the testimony of those engaged in chartering yachts as to what in their opinion the owner could have obtained for her use for eight days in case she had been chartered. The testimony of the witness Manning seems to me to justify the conclusion that she could have been chartered by her owner for a season of three months for the sum of \$36,000, the owner furnishing the crew. Under such a charter the vessel would have earned for her owner in eight days the sum of \$552, and that sum is in my opinion entitled to recover for her detention. The first exception on the part of the libellant is therefore allowed. All other exceptions are overruled.

A NEW 46FT. RACER.

THE rumors of a 46-footer to be built at Bay Ridge, which have been current for a couple of weeks, received a very substantial confirmation last week in the successful casting of a 22 ton lead keel by Mr. Wintringham. The new boat, which is now well under way and will shortly be in frame, was designed by Mr. Wintringham for Mr. J. Rogers Maxwell, owner of Shamrock, and as a matter of course is intended for racing. She will be a keel craft, 62ft. over all, 46ft. l.w.l., 13ft. 6in. beam, 10ft. draft, with all her ballast, 22 tons, on the keel. The lead is 15in. near bottom, 24in. on top, and about 30in. deep, the bottom being semicircular in section. The yacht is similar to the other new boats of her class in general appearance, with clipper's end and long overhang. The stem and fore deadwood are of natural crooks, as is the after deadwood. The keel is a fine stick of oak, 10x24in. The frames will be of steamed oak, with 10 angle steel frames on each side, steel floor plates being used. The construction will be as light as is practicable.

Below the yacht will be fitted with a large main cabin, with 6ft. 2in. headroom, toilet lockers in the stowage, and a roomy after stateroom. The interior finish will be plain and simple, but as comfortable as possible; the yacht being intended for racing between New York and Marblehead, which involves more or less cruising and makes the question of accommodation an important one. Her sail area will measure about 3,450ft. by Sea-breeze rule, making her racing measurement about 62,25ft. She will steer with a tiller. Mr. Maxwell will fit out Shamrock as usual, and enter her in any races that may be arranged for her class. The new boat now gives New York one representative out of a class of nine boats, and as it brings in another designer to compete with those already represented, Messrs. Burgess, Fife and Paine, it will make the class still more interesting. New York owes a good deal to Mr. Maxwell for giving her a representative in the class of the year, and it is a pity that out of her large number of yachtsmen there are not two or three more of equal spirit. A boat from Mr. A. Cary Smith's designs and another by Mr. Gardner would put New York somewhere near Boston in the year's racing, and would result in bringing a fair portion of the sport to New York waters. There is yet time to build for the class, and we hope, for the credit of New York yachting, that the work will not be left entirely to one man.

CRUISING CAT YAWL "KUMA." DESIGNED BY THE BOSTON YACHT AGENCY

SAIL PLAN OF CAT YAWL "KUMA."

BODY PLAN.

SECTION IN CABIN.

THE ST. LAWRENCE Y. C.

THE plans for the new house of the St. Lawrence Y. C. are now being prepared by Mr. Gardner, of Montreal. The building will be 40x32. On the ground floor there will be a fine club and dining room, with the usual offices, locker room, dormitory and committee room. The structure promises to be not only a very comfortable but a very handsome club house. The club has also decided to lay down ways for hauling out, and to erect a mending shop and storage shed, with the intention of leasing the plant to a competent builder, and thus doing away with the greatest existing obstacle to the development of yachting in the vicinity of Montreal.

During the winter a number of meetings have been held, the constitution and by-laws have been thoroughly revised, and although there has been a substantial increase in the fees, a very creditable increase in the membership is taking place.

The additions to the fleet for the coming season are of such a nature as to insure good racing in all of the new corrected length classes. Two boats, the Queen, late of the Lake Champlain Y. C., and the Frolic, of the Atlantic Y. C., were bought into the club last fall, and will be raced in the new A class for boats of over 29ft. c.l. The principal addition to this class is, however, the Viking, a 30 l.w.l. of 35 c.l., designed by Mr. S. H. Duggan, the commodore of the club, for Mr. L. I. Smith, and now under construction at MacIntire's Cote St. Paul shop. The Viking has 27ft. beam for 3ft. draft—the limit fixed by the nature of the water—and will have 6,000lbs. of iron outside. She has a long and light counter, a very pretty raking stem, and fine waerlines with very easy buttocks.

The only boat building for the 29ft. class is one of 23ft. waterline, 27ft. over all, 9ft. beam and about 26ft. c.l., which is being built in Hamilton, by V. W. W. for a syndicate of St. Ann's men.

Two new ones are to be added to the 24ft. class, one of which, a boat from a Burgess design, now building at Lawley's, promises to be a very fine craft indeed. She is to be about 20ft. l.w.l., 8ft. beam and 3ft. draft, and will carry all the sail which her class allows her. This boat is being built for Mr. W. Kavanagh. The other is a lugsail boat of 21ft. l.w.l. and 23ft. c.l., which is being built for Mr. Fairman.

No boats are actually under way for the 21ft. class, although several are talked of, but three boats are being built for the new 18ft. c.l. class, which is intended to be a singlehander class, the crew being limited to two men, and more are being talked of. The boats of this class promise to be exceptionally able and useful little crafts and the class affords a fine opportunity for the amateur designer.

Two of the 18-footers now under construction are being put up together in MacIntire's shop. The one is from Mr. Duggan's design, for Mr. Kenrick, a likely looking little craft of 16ft. l.w.l., 20ft. over all and 6ft. beam, with 500lbs. underpneath. The other was designed by Mr. F. P. Shearwood, for Mr. A. W. Shearwood, and for 16ft. l.w.l. she will have 5ft. 6in. beam, 24in. draft and about 600lbs. out-side. The third boat is a 16ft. catboat, designed by Mr. A. Cary Smith for Mr. E. M. Fulton of the steamship Gadabout.

WORK AT BRISTOL.—The works of the Herreshoff Manufacturing Co. at Bristol, R. I., are busy with a number of yachts, both sail and steam, in addition to Government work. The largest yacht is a steamer, 112ft. long for W. R. Hearst, to make 25 miles per hour, another steamer, 98ft. long, is for E. D. Morgan, her speed being 23 miles; while Mr. Morgan will also have a steam tender, the Katydid, 27ft. long and 6ft. 5in. beam. Beside these two steamers he has a keel catyawl 23ft. 6in. l.w.l., of the same family as the Consuelo and Clara. Her name will be Gannet. Another catyawl 26ft. 5in. l.w.l. is for Mr. J. C. Moran, of New York. The firm has a steam launch, the Mississqui, for Dr. W. S. Webb, of Burlington, Vt. for use on Lake Champlain. She is 48ft. over all, 7ft. 6in. beam, and has made 19 1/2 miles in one hour. Besides these are two 16ft. cuts, one for Boston, one for New York. Mr. N. G. Herreshoff designed this winter a keel 46-footer for Mr. Royal Phelps Carroll, but nothing has been done toward building her. It is now reported, however, that the firm will build a keel 46, which will make the class still more interesting.

A NEW CRUISING STEAM YACHT.—The Cleveland Shipbuilding Co. is now at work on a large steel steam yacht for Mr. J. H. Wade, of Cleveland, who proposes, after using her on the Lakes this season, to send her to the Mediterranean next fall, where he will join her for a long cruise, probably to Japan and China. The yacht will be 160ft. over all, 21ft. beam, 12ft. depth, 9ft. draft. The keel is 8 by 12 1/2 in. frames 2 1/2 by 3 in. garboards and sheer strakes 3/4 in. and plating 1/2 in. The floors will be 1 1/2 by 1 1/2. There will be 5 bulkheads and a steel deck. The 3 cylinder compound engine will be 15 1/2 by 26 and 42 by 22 in.; the Scotch boiler 12 1/2 ft. long by 18 ft., carrying 170 lbs.; and the wheel 7 1/2 ft. diam. The yacht will be fitted with condensers, steam steering gear, and a complete electric light outfit of 135 lamps and a search light of 2,000 candle power. She will also carry an ice machine, while a system of fans will be fitted to force either hot or cold air through the cabins. The arrangement and fittings of the cabins will be very complete and elaborate.

CORINTHIAN NAVY.—The New York Bay Squadron's committee on education has arranged for a lecture at the Hotel Marlborough, Broadway and Thirty-sixth street, on March 19. The lecturer will be ex-Sergt. Wm. Henderson, U. S. A.; the subject, Signaling. The East River Squadron has elected T. Fleming Day, commodore and W. E. Torrens purser. The New York Bay Squadron has elected Paul E. Vollen commodore, and H. F. G. Wey purser. The first regatta of the season will be given under the Long Island Sound Squadron's auspices at New Rochelle on June 27. The board of managers have named Aug. 1 to 15 as the time for the annual meet. The meet will be at River-side, Conn. The locality is an excellent one, affording daily communication with New York and giving an excellent anchorage and camp grounds. At the next meeting of the navy a committee on plan and scope of the meet will be appointed. The regatta committee is now framing rules for the new twenty-five-footers and raters. The new rules will be published shortly.

RHODE ISLAND Y. C.—The fourth annual dinner of the Rhode Island Y. C. took place in the Narragansett Hotel, Providence, on March 2, nearly 200 persons being present, including Com. John C. Soley, Massachusetts Y. C., commanding officer of the Massachusetts Brigade of Naval Militia; President J. W. Miller, Stonington Steamship Co.; Maj. W. R. Livermore, U. S. A.; Gov. John W. Davis, ex-Gov. Herbert W. Ladd, Lieut. Franklyn J. Drake, U. S. N.; Com. D. J. Burdick, Fall River Y. C.; Judge George M. Carpenter, Hon. Henry W. Hayes, A. G. McVey, yachting editor of the Boston Herald; Hon. Joshua Wilbour, Col. Samuel P. Colt, and Judge L. Bar-n B. Colt. The dinner was a great success, the speeches being specially good. Com. Soley spoke on the subject of the Naval Reserve; Lieut. Drake delivered a very interesting address on the possibilities for speed in the steam craft of the future. Designer McVey spoke on the new 46ft. class. The menu was embellished with a number of severely nautical designs.

TOWER RIDGE BOAT CLUB.—The newly organized Tower Ridge Boat Club, of Hastings-on-Hudson, are patiently waiting the disappearance of ice in the river, to start the crib foundation for their club house, which Architect O'Brien, of the New York Central Railroad staff, hopes to have completed by May 30. The officers are: Com. Wm. Christie; Vice-Com. T. K. Fraser; Sec'y, E. Searl; Treas., Wm. Fanning; Capt., A. I. Jones; Meas., H. C. Brown; Trustees, T. K. Fraser, Wm. Fanning, Rev. J. A. Norris, Dr. E. N. Brandt, A. H. Smith, T. M. P. Mills, H. C. Brown, Wm. Ross, Jr., and A. T. Jones. Committee on Membership, T. M. P. Mills, H. C. Brown, T. K. Fraser, Wm. Fanning, Dr. E. N. Brandt, Wm. Ross, Jr., and A. T. Jones. The membership has reached sixty, and about thirty boats will fly the flag at the opening of the season.

OYSTER BAY Y. C.—At a meeting of the directors of the Oyster Bay Steamboat Company, held at the Bay View Hotel, at Oyster Bay, L. I., on March 7, the corporation's dock at Oyster Bay with the land adjacent owned by the company, was leased to the Oyster Bay Y. C. for 21 years at a yearly rental of \$850. By the conditions of the lease the club agrees to keep the dock in good repair, and to allow the landing of regular passenger and freight steamers at all times when necessary, and at the expiration of the lease to turn the property over to the company in as good condition as when it was leased. The club will erect a handsome house near the dock.

SEAWANHAKA CORINTHIAN Y. C.—On March 10 there was a very large attendance at the club house to listen to the lecture by Mr. Onas. A. Post, of the lecture committee of the club, on "The Night Sky from the Deck of a Yacht, and How to See It." Mr. Post attempted the difficult task of compressing a subject of almost unlimited magnitude into an evening's talk, and succeeded admirably, retaining the interest of his audience to the end. The lecture, which we hope to publish shortly, was illustrated by a number of stereopticon views from negatives taken by the Lick telescope.

ALVA, steam yacht, Mr. W. K. Vanderbilt, reached Cadiz on March 7.

PORTLAND Y. C.—The officers elected at the annual meeting on March 4 are: Com. C. W. Bray; Vice-Com. Walter Woodman; Fleet Captain, W. Willis Gould; Sec. Chas. F. Flagg; Treas. C. F. A. Weber; Meas. Jos. H. Dyer; Fleet Surgeon, Charles D. Smith; Trustees—Commodore *ex-officio*, Wm. Senter, J. Hall Bord, Benj. W. Jones; Regatta Committee—Commodore *ex-officio*, A. M. Smith, R. S. Rand, Willis E. Carter, Wendel Kirsch; Membership Committee—C. J. Farrington, E. H. York, J. Hall Boyd, Secretary *ex-officio*; House Committee—Wm. Willis Gould, Chas. E. Rolfe, Secretary C. D. Smith and Vice-Commodore Owens declined reelection. The anniversary dinner will be held on April 26. The annual spring cruise will take place on May 28; return June 1. The annual challenge cup regatta will be sailed on June 11, 10 A. M.

NAVAL COURTS MARTIAL.—The Army and Navy Publishing Company, Washington, D. C., has just issued a pamphlet on Naval Summary Courts Martial, compiled by Lieutenant Lemly, U. S. Navy, and Lieutenant Denny, U. S. Marine Corps, attached to the Judge Advocate General's Office, Navy Department. The pamphlet treats of the constitution, composition and jurisdiction of summary courts, of the trial and its incidents and includes all the recent rulings and decisions of the Department on subjects that relate to such courts. A complete "form of procedure" is appended. It will be a valuable little reference book, a reliable and convenient guide to naval and marine officers detailed for court martial duty.

ANOTHER OCEAN TRAMP.—Captain Wm. A. Andrews, the bold and hardy navigator whose name is familiar in connection with the Nautilus and Dark Secret, is about to undertake another dangerous and foolhardy voyage; this time in a flat-bottomed centerboard dory, 15ft. long, 5ft. beam and 2ft. depth. His intention, as announced, is to sail for Europe and thence to China and San Francisco.

KATHLEEN.—An advertisement of this well-known 30-footer will be found on another page, as Mr. Whitlock has decided not to race her this year. She has made an excellent record in each of the two seasons that she has raced, and is still good enough to add to them this year, as she has not yet been outbuilt.

CASTANET.—We call attention to the advertisement on another page of Messrs. Fay & Co., who have for sale the 32ft. keel yacht Castanet and several other cruisers, also the 2½ rater Trouble, some a fast boat that comes within the new 25ft. corrected length class in New York.

FORTUNA, schr., will be towed from her winter berth at Beverly to Boston in a short time, where her foremast will be replaced, her headgear removed and a pole bowsprit shipped, and lead will be added to her keel.

SALADIN.—As usual, Mr. Fowle is the first afloat of Eastern yachtsmen; his 30-footer Saladin was launched last week, and will be cruising about in a short time under a trysail.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

C. D. S.—We have forwarded your letter to Von W.

W. B. J.—We do not know T. Gardner as a gunmaker.

P. W. G., Boston, Mass.—Pattie of Portland is not registered.

D. W. R., Vancuborough, Me.—Consult our advertising columns.

F. B., Binghamton, N. Y.—We do not know. You had better advertise for one.

F. J. B., Troy.—Copies of the moose portrait are for sale still, and may be obtained by addressing Lucius L. Hubbard, Cambridge, Mass.

J. L. B.—It will be safe to use the powders so far as the material of the gun is concerned, if you do not load too heavily and the powder burns normally.

R. M. S., Philadelphia.—Can you give me the address of builder of portable houses convenient to the Adirondacks? Ans. Norman Barbour, 81 New street, New York, is agent for a portable house.

CONSTANT READER.—In answering your question as to a trainer residing within 100 miles of Chicago, we inadvertently omitted to state that the Riverside Breeding and Training Kennels, Riverside, Ind., are located 90 miles from Chicago.

J. H. B., Punkapog.—Can you tell me how it is possible to keep prairie dogs out of a sheep pasture? Ans. We know of no way. They can be kept down by trapping and shooting. Perhaps some of our Western sheep herding readers can give J. H. B. points on this.

J. E. L., Carthage, Mo.—A makes a wager that a dog which had lost an eye would be demerited on that account; B says not. Ans.

A is right. Total blindness disqualifies, and the loss of an eye is certainly a demerit, and under a proper judge will be scored accordingly.

BEAGLE.—I see some beagle hounds advertised in your paper for \$5. Do you think they would be any good at that price? What is a good beagle hound worth? Ans. 1. The breeding is good. 2. All depends on breeding and training, anywhere from \$10 to \$50. Of course a good bench winner will come much higher.

J. H. Y. E. B., Cazenovia, N. Y.—I am the owner of two rough-coated St. Bernards; bitch, Francesca (A. K. R. 3,017), and a dog puppy, out of her by a dog called Prince, owned in Boston, said to be a registered animal. I bought the bitch of an old lady's estate; and would like to know how to have proper transfer made on A. K. R. books, also how to register the puppy? Ans. The A. K. R. was purchased by the American Kennel Club, and your dog must now be registered in their stud book. The fee is \$1, and blanks and all information can be obtained from A. P. Vredenburg, 44 Broadway, New York city.

PHEASANTS, SYRACUSE, N. Y.—Where can I obtain colored plates of the various kinds of pheasants. Where can Elliott's Monograph of the Pheasant be obtained and at what price? Please give me an idea of the nature of the work. Ans. This magnificent monograph was published in London by the author in 1872. The subscription price was \$27. Only 150 copies were printed and all were sold. It can now only be obtained by chance. It brings now in London \$50. At the Ives sale last week a copy was sold for \$190, which was cheap. We have a little book called "Pheasant Keeping for Amateurs" which has one colored and nine uncolored plates. Price \$1.50.

ALBUO, Webb, Mo.—1. Will you please tell me if any town in any State has the right of eminent domain, as regards the streams on private property in said town? 2. Can the State specially legislate, giving towns the right to control the fishing on streams belonging to private individuals? 3. If so, would the law be constitutional? 4. Can the individual have any redress, provided the law is unconstitutional, if he has been fined in accordance with such a law. Ans. 1. As to the right of eminent domain we advise you to consult a lawyer. 2. The State undoubtedly has the power to give towns right to legislate respecting fishing in streams belonging to private individuals, just as the State itself legislates directly as to such waters. 3. The constitutionality of many of our fish and game laws can be determined only by carrying the test cases to the highest courts. 4. Yes, if he thinks it will pay to fight it out in the courts.

From "OUTING." Copyrighted

It is of the utmost importance to Anglers who contemplate taking a trip to Florida for Tarpon Fishing that they provide themselves with proper tackle.

Our Noib Wood Tarpon Rod, patent compensating steel pointed Reels, Tarpon Lines and Snells on forged hooks, made expressly for this kind of fishing, have stood the most severe tests and given perfect satisfaction.

Send 10 cents (to cover postage) and we will mail you our 136 folio page illustrated catalogue.

FISHERMAN'S AUTOMATIC REEL.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR The Automatic Reel.

FIRST—It will wind up the line a hundred times as fast as any other reel in the world.
SECOND—It will wind up the line slowly if the angler chooses.
THIRD—No fish can ever get slack line with it.
FOURTH—It will save more fish than any other reel.
FIFTH—It will prevent tangles, lines and snells from being broken by large fish.
SIXTH—It enables the angler, and makes it desirable, to use lighter tackle.
These claims have been substantiated by the most skillful fishermen in America and Europe.

This reel is manipulated entirely by the hand that holds the rod.

GUNNERS.

Gunners, read this and practice till you can hit anything that hops, runs or flies. One pound of No. 1 sh gives you 120 rounds with your own gun. Practice limited only by shooters enthusiasm. Our pneumatic auxiliary gun barrels can be inserted in any ordinary breech-loading shotgun in a moment, converting your gun in an air gun to practice with. By pulling trigger of your gun precisely as if using shells, a single pellet of No shot is discharged that will break any clay pigeon or kill small game at short range. No fire, smoke or no and no trouble to load; can be used anywhere. Will teach you to hit with centre of load and kill neatly instead of crippling. Such practice is invaluable to any club shooter or sportsman. When ordering give gauge and length of your gun barrels. Sold by dealers or samples sent on receipt of price, \$3.50; 10, 12 and 14 gauge only.

BIRD PORTRAITS.

Some Native Birds for Little Folks.

BY W. VAN FLEET, M.D.

A handsome imperial octavo volume of untechnical descriptions of the lives and ways of fourteen American birds. The list comprises:

Robin, Chickadee, Kingfisher, Great Horned Owl, Bobolink, Blue-jay, Woodcock, Nuthatches, Meadowlark, Ruffed Grouse, Cedar Bird, Kildeer, Summer Duck and Crossbills.

Each of these birds is beautifully illustrated by the photogravure process from drawings by Howard H. Darnell. The paper is substantial, and the 147 pages of large, clear, handsome type contain just the sort of information necessary to make little folks better acquainted with the birds described, and to awaken a taste for extended study. Everything has been done to make the volume one of the most handsome gift books of the year. Price, postpaid, \$3.00. FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.

**BULL-TERRIERS
FOR SALE.**

The property of H. A. HARRIS.
Owing to business engagements fully occupying my time, I have decided to sell my entire kennel of bull-terriers, including the following well-known dogs:

No. 1. CHAMPION JUBILEE (A.9100),
by Bendigo ex Queen, whelped June, '88, weight 35lbs., winner of over fifty prizes in England and America.

No. 2. GREENHILL GENERAL,
by Prince ex Kit, whelped July, '89; weight 50lbs. Just imported. A sure winner.

No. 3. LITTLE DONOVAN.
by Duke ex Tany, whelped May, '90; weight 24lbs., winner of first last Birmingham show and undoubtedly the best light-weight bull-terrier alive.

No. 4. STANLEY BILL (A.20,016),
by White Wonder ex White Violet, whelped May, 1890.

No. 5. WHITE VIOLET,
by Charlie ex Rose, whelped April, '87; weight 40lbs. Winner of many prizes in England. Never shown in America.

No. 6. MY QUEEN (A.12,679),
by champion Grand Duke ex champion Maggie May, whelped July, '87; weight 50lbs.

No. 7. COUNT NELL (A.16,499),
by champion Count ex Bertha, whelped December, '87; weight 38lbs.

No. 8. STANLEY BELLE (A.20,017),
by White Wonder ex White Violet, litter sister to Stanley Bill.

No. 9. STANLEY ROSE (A.20,018),
by White Wonder ex Marguerite, whelped July, 1890.

	ANSWERS TO CORRESPONDENTS.

STOCKING LAKE ONTARIO.

IN September last we published an account of the great popular movement, led by many representative New York men, in behalf of an increased supply of cheap fish food for the State, and particularly for Lake Ontario. The circular widely distributed by these gentlemen, who are officers of the Anglers' Association of the St. Lawrence River and of the Caledonia Fishing Club, together with influential editors and judges, showed the backward position of New York, as compared with some of the other States and the Dominion of Canada, in the efforts to increase the whitefish, and indicated the steps necessary for the future of fishculture in the region. The specific demands of this undertaking are: Liberal and systematic appropriations for artificial hatching, a strict close time during the spawning season, preventing the capture of undersized fish, efficient protection of stocked waters, and coöperation with the national Government and with Canada in all measures necessary to secure the desired object.

The comparative neglect of Lake Ontario has become a matter of notoriety, and the appeals of public-spirited gentlemen have enlisted the attention not only of the Fish Commission of New York, but, also, of the national Congress. On the part of the New York Commission the sympathy with the popular desire has found expression in their published determination to largely increase the introduction of whitefish and ciscoes into Lake Ontario next spring. In our issue of Feb. 26 we set forth the measure taken by the Government in behalf of Lake Ontario. An appropriation was made by Congress for the establishment of a hatchery in the State of New York, near the St. Lawrence River, and it is intended that this establishment shall have a capacity of 100,000,000 whitefish eggs and 1,000,000 salmon eggs, together with troughs for 1,000,000 salmon fry and an extensive system of rearing ponds. This appropriation was made

contingent upon the condition that the U. S. Commissioner of Fisheries is satisfied that the State of New York has taken necessary measures to regulate the fishing and protect spawning fish in the waters to be benefited by fishcultural operations.

In some of the correspondence growing out of this subject, and particularly in a letter written by the Superintendent of Canadian Fishculture, it is stated that the U. S. Fish Commission, like some other organizations, holds to the doctrine that artificial breeding without the aid of wise protection will suffice to insure a permanent fishery. The real position of the Commissioner of Fisheries is so clearly shown in his report accompanying the bill for the establishing of a fish hatchery for Lake Ontario that we need only refer our readers to that document to show that this criticism is groundless.

The more we look into this subject the more we are astonished at the little attention bestowed upon Lake Ontario. Since the beginning of whitefish hatching by Canada in 1868 that government has deposited annually about 16,000,000 of fry on the average, but very few of these have been placed in Lake Ontario. For the years 1887 and 1888 the output of whitefish by Canada in this lake was less than 10,000,000. From 1883 to 1890 the U. S. Fish Commission has deposited in Lake Ontario 40,097,000 whitefish fry.

One of the essentials of success in fishcultural operations is their systematic conduct upon a large scale, and this is provided for in the national legislation above referred to, which contemplates a hatchery with a capacity of 100,000,000 in a season; and we look forward with bright anticipations to the future of the whitefish in Lake Ontario, under the combined activity of a healthy public sentiment and a wise State and national policy.

POT-HUNTERS AND SPORTSMEN.

AS the bad example of a professing Christian is worse than that of a non-professor, so are the law-breaking and selfishness of professed sportsmen immeasurably worse than the evil deeds and unfair methods of those who make no pretension to the name which should imply respect of law and the rights of all.

Too many sportsmen have a feeling that the laws are not made to restrain them but only the market-shooter and pot-hunter, and too many are apt to measure success by their score. Indeed, there are more than would be willing to confess it, who feel pride in making a large bag, and humiliation in bringing home an empty one, and fewer than boast of it, who are content with small things well done.

In sober truth, this class of peripatetic philosophers is almost confined to those who use the gun and rod as the excuse for a ramble, or go hunting without a gun and fishing without a rod.

Nothing is expected of the market-shooter but violation of law and complete hoggishness under cover of the law, and if he disappoints this expectation he is credited only with fear of the law or ill luck even when his example should shine like a good deed in a naughty world and lead more pretentious men to better practice.

But the eyes of all men are upon the vaunted true sportsman, not as one above the law except as he needs not its restraints but as one who more religiously than all others shall abide by it and uphold it, even when its restrictions run contrary to his desire and his judgment.

He must be an exemplar of strict adherence to its letter, for if his practice accords not with his precept, to whom shall we look for faithfulness?

Necessity and desire for gain are stronger incentives to infraction of law than the gratification of the sporting instinct. How can we expect those who are impelled by these to abide by the statutes, when the sportsman sets the example of disobedience?

GAME preserve fences may be pig-proof, horse-high and bull-proof, but they cannot keep in the imported pheasants. The country along the New York and New Jersey line between Greenwood Lake and the Delaware River has been stocked with English pheasants, which have strayed from Tuxedo Park, the Stuyvesant estate at Tranquility, and Mr. A. S. Hewitt's preserve at Ringwood. There is abundant cover for the game in the Warwick and Shawangunk mountains, and it is to be expected that they will spread over a wide stretch of territory. This rule holds good in greater or less degree in the neighborhood of all game preserves.

SNAP SHOTS.

THE bill now before the New York Legislature, as amended, printed and ordered to second reading in the Assembly, differs from the text as printed in our issue of Jan. 24. The present bill provides for five commissioners, one from each judicial department, the first appointments to be for one, two, three, four and five years respectively; subsequent appointments (as the first terms expire) to be for five years; the office to be in Albany. It makes the deer hunting season Aug. 15 to Nov. 1; hounding, Sept. 10 to Oct. 11; hare, rabbit, Sept. 1 to March 1; wildfowl, Sept. 1 to March 1; quail, Nov. 10 to Jan. 1; woodcock and partridge, plover, bay snipe, etc., Sept. 1 to Jan. 1; robins, blackbirds, meadow larks, Oct. 1 to Jan. 1; trout, May 1 to Sept. 1, none less than 6in.; salmon trout and landlocked salmon, May 1 to Oct. 1; black bass, Oswego bass, May 30 to Jan. 1, none less than 8in.; muskallonge, May 29 to Jan. 1; salmon, March 1 to Aug. 15, none under 18in. There are numerous exceptions relating to localities as to both game and fish. The act if passed will take effect immediately.

The West Jersey Game Protective Society is an association with a membership of over one thousand, having control of the shooting in six counties of the State. Their charter empowers them to tax non-residents for the privilege of shooting game \$5 the first year and \$2 annually thereafter. The membership is chiefly composed of non-residents. The society is governed by a board of directors, there being one from each county. The income from license fees is devoted to the payment of officers to enforce the game laws, and to the purchase of live game for stocking. There is a large class of residents who are restive under the rule of the society. A bill to annul its charter was before the Legislature last year, but did not pass. This year a similar bill has passed the Assembly by a vote of 48 to 6. The non-residents will find little comfort in the new "Home Rule" measure, however, since it increases the tax he must pay to \$10 per year, with \$1 to the clerk who makes out the paper for him. This applies to the entire State. The law is to be enforced by county game commissions of ten members, and the proceeds are to go to enforce the laws and increase the stock of game.

A recent Canadian decision, as reported in the *Canadian Law Journal*, relative to shooting rights on navigable waters, was this: Ownership of land and water (though not inclosed) gives to the proprietor, under the common law, the sole and exclusive right to fish, fowl, hunt or shoot within the precincts of that private property, subject to the game laws when pertinent. And this exclusive right is not diminished by the fact that the land may be covered by navigable water. The right of navigation, where it exists, is to be used so as not to unnecessarily disturb or interfere with the enjoyment of the subordinate private rights of fishing and shooting. The public can only use the water for *bona fide* purposes of navigation, but not so as to occupy the water for the purposes of fishing or fowling when the soil underneath is the private property of one who objects to such occupation.

Size is rapidly displacing number as a criterion of success with the rod. It is the big fish, not the big string of fish, that is shown with pride among men who claim to be true anglers. They tell a good story of a fellow from this city who went up to a New Hampshire lake last summer where there were several New York anglers, and having succeeded in catching a huge string of diminutive bass, brought in his spoils in triumph and exultation. The cold, not to say scornful and sneering, reception given him by every fisherman in the party so dampened his foolish pride that he cut short his stay, and quickly sought other fields of renown. This growing contempt for the fingerling fisherman is thoroughly healthful. It means everything for the fish supply.

The United States Supreme Court rendered a decision last Monday in the Massachusetts menhaden fishing case, sustaining the decision of the Massachusetts Supreme Court that the State has jurisdiction over the waters of Buzzards Bay and may regulate the fisheries therein. This ruling will have an important bearing on the menhaden legislation of other States.

The Sportsman Tourist.

IN THE REGION ROUND NICATOWIS.

XXI.—GRAND FALLS AND SPAWNOK.

WE went down stream in the chilly morning, saying good-bye to our old heron as he sat hunched up under the trees on the sunny left bank. Off behind a swamp we heard a partridge drumming, but not being anxious to wait in the cool, did not encourage Father's going after him, and at Trout Brook Landing we were willing to go ashore and exercise to get warm.

It lacked an hour or two of noon when we reached the head of Grand Falls. These are a mile long, rough water all the way, ending in a natural fall, improved for driving purposes by a rolling dam about 14ft. high. That is my own version on my own judgment; Well's Water Power of Maine gives the falls as 200 rods, the total fall 100ft., the last pitch 20ft. I do not know about the length of the falls, but that carry is full 320 rods by my reckoning, and I carried on it a varied load from my slippery jacket and the rifle down to whatever could be clutched with the other hand; if any benevolent-minded person said that it was twice as long as Nicatowis carry I should try to believe him unless he could prove that the jacket was just twice as slippery as it had been there. I do not pretend to know the total descent of the falls, though it is considerable. But as to the last pitch I have an opinion, though rather than quarrel with Well's Water Power, I would compromise, stretching the height from 14ft. to 15ft. if the opposing party will throw in the other 5. It is a good fall, though, and pours down a flood of white water.

Father and I each lugged a light load across, but Jot, after running ahead a little to look out the place, said "he guessed he could go it all right." It is bad water at any time; even in a dry season Big Sebattis declared that it was "berry rabbidge water" and took "great deal judgment" to pole up it; but this year the stream was 2 or 3ft. higher than Father had ever seen it in the fall, and the increased volume of water pouring down over the falls made them much worse than usual. The rains had so swollen the river that it boiled down over the rocks in great white rapids that showed a brandy-colored edge above the yellow foam when the sun struck on them, rapid after rapid, increasing as they descended until, just before it made ready for the grand leap, it was all foam. After waiting some time, part of the time on the bridge watching the water and part of the time in the bushes basking in the hot sun, I heard the clink of the pole on the rocks, and soon the Lady Emma appeared slowly picking her way through the rapids. Presently she shot beneath the bridge and Jot landed out on a large rock on the right bank just above the Grand Pitch. He did not say much about the place except that there was "some great kywashing around up there," and that the worst of it was not in sight. Several times, he said, when he put his pole down the whole length it did not touch bottom—a great danger when all may depend on getting pole-hold and snubbing at that particular place. Pointing to the last rapid above the grand pitch, the worst of those in sight, he said that he went through several places as bad as that. Many expert watermen would not have cared to run Grand Falls this year when Jot did. Let me forestall the question by confessing that I am altogether too much of a coward to have desired any part in it myself.

We took time to view the grand pitch from the dam both above and below and also crossed the stream to the left side where there is a great, square, out-hanging rock, which some poor witting undoubtedly either has named or will name the Devil's Pulpit. Let it be named Joe Mitchell's Rock, for here it was, in full view of the magnificent panorama of the river, the falls and the mountains below, that old Joe used to have his camp and his eel-pots, and here was enacted that laughable story with which many an audience has since been entertained, of Joe Mitchell's eels and Stickney's cow.

Just before we embarked I found a family of snakes coiled up in the sun. It was mean to do it, but I threw them into the swift current to see them swim. They came straight to the shore, riding on the surface of the swift water, their heads and breasts reared up, their backs arched in undulating advancing curves. They were Virgil's pythons coming from Tenedos, vindicating his description point for point, and imparting to it a new forcefulness, it seemed to me.

From the Grand Falls down the stream is quiet, with low banks and few camping places. The hot sun made it pleasant for us, but in the treetops we could hear a wind howling. We glided along quietly, occasionally scaring up an old heron that would keep just within tempting gun shot of us, until we came to Spawnok Lake, which is threaded on the stream like a single great bead. On the lake it was blowing a gale. From the shelter of the inlet we could see the big, white-capped waves, black and ridgy, rolling in to us across the shoal ground. On a lake one never sees the smooth, glassy, green rollers of the sea shore; lake waves are blue, black, or leaden, with wrinkled fronts, and they rise up very straight on the foreside as they are driven on by the wind which they never long outlive. We looked at the lake before we started out, and planned how we should be able to bear up against the wind. But this was not like that day when we were windbound at Nicatowis, nor like that other when we were driven down from the shoal and rocky ground at the foot of Caucomgomoc with the odds against us. We could see the worst of the waves, and the lee shore was clear sand. We laughed as, within the haven of the inlet, we took off our head gear to prevent its being blown away, tucked the tent down over the load and the gossamer over myself to keep the water off, and put out. It was rough, about as rough as it could be on a lake no larger than Spawnok, and hard work for the paddlers, who had to do their best to prevent being driven back on the shoal ground and capsized; but it was good fun for the passenger with nothing to do but be rocked like a sea-gull and admire the skill with which the Lady Emma was held on her quartering course so long as the wind permitted, and the moment a gust came or a larger wave than common lifted his crest, was turned head to, and eased off, so that with an uplift of the bows she rode out what would otherwise have come near to upsetting her. Maps give this lake the name of Saponic, but that is not its proper title. The real name is Pawnook, or Barnook, and it means "an opening in the mountains"—an appropriate name for this sudden expansion of the stream

just as it reaches the foot of the massive Passadumkeag Mountain sloping down to it on one side, and the granite studded hills which encircle it on the others. Pawnook was the name the Indians gave it seventy years ago; for in 1828, or within a year of that date, when my grandfather went up the Passadumkeag with some Indians and S. R. Peale, of Philadelphia, a member of Long's expedition in 1819-1820, and of Commodore Wilkes's in the forties, the Indians gave this name and this meaning. If we cannot restore the old Pawnook or its softer equivalent, Barnook, let us keep the vulgar Spawnok, and not give up name, association, meaning and everything for the barbarous Saponic proposed by some unknown map-maker, or corrupted by some careless printer.

The wind was so strong that we could not keep the course we wished to, but instead of going directly for the old bark landing on the left where we intended to camp, we were forced to head up into the wind a great deal more than we wished to, until, when nearly half a mile out from the shore, where we wished to land, we could take advantage of a lull, turn and run in shore. We did not take in much water after all, thanks to good management. And we did pass a very pleasant evening on that camp ground; though being the last, it seemed just a little lonesome.

XXII.—"AND SO HOME,"

The next morning we started out again—another glorious day, bright October weather, not too cold, but every morning the trees waking to find themselves redder than before. Just as we entered the outlet Father killed two wood-ducks at a shot. A little below comes the fall called White Horse, which Father and I walked past as only one man was needed in handling the canoe and our extra weight would make it harder. I remember that I had been allotting on the fun of running the quick water here and at Lowell and lost both.

Many were the pleasant reminiscences of this day, little things seen in passing—a blackbird in the bushes, a flock of ducks flying, ship-timber floating slowly down stream, an old heron that like all those we had seen this trip was so tame that we repeatedly came within a few rods of him. At one place we heard a partridge drumming, and Jot and I remained in the canoe looking over the side at the wriggling creatures in the water, while Father went off after the partridge. In the course of half an hour he returned with his bird, having successfully located him and hunted him up when he was drumming on the top of a granite rock some five feet high.

Down to Lowell we floated quietly, but below there the stream is broken by many rips, "nothing at all for water," as Jot would say, but very delightful for the canoeist, who loves to feel the quickened pulse of the water and to see the canoe, skillfully guided, swerve, turn, or shoot ahead as directed. Most of these rips had water enough on them to be run on the paddle, but sometimes we used the pole a little. With a poor canoeist in the stern every one, insignificant as they were, would have been a fresh vexation, for we should have been run upon gravel beds, scratched over little stones and bumped on big ones, which hurts one's feelings more than it does the canoe. But with Jot all was different. He does not need our commendations as woodsman, hunter, waterman, cook, or honest man, but he has them, none the less.

O, the perfection of a day, the perfection of a cruise—to glide over still waters in the hot sunshine, to dance with the ripples down the rapids, the trees standing on both sides robed in scarlet. That it was the last day, so soon to be over, only made us grasp the more greedily at its pleasures; we drank in our environment with the unslakeable thirst of Gargantua, and a hundred pictures of scenes we passed are held in memory as vivid as the moment we passed them. How we did enjoy the day! like others that had preceded, rainy and sunny alike; looking back we would not have had any of them other than as it was. The weather and the events seemed to have sympathized from the first; we saw each place in the mood most becoming to it. We would not for a world have missed the exquisite delight of that day about the Pistol region, and Fourth Lake would not have shown half its proper dismalness on any but just such auspicious days as we spent there.

Just above Rocky Rips, Father shot a sheldrake flying overhead and brought him down into the water; we saw him fall and swim a space; when we were almost upon him he disappeared. We searched everywhere for him, scanning the bottom up stream and down, to see that he was not clinging to the weeds beneath the water, and beating the banks to drive him out if he were hiding. Failing to find him, we went ashore to take our last meal together. After dinner we went down stream over Rocky Rips, Lightning Rips, Scalp Rock—natives call it Sculp Rock; it commemorates some old Indian fight probably of the last century, and there was another at Spawnok—and over all the other numerous rapids on the way. 'Tis too bad not to tell a good joke on one's self. I was pondering over the escape of the sheldrake, going over all the possible escapes open to him, how he looked, how he was wounded, which way he went, and all that, when only a few feet from us a pickerel flipped out of water with such suddenness that I was scared into speaking. Well, what did I say? What but "There's your duck, Father," and got well laughed at as I deserved, for the duck had been shot miles behind and was either dead or recovering long before.

We went down through the wide meadows, the booms, the rafting-out place, to the town of Passadumkeag. It was not pleasant to see houses again; we always dread the coming back. But we repacked our goods into smallest compass, brought out the neglected clothes brush and clean but crumpled collars, straightened our hat brims and made ready to go down to the railroad station and so home, as loath to return as we had been anxious to go. *Sic semper.*

FANNIE PEARSON HARDY.

[Next week we shall begin the publication of a series of papers by Miss Hardy, entitled "Six Years Under Maine Game Laws." As the topic is one of importance, and one about which our correspondent is well qualified to write intelligently, the papers will be read with interest. It is well known that in a large section of Maine the present game and fish laws are disregarded. If Miss Hardy shall carry out her expressed intention of telling the public how this unfortunate condition has come about and shall succeed in pointing out even a partial remedy, she will have performed a public service of no mean magnitude.]

WILDFOWL IN OREGON.—III.

HUNTERS habitually refer only to their successes. Seldom do you hear much about their failures and their hardships; but then hunters at best are only human beings in disguise. Observation and experience impresses me with the belief that a record of the failures and hardships in the life of any persistent sportsman would constitute more than half of his diary. The rains, the chilling fogs, the cold winds, wet feet, muddy duckboats, frozen decoys, tired bones, hungry stomachs, all these are seldom referred to; neither is much said about empty game bags; but without experiencing all or most of these vexations and afflictions no man was ever a true hunter. You can tell the old hunter from the tyro simply by his patience in adversity and his calmness in distress. He never murmurs; he never wants to go home simply because things have gone a little wrong or the ducks don't fly. Hunting is a safe cure for chronic. It either makes better men of them or makes them stay at home where they belong.

Dan Howe and I left Portland at 2 o'clock A. M. one dark stormy night on the old hunting boat for a shoot around Sturgeon Lake on Sauvie Island. It was not only dark, but black, and the rain was out of Oregon's old original stock, the same that prompted envious neighbors to dub this the "Webfoot" State. I concede that it does sometimes rain in this country for six weeks, day and night, without cessation. I concede that the word Oregon affects the majority of Eastern people somewhat as a mild attack of the ague affects them, and that in their minds it is synonymous with mists, clammy feet and influenza, but these assertions about the birds, the animals and the people all being web-footed, I assure you are not strictly true. As a matter of course it rains; but ordinarily the rains are of such a mild, gentle little tear-drop kind that nobody seems to feel like seriously protesting.

But this particular night was very stormy and boisterous. An hour brought us to the "breakwater," through which we were hurled into Willamette Slough. This breakwater is a thorn in the side with every Portland hunter. It is built at the entrance to the Slough and is an extremely dangerous place in the night. It is always a relief to be through it, either going or coming. Another hour brought us to the mouth of the Gilbert River, a navigable tide stream of the island, up which we started under a good head of steam. Ten minutes more and the prow of the boat was pointing to the north star, while the stern was almost under water. In fact, the water was washing into the fire room. We had run square upon a sunken log, and apparently were there to stay unless the boat sank. Every usual expedient in such cases failed to bring us off, so Dan and I, against the protestations of the captain, launched our little duck punt, which was about the size and shape of an ordinary coffin, and pulled up to our destination, leaving the dogs to find their way as best they could along the bank. It was a long, laborious pull; but perseverance prevailed, and we arrived in due time at the narrow ridge which separates Big and Little Sturgeon.

It rained unusually hard all day, but the shooting was excellent. The birds were continuously flying over this ridge, back and forth between the Sturgeons; and taking our station in their fly-ways, we killed all we could carry. As I have remarked before, it rained. Our luncheon got wet and resolved itself into a kind of soft hash. Its sickly, mysterious appearance was enough to appease even a hunter's appetite without partaking of it. Night came on early, and the last we could discern of the hunting boat was her white steam rolling up over the trees away down the Gilbert, as she puffed and pulled in her frantic efforts to free herself from the embrace of that log. We learned afterward that she pulled off at dusk, whistled herself hoarse for us and then steamed back to Portland. But we were too far off to hear her, and could not have reached her in time if we had.

As the darkness settled down upon us we began to think serious thoughts. A night on Sturgeon Ridge; in such a wind and such a rain, was not an agreeable contemplation. Dan suggested that we try to reach an old hunter's cabin which he remembered to have seen away at the upper end of the ridge. We acted upon the suggestion, hung our ducks in a tree and struck out for this haven of rest.

It was very dark, but by following the bank of the lake we arrived at a point opposite that at which Dan supposed the cabin to be located. Feeling our way through the dripping brush for half an hour we found the cabin, entered, scratched a match and surveyed our quarters. We found ourselves in a little box about 8ft. square, with no sign of a roof, and such evidences of cattle having been there as made hip boots a necessity. We got out of that place; and stood under a tree to talk the matter over. It was raining and blowing just as hard as ever; and was getting cold. Finally we concluded to build a fire and try to get warm. Did you ever try to build a fire of a dark, rainy, windy night with green, wet wood, benumbed hands and a match?

Well, as the last match flickered and went out we stood there shivering and silent. I don't know what Dan was thinking about, but I was thinking something about home, hot supper and a blazing fire in the hearth.

The wind moaned and the rain drizzled down our backs, the only variation in the monotony being the hoarse whooping of cranes, the weird honking of geese, and the rude quacking of ducks, while their restless thousands made the air tremulous. It seemed as if the air itself was some living thing, shivering as we were, such a strange, confused, incessant noise did the wings of the uneasy water-fowl make.

But we must do something. It would be at least ten hours until daylight and it would not do to stand there all night. So we sneaked away into the darkness like two thieves, or two tramps under orders from the police to move on. Shortly we struck a grassy swale and following it came to an old hay barn built up on stilts. We could not get in, but hearing hogs grunting and snoring underneath, we concluded that they might go out on watch a while and give us a chance to get warm. Of course the dogs eagerly took off our hands the job of ejectment, and, shame to say, we crawled into their warm beds. No, not exactly into them, but we compromised with our pride and got as close as we could. Then the fun commenced. It was very evident that our intrusion was distasteful to both the hogs and the fleas; but it was fight or freeze, and we prepared to fight. The battle

lasted five hours, but the perseverance of the swine and the perseverance of the fleas won the field. Imagine our surprise, however, when emerging from this den we found that the clouds had broken away, the wind had stilled and nearly a full moon was smiling down upon us.

The air was full of water fowl seeking their feeding grounds, for as is well known, they feed as readily by moonlight as by daylight, particularly when they are hunted a great deal.

We came to a little round wapato lake, and the boom of a gun away up the island suggested that we might mix a little fun with our night's wretchedness. So we sat down on the bank of that little pond and potted about two dozen mallards by moonlight. It is a reprehensible practice, however, and should not be countenanced, for ducks must have their feed and rest without molestation or they will abandon the best of lakes.

Next morning we found our way back to the ridge, pulled the boat over into Little Sturgeon, paddled our way to the head of the island, boarded a passing river steamer, ate up everything eatable aboard except the China cook, and in due course of time arrived home with about eighty mallards.

It must be that the mind cannot retain painful memories, or if it does it ignores them, for after years of hunting and angling with all their accompanying hardships and privations, to-night finds me loading shells and wishing for bad weather just the same as of old.

Natural History.

DOVES NESTING IN TREES.

It seems strange that the mourning dove (*Zenaidura macroura*) should ever attempt to nest in trees, seeing the extreme labor such an undertaking entails upon her, but the fact that she frequently does so remains and furnishes food for reflection to the ornithologist.

Every one is familiar with this bird's nest as found on the ground, a shallow, carelessly-constructed affair, with the two snow-white eggs, over which the sleek owner broods continually from the time the first is laid until the two are hatched, not daring to come off except at dusk, so conspicuous are her treasures in their far-gleaming whiteness. This is her natural nesting place. When the time comes it is but little trouble for her to collect the handful of dry weed-stems and straws upon which to deposit her eggs, and so perfectly does her gray-hued plumage blend with the tints of the soil that they are seldom discovered by man unless disclosed by her flight therefrom.

It is when this beautiful creature, whose name has become with us a synonym for meekness and gentleness, resolves to become "a scornor of the ground" that her trouble begins. The interested observer finds himself at a loss in his speculations for what he may deem sufficient cause to justify all this extra labor. To be sure, the ground-nesters are subject to a thousand perils that immediately suggest themselves to the mind and furnish apparently obvious reasons why this timid and gentle bird should seek, in the selection of an unusual nesting place, to avoid some of the dangers that threaten her eggs and her young. But we commonly agree that birds through all their changes have preserved the wisdom of ancestral serpents entire, and I felt pretty certain one May morning, when I discovered a dove preparing to build in a winesap of my orchard, that this wisdom was at fault. A little investigation, I said to myself, would have proved that this leafy security of the grove is a matter of pure imagination. No shady deep suffices, no triumph in the art of concealment avails to render the successful rearing of a brood of young birds anything less than a miracle, and as far as safety is an object she might as well have trusted to mother earth and saved herself trouble. I was, however, highly pleased to have her meet this "sea of troubles" in my orchard.

To one who, like myself, holds the study of birds his chiefest recreation, and who has to contend with the natural disadvantages of prairie location, it becomes a matter of no small importance to detain among his wind-swept groves such of his feathered friends as stray thither from more congenial haunts. He must learn to regard a nest as a thing almost too sacred to be looked at, much less rifled of its contents; and the shells in his shotgun must be allowed to reach a green old age, whatever temptations may assail him in the shape of glowing wings. Nor will this spirit of forbearance alone suffice; he must, if he gain his end and bring about the desired amicable relations, make propitiatory offerings in the shape of boxes for bluebirds, wrens and martins, a festal board in some retired nook whereon corn is to be spread for the cardinal, and free baths at all hours for all comers.

And after everything is done, the student of bird life on the prairie will find that his work lies among the yoe-manry of the feathered race—the robins, the brown thrushes, the kingbirds and sparrows. The rarer songsters hold themselves aloof in the line of blue timber that bounds his horizon, and whose sequestered, wing-haunted shadows seem to him a very paradise. Even from the great warbler clan—the Smith family among the birds—the yellow warbler is generally the only one who will accept his hospitalities and venture to swing his nest among the uneasy treetops of the place. Perhaps once in many years that inveterate little tree lover, the chickadee, will espy a woodpecker's hole in one of his fence posts, and, unable to resist it, be seen tearing the lint from gunny sacks and stripping the fibrous bark from weeds; and then our ornithologist, "too happy" at red sunrise, will hear the fairylike song of this little fellow, and in due time be filled with a pleasant astonishment at beholding a pint or so of nestlings tumble off that little lint-lined den.

I imagine that any one who makes a study of the living birds and becomes acquainted with their many taking ways, will soon begin to look askance at his cabinet of stuffed ones, and at his collection of blown eggs, so many of which, with the lapse of time, lose their richness of coloring and gloss. I, for my part, no longer find the mummified specimens in the glass case or on the dusty shelf to my taste. A hawk, or an owl, or some one of the waders who can stand to petrification when alive, are the only birds anyway that are endurable stuffed. With the others life is motion, and after the first glance at

their mounted skins the beholder's pleasure in them is gone. Besides, how thick the shell of selfishness on his conscience; thoughts and memories will fall on it sometimes as he looks at his spoils, that like coals of fire will make the creature show signs of life.

No evil intent marred my pleasure that morning when I discovered the dove prowling in my orchard. With a heart soft as her own and as far from any treachery, I chose a tree sufficiently distant from the scrubby winesap she had picked out, and couching in the grass at its foot proceeded to devote the remainder of the morning to watching her movements; for though I had several times found doves' nests in my orchard, this was the first time I had ever caught one building, and I was curious to see how these rosy-footed walkers managed among the interlacing twigs. It soon appeared that whatever the difficulties of the undertaking, the female dove was to encounter them alone. For the three or four hours that I watched her she toiled at her task unaided; her selfish mate, sitting concealed in a neighboring blackberry patch, answered her short, piteous appeals for help with a note of undisturbed serenity and content. She certainly needed assistance. Unable to hop, like the perchers, from twig to twig, she was obliged to make her way through the trees by means of her wings, which striking against the branches about her, baffled and distressed her beyond measure.

I was ready to accuse her of being uncommonly stupid as well as headstrong by the time the morning was gone, for it was only on one side that the branches of the tree were so disposed as to admit her into the leafy interior, and if she failed, as she frequently did, to strike this opening when she returned laden with building material, she became completely bewildered, and would fly distressfully about the tree in search of the lost portal, when apparently the difficulty would have been to have missed it. But she was out of her sphere and suffering the natural consequences of her aggression.

About noon she flew away in search of food or rest, and I went over there to see what she had accomplished. Among the close-set branches of the tree lay the loose jumble of stems and straws—the handful of trash which had been collected at the cost of so much time and trouble. It was a mere skeleton platform in arrangement, and the material composing it could have been gotten together in five minutes by a bluebird or a robin. Much of it had evidently fallen through to the ground, and what remained looked so hopelessly insecure as a foundation for a nest that I was strongly tempted to improve it by sprinkling a similar assortment of stems and straws on top of it, but the remembrance of how a like officiousness on my part had resulted in the case of two robins, deterred me, and after a short inspection of the dove's work I went away. She came back no more that day, and I believed that she had given it up, disheartened and disgusted with things in general, and her mate in particular. But the avian mind seldom changes in the matter of nest-making, if left unmolested by man. Once resolved on a building site I have seen them hold it in spite of most audacious attacks from lesser foes, and overcome what seemed to me insuperable natural difficulties.

The dew was still bright on the grass the next morning when I heard the peculiar whistling flight of the dove, and going down I found my bird at work. Again she spent half the day at her solitary task, carrying and arranging her coarse twigs and straws with an air of troubled uncertainty that was quite piteous. Once when a golden warbler suddenly darted down and gave her a spiteful peck on the back she took no notice, but plodded on absorbedly in search of straws. Three days this work went on, the whole of the mornings being devoted to building and the afternoons to rest and recreation.

At the end of this time the loose, shabby platform supported a pile of debris that presented a quite respectable appearance, and though very far from answering to the ordinary human conception of a nest, filled no doubt the gentle breast of its builder with joyful pride and content. The next day when I visited it I found her nestled upon it for the purpose of laying.

Watching the construction of this nest and still under conviction that the great labor expended on it was thrown away, in so far as the dove believed herself the safer for being off the ground, I now resolved thoroughly to satisfy myself on this point. I determined at once to search out and make a list of all the birds nesting on the place, and by daily visits to each nest to ascertain how many of them succeeded in getting their young safely on the wing. My place is small, and the list consequently short, but it answered the purpose—it gave me some idea of what a purely fortuitous circumstance it is that any bird of even our commonest species ever reaches maturity. The list follows, and the birds are so well known that the Latin names are not needed.

LIST OF BIRDS NESTING.

1 house wren,	2 cardinal birds,
1 black-capped chickadee,	3 catbirds,
1 bluebird,	3 orchard orioles,
1 lark finch,	3 chipping sparrows,
1 golden warbler,	1 mocking bird,
2 robins,	1 kingbird,
2 brown thrushes,	2 purple martins.

Here were twenty-four nests over which I constituted myself guardian, and which I visited every day or every other day. By the ninth of June the result summed up as follows:

LIST OF BIRDS HATCHED.

	No. of Young.
1 bluebird.....	3
1 golden warbler.....	5
1 chickadee.....	6
2 robins (respectively).....	2 and 5
2 brown thrushes, each.....	3
2 purple martins, number unknown.	

It will be seen that for the nine nests which escaped, fifteen were destroyed, and all these, with the exception of one cardinal bird and two oriole nests, contained full sets of eggs when first found. To tell of the various accidents that caused the destruction of even the few I know all about, would take too long. The greater part of them had their eggs spirited away in the mysterious fashion that usually characterizes these felonies. Some morning I would climb to a nest to find it safe, sound, and—empty; that would be all.

Now I imagine that any one keeping a close watch over the bird nests about a farmhouse could match this experience of mine, and if I am not mistaken, would come to the same conclusions which I have reached, namely,

that it is indeed monstrous that the birds, exposed by nature to such numberless perils, should have man to contend against as their greatest enemy. That he is such, who can read and doubt?

Let us continue to smash fashion plates over the ladies' heads, but let us, also, give a part of our attention to the egg collectors, the accounts of whose shameless raids fill pages of every ornithological pamphlet published. Who has not been disgusted with the repeated descriptions of these heartless robbing expeditions in which no nest or bird is spared? Who has not been wearied with receiving through the mail price lists in which the eggs of our most useful song birds are offered at a few cents a set? Again, learned naturalists show us in their papers what becomes of many of the birds. Not content with large and complete collections, they kill numbers of one species to satisfy themselves regarding some slight variation in plumage, or they slaughter hundreds of our most beautiful singers to prove, by examination of the vocal organs, this or that theory of song to be the true one. "In the interests of science" is a fine phrase, but what it covers will sometimes not bear the investigations of common sense.

Why are not our laws enforced to stop this wholesale destruction? It is because the average observer believes birds multiply so fast naturally, that no protection is needed. He was never more deceived in his life. If he would be convinced of this, he has only to follow, for one season, the fortunes of the harassed songsters about him.

After all the above recorded disaster, of course, I watched over my dove with increased solicitude, strolling every day or so by her tree, with just a quick glance to see that she was still all right. A brooding bird will let you fairly brush against her before she will start from her nest, if she does not meet your eye, that alone convinces her she is seen. I was careful, then, not to alarm this mother bird in that way, and in due time I had to recite my little lesson in humility, for her darkly-mottled, preternaturally-solemn twins were hatched and safely reared within the leafy shelter of the wine-sap.

SNAKES IN FLORIDA.

Editor Forest and Stream:

I don't think your correspondent "Anti Snake" need to be so much afraid of rattlesnakes in Florida. I have done considerable camping, tramping and hunting in the twenty winters I have spent in Florida, but I have never lost a dog nor seen a live rattlesnake in the woods or swamps of this State. I walk through the swamps, scrub palmetto or grass without ever thinking of snakes; and in the twenty years have only known of two persons to have been bitten by rattlers; one a Mr. Babcock, at Pine Island, Charlotte Harbor, and the young Englishman killed this winter at Halifax River. He saw the snake and struck at it with a stick, when it struck back and hit him. It don't do to play with them.

What is called the moccasin snake or cotton-mouth here, is very abundant in the water and swamps in the southern part of the State, but not much feared or considered very dangerous like the rattlers.

I was once shooting from a boat in south Florida when the bushes pulled out one of our rowlocks (quite a loss when we could get no other). I proposed to our colored man "Bill" that he take off his shoes and pantaloons and feel for it with his toes, in the water about three feet deep. He dropped out of the boat and stepped upon a big moccasin snake. He gave an awful yell, and as he came out had an enormous snake twined about his naked legs. As soon as he was out of the water it unwound and went away. Bill was sure he was bitten, and I thought he looked very pale for a black man, but I could find no bite or damage. It was several days before he got over the shock, and the rowlock was never found. The moccasin snake keeps in or near the water all the time, and the fires that run all over the country do not kill them, but the rattlesnake keeps most always upon the dry land, and most of them are burned up in the long grass and scrub palmetto.

I only know of three poisonous snakes in Florida or United States: The rattlesnake, moccasin and coral snake. The last is a small very pretty snake, and not dangerous unless you handle it. The rattlesnake of the Southern States is a very large and dangerous reptile, but, as I have said before, a very rare snake and seldom seen.

JACKSONVILLE, Florida.

GEO. A. BOARDMAN.

DRAGON FLY AND MOSQUITO.

Editor Forest and Stream:

I fully indorse what "Hermit" says regarding the praiseworthy qualities of the dragon fly, in the last number of the FOREST AND STREAM. Your correspondent Fannie Pearson Hardy evidently did not study her lesson in entomology very closely before making her attack on these very useful insects. Many times during the past 18 years, while wading trout streams in the Adirondack region, have I welcomed the whirl of the dragon fly. After coating my face with "tar and oil" and smoking until my mouth was sore, in the vain endeavor to disperse the cloud of black flies or gnats swarming about my head, I have found it a relief to have this hawk of the insect world swoop down among my persecutors. Back and forth through the swarm he would dart with lightning-like rapidity, presumably carrying away a gnat at each return, and affording me at least temporary relief. The whirl of the dragon fly's wings in proximity to one's head is not particularly soothing to a nervous individual, but if one can rid himself of the idea instilled in his boyish mind many years ago, that "if you are not good the 'darning needles' will sew up your ears," they are not at all unpleasant companions under certain conditions.

UTICA, N. Y., March 14.

PORTSA.

JACK RABBITS FOR ENGLAND.—New York, March 13.—

Editor Forest and Stream: It may be of interest to your readers to know that I shipped last week some Kansas jack rabbits to the Duke of Wellington for propagation on his estate, Strathfield Saye. Should they multiply, it is probable that they will be adopted for coursing in place of the English hare, being so much larger and speedier,—GEO. SHEPARD PAGE.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Fawcett's Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—Ado.

COON PREYING ON RABBITS.

Editor Forest and Stream:

"B." in FOREST AND STREAM of Feb. 26 doubts my conclusions as to coons catching rabbits, published in your edition of Feb. 12. He says: "Before we accept Mr. Lathrop's conclusion in the matter of their preying upon rabbits, I think we should examine his practices closely to see if his observations have been made with that thorough minuteness the importance of the subject demands."

I have hunted coons for years. The smallest number captured in any one season was thirty-three, the largest forty-five. This season, by reference to my records I find I spent the whole or part of forty-nine nights in the woods. My vacation lasts from July 1 to Oct. 1. I keep from five to seven coon dogs, and during July and August spend many days with them on brooks and in swamps looking for tracks and coon signs generally, so to know where to hunt for them later. Among my friends I am known as a "coon crank." The last of December, 1888, I took three old coons from a hollow tree alive, kept them in a cage made on purpose to see if they would make any crying noise that could be heard in the woods, and found they did. These were full-grown coons weighing sixteen pounds each. The next year (having disposed of these) I had four tame ones. I have often let them out in the yard after a snow storm, just to see their tracks and notice how they looked when walking, trotting, pacing and running. I spent many hours thus during that winter, and feel very competent to tell a coon track from a cat track. I am very sure the tracks seen following those rabbits were made by coons.

"B." says "it is a death blow to formerly received theories of abstinence while in a state of hibernation, etc." If "B." supposes that coons at a given time go into a state of hibernation to remain so until the season for that state is over, then to come out of it and remain so until the next winter, he is mistaken. A coon hibernates the least of any hibernator. Any warm foggy night during December, January or February, after two or three weeks of severe cold weather, coons are out, principally to drink water; but they eat acorns, chestnuts, birds or anything they can get that is included in their bill of fare.

The three old coons captured as above were tracked by me to a hollow tree in the last part of December, after the ground had been covered with snow for about three weeks, and we had severe cold weather during that month. I was in the same swamp the day before during a hard rain and captured two coons, located by my dog by scent, the hole in the tree being but five or six feet above ground. There were no tracks in the snow that day, but this rain brought the other coons out that night.

Now as to my practices on the day in which I made the discovery, which "B." doubts, I had hired a livery team and driven two hours from Cambridge for the express purpose of looking for coon tracks; spent the whole day there; left Cambridge at 9 A. M., returned at 6 P. M., so you see I spent five hours with those coon tracks.

If "B." will send me his address, and ask what questions he wishes about coons, I shall be glad to enlighten him to the best of my ability. JAMES G. LATHROP.

CAMBRIDGE, MASS.

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

A DEER HUNT IN FLORIDA.

DURING the month of January, 1890, scarcely a day passed but that a prominent physician of Cincinnati, a fruit grower of Rochester, and myself, a resident of Pennsylvania, gathered at Lake Helen, did not have an hour's talk on our proposed deer hunt to the southern part of the State.

Though daily Hayward and myself bagged a number of quail and pigeons, which the *chef* of the Harlan Hotel served up in good style to the appreciative guests, a deer hunt was quite beyond anything we had undertaken, with the exception of the doctor, who had shot deer in the northern woods of Wisconsin.

We were ready to leave Lake Helen the first week in February, having secured Paul Long as our guide. He was a native of Florida, an excellent hunter and a good cook. We had decided to go to Polk county, where a brother of our guide lived and where there was reported to be an abundance of game. Eagle Lake we found to consist of but one house, the property of Martin Long, our guide's brother. Orders were immediately sent to Bartow for provisions, and about four P. M. the following day the mules were hooked up to the large lumber wagon whose broad tires prevented it sinking in the sandy soil. One camp chest in which had been packed bacon, flour, potatoes, canned goods and the necessities was loaded on the wagon with a large tent, and with Long as driver we started off, followed by two deerhounds. Quail flew up at our approach, but though the guns were nervelessly fingered, they were left to fly away in peace.

Camp was made late at night along a small creek of clear, pure water, and as the silvery moon came peering over the treetops, we ate our supper of bacon, crackers and coffee. After gathering a quantity of pine knots for fuel, our couches were sought and all was still save the quiet breathing of the sleepers. As we were to penetrate still further into the forest our early breakfast was eaten by the light of a huge camp-fire, which cast weird shadows about us.

The rude trail which we had been following was left and a southerly direction was taken toward Lake Arbuckle. As we arrived near a beautiful lake about a half mile in diameter the guide thought we had better make our permanent camping place on its banks. It would insure us plenty of pure water, and deer and turkey tracks were visible. If no game fell to our guns, plenty of fish could be caught.

Ere we had pitched our tent the rain began to fall in torrents, the first good shower we had had in eight weeks. When we awoke the following morning it was still falling copiously, but it did not dampen our spirits, and the forenoon was pleasantly passed listening to stories related by our guides.

The rain ceased about noon, and Long thought it would be a good time to go out and look for deer, and I accom-

panied him. The camp had scarcely been lost to view when we jumped a big buck. Both fired, but, alas! he escaped us. Nothing daunted, however, we crossed a marshy plot of ground and found where a deer had been feeding since the rain. We tracked him by his trail in the damp sand, but lost it when it entered the swamp.

While meditating whether to go on or return to camp, the quick eyes of the guide caught sight of three deer coming out of the brush along the edge of the swamp. We quickly dropped on the ground and were hidden from view by the scrub palmetto. The wind being favorable and the deer feeding toward us, we waited until they were within 80 yds. from us, when they were laid low by the shots from our guns. As evening was approaching and we were two miles from camp, it was necessary to work rapidly in order to get them into camp. The greater part of the next day was occupied in cutting and salting the venison to take home.

Early the following day, before the sun arose, Long started out to look up the turkeys we had heard gobbling the previous day, but his search was in vain. The afternoon of the day all went fishing and our supper would have delighted the most fastidious hunter—deer steak, fish fried in bacon, sweet potatoes, flapjacks and coffee.

Then followed two days of unsuccessful hunting. The weather turned very warm, our provisions were running low and we were fearful of our deer meat spoiling. So, the next day, we put out our hounds into the bayou, two of our party going on one side, the others on the opposite side. It was not long before the dogs struck a trail of some kind and gave tongue. This was kept up for a half-hour, yet peer as we might into the brush nothing could be seen or heard. Suddenly we heard three reports of a gun and upon running up to where they came from we found Hayward standing over an old bear, which was quite dead, while a cub, which we soon killed, was making things lively for the dogs. The combined weight of the two was 700 lbs. and with much difficulty they were brought into camp, and it was late at night before we could rest our tired bodies.

The next morning's sun found us with loaded wagon ready to start for civilization. It was with delight we turned our faces homeward with our trophies. Night found us at Eagle Lake and the morning train bore us northward, well pleased with our deer and bear hunt in Florida. L. R. S.

SCRANTON, Pa.

TRAITS OF THE VIRGINIA DEER.

NONE of the wild animals of America is better known in a general way than the common or Virginia deer. It is my purpose in this article to mention some, only, of the peculiarities of this animal as the result of many years of careful observation, and which may have escaped general notice. I regard this variety of the deer family as likely to remain longest among us, in a wild state, and as the one best adapted to furnish sport to the hunter. For lithe and graceful motion he excels all other American varieties. In this respect he equals the action of the proudest horse. The mule deer under like circumstances, that is, when alarmed by the approach of the hunter, is awkward in his movements, making his few first jumps striking the ground with his feet close together, and stiff-legged like a bucking horse.

The Virginia deer has a natural inclination to remain in one place or neighborhood, and about clearings in forest and farms, even after cover has become scant, leaving scarce a dozen acres of timberland between cleared farms. For twenty-five years I lived in a well-cleared and cultivated valley. During that time deer were always to be found on the mountain sides within a half mile of the clearings, and where they could at all times see and hear the usual farm operations, including a view of the house dog as he lay in the farm yard or run about the fields.

This deer is a great lover of water and of the food he finds about lakes and rivers. I have known at least one to be out in Lake Huron twelve miles from shore and making for an island a couple of miles further from the shore of the main land. I saw a large buck go into the breakers of Lake Michigan when every wave knocked him over on to his back. He did not like such rough water, and came back to shore in spite of hounds and hunter. When pursued by a full-blood staghound a buck takes to water in about half an hour. A doe will require about twice as long. And a four-months-old fawn will frequently run before the hound from four to six hours before it goes for water. Of course trained our dogs and crossbreeds of many sorts run a deer much faster.

Some of his methods of escaping the shot of the hunter show great sagacity. I have many times known deer to be driven to a public road where a hunter was stationed. If a wagon was passing the deer would cross the road close behind the wagon, and so the hunter hidden a dozen rods away could not fire. I have seen this occur too often to believe it an accident. I was digging potatoes one day when a buck came up behind me and lay down about 10 ft. away. Half an hour after a hunter approached and inquired where his deer went to. I had seen none and told him so. While we were talking the deer jumped up. If the hunter had carried a hoe instead of a rifle I doubt if the deer would have moved so much as one of his ears. Their returning upon their track, or "back tracking," when pursued, is known to all hunters.

The mule deer, so far as I have discovered, knows nothing of these tricks. Judge Caton once said to me, speaking of the difference in sagacity of the two varieties, "The mule is a fool." Whether or not that criticism is just, it is certain that living as the mule deer does in the solitude of these great mountains, he does not need to practice so much cunning to keep himself fairly safe.

To discover the approach of danger deer depend on their sense of smell. A single hunter, if skillful, when there are two paths or runways, will walk into the forest on one of them, then take his stand near the other in order to shoot the deer before his hound. One day I saw a band of five thoroughly frightened deer strike the track where a hunter had passed but a short time before. They all stopped when they reached the track as suddenly as if their necks were just then broken. After sniffing the air a few seconds they all set off again, but in an opposite direction to that taken by the hunter.

One Sunday morning found me in a lumber camp on the Rabbit River in Michigan, where I must stay all day. After breakfast I strolled up one of the log roads and saw where five deer had crossed on their way to some hard-

wood bottom land bordering the river. I followed on their trail, intending to find them and spend an hour or two in their company. I found them scattered out over an acre of ground, but all in sight and browsing. The one nearest me, and in no cover, soon saw me. At first he only looked at me when I was sitting down on the snow and covering my face with my hand. He looked at me sharp and often, but continued to browse. When they were busy feeding I managed to approach. The wind blew from them toward me. Sometimes I whistled as if calling a dog. They all looked at me, but my face was covered, and I sitting on the snow. After a while the deer furthest to my right had got nearly in my rear, when he gave a big snort and ran with great apparent alarm. The others, startled by his warning snort, ran also, but only a few rods. After a quarter of an hour of standing motionless, they slowly made their way back and began again to browse. I continued to approach as I had a chance, while they were busy eating, until I had got within a few rods of one of them. Just then he stepped behind a big pine and I stepped forward briskly and made a jump for his hind leg. I missed it by an inch. The deer was too much frightened to jump more than a length at one spring, until it had got off some rods, and then made what might be called fast time. The others ran at the same time and I saw my friends no more.

From the experience of a tolerably long lifetime in the woods I am satisfied that the Virginia deer was intended by nature to run before a deerhound. He is not afraid of the hound and has no reason to be. But wolves, cur-dogs and cross-breeds are his terror. I have seen a deer pass me in the woods, bleating most piteously at every jump. A black cur-dog was only a few yards behind. I have seen deer running before a staghound and loping along as happily as a fox in the same situation, stopping at top of every considerable hill and waiting for the hound to come up. When tired the deer will go to water, or if a buck may stop and beat off the hound. I have seen a buck beat four as good hounds as ever were in the United States.

The deer after a day's run goes back at night to the bed he was started from in the morning; and I have started the same buck with my hound from the same bed several times. And the testimony of my friends is to the same fact.

Often a hound gets beaten by a particular buck and will not after that follow it a rod. In a case of that sort I got a farmer to go with me, taking a large dog of his. I got up the buck; and in fifteen minutes the farmer's dog came back with a hole in his side as big as a hen's egg. My hound was within 20 ft. of the buck when he sprang up, but did not follow the buck a dozen rods, notwithstanding I did my best to urge him on.

I learned when a boy to still-hunt deer. But I would not give a straw for all the sport I can get from shooting deer. I would as soon walk in the autumnal forest with a cane as with a rifle. My only idea of sport in good hunting is shooting on a runaway before a deerhound, and with a party of my friends. I never saw a party of deer hunters that could kill as many deer in a week as either one could kill in the same place at still-hunting. For myself I never killed more than two deer in one day before hounds, and that but a few times, while I have shot as many as five in as many minutes while still-hunting. It is not the killing of deer that makes "sport," but the chase, and I am as well contented without the killing as with. I hunted for twenty years more or less every fall with hounds, most of the years about the rivers and lakes in northern New York; and never shot a deer in a lake nor saw one killed from a boat except in two cases. I saw one Indian and one half-breed each kill one in Lake Huron. In the first case I was watching a deer floating about in the breakers near shore and waiting for her to come out. Suddenly she sank, nothing except the tip of her black nose remaining above water. Surprised at this, I looked up and down the shore for the cause. Soon I saw coming round a sharp point of land jutting into the lake on the north an Indian canoe, containing an Indian and his squaw and children. I showed myself and he passed the deer without pretending to see it. One of my party, however, whom I did not suppose was near, hailed the Indian a quarter of a mile below and engaged him to land his family and go out and catch the deer. I was disappointed. I could have shot the deer any time during the last half hour, but did not wish to do so until it had left the lake and was on the jump through the scant timber lining the shore. GEO. H. WYMAN.

BOISE CITY, Idaho.

PARTRIDGE.

WILL you kindly tell me through your columns the difference between a "ruffed grouse" and a "partridge"?

I was raised in Vermont, and recall with pleasure many a ramble, while yet a boy in my teens, over her forest-crowned hills, lugging guns that were not infrequently dangerous at both ends, particularly the closed end. Nevertheless the blood of Nimrod coursed through my veins, and on these tramps I occasionally brought down one of those magnificent birds which in my neighborhood I never heard called anything but partridge. During those early days I often heard and read of grouse in other States and other countries, but supposed them to be an entirely different bird. When about twenty-one I left my native State and came to Kansas, where I have since lived. I do more or less gunning every season for prairie chickens, quail, geese, ducks, etc., but have never yet fell into a "ruffed grouse" locality.

From reading about the habits and tricks of the latter, I have long since had a suspicion that the "ruffed grouse" and the old "partridge," friends of my boyhood days, are one and the same bird. Webster does not make it entirely clear to me, or at best he gives different names for different localities, but does not make the difference plain.

I am aware that a man who has carried a gun for quite a number of years ought to be posted on so simple a question, but my boyhood's birds were partridges, and known in our part of the State as such, and by the time I had grown to manhood I was far away in another State, and my hunting since has been for different birds, either in open field, brush thicket or water, and having had no opportunity to form the acquaintance of ruffed grouse, or renew my partridge acquaintance, I am obliged to settle my doubt from the knowledge of others. This much I do know, that a partridge—be he known by that name or any alias—is wise enough to lead any old gunner, a long chase, and when flushed within range that gunner,

must be quick and sure of aim, or the bird's plump breast will still continue to thunder through the woods instead of steaming from the frying-pan.

I have read with great interest the late articles on the woodcock question, and feel that the subject is yet open for investigation if all doubt is to be removed.

In the last number (March 5) I notice a communication from Stockton, Kansas, by "A. L. T.," in which he regrets the violation of our game law. He has expressed the right sentiment, and our towns are not far apart. I would be glad to correspond with him to secure his co-operation to create sentiment against this unlawful slaughter. If he will kindly address me at Kirwin, Kansas, P. O. Box 11, giving full name, I will gladly reply.

KIRWIN, KANSAS, March 9.

[The ruffed grouse is commonly called partridge or partridge in New England; that is the name the bird is best known by; it is the name associated with shooting days in the memory of scores and thousands of men; and there are lots of people who know the ways of the bird in its native haunts and the tricks of shooting it, who never have and never will call it ruffed grouse nor anything else than partridge.]

My experience for 1890 with dog and gun is as follows: Number of birds shot forty-seven, about half and half woodcock and partridge. All brush shooting. And in some of the most inaccessible places. It cost me about five shots to the bird. All shot on the wing but one. Made my first double shot this season on partridge. Woodcock have been more plenty than usual. But partridge scarce, broods small; in the season's hunting did not see a brood with over four in. Something wrong through hatching season.

Game has all sorts of enemies, and some worse enemies than man. In this section we have only two months' hunting, September and October. Snow and cold weather close it for us about Nov. 1. One day while out hunting I came to a fence of alders. The dog showed game, and a woodcock flushed wild. I marked him down and worked that way with the dog. Before getting half-way to where the woodcock lit, to my surprise a great hawk got there before me. Then there was a hustling right toward me—woodcock ahead, followed by hawk three or four feet behind. I had but little time to think, and wheeled calculating to shoot both. Shot the woodcock; and in the smoke and confusion the hawk got away. Another time I was hunting partridge. Had just shot one, and was working along to where I had seen others go, when, on rounding a clump of scrub pines, I noticed a large hawk making a great effort to fly. I looked at it with astonishment for a minute, when collecting my senses let go a shot which brought some feathers, but the hawk got away. On walking along further I saw a lot of feathers which on examination proved to be of a partridge. The dog stopped, and in going where he was I found a partridge yet warm. I picked it up and examined it. The hawk had gone to work in a scientific manner to make a meal. First every feather had been picked off of the head and neck, then he plucked out the eyes, after which the fat and skin of the neck make a dainty morsel. Coming along just then I had broken up the meal. With my jackknife I cut the neck off close to the body—the blood still running—and put it in my game bag, not feeling badly at robbing a hawk of its supper.

Another time, after the snow came, I found that nearly every partridge track had a fox following. So we see that game has enemies all months in the year. J. E. C. D.

GLOVERSVILLE, N. Y.

GAME SLAUGHTER ALONG THE BORDER

R. V. GRIFFIN, an old hunting companion, in a private letter to one of the editors, writes from Toats Coula, Washington, near the boundary line between that State and British Columbia, of the destruction of game in that vicinity: "I am delighted with FOREST AND STREAM, and shall always continue to take it. I wish we had some of your game protectors in this country, for it is a shame the way our game is disappearing. The blacktail deer in particular have been shot down here and left lay to feed the magpies and eagles, without even removing the hide, and many four-horse team loads have been killed and hauled to the Columbia River and thrown away and not a pound of the meat used. Even the ranchmen have gone out for a week's hunt and killed from fifteen to twenty large, fat bucks, and never bring a pound of it home. Some of the same party now would be glad to close their lips over a piece of a poor doe. I have hunted a great deal in the last twenty years, and have killed a good many deer, but always made use of the meat and hides, but I never have seen game destroyed as it has been in this section of the State. "Just think of it! Last winter on the Ashnola one hundred rams were killed for their horns, and the meat left to feed magpies. It is no trick to kill as many as one wants in the winter, when the snow drives them out of the high mountains and down to low hills along the streams to the great licks. Anybody that can hold a gun to his shoulder can kill sheep there. Now, the same party that killed so many last winter have been to the same place with sportsmen for two summers, and they never got but one sheep, and that was a two-year-old ram. That don't speak very well for men who follow hunting and guide for sportsmen.

"Since writing this the same men have returned from a six weeks' hunt on that stream. They got two two-year-old rams, two wolverines, which were caught in bear traps, one large silver-tip bear, which they caught in a steel trap; he was very old, his tusks were gone. Two cow elk were seen on the headwaters of Nehum Creek, the first that have ever been seen in these mountains. The party reported deer very scarce and shy.

"Some of the old mountaineers here had the laugh on me when they heard we got lost a year ago last fall, but one of the same men, a good mountaineer and good hunter, got caught in the same trap as we did a few days ago. He went out in the morning to kill a couple of deer, and had shot one doe when it commenced to get foggy. He came on to a buck and a doe, and shot at the buck but struck him too low down, but he was bleeding very free, so he kept on after it, but never got to see it again. Then he thought he would go back to the doe he had shot and take it to camp, but he did not find the doe that day, as it was so foggy he could not tell where he was. So he got under a big pine tree and walked around the stump the whole night. Do you ask why he did not make a fire?

Well, in the first place there was no wood and in the second he had no matches and no coat on, and not a bite to eat from the morning he left camp until the next night—and he was not more than a mile from camp at any time. Such is the life of a hunter. The best of them get caught some time, and when they do get caught they know how it is themselves.

"I see they have placed a heavy license fee on all hunting parties or persons that are not citizens in British Columbia. This is a little rough on the boys, ain't it?"

A HANDY CAMP BED.

CHICAGO.—Editor Forest and Stream: Some of your readers like to camp out, but do object to sleep on the ground. This is not the case with me, for I would rather sleep on the ground than in a feather bed. Still as all "outers" do not think or feel alike, I have put together a device that may be used as a bed.

A bit of canvas or duck of any required size, as say 8 ft. by 6 ft., is provided along the edge with eyelets, as say 8 ft. by 6 ft., is provided along the edge with eyelets, and to each eyelet is a short cord or rope. This forms the bottom of the bed; and it is to be used in this fashion in the woods. A few notched poles are cut and put together, as indicated in the sketch; and on the top of the four horizontal poles the bed bottom is put and the cords tied each to the opposite cord underneath the bed, passing the cord over the horizontal poles on the sides. This forms a can-

vas bed bottom. Now, my experience has been with these canvas portable beds that they are "colder than Christmas," and to remedy this defect I propose that this canvas bed bottom, as it will always sag, be filled with spruce or pine feathers up to a level with the poles; or in other words fill the hollow, and then spread over it the blankets. Then if the sleeper, before he goes to roost, will spread over the frame a mosquito bar, he will sleep like a top.

Of course it should be remembered that the poles must be tied together at the top and other joints; and by selecting the poles with a view to the notches, one can have a bed on which he can comfortably sit in the morning to put his moccasins on or stretch himself and yawn with the greatest comfort. And all it will cost him is a bit of good stout duck, a little mosquito bar, some cord or thongs, and a few grains of sense; and with a hatchet the thing is done. So am I. HERMAN HAUPT, JR.

DAKOTA GAME BIRDS.

Editor Forest and Stream:

I send you a few notes on the game birds of Townier county, North Dakota, as I saw them during the spring, summer and fall of 1890. I arrived in Townier county May 10, and from that time until late in the fall I saw game birds of some kind nearly every day. The main flight of geese and ducks had gone north, presumably to their breeding grounds, leaving only those which for reasons of their own had determined to try their luck where they were at that time.

May 1 I saw first willets and bartramian sandpipers—called plover—the 18th I saw a good many mallards, some widgeon and bluewing teal, four ruddy ducks (the only ones seen during the year), hooded mergansers, two sandhill cranes, and flocks of geese that looked very large to me, and they were when compared with what I had seen in old Connecticut. The 16th I had my first goose hunt. With two friends I went to the Big Slough, some 2½ miles northeast of town. We arrived late; the flight was over. The geese and ducks frequented the place for the purpose of rest and to drink. Charlie, thinking to give the two novices a chance, went back and around a hill, coming on to the shore of the pond opposite our stand. Every bird immediately took flight, several hundred coming over our heads. Billy picked out his bird, killing one with first barrel and missing with the second. As for myself, I scored a complete miss. As the flock went over my head, I thought the geese were so thick that a shot could not get through without striking a bird, so I drew up and shot both barrels into the flock, and so far as I could see, never stirred a feather. Small wasn't the word for the way I felt. This proved to be the last flock of geese we saw until the fall flight.

On the 19th I added the gray duck to my list; the 20th an American coot; the 28th the pintail duck; the 25th prairie chickens were seen, also a large flock of black-bellied plover. May 21 I found a mallard's nest with eight eggs; the 31st another with eleven eggs. June 4 I added the marbled godwit to the list. June 18 saw female gray duck with six or eight young two or three days old. June 14 a friend brought me a young prairie chicken less than a week old. His dog had killed it. There were a number of good broods of prairie chickens raised within a short drive of the town. A few were shot before the law was off by local hunters. The farmers at this season are very busy, or in all probability more would be shot. In 1888 chickens were rarely seen in this vicinity, while the sharp-tailed grouse were quite numerous; but now it is changed. The prairie chicken is increasing and the sharptail disappearing, although said to be the only grouse in and around Turtle Mountains.

Sept. 8 I found a flock of twenty chickens, apparently two broods, as they were of different sizes, nearly full-grown and very strong flyers. Previous to finding the chickens I had put up an old male sharp-tailed grouse, who proved to be too sharp for me, as, after following him over three miles and shooting at him several times, I gave it up, thinking it would be too bad to annihilate the only specimen of its kind I had seen.

Two days later, with my friend Charlie Canfield, I had some fine shooting for a short time at the same flock of chickens, getting seven. They were about the last killed in this place. Sept. 20 I saw a small flock of brant which were the advance of the fall flight here. The 25th I saw the first flock of snow geese, which were common from then on. Oct. 5 Hutchins's brant and white crane made their appearance. Some flocks of sandhill crane had been seen flying over, but they did not stop to feed. Oct. 7 it commenced storming and it rained or snowed every day until the 17th. It was an unusual thing for so much water to fall at this season of the year, but the hunters thought it a great blessing, as it filled up the sloughs and coulees. Before the storm general complaint was heard from shooters that there would be no geese or duck shooting as there was no water. From then on geese and mallard ducks were without numbers. Figures can give no idea of the size of the immense flocks that were seen. The largest flock I saw was in one continuous line over a half mile in length and they were flying from 20 to 50 abreast. Nearly every resident agreed in saying that there had never been so many mallard ducks seen in one fall as there were during the last weeks in October, 1890. They were considered small game. Every one could eat goose. One man, who had killed a good many ducks, took a buggy load into town. He could not give them away and they were fed to hogs. I heard of an old half-breed who sneaked on to a flock of geese and killed twelve with one charge from an old muzzleloading shotgun of not over 16-bore. The geese I saw, and could identify, were snow geese, which were abundant and led in numbers. Hutchins's brant were quite common and often seen in large flocks of snow geese, besides many flocks that kept by themselves. The Canada geese were common but not seen in any great numbers at one time; the American white-fronted or speckle-bellied goose was quite frequently killed out of flocks of snow geese. I also saw several that I could assign to no place, apparently hybrids, or they might be classed as sports from the varieties of the genus *Bernicla* or brant geese.

There was a severe cold snap the first week in November, after which the geese were seen flying in the triangular-shaped flocks in which they migrate, and from then on the numbers seen grew rapidly less and all were gone by Nov. 15, with the exception of now and then a small flock which would be seen flying rapidly toward the south, until about Dec. 1. After geese and ducks go south it is seldom a game bird of any description is seen on the prairies of North Dakota. I append the weights of a few of the geese and ducks I killed during spring and fall.

Snow geese in adult plumage: 7 weighed respectively 5lbs. 6oz., 5lbs. 5½oz., 5½lbs., 5½lbs., 6½lbs. In young or gray plumage 8 weighed 4lbs. 6oz., 4lbs. 10oz., 6lb. 12oz., 4lbs. 10oz., 5lbs., 5lbs. 2oz., 4lbs. 8oz., 4lbs. 4oz. Mallards: 6 drakes weighed 3lbs., 2½lbs., 2lbs. 10oz., 2½lbs., 1lb. 10oz., 3lbs., 2½lbs.; 3 ducks, 2lbs. 2oz., 2lbs. 8oz., 2lbs. 10oz. One gadwall drake weighed 2lbs., one pintail ♂ 2lbs., one widgeon drake 1½lbs., 2 ducks, 1½lbs., 1½lbs. Blue-wing teal, 5 drakes, 4 ducks, weighed without any variation 1lb. each.

ELMER T. JUDD.

BETHEL, CONN.

WYOMING SHOULD ACT.

Editor Forest and Stream:

I was glad to see your editorial of March 5, calling attention to the destruction of game and fish in the region bordering on the southern boundary of the Yellowstone Park. For a very small expenditure the new State of Wyoming could do much to prevent the poaching going on in that portion of her preserves. It is surprising how quickly the wild animals take advantage of protection and come back to their former beloved ranges when undisturbed. I have been amazed at the results attending our efforts on the east side of the Park to stop wanton and indiscriminate killing. We have only been at work for a few years, and the increase of game is most gratifying. If similar action could be instituted in the other districts adjacent to the Park it would not be long before the natural increase and overflow would provide enough game to warrant a modification of the game laws, or at least to the extent that they could admit the visiting sportsman to a reasonable share in the trophies of the chase.

Hunters and guides now are generally in favor of strict game laws; they see that without them their occupation is gone. They could do a good work too in restraining their parties from going too far. Patience and great moderation should be their guiding principles. Let us hope that Wyoming will, before it is too late, realize the necessity of action. It is extraordinary that the protection to game throughout the whole country has always been of a puerile character, locking the stable door, etc. On a trip last fall and certainly within a mile of the south line of the Park, we saw many evidences of game ruthlessly shot down and left to rot.

ARCHIBALD ROGERS.

HYDE PARK-ON-HUDSON, N. Y.

GENERAL SIBLEY'S SKETCHES. — Referring to two sketches by General Sibley mentioned in a recent article by Chas. Lanman, a correspondent asks where "Buffalo Hunting" and "Hunting on the Western Prairies" can be obtained. Can any of our readers answer the question?

SCOTT GUNS.—Tariff changes may come and go, but there are a large contingent of American shooters who are wedded in their likes to the English guns and secure them no matter what the customs rates may be. When an order is given for a prime weapon it's Scott to be filled, and Wm. Read & Sons, of 107 Washington street, Boston, can take the instructions of the gun user and fill them to the smallest detail. They import Scott guns direct from the maker and have an exceptionally large supply on hand, and can fill a special order in a very short space of time. They report that the demand is increasing at a very gratifying rate, and from the best class of shooters, those who have used guns for some time and learned just what they want for the best work. A list asked for from the firm of Read & Sons will give FOREST AND STREAM readers full particulars about old reliable Scott arms.

THE MAINE GAME QUESTION.

Editor Forest and Stream:

It is with considerable reluctance that I take up the task of replying to a letter of Mr. Manly Hardy in the FOREST AND STREAM of Feb. 26, 1891. In the outset, permit me to say that I dislike a controversy in a newspaper above all things, and am well aware that the readers thereof share in my dislike. Indeed, were it not that a principle is involved, that the principles of FOREST AND STREAM itself are involved in having published "Special's" articles for six or eight years, believing them to be the truth, that personal attack upon "Special" would never have been replied to by me.

In the first place, it may be well to state that I am convinced that Mr. Hardy is honest in his opinions; indeed, that he is an honest man, and, so far as his knowledge extends, he would not knowingly mislead the readers of the FOREST AND STREAM in regard to the situation of game protection in Maine, the way to do it, or any of the affairs of the State immediately connected with that subject.

So far as Mr. Hardy's knowledge is concerned, so far as he has thought, he is right in regard to "Special." He evidently supposes him to be a writer in Boston or somewhere else, writing about Maine game affairs like a long-distance war correspondent. But it would perhaps surprise him to know that the writer behind the *nom de plume* of "Special" was born in Maine, in a back town (he is proud of it), schooled in one town in Maine, fitted for college in another town in that State, college-trained in another town, now a city, began newspaper life in yet another town, only removing to a larger New England city for the sake of the better opportunities offered. "Special" also visits Maine twice annually for the sake of the dear old hills, the woods and waters, and the little share of fish and game that is left to him after the legal open seasons commence. That "Special" is in daily contact with "sportsmen" and tradesmen who visit Maine, and goes there himself as often as occasion or business requires is another fact that Mr. Hardy should understand, lest he make another mistake; also that he is fully aware of the number of deer being shipped to Boston commission houses in the close season, and at a time when the city sportsmen are certainly at home.

That certain of the lumberland owners of Maine would willingly see all the fish and game laws of that State repealed is capable of proof, and that they would try some such action before the Legislature of that State this winter was communicated to me by men in whom I have confidence, need not be repeated. One of the largest land owners in Maine has told me himself that he should be glad of any form of law or any means whereby fishermen and hunters could be kept away from his lands. "We don't want them there," he said, "we are afraid of their fires." Mr. Hardy must also be aware that the present game laws of his State were left in their present ineffective condition for the simple reason that a lumberland owner proposed the amendments that weakened these laws at the very last hours of the session two years ago, and at a time when the friends of the laws as proposed had all gone home.

Mr. Hardy objects to "true sportsmen." I do not. By the term, I mean a man who will not kill game in close time. There are many such who go to Maine. I can give Mr. Hardy some of their names. Some of them own camps and cottages on lands leased of the lumber land owners, costing thousands of dollars. I have in mind one such gentleman, who rowed three miles in an open boat himself one night, to try to extinguish a fire that some campers had left burning. He could not even wait for a man to come to row the boat, though he had several men at work not far away, who would be in at nightfall. The fire was set by some native hunters, and it could not be extinguished for several weeks, though it was kept in check by the efforts of crews of men from the camps in that region, till the fall rains came. True sportsmen will not kindle fires in the forest, neither will they kill game out of season, even at Naticouse, where, it must be admitted, the love of the game laws is at low ebb.

But Mr. Hardy should not for a moment imagine again, from the above, that I stand up for either the hunter from Massachusetts, New York or Yale College, that goes to Maine to kill deer in close time. If he does again allow himself to so think, I shall be obliged to accuse him of not having read my letters carefully. I defy him to produce either word or line that I have ever written for the FOREST AND STREAM defending the killing of game out of season in Maine or any other State. The files of the FOREST AND STREAM for all the time I have written for it are at his service; for if he does not have them at hand I will forward them to him, express paid. I shall expect that he will show some words from me defending those from outside of his State who have killed game out of season, or I can with justice claim in the FOREST AND STREAM that the principal accusations in his letter in that paper of the issue of Feb. 26 have fallen to the ground for lack of truth.

I am also here obliged to ask him if he will kindly point out a single paragraph wherein I have denounced anybody, either citizen of Maine or any other State, except the enemies of the enforcement of the game laws of that State as interpreted by its able and honest commissioners. I shall be obliged to request him to refer this paragraph to those commissioners and ask them if I have ever denounced any other citizen of Maine. With replying to the accusations of Mr. Hardy I am done, except that I must request him in his careful perusal of what I have written in FOREST AND STREAM to carefully note the many times I have openly denounced the carrying of guns into the Maine woods by anybody in the close time for game; to note where I say in substance that if anybody does this and gets shot, why, I am simply glad of it. Something like this idea he will find in connection with the shooting of the son of the Massachusetts professor, with the noted Connecticut professor, the announcement of which piece of news was made by me in the FOREST AND STREAM at the time, or as near to the time as the news got out. Will he also carefully note the condemnation that I gave in the case where a New York sportsman got a charge of shot in his side, I think it was, at Seven Ponds, a year or two ago, while attempting to jack a deer in close time. Then there was the case of the son of a Boston gentleman, who was shot by his own rifle, in a Maine camp, last summer, or a year ago. He will find the case if he reads the back numbers of the FOREST AND STREAM carefully. There I say in substance that the boy had no business with a rifle in camp in close

time, and that if he was killed his parents had only themselves to blame. The editor of FOREST AND STREAM will tell Mr. Hardy that I have very often scathed the breakers of the Maine game laws—several of the very ones that Mr. Hardy mentions in his letter—so severely in my articles that he has been obliged to soften and tone down the language, lest it might appear that I were altogether too severe.

With answering the attack of Mr. Hardy the above must suffice, but he will permit me to submit a proposition to his judgment. I desire him to answer it through the FOREST AND STREAM. Now, suppose that for some cause or other it should happen to become the thing to do for about all of the vacationists of the country to burglarize houses in Boston. Indeed, allow that the desire for robbing houses in Boston had greatly increased during a few years; that even Maine visitors to the city had grown to have a passion for this thing. Now we will suppose that the Maine visitor does not even know the streets of Boston; does not know the location of the house he desires to rob, but that there are a set of men in Boston who are ready to guide him to the house for pay. Nay, they will even furnish the conveyance and "hold up" the place while the Maine "sportsman" you may call him, if you desire, does the robbery—brings off the trophy. House robbing becomes very common; even the "guides" themselves are at it. Now it is necessary to enforce the law of Massachusetts against burglary. Where shall the officers begin? Shall they rush to a newspaper and complain of the Maine "sportsmen," and claim that the "sportsmen" from Maine are altogether to blame; that the Boston "guides" have become disgusted with the robberies committed by the Maine visitors? Shall they say, "Keep your Maine sportsmen out of our city and the robberies will cease?" Has Mr. Hardy never heard about such a thing as an accessory in a crime? Don't the Maine laws have something to say about an accessory before the fact, where a "guide" writes letters telling thieves where the booty lies, when to come, etc.? Suppose that it was almost impossible for the visitors to find the particularly desired booty in the great city; that the visitors are not experts at stealing; yea, even that it would be almost impossible for these visitors to get the booty unless guided by experts, where would Mr. Hardy begin to enforce the laws of Massachusetts against this stealing?

I think that Mr. Hardy will reply that I have put the comparison in too strong terms. Please remember that I have drawn no comparison. I have not even mentioned the other side of the comparison. I have left that for him. He may say that I have put the case too severely; that shooting deer in close time is not a crime against society, and that housebreaking is; that the illegal killing of game is only a crime against the State. Well, then, put it in a different form, if you please. Suppose that it was the thing for Maine visitors to do to pluck the flowers from the Public Garden, or from private yards and greenhouses. That these visitors had to be guided by Boston "guides" in order to know where the flowers were; indeed, that they would not succeed in getting a flower once in a dog's age, unless assisted by a Boston "guide," where should we begin to enforce the law? Stealing flowers before the owner is willing that you should gather them is scarcely worse than shooting game in the legal close time. Now let Mr. Hardy tell the readers of the FOREST AND STREAM squarely whether if Maine people universally stood by their own game laws and refused to assist "sportsmen" from other States in the illegal killing of game, if the whole work would not be done; then take the last sentence in his own article in that paper of Feb. 26, and see again how it sounds: "The fact lies just here: keep your true sportsmen out of our woods in close time and our own people will respect the laws; but if these gentlemen see fit to keep on doing as they have done, and have a man like 'Special' to charge their sins to us, they must not blame Maine people if we join with them in killing in close time." SPECIAL.

GAME IN THE NATIONAL PARK.

YELLOWSTONE NATIONAL PARK, Wyoming.
March 10.—*Editor Forest and Stream:* On Feb. 14 Capt. F. A. Boutelle, who has been Acting Superintendent of the Park for the past two years, turned over to Capt. Geo. S. Anderson, Troop 1, 6th U. S. Cavalry, the government of the Park, civil and military. Troop 1 is just from Pine Ridge and the Sioux Indian war. They anticipate a much pleasanter time here than herding hostile Indians.

Up to Feb. 14 we had had very little snow; what there was could easily have been absorbed by the dry ground. Scarcely any of the water would have found its way to the streams. Since that date we have been blessed with several snowstorms that have been very extensive, covering the whole country with what insures good grass and plenty of water, although the body of snow for the Park is about one-third to one-half the usual quantity.

The mail carrier for the Park hotels reports about 3½ ft. from Norris to the Falls of the Yellowstone, a section of the country noted for its deep snow. The cold waves have averaged from 16° to 18° below zero, except at Soda Butte, where they claim—40°.

All kinds of game are in the best possible condition to stand the severe storm and deep snows. I have noticed less scabby animals this season than ever before.

The mountain sheep have returned to the Gardiner Cañon once more. They suddenly disappeared from there last winter, driven out either by shooting or a mountain lion, their greatest enemy. There are about 250 antelope on the flat across Gardiner River from the town. Several large bands are on the hillsides between Hellroaring and Stough Creek. Others are about Junction Butte and the Blacktail country. There cannot be less than 800 antelope in the Park.

There are several small bands of blacktail deer near the Mammoth Hot Springs. It is noticeable that these deer are preparing to stay all winter in the Park, where before they have left for a lower and more open country, where there is less snow. This has been the case with all game animals in the mountains. When the snow begins to fall they seek lower altitudes, but the settlements of the country has compelled them to change their habits. The blacktail were the last of the deer kind to do this.

I have tried to get an estimate from a great many people acquainted with the country as to the number of elk in the Park and vicinity. They claim all the way from

25,000 to 75,000, some as high as 100,000. Without a doubt there are not less than 25,000 elk on this reservation.

I am unable to give an accurate estimate of the number of buffalo in the Park. Last summer several bands were seen with from one to eighteen calves. It would be necessary to make an extended snowshoe trip over a greater portion of the Park in order to see most of the buffalo or arrive at a definite estimate as to numbers. If they have not been driven from the Park there ought to be not less than 400 on the National Reserve, this allowing for a very small increase and more than natural loss. They are so wild and unmanageable that the greatest caution is necessary to get a glimpse of them in the timber, where they usually spend most of their time.

I learn that very few buffalo have been seen in the Hayden Valley, where usually quite a band spends the winter, owing probably to quite extensive fires which burned their winter feed. None of the moose that frequent the section of the Park between Mt. Holmes and Norris Basin have been reported, though quite a number range in the unfrequented section.

A few local shocks have been felt at Norris Basin and violent enough to throw dishes, etc., from the tables at the hotel. H.

THE MASSACHUSETTS ASSOCIATION.

BOSTON, Mass., March 13.—The Massachusetts Fish and Game Protective Association held its regular monthly meeting at Young's Hotel last evening. President Samuels presided, 45 members being present. The following were elected: Benj. V. Howe, S. G. Brooks, Selim S. White, A. H. Wright, Cyrus Thacher, Samuel C. Bennett, Jas. H. Lange, Wm. F. Ray, Chas. Stewart, Sidney Gleason, Frank A. Nelson, Stephen Miesusset, R. B. Blodgett, Wm. R. Scott, John Cowen, Willard D. Ball, Robt. M. Read, Abbott Frazar, Willard S. Peel and J. C. Bartlett. Fifteen applications for membership were referred to the committee.

President Samuels said that the open season on woodcock and partridge would probably begin on Sept. 15 and on quail Oct. 15. These dates have been reported upon favorably by the committee of fisheries and game at the State House and will probably be adopted.

Mr. Samuel Hanson for the fund committee reported a total of \$926.36, as the Association fund, \$357 having been added last year.

Mr. John Fottler, Jr., for the game committee, stated that 1,000 quail and 200 prairie chickens had been received and distributed in twenty-one different localities. The 150 white hares had not yet arrived, but were expected very soon.

Capt. James H. Jenkins, of West Barnstable, complained of the damage caused by skunks, and stated that since the town of Barnstable had offered a bounty on these animals, the town had paid out \$250 in bounties at twenty-five cents per head.

President Samuels spoke of the damage caused by cats, which roam wild through the woods and kill off lots of birds.

Mr. Henry G. Thayer moved that the Association endorse the petition now before the Legislature for a bounty on skunks, foxes and other carnivorous animals, which it was voted to do.

Mr. John Fottler suggested that sportsmen take one day, and instead of a gun carry a bill-hook, and erect little piles of brush, where birds can find a safe retreat from their enemies. "It is of no use to import birds unless we can protect them," said Mr. Fottler; "stop snaring, plant food and erect shelters, and the game will increase."

A letter from So. Gardner, asking for a close season on pickerel from Jan. 1 to May 1, was referred to the committee on legislation. Dr. Heber, for the committee on securing headquarters, reported progress.

All the fish and game associations in New England are to be invited to attend the next monthly dinner and meeting of the Association, to be held at Hotel Thorndike, Boston, on Thursday evening, April 9, at 7 o'clock, to discuss the subject of uniform game laws in New England.

New England associations for the protection of fish and game are cordially invited to send their address to the secretary. RICHARD O. HARDING.

304 WASHINGTON STREET, Boston, Mass.

CHICAGO AND THE WEST.

CHICAGO, March 13.—In the matter of positive success nothing has yet been attempted by way of legislative measures. The State Sportsmen's Association's committee on legislation held its final meeting yesterday at Mr. Chairman Low's offices. Mr. Low himself has been seriously ill for a week and was forced to leave early. Mr. Nicholls was at home, also sick. Mr. Donald, Mr. Baird and Mr. Bostree were present. South Water street was not present. A well-drafted bill was at hand and was discussed carefully. This bill will go down to Springfield for handling about as it is now. It is not radical or sweeping in its demands, and if it could ever be laid fully and pleasantly and fairly before the people of Illinois, it would doubtless be approved in whole. The bill will ask that the quail date be made Oct. 15 instead of Oct. 1, as it is now; that any quail exposed for sale shall show shot marks; that the selling season shall close Jan. 10 or Jan. 1 (open for compromise); that the chicken season shall open Sept. 1 instead of Sept. 15; that fish and game wardens be appointed by the Governor at request of the State Fish Commissioner. There is not an unreasonable request in that. What a grand thing it would be if the sportsmen should carry their bill! It will be introduced in the Senate. Where is the Senator who wants a lot of friendship and a few votes some day, perhaps? He has his chance in the supporting of this most reasonable measure.

Of course the chief opposition to the bill will come from the game dealers. We never speak as we pass by now. The game dealers have also openly said that if the selling season were shortened to Jan. 1 or Jan 10, they would not be responsible. They would obey the law, of course they would; but the law wouldn't make any difference. In other words, Chicago markets would be run wide open as a matter of retaliation.

All right. We wish they would run South Water street wide open for a while. That is just what we want. We are getting ready for that.

In the past there has never been a warden on South Water street who would work against the game dealers.

The office of warden is nothing. It is the man who must make the office. The present incumbent, or perhaps I might better call him incumbent, the immortal Brusewitz, is now thought to be sufficiently well advertised as an incompetent. Action in his case has been all too long delayed. Yesterday at the committee meeting a petition for his removal was presented. This petition will have 10,000 names in a couple of weeks. As it is desired to circulate it somewhat outside of the city of Chicago, and as some clubs or individuals may wish to sign it if forwarded to them, the petition is here given as drawn:

PETITION FOR THE REMOVAL OF THE COOK COUNTY GAME WARDEN, AND FOR THE APPOINTMENT OF A SUCCESSOR.

To his Excellency, Joseph Fifer, Governor of the State of Illinois:

We, your petitioners, do respectfully represent:

First—That the unlawful handling, selling and exposure for sale of wild game in the county of Cook and city of Chicago, is an offense against the dignity of the Commonwealth which has enacted laws for the prevention of such practices.

Second—That the game warden under whose inspection falls the great game markets of the city of Chicago, should be a man holding in the highest degree qualities of energy, fearlessness and probity of character, and a disposition to prevent this unlawful offense against the dignity of the Commonwealth.

Third—That the present incumbent of said office of Cook county game warden, H. P. Brusewitz, is, and has been from the first, notoriously inefficient and incompetent, and has shown himself to be possessed of qualities the reverse of those demanded in the possessor of that office, for that:

(a) He has failed, if ever, to appear upon South Water street, that being the location of the game markets, and has shown rather a disposition to keep away from said game markets than to appear and prosecute his duties there.

(b) He has, in his capacity as insurance agent, taken large amounts of business among the game dealers, but he has found no illegal game.

(c) He has said publicly, and often, that he "cares nothing for the game business, knew nothing about it, and didn't propose to bother with it." He has further publicly said that he "did not know a duck from a prairie chicken, and did not care to."

(d) He has refused always, although repeatedly so requested by those who had discovered the whereabouts of illicit game, to appear and make seizure or search for the same; so much so that it is now known that he will not act in any fast disappearing game.

(e) He has refused to appear and seize illegal game when so requested by a justice of the peace, to wit: Justice Harry Smith, who had dismissed an action through error in form, the said action involving a certain lot of illegal game then and there lying in the court room of the said Justice Smith.

(f) He has failed and neglected to file an annual report of his acts and doings, and we deny, as is by law required.

(g) He has been guilty of assisting in violating the game laws of this State.

(h) He is so notoriously indifferent, incompetent, and inefficient that your petitioners believe your Excellency will be unwilling to retain him in office upon the presentation of these facts.

Now, therefore, we, your petitioners, do respectfully pray:

First—That the said H. P. Brusewitz be removed from his office as game warden for the county of Cook.

Second—That a successor be appointed at an early date.

And we believe that one ———, of the city of Chicago, county of Cook, now resident at ———, would be a man fit and worthy for said office of game warden for the county of Cook, he, the said ———, being in our belief, energetic, fearless, of integrity, of an unfeigned interest in the preservation of our fast disappearing game, and well imbued with a disposition to make it hot for the law breakers on South Water street.

And your petitioners will ever pray.

We shall have to ask the game dealers to guess the name of the successor referred to in blank, and for the present the same must be asked of FOREST AND STREAM, until the petition is actually started going. It would be worthless to jump Brusewitz out and get another incompetent in. This time we want a warden who will make a national name for himself, as Mr. Collins, of Connecticut, has done, or if you like, as Mr. Bergh did, as Mr. Shortall is doing. We want an enthusiast, and if possible a man of means, not an impecunious and questionably honest incompetent. We believe out here that we have got just such a man located, or we hope we have, at least. At present he will not accept, but under the pressure brought upon him to do so, it is thought that he will yield and take the office. If he does, we only hope that South Water street will try that wide open business. We are going to have some fun out here yet, and this time I believe the warden will have better support than any ever did before from the sportsmen.

Now some more talk about this question of game protection. My old friend Col. Bond, the king of the game dealers, and a man of no mean ability in general smoothness, as I think readers of FOREST AND STREAM will agree, writes me as follows:

The FOREST AND STREAM came Saturday, and I noticed your article. You have no correct conception of this game question. Your idea of eventually closing the season Jan. 1, is well enough in its way, but does not solve the question of game protection. Now take grouse as an example: the great destruction is made in September, October next, November next, then December, and in January less than any of the preceding months. If you wish to save game, prohibit its being killed in the months when most of it is destroyed. Commence by stopping the killing first in September, then October, as there are twice as many killed in September and October than in November, December and January. I don't know but I would favor a uniform law prohibiting the killing in September and October, and opening the season on all game Nov. 1 and closing Jan. 31. There is no use to talk to me about being in favor of the "bird" when September shooting is allowed. The disposition to make big bags is another reason for the great destruction of game. A large majority of shooters would like a gun that would be as effective at a quarter of a mile as their present guns are at 30 yds., and if they could get one of the former would throw their old guns away. I would suggest other ways of saving game. Prohibit the use of dogs in field shooting, and the use of boats, blinds, decoys and duck-calls in water fowl shooting. If this could be done it would go a great way in saving the "bird." But there is no such thing as such things, as the sportsmen would not agree to anything that would take away their chances of slaughtering game.—E. S. BOND.

So I haven't any correct conception of this game question, Col. Bond says. I reckon he is about right. But I just want to struggle with his letter for a moment. Col. Bond says that most of the game is killed in the two or three early months. This is unfortunately true, so far as shooting and not trapping is concerned. But who kills that game, and where does it go? It is not killed in bulk by sportsmen and used by themselves and friends. It is killed by market-shooters and put into the freezers all over Iowa, Minnesota, South Water street. It is the fiend Cold Storage which kills this early game in bulk, and not the sportsmen. A denial of this is worthless, because the truth is too well known. It is true that the State Sportsmen's Association by its committee agree to advance the chicken date to Sept. 1 instead of Sept. 15. Why? Simply as a compromise. A compromise with whom? Was it a compromise with the sportsmen of the lower part of the State? No sir! It was a compromise with the shooters in the lower part of the State who shoot for Cold Storage, and who can kill more birds on the stubble than they can in the corn. Not a man of the legitimate personnel of the whole association but would rather see the chicken date Nov. 1, now and forever, if that thing could be. That cannot be, because Col. Bond and his associates and their market-shooters, who here blame the sportsmen for this early destruction of game,

would never all of them [once agree to any such a date. Col. Bond's real friends are these same early shooters, whom, wrongly named as sportsmen, he here seeks to blame. Col. Bond is playing an easy game. No wonder he can talk. He has two ways to win. Last summer I could have showed the game dealers in early July prairie chickens on South Water street not bigger than your fist. Next summer, unless we get a decent warden, I shall be able to show the same thing. Was it the sportsmen who killed those birds? Is it the sportsmen, or just the game-selling shooters, who are so anxious to do this slaughtering of game early in the season? I know very well that the dealers do not or dare not openly invite these early shipments. Why? Because they get them anyhow, out of the local freezers, when the season permits; also, because, as they admit and publicly profess, the natural demand for game, and consequently the time it brings the most money, seems to be in the cold weather. It is easy to see, then, that the cry of the dealers against September shooting is because there is not so much money at once in that shooting for the dealers. I think Col. Bond will admit that the September game and its allied poultry trade must amount to some little amount. I think he will admit that he gets his share of this, anyhow, sooner or later, at once or ultimately out of the Iowa and Minnesota freezers, and that he can get this just as well while he upbraids the "sportsmen" for practicing such early shooting. There is nothing like being honest with one's own self. Very well. Let us suppose that all this could be cut off, that the dealers would really give up this September profit which they now realize in December, and that the actual sportsmen would be willing to sacrifice the mild and beautiful days of autumn, the natural sporting season of the year, and agree upon so cold and stormy a date as Nov. 1 for the opening of the season. Would the dealers meet this last sacrifice with an equal sacrifice and cut down the selling season to Jan. 1? No indeed! They wouldn't do anything of the kind. Would they agree to Oct. 1 to open the season, shooting and selling, and Jan. 1 to close both? No, indeed, nothing of the kind. In short, the game dealers know just exactly how they can make the most money out of selling game, and they are going to hang out for just exactly the dates most profitable to them. Their indignation at the "slaughtering of game" is a very artificial and really transparent affair.

I do not think the use of a dog in field shooting ought to be prohibited, any more than the use of a gun, for it is natural and fit; but as to the use of more destructive arms, their adoption by sportsmen is as much from a desire to be up with the times as from a desire for actual butchery. I do not find these large bags by sportsmen so very common as Col. Bond would indicate. The shooter for sport lays in many appliances for sport, but who is the man that actually and steadily uses such appliances? Col. Bond knows it is the man who ships his game. To give up boats, blinds, decoys, calls—I can conceive of a spirit of American sportsmanship which would agree to all that, but a law to that effect would have to be made by a compromise, and that compromise would have to be made, not with the sportsmen, but with the men who ship their game—the men who are Col. Bond's friends, and not the friends of sportsmen. I do not find the sportsmen such steady killers as would seem to be intimated in Col. Bond's letter. I don't find them eager to devise ways to kill game more generally. I bear in mind a devoted little body of men who not long ago pleaded strongly with Col. Bond to consent to a means which should make the killing of game, as they thought, less general. And Col. Bond would not consent. It wasn't his way. I shouldn't like to say anything unfair or discourteous to Col. Bond, who is himself always pleasant and fair—although I know I don't have any "just conceptions of this game question"—it does look to me as though a South Water street compromise was one by which South Water street gets the carcass, hide, tail, horns and tallow, and the more valuable portion of the intestines, while the sportsmen get the rest—with a scolding for being so selfish about it.

I've got the Colonel stirred up a little, and the other day he sent me another letter, which I really must have space to run, for it raises some more interesting points. The letter says:

I inclose a letter from an old friend and one of the most accomplished sportsmen I ever knew. I have several of the same tenor, so you see the free advertising I have had in the FOREST AND STREAM has done me good. I want you to become a convert to my idea of preventing September shooting. I have taken the trouble to look over my old books and find my receipts of grouse in the month of September were about half the number I received during the months of October, November and December. At that time the season opened Sept. 1 and closed Jan. 1 and I have not the least doubt but that the grouse killed in August and September amounted to round numbers over double killed in October, November and December.—E. S. BOND.

The inclosure referred to is a letter from Mr. S. W. Scott, of Osakis, Minn. I wonder if it is Col. Bond who has put such funny ideas in Mr. Scott's head? I really must quote a part of the latter's letter, since I am not told not to do so, though we cannot be severe in comment on it under the circumstances. Mr. Scott says:

I saw by FOREST AND STREAM that you represented South Water street at the Sherman House the other evening. I hope you will make game laws that will suit everybody. I see the FOREST AND STREAM occasionally, and would be highly interested in it if they would print a little of the game question. Anything English makes me sick, and if they could only have their own way they would tax the guns of us poor devils and cut us off entirely. They keep agitating the subject, and have got the city shooters to believe as they do, and in time they will succeed in making a law to suit them, and we the people, the majority not being organized as a great, will have to go to the wall. South Water street is in power, and can keep them in check in Illinois, but we, unorganized as we are, are powerless. My day is most past, and I can't be cheated out of what sport I have had, but my sympathies are just as strong as if I had got to spend another life on this naughty world.

Now, if Mr. Scott will so permit, I can't help thinking that he would be yet more highly accomplished as a sportsman if he would get out of the way of thinking that game protection in America is anything either English or undesirable. The old idea that it is the "city shooters" who want to protect the game for themselves selfishly and not for the people, is now quite too old and exploded to be retained by Mr. Scott or anybody else any longer. It is for the people, heedless, thoughtless, wasteful and unreasoning as they are, that other and wiser heads should act in the preservation of the game. FOREST AND STREAM is not more for the city shooter than for any shooter, and everybody knows that who knows the paper. But I imagine it will keep right on agitating this

game protection until it does indeed obtain a law which drives to the wall the unorganized mob of the thoughtless and reckless shooters. The day will come when these sporting papers will be called blessed. Mr. Scott says he cannot be cheated out of the sport he has had. How about his cheating his own children and the next generation out of the sport they ought to have? How about cheating other fellows, right here in this generation? If such fraud be prevented, who should have the praise for it, the unorganized mob, or the organized thought and energy and intelligence which lie behind an able journal of to-day?

It pleases me to hear my friend the Colonel say he is getting results from his free advertising. I always said FOREST AND STREAM was a capital advertising medium. But as to "becoming a convert to the idea of September shooting," I would like to know who is more of a convert or a devotee to that idea than the writer, or than the men of the State Association, or than FOREST AND STREAM? We all know very well that with the Sept. 1 date we should have no chickens in Illinois after the next fall. Why was not the date Oct. 1? Compromise. With whom? This has above been answered fully enough for any one to understand who cares to do so. Col. Bond may or may not, but I wish he would turn in and really help to stop the extermination of the game. Noman could be so able as he, for he is cute above all things, and smooth, oh my! Still, I hope he will once in a while come over in our yard and holler down our rain barrel, even if he can't stay very long.

March 14.—Mr. Lew Harrison, of Minneapolis, I suppose about the best-natured and biggest-hearted sportsman in the world, is in town this week, having scented from afar off the battle of day before yesterday between Capt. Adrian Constantinople Anson and Mr. Geo. Hofmann in the matter of 100 live pigeons, somewhat a side, in which, as will appear by the scores in the proper column, Capt. Anson won. The boys wanted Lew Harrison to come down and have a little duck shooting, but he declined. He is one of the all too few men who will not shoot ducks in the spring at all. Something of principle in that, sure. Mr. Harrison informs the Chicago boys that he has started a branch Possum Club in Minneapolis, and that it is already a howling success.

The organization of the Rock Creek Fishing Club is announced at Clinton, Ia. Will some friend out there report more fully? The fishing season is coming on, and FOREST AND STREAM wants all the news from all the fishers.

Mr. James Wolstencroft, of Philadelphia, who was in the city last week, got away without my meeting him. It was wrongly reported in a Chicago paper that "Billy" Wolstencroft, the Philadelphia crack shot, was in town. Billy and Jim are brothers.

Mr. H. L. Cairncross, a well-known figure at Illinois traps, blew in the other day, and so did Johnnie Ruble, of Beloit. Charlie Budd will be here next Friday. There will be quite a party going over to the Detroit shoot, and the opening of the season there will be something of an event.

Mr. V. E. Wampler, of Dayton, O., an old friend of Rolla Heikes, was here yesterday visiting with Rolla.

Mr. F. E. Bosworth, late of Lexington, Ky., is recently arrived in Chicago, which place he will now make his home.

On last Saturday quite a party went down to Mak-saw-ba Club after some duck shooting, but a cold turn of the weather defeated plans and no bags were made. There were some bluebills about, and some sheldrakes in the river, but no shooting. Mr. W. H. Haskell says that about that time a conductor told him that in running along the Kankakee Marsh he had seen great numbers of geese out on the ice. I have heard of no goose shooting, though unusual quantities of geese have appeared hereabouts this spring. The weather has been changeable and mostly cold all this week, and though a thaw ought to bring some shooting now, it is still a question whether those going out near the end of this week will meet any birds. To-day will see a good many shooters start.

E. HOUGH.

A SILVER GRAY FOX.—It has been known for a number of years that on the hills north of Port Crane there lived a silver gray fox, the most beautiful and highly prized of all the reynard family. Every effort has been made to capture the cunning creature, but in vain, as every time the hounds were put upon his track he would lead off to the north and make such a circuit that nothing would be seen of the dogs for the rest of the day. The next day, if they had good staying qualities, they would come in worn and exhausted by their long and fruitless chase. For several days after such a chase no trace of the fox could be found in his usual haunts, after which his trail would be found leading from the henry where he had been to regale himself. His home was known to be in a rocky gorge, but there were so many entrances to it that all efforts to trap him proved unavailing. Last week the cunning animal was shot by a hunter who got within range of him by the merest chance. He was one of the largest foxes ever killed in that section of country. His size was probably due to his age, which could not have been less than ten years. The fur was coal black, except on the extreme tip of the hairs, where for about 1/8 of an inch they were as white as snow. The skin was shipped to a New York fur dealer and yesterday the hunter, A. C. Wilson, received a check for \$100 in payment for it. In conversation with a fur dealer in this city to-day it was learned that silver-gray fox skins are the most valuable of any furs obtained in this State, and \$100 is the usual price for a good one. But one other has ever been obtained in this county so far as known, and that was shot by Burton Wylie near North Colesville about ten years ago. He kept the skin two years, which damaged it somewhat, and finally sold it for \$50.—Binghanton (N. Y.) Exchange.

MISSOURI.—Sedalia, March 11.—The game prospects were never better here at this time of year. Chickens and quail are very plentiful, the latter very numerous, and if the breeding season is favorable the shooting next fall will be exceedingly good. The law is pretty well observed here, and I am satisfied the quail supply is steadily on the increase.—L. S. E.

MADAWASKA CARIBOU.—Caribou are unusually plentiful this winter in Madawaska. At Murchie's camp they have killed over fifty.—St. Croix (N. B.) Courier, March 5.

DEER HUNTING INCIDENTS.—West Lebanon, N. H.—I take lots of comfort reading the experience of my brother sportsmen, and it gives an added zest when it comes from some of the waters that I have camped on. The account of a trip to Cold River, by F. Berkley Smith, in your issue of Feb. 12, puts me back twenty-six years and more, when I first began to camp in the grand old Adirondacks. I well remember that the first deer I ever shot was in Long Lake, not more than two miles from the outlet of that same Cold River. That feeling can never come to a man but once in a life time. And speaking of that same Long Lake (as you say) "reminds me." One of your correspondents spoke of a strange shot made at a deer, and asked if any one knew of a similar case. It was of a deer killed by the bullet striking its horn. I can answer for one that in the fall of 1865, when I was camping on the lower end of that lake, my dogs drove in a fine buck. He was so far off that I shot the rifle barrel at him. He was dead by the time I could row up. The ball struck and split the left antler about 2 in. from the head. I always supposed that it was concussion of the brain that killed him. I watch the paper very closely to see if "Von W." has written anything, and feel well repaid when I find something from his pen. I have followed the hounds for over forty years till the present winter, and now I feel as though I would like to sit in the chimney corner with "Von W." and talk of the days of old, never to return; but the memory is sweet.—C. D. S.

A LONG-BARRELED GUN.—In the last FOREST AND STREAM I see a query from "Doctor" as to length of gun barrels. I have in my possession an ancient "fowling piece," brought to this country by a brother of my grandfather, who lived at Flatbush, L. I., some time before the Revolution, say 1760-70. The barrel is just 5 ft. long, but the gun is beautifully balanced and comes well to the shoulder. It was brought from England, but from the fleur-de-lis on the barrel I judge it to be of French manufacture. The first owner used it to shoot plover on Long Island, and the family tradition is that a colored servant used to drive him in a low gig, from which he fired when he got near enough. An uncle of mine had it altered to "percussion" about 60 years ago, and many a gray squirrel and some ruffed grouse have I killed with it when a boy. I sometimes think I will take the old gun out and try it again, with fine shot, and see what it will do. "The boys" always used No. 2 shot in those old days, but the old gun had a fearful reputation as "sure death," and the "other boys" said I just knocked the squirrels out of the trees with it without taking the trouble to fire.—VON W.

REMOVING DENTS IN GUNS.—One of your inquirers recently asked about removing dents in gun barrels. Several times I have carelessly dented the barrels of my shotgun. The dents were in all cases removed by firing heavy charges a few times. I loaned a friend metallic shells to use in a gun of German manufacture, the chambers of which proved to be much larger than those of my gun, and when the shells were returned they could not be placed in the chambers of my gun, they were expanded so much. I made a die and forced them into it, but instead of this compressing the shells they were corrugated. I loaded them heavily, and the first discharge left the shells as perfect in form and otherwise, so far as I could see, as when they were new.—H. L.

A GUN CLUB FOR WEYMOUTH.—Weymouth, Mass., March 10.—An enthusiastic meeting of a large number of sportsmen of Weymouth and Braintree was held this evening to organize a club to enforce the game laws, for stocking the woods with game, and for general development of fine shooting. Charles E. Jacks was elected president and C. Frank White secretary. The remaining officers will be elected at the next meeting. The club will hold their first clay-pigeon shoot Fast Day. A large number of applications have been received for membership, South Weymouth sending eleven. We have a club of enthusiasts qualified and protected by a doctor and lawyer for emergency.—CHAS. E. JACKS, Pres.

WHAT'S IN A NAME?—The press reports relate that "Wm. Slaughter, a wealthy farmer of Clay county, South Dakota, has got himself into a remarkable tangle, from which it will cost him more than \$20,000 to extricate himself. He was caught yesterday by the sheriff of his county and taken to Vermillion, together with nineteen barrels of prairie chickens which he admitted having killed. The penalty for violating the law is \$10 for each bird, and as he had 2,000 of the birds barreled up, it is very easy to figure out the amount he is indebted to the State. There are no loop holes in the law, and Mr. Slaughter has goods and chattels enough to pay for his sport."

GREAT SOUTH BAY.—The duck shooting in Great South Bay, Long Island, is capital. An unusual wildfowl score of twelve brant was made there last Saturday, by a gunner who went out from Sayville.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nash," "Glean," "Dick Swirell," "Byblione" and other competent authorities to be the best treatise on the subject extant.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

THE OTSEGO BASS.

A SCIENTIFIC INVESTIGATION.

Editor *Forest and Stream*:

As is already known, principally through the columns of your journal, large numbers of the Otsego bass, so called, have during the past two winters, and contrary to all former experience, been taken with the baited hook, chiefly through the ice.

More wonderful still is the fact that, whereas the *Coregonus* subsist naturally upon crustacea, these fish, averaging about 1 lb. each, are almost invariably taken with a small lake shiner or tiny fragment of the same.

As the original Otsego bass averaged from 2 to 3 lbs. each, reaching in one instance a weight of 7 lbs., and were rarely if ever taken with the hook, however baited, the question whether the fish now taken is identical with the original Otsego bass has been quite seriously raised. By some it is flatly disputed.

To clear the matter up, I forwarded to Prof. T. H. Bean, Ichthyologist of the Smithsonian Institution, at his request, one of the fish packed in salt, which reached him in poor condition, partly disintegrated, and from this he was unable to arrive at a satisfactory conclusion.

My theory is that we have now in our lake three varie-

THE OTSEGO BASS.

ties of the *Coregonus albus*, viz. (1), the original Otsego bass ("an established misnomer for the common whitefish"), averaging about 3 lbs., but attaining an extreme weight of 6 or 7 lbs.; (2), the Lake Huron whitefish, averaging 3 to 6 lbs., but said to attain a weight of 20 to 25 lbs., and (3) the fish now taken, averaging 1 lb. each, but reaching to 3 and 4 lbs., and that this fish is probably a fertile hybrid, resulting from a cross between the original Otsego bass and the Lake Huron whitefish, of which 300,000 were planted here in 1877.

As this theory affords a logical solution of the doubt, I have submitted it to Prof. Bean, who, after another and thoroughly scientific analysis of a perfect specimen, sent to him in alcohol, herewith appends his conclusions, which, having been reached with the utmost care, must certainly place the matter beyond all further controversy.

That the variations between the fish now taken and the original Otsego bass are neither structural nor organic, but purely accidental, resulting from change of food and habitat, I am the more ready to believe since, upon this very point, Dr. Bean's views concur exactly with those of the late Gov. Seymour, formerly New York State Fish Commissioner, and one of the most careful observers of his day.

COOPERSTOWN, N. Y., Feb. 12.

"Mr. Elihu Phinney, Cooperstown, N. Y.:

"The whitefish from Otsego Lake arrived in excellent condition and will be permanently preserved in the Museum collection. After having carefully gone over the specimen and compared it with other individuals from Otsego Lake and with the common whitefish from Lake Michigan, I find certain differences, which are constant in all the examples I have seen. The Otsego Lake whitefish, to begin with, is a smaller fish than the common whitefish of the Great Lakes; (2) if I may judge from the specimens at hand, the snout of the Otsego Lake fish is blunt and not obliquely truncate as in the common whitefish; (3) the scales of the Otsego form are smaller than in the common form, almost invariably exceeding 32 along the lateral line, while in the common whitefish the average is about 72. The fish you have sent me is most nearly related to the common species of the Great Lakes (*Coregonus clupeaformis*), but if the differences which I have pointed out prove to be constant the Otsego Lake whitefish must be distinguished by at least a varietal name, and would be written *Coregonus clupeaformis* var. *otsego*. You can better judge than I about the constancy or variability of these characters, and I will be glad to have as full information on the subject as you can obtain. Is the snout in your fish always even with the end of the lower jaw, or does it project somewhat forward into a conical point as in the common whitefish? What changes do you notice in the breeding season, does the male acquire a decided hump on the nape?

"From present appearances your fish is more nearly like the common whitefish than anything else, and the differences which I have pointed out might be caused in the common whitefish after introduction into a lake like

yours. You know more about the history of the hatching operations at Cooperstown than anybody else, and I should be delighted to learn just what work you carried on there years ago. Very respectfully,
T. H. BEAN."

[One of the very best accounts of angling for whitefish was published by Mr. Phinney in FOREST AND STREAM, Feb. 26, 1885, wherein he relates the experiences of Seth Green, Charles Carpenter, Dr. Garlick and Judge Potter, with a variety of baits. Seth Green recommended the use of small minnows and red angle worms, very fine tackle, the line to be left on the bottom and the fish allowed to hook themselves. He always insisted upon a light strike and careful handling, in order to avoid tearing out the hook. Mr. Carpenter was successful when large schools of the fish were present in Lake Erie in catching a few with cockroaches drawn rapidly through the water. Dr. Garlick took them at Copper Harbor, Lake Superior, bottom fishing at night, with small pieces of fresh beef. Judge Potter saw a great many taken at Sault Ste. Marie, Lake Superior, with the hook baited with the June or soldier fly. The fishing was done just before sunset in a deep, still pool, adjoining the rapids, and the bait was allowed to rest on the bottom where the fish were feeding. The whitefishes consort in large schools and are found in deep cold water in summer, approaching the shore in cold weather. Dr. Garlick thus describes the action of the common whitefish: "These fish bite very gently, with no dash like the trout or other game fish. You will barely feel a slow movement of the line in your fingers. Then with a light strike you bring them slowly to the surface and take them out with a landing net." The methods recently pursued in Otsego Lake have been so fully described by Mr. Phinney that we need only refer the reader to his excellent descriptions.]

ONONDAGA' ANGLERS' ASSOCIATION.—Syracuse, N. Y., March 7.—At the annual meeting of the Anglers' Association, R. W. Jones was reelected President; J. N. Babcock, Vice-President; W. S. MacGregor, Secretary and Attorney, and Chas. W. Phelps, Treasurer, with M. J. French, George B. Wood, F. J. Kendrick, Charles H. Mowry and C. W. Smith as Executive Committee. There was a large attendance of members and much interest manifested in the work of the Association. Starting one year ago with a membership of about twenty, the Association now has upward of 200 members. The report of work done during the past year in capturing and destroying nets and in detecting and prosecuting net-fishermen in the waters of Onondaga county, shows that the As-

sociation has accomplished more in the work of protecting fish during the past year than any other association in the State, and that it has become a terror to the law breakers, as they have discovered that the Association is determined to prosecute the fish pirates without fear or favor. It was decided to stop the use of all dip-nets and flat-nets and other illegal devices for fishing upon Onondaga Lake, Oneida Lake, the Seneca River and their tributaries, and the shooting of pickerel, and that any one detected in committing any violation of the law in that respect should be prosecuted. A large number of new members were admitted and the prospects are bright for a large increase in membership during the coming year, and for a very vigorous campaign against the pirates.

ANGLING NOTES.

FLOUNDERS of large size, 1 lb. to 4 lbs., have been taken in considerable numbers in Jamaica Bay. The best bait seems to be sandworms, though when these cannot be obtained soft clams will answer fairly well.

The first run of striped bass may be looked for about the middle of April, and the weakfish follow about three weeks later. The first are generally caught off Fort Hamilton.

In Professor Bean's list of fishes caught in Great South Bay he omitted the redbait and spot. Almost every season one or more of these handsome fish are taken while chumming for bluefish. And they are generally of good size. The largest on record was the 35 lb. fish killed by Mr. Wilson.

Some magnificent specimens of fresh cod have been received from Boston dealers lately. John Sutherland had one on exhibition this week that weighed 50 lbs., and last week received one of 61 lbs. in weight. Last season his biggest cod weighed 86 lbs. These large fish are of fine flavor with layers of cream between the flakes of meat, and are at their best at this season of the year.

Game Warden Kidd has been visiting Saw Mill Creek in Westchester county. He found that a lime kiln where they used petroleum to burn the lime was running the refuse oil into the stream; also the managers of a couple of pickle factories were allowing the brine to escape. They were notified that unless the nuisance was abated inside of ten days, suit would be commenced against them. This stream has recently been stocked or is about to be stocked by the State with trout. It seems a shame that the tax-payers who contribute money to keep up our stock of fish and game should be imposed upon by these people.

The wisdom of changing the date of the opening of the trout season from March 1 to April 1, both in New York and New Jersey, was again made apparent this year. It seems that in recent years the clerk of the

weather supplies us with some of our coldest weather during the month of March. Last season we had several inches of snow on the first of April, and it is generally well along in this month before the angler can fish with any degree of comfort.

Public waters are getting more scarce every year on Long Island. Smithtown, Glen Cove, Patchogue, Newbridge Creek and Cedar Creek are about the only places that afford any trout fishing worth going for, and most of these are very uncertain. The following list of flies comprise the list of well-tried favorites: Scarlet-ibis, cow-dung, Abbey, dark-montreal, Cabill or Von-Patten, Imbrie, great-dun, black-gnat, coachman, professor, queen-of-the-waters, plum, Lowery, golden-spinner, March-brown, brown-hen and grizzly-king. No. 8 spout is the best size to have the flies dressed on for early fishing.

SCARLET-IBIS.

CHICAGO AND THE WEST.

CHICAGO, Ill., March 11.—I want to tell a very pretty little story which will show the beauty and the usefulness of a right devotion to field sports. A friend of mine, with whom I often go fishing, is the hero of it. This friend is a newspaper man, and like all good newspaper men, he tries conscientiously to live up all his salary. Last week, without any very elaborate preliminaries, the manager of the paper for which he labors came to him and told him that the paper was not making very much money, so he guessed he wouldn't publish it any more after the next Saturday, and such being the case, he wouldn't need any editor to speak of after that date. "Now, I don't know what I'm going to do," said my friend. "Here I've only got just about \$45, and this is a mighty bad town to get broke in. I can't live for over two weeks on \$45, and besides that, I've got to have some clothing. I've got to have some shirts, and I need some other things. And you know we were figuring on going fishing this spring, and I was going to buy another fly-rod."

I flatter myself that I rose to this occasion. "It is pretty tough, H.," said I, "but now you want to be careful and not spend any money foolishly till you get to work again. Don't be extravagant, and buy only the necessities first."

That was good advice, as I think all will agree. We then laid our heads together to determine what the "necessities" were. We argued that a man could wear a coat without any shirt, if need be, but that he could not possibly go fishing without a rod, and that therefore the rod in this case was properly to be classed as a necessity. "Come on," said my newspaper friend, "I know where I can get a dandy for \$15." So we went and bought the rod, and I must say it was a beauty.

Now I imagine that a great many practical people will say that was a very unwise and absurd thing to do. That is all they know about it. Mark the result. Just two days after my friend had bought this elegant few rod, a publishing house came along and bought the newspaper of his late employer, retained my friend as editor, raised his salary \$15 a week, and gave him an interest in the business. These are actual and bona fide facts, and I could give the names of all the parties if it were proper to do so. To-day I met my friend again and he was happy once more. We congratulated each other on our judgment in buying that fishing-rod. I do not wish to pose in the least as a wise man or an authority in business methods, but to any one who finds himself in such straits as render economy obligatory, I would point to the above example and repeat my advice, "Don't be extravagant and spend your money foolishly. Buy the necessities first." And there hadn't better anybody tell me this story isn't true.

March 14.—Messrs. A. C. Ely and W. H. Comstock, of this city, leave to-day for Castalia, O., for the opening day of the trout fishing, March 15 or March 16 (Monday.) The success of the Castalia Club with its preserved stream is too well known to need much mention. The gentlemen will probably have rather cold weather, but last spring they caught trout in a blinding snowstorm on opening day. Success to the First Line. E. HOUGH.

WHALES IN THE CHESAPEAKE.—The lower Chesapeake is fairly alive with whales. They have the appearance of sperm whales, and the man who could corral the lot would be rich. Capt. Howes of the steamer Dorchester from Boston, reports three big fellows off Fortress Monroe. They were blowing at a great rate. Nearly every captain arriving the past week reports having seen the sea monsters throughout the various parts of the bay.—Washington Evening Star, March 11.

A MOOSEHEAD LAKER.—Mr. F. S. Stevens, of Augusta, Me., is credited with having caught a speckled laker, which is believed to be the king fish of all its species ever captured at Moosehead. The fish was taken near Deer Island and measured 35in. in length, 10in. from back to belly, and weighed 21½lbs.

CHUBB'S CATALOGUE would have been noticed this week, but "Podgers" saw it, the other day, borrowed it, and found it so interesting that he has not brought it back.

MR. ANDREW HARRIS, Providence, R. I., whose advertisement appears in another column, carries a full line of fishing tackle and anglers' supplies. Write him for a catalogue.—Ado.

Fishculture.

WORK OF THE COMMISSIONS.

Arizona.—Arizona's Commissioners can report very little as yet in regard to the fisheries in the Territory. Some of her private citizens along the mountain streams are doing something. Mr. W. J. Hill, of Belmont, has expended not a little in building ponds and placing fish in them. He has met with poor success through want of experience, but is now more fully informed and hopes to succeed. Our people take to mining and not to fishing. The Legislature has not been asked to do much, if anything, by way of appropriations to help. We expect to make a report of our work at the coming legislative session.—T. W. O.

Colorado.—Colorado has placed W. S. Kincaid in charge of her fishcultural operations and the result of his work has been most encouraging, both last season and so far this year. We have over 500,000 eggs of *S. fontinalis* now in the trays and hope to get about 800,000 before the season for taking their eggs closes, which is with us about Dec. 20. Our work is confined to trout propagation entirely. We

handle *S. fontinalis*, *S. trideus*, *S. fario*, and *S. virginialis*, not the *S. spilargenteus* or Rio Grande trout, but the black spotted or Utah trout of Girard. These fish spawn only in June and no earlier eggs have ever been taken by our Commission though there are a few persons who claim to have taken ripe eggs in May. The stocking of barren mountain lakes has been very successful the past two seasons. On Aug. 17, 1889, the State superintendent stocked Moraine Lake on the Pike's Peak trail with several thousand brook trout (*S. fontinalis*). In September of this year one was captured in the lake that weighed 1½lbs. As the lake never had a fish in it of any kind prior to the above date we consider this a very rapid growth, as the fry put in were not over 2½in. long. The elevation of Moraine Lake is 10,500ft. above the sea level. The cans of fish were placed upon the backs of burros, there being only a pack trail leading to the place of planting. Other lakes report almost the same results, while Echo Lake, near Idaho Springs, shows such a wonderful growth of *S. fontinalis* in its waters that no one, who has not actually seen the fish, will believe the reports in regard to them. An examination of the water plants, that grow to such an extent as to afford shelter and food for myriads of insects, reveals the real reason for such marvellous growth upon the part of these vigorous fish. *S. fontinalis* is an incessant feeder. He takes his food from the bottom, from the weeds and mosses, rocks and from the surface. Nothing in the shape of aquatic animal life, small enough to be taken into his capacious maw, escapes his efforts to devour. We have barren rivers as well, that are literally alive with fish food and yet contain no fish of any kind. These we are stocking, and in every case meet with good results. An entomologist would find rich harvests along our mountain streams and lakes.—G. L.

Illinois.—The year 1890 has been a great angling season in this State. Outside of pond culture for carp, our method of rescuing and distributing indigenous fishes is about the only fishculture carried on in this State.—S. P. B.

Indiana.—We have organized the Indiana Fish and Game Association and mean to protect the food fishes of this State. Over a hundred violators of the fish laws have been punished, and dynamiting and illegal seining have been checked. Numerous auxiliary branch associations have been formed in several counties, and an interest in fish protection is observable throughout the State. During the past year we have placed 20,000 young bass in various streams. At Rome City we have 500,000 young wall-eyed pike in a pond. These will be kept until a year old and then distributed in suitable streams. We have also 10,000 landlocked salmon, which will be planted in Indiana lakes when old enough. The German carp is not coming up to our expectations. They are poor food and, burrowing in the mud like swine, they keep the water so muddy as to disgust the clean fish and drive them away. Indiana has a vast amount of water that is inhabited by the better class of indigenous fish. Its shore line amounts to 30,000 miles, and we have 300,000 acres of water well adapted to fish. The value of the fishery products of the State, if carefully protected, will amount to many millions of dollars. The present impoverished condition of our lakes and streams is due to several causes. The wholesale capture and destruction of fish; obstructions in streams preventing the fish from reaching their proper spawning grounds; the pollution of streams, etc., are among the principal causes. We hope to be able, with the aid of our fish and game associations, to secure a strict enforcement of the law for the protection of fish, and by restocking our streams and lakes to restore them to their original condition of productiveness.—W. T. D.

Kansas.—Our streams are fairly well stocked with fish. The most valuable are the black bass, sun-perch, crappies, channel cat and buffalo fish. These are all native fish. Some others of the better varieties have been deposited in the streams, a landlocked salmon, weighing over 6lbs., having been taken in Shawnee county. Other kinds are heard from occasionally, but there is so little protection afforded fish in the State, and so little encouragement given by our law makers to our fishing interests, that it is surprising that any should live to maturity. The waters of the northern part of the State, like those of the southern half, are pure and well suited for the propagation of all kinds of fishes and are tolerably well inhabited by the finny tribe; but, strange to say, there are no bass of any variety found in any of these streams, except such as have been planted by the general Government. The general character of the beds of the streams is the same, the aquatic plants and fish food seem to abound as in the southern portion of the State; but why one section should abound in bass and the other have none is a question not yet satisfactorily answered. Because of the limited area of the waters of Kansas it is very essential that wise laws be enacted to protect the native fishes, especially while spawning. Such protection, in connection with the fish we may have from the general Government, will largely supply us with this excellent and wholesome food.—J. M. B.

Maine.—We have steadily advanced in our work. The mass of the people begin to comprehend our objects. We hope for better legislation by the coming Legislature. Our woods are full of deer and our ponds and streams of fish. The people begin to see the result of such protection as we have been able to give to our game, as well as the product of our fish plantings.—E. M. S.

Maryland.—The reports from the western counties of this State as to brook trout are very encouraging, and from what I can gather they are so eagerly sought after that the Commission will have to increase the output. There is not so much demand for carp as formerly. Some years ago a friend and I bought 500 acres of land, through which Deep Creek flows, and we erected a dam and formed a lake of about fifty acres, and strange as it may appear, the fishing was good the following spring. Since then I have introduced the rainbow and German brown trout. Of the rainbow we have some that will measure 2ft., and as game as they are large. As to the natives—the brook trout—they are there by the ton.—G. W. D.

Minnesota.—In the years 1889 and 1890 Minnesota distributed more than 5,000,000 of fishes, besides 25,000,000 eggs of the pike-perch (*Stizostedion vitreum*). Of this number 860,000 were brook trout (*S. fontinalis*) and 347,000 lake trout and 162,000 Loch Leven trout. The United States Fish Commission planted in addition to these, in the waters of Lake Superior within the limits of Minnesota, 36,910,000 fish consisting principally of whitefish, lake trout and pike perch. Every indication at the present time leads us to believe that the output of the coming season will largely exceed, if not double, that of the last.—R. O. S.

Missouri.—Missouri has had her fish car out two months distributing large numbers of crappie, bass and carp, for which her streams are admirably adapted, especially for the first two species mentioned. In 1891, if our State Legislature appropriates sufficient money, we mean to double our present work and handle several new varieties.—H. M. G.

Nebraska.—The reports for the years 1889 and 1890 are now in the State Printer's hands. The Commissioners are all gentlemen of large experience in piscatorial matters and take a lively interest in all fishcultural operations. The practical results of the work of the Commission are demonstrated by the fact that in the few years of its existence it has successfully stocked many of the waters of this State with the best varieties of food fishes. Perhaps our greatest success has been in stocking the spring streams with the brook and rainbow trout. When trout were first planted in these streams the wisdom of the undertaking was doubted by a good many, as before the advent of the Commission no fish of the salmon variety was ever known to be found, in the history of the white man, in any of the waters of this State.

However, at the present time we are pleased to say that many of these streams afford the angler excellent trout fishing, and the speckled beauties are as plentiful in some of them as they are in the streams of New York and Vermont—States which are noted for their excellent trout fishing. What has been said of stocking the smaller streams with trout might also be said about stocking the larger streams and lakes with the black bass and wall-eyed pike, as very few of these fish were found in this State until the waters were stocked by the Commission. The stocking of private ponds with the German carp has also been successfully carried on and is considered one of the most important branches of our work. The State owns a fish car which the Commission finds a great advantage in distributing young fish. During the years 1889 and 1890 we hatched and distributed in the waters of this State 36,923,005 young fish; of this number 35,000,000 were young wall-eyed pike (*Stizostedion vitreum*); the others were brook trout, rainbow trout, salmon trout, black bass and German carp. The State appropriation for the Fish Commission for the biennial period ending March 31, 1891, was \$16,000; an extra appropriation of \$2,000 for a fish car is included in this sum, and the Commission have recommended the appropriation of \$16,000 for the next two years' work.—M. E. O'B.

New York.—Notwithstanding the increased efficiency of the hatcheries, the demand for eggs and young fish for planting has vastly exceeded the supply. There has been a notably urgent call for the propagation of whitefish in Lake Ontario, which the Commission, with its present funds, has been entirely unable to satisfy. The Caledonia hatchery distributed during the year 1890 upward of 20,000,000 eggs and fry of food and game fishes. The total distribution for the year aggregated nearly 40,000,000, composed as follows: Frost fish or tomcod 3,320,000, wall-eyed pike 4,000,000, masalonge 75,000, smelts 200,000, whitefish 3,998,000, siscowet 2,400,000, Atlantic salmon 50,000, landlocked salmon 18,000, brown trout 1,246,500, rainbow trout 155,000, brook trout 2,669,500, lake trout 7,477,000, shad 14,238,688. An appropriation of \$38,000 is estimated for the expenses of the ensuing year.

Ohio.—Ohio has finished her pond hatchery at Chagrin Falls, for the purpose of stocking the inland streams. From this hatchery 30,000 marbled catfish (*Ictalurus punctatus*) were distributed last year. Some small-mouthed black bass were turned out from the same place. We find that the catfish does well in confined ponds, but that the bass does not. Next year a much larger number of catfish will be produced, and another effort made to cultivate bass in these ponds. Of course our work will depend largely on the amount of funds placed at our disposal. Private enterprise will fit some of our brooks for the retention of trout, and we hope to make this fish to be no longer a stranger in many parts of our State. The two-year-old fish received a year ago from the U. S. Fish Commission show up well, measuring now 13in. and weighing from 12 to 14oz.—C. V. O.

Pennsylvania.—Pennsylvania's work of propagating and distributing fish was similar to last year's (1889), but on a much larger scale. The species and varieties, which have received attention at our several hatcheries, consist of brook trout, lake trout, Loch Leven trout, brown trout, California trout, and some lake and brook trout hybrids and German carp. At the Central or Erie hatchery we propagate whitefish and wall-eyed pike, and have about 20,000,000 of each, which we hope to distribute during the coming season. We expect to have about 2,000,000 trout from Corry and about as many from Allentown.—J. V. L.

Utah.—Utah has no hatchery as yet. At the last legislative session an appropriation of \$5,000 was made to build a hatchery, etc., but up to date the sum has not been made available. Utah has quite a large water area, which is in every way adapted to the wants of fresh-water fish. Our Great Salt Lake is too salt for any living thing except a small shrimp (*Artemia fertilis*), which abound in great numbers. Utah Lake, some thirty miles south of Salt Lake City, is our best fishing ground. During the year 1889 our regular fishermen took from that lake 25,450lbs. of trout and 1,289,000lbs. of mullet, suckers and chubs. The number of fishermen employed was 38; the number of boats, 3,811; boats, 44, valued at \$1,800; seines, 25, value \$2,350. Of the trout, 1,550lbs. were taken with hook and line. The trout are *poor excellence*. The fishermen found ready sale for trout at 20 cents per pound. The mullets, etc., were sold at from 1¼ to 2½ cents per pound. Utah Lake is about 10 miles wide by 20 long, while its greatest depth is but 12ft. It empties into Great Salt Lake through the River Jordan, which is about 40 miles long. The south half of Bear Lake is in Utah. Its area is about the same as Utah Lake, while its maximum depth has not been fathomed. Then we have a large number of small lakes filled with native fish. The great number of suckers, mullets and chubs is white and sweet, but, oh, the bakers! Our largest rivers are Green, Bear, Weber, Jordan, Provo, Sevier and Price. In all these fish abound. A few white salmon are found in Green River, and they are a very fine fish. Colorado heretofore has been liberally supplied with Utah fish, but now the law forbids their export. The General Government has been sending us carp, shad, black bass, perch, crappies, etc., etc. The shad and carp are doing well, the other species have been planted but a short time and that they will do well no one has a doubt.—A. M. M.

Virginia.—Virginia had no money last year for fishcultural work, her last Legislature having failed to make an appropriation for that purpose. We earnestly hope that provision will be made for the work during the coming season, when we expect to continue the artificial propagation of our most valuable salt-water fish. Last season we deposited in the Chesapeake Bay, near the Glebe hatchery in Northampton county, 7,400,000 young Spanish mackerel and 1,135,000 young shad in the tributaries of the Chesapeake. In addition to these a large number of ova of porgy, bonita, mackerel, coalfish and gray and speckled trout (*Cynoscion regale* and *C. maculatum*) were secured, and with these we were, in an experimental way, quite successful. Beyond a doubt, if means were at our disposal for the manipulation of these eggs, we could make large deposits annually of the fry of these varieties of fish. Until two years ago it was thought by those tolerably familiar with the subject, that the period of spawning of the Spanish mackerel extended over a space of three months, beginning about the middle of June; but we have established the fact beyond controversy that the time of greatest activity in spawning is in the early part of June, while after this month ripe fish are met with only sporadically. An investigation of the condition of the Virginia fisheries reveals the lamentable fact that the catch of our pelagic fish is declining year by year, and the value of the product, even with the latest devices for taking the fish, is growing gradually less. This condition, coupled with the fact that we have such abundant opportunities for artificial propagation, makes it especially desirable that such supplementary methods should be adopted as an auxiliary to our natural supply, and its practical value would be inestimable.—J. T. W.

MILLIONS OF COD AND SALMON.—During the months of January and February nearly nine millions of young cod were planted from the U. S. Fish Commission stations at Woods Hole and Gloucester, Mass. In January upward of twenty millions of cod eggs were taken from 48 females at Gloucester. At this hatchery the development of haddock eggs is assuming great importance. From the Clackamas station, in Oregon, young California salmon have been liberated in the river from time to time as they reached the proper age, and on Feb. 23 there remained in the hatching house 2,500,000 young salmon. To make room in the building 75,000 fry were transferred to a small ditch, fed by a spring, and here they are doing remarkably well.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

March 18 to 19.—Inaugural Dog Show of the Washington City Kennel Club, at Washington, D. C.
March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.
March 31 to April 3.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Secretary.
April 8 to 11.—Third Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.
April 14 to 17.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Munhall, Secretary.
April 15 to 18.—Dog Show of the Southern California Kennel Club, at Los Angeles.
April 28 to May 2.—Dog Show of the California Kennel Club, at San Francisco, Cal. R. P. Rennie, Sec'y.
Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

PITTSBURGH DOG SHOW.

THE opening account of this show, held March 11 to 13, and a full list of the awards, with the exception of beagles and foxhounds, which had not been judged up to the time of our going to press, appeared in the last issue of FOREST AND STREAM. The management of the show, so far as the care of the dogs, the benching and so on is concerned, was, as might be expected, in the hands of "Billy" Tallman all that could be desired, though he was necessarily hampered in his movements by the immense crowds which poured into the building from morning till night. The members of the committee, whose names I gave last week, worked like beavers to make the show the success it proved to be, and were continually on hand to answer all the demands that the ordinary exhibitor is so prone to spring on these hard-worked gentlemen. I never attended a show where such eager interest seemed to be evinced by the general public and, as on the first day over 3,000 tickets were sold, on Wednesday 5,970, on Thursday 4,982 and a similar number on Friday, the financial success of their first undertaking must have been very gratifying to the club, and in appreciation of this good luck a show is promised next year which will outstrip all previous endeavors. The Exposition building will be secured and a better array of prizes will be set forth to tempt the best dogs and owners to the Smoky City. The present building is altogether inadequate to the needs of even a fourth-rate show. The boys were loud in their praise of the way Mr. Boggs and the club had treated them, and it is safe to say they can command a big entry next year.

The judging ring on the stage was poorly lighted, and as many people were allowed to sit round who had no business there, the judges were seriously handicapped in their work. The dogs should have been judged outside in the exercising yard, where light and plenty of room could be had. The judging somehow seemed to lag very much and it was night time on Wednesday when everything was over. This was a show of specials and these take a lot of time to settle, especially when so many are given for local dogs which in many cases have no merit as winners, still demand so much valuable time to properly adjudicate. Messrs. John Davidson, James Mortimer and Joe Lewis did their work well, and though, as is usually the case at Pittsburgh, there was some grumbling by the local element, the "rounders" took everything as it came, appreciating that which they were lucky enough to get and looking forward to what the future and the next show might bring them. The catalogue, while substantially gotten up, was, we regret to say, rather too full of errors, and the management lost money in not ordering double the number of copies, as the 1,500 were all disposed of by Wednesday and no more could be had for love or money. The fire in the city on Wednesday night caused many an owner and handler some anxious moments, but happily the building escaped all harm, but of this more will be said in "Dog Chat." The criticism of awards will be taken as the catalogue runs:

MASTIFFS—(JAMES MORTIMER).

This breed was well represented by the Flour City and Chas. C. Cook kennels, outside of them there was little of any quality. In challenge dogs Moses, hardly looking as well as we have seen him, was alone, and the same may be said of Lady Coleus. Five dogs faced the judge in the open class and, in the absence of Melrose Prince, Clifford Chancellor had an easy win over the others. Major Sellers, second, is too flat faced, boudy in ear, faulty behind and a poor mover, but, no doubt, his excellent body and chest gained him the place. Reginald Neville, third, is a black-faced brindle, long in head, weak in pasterns and straight behind, redeemed by good bone, vhc. going to his son, Benedict Neville, who is woolly coated, is bad behind, but better in head and front than the third winner. Lady Dorothy here reversed her position at Baltimore, Caution's Own Daughter moving down to second place; she is young yet, and age, no doubt, will make her superiority more apparent in future. Duchess of York, third, has a small but well-formed head, ears might be better and little fault can be found elsewhere. Miss Beaufort, vhc., also from the Cook Kennels, shows lots of quality, excellent bone, hardly deep enough in muzzle, but boasts a nice skull and body. Puppy dogs, with the exception of Wilkes and Dude, were woefully lacking in mastiff type. Wilkes has a promising head, feet and ears might be better. Dude has faultily-carried ears and is a bit straight behind. The winner is by Moses and the other by Beaufort. Mr. Cook took both prizes in bitches with Beaufort Queen and Duchess of York, though there must be some mistake in the name of this pup; the Duchess of York in the open class is by Minting and the puppy by Beaufort.

ST. BERNARDS—(JAMES MORTIMER).

These classes filled fairly well with 23 entries. The two big kennels were on hand to fight out their battles again, though Sir Bedivere was, as usual, entered for specialties only. This policy may be strictly within the rights of an exhibitor, but I hardly think it fair to the judge or the dog. It took a good deal of explaining away at Baltimore when several people asked me why Alton was put over Sir Bedivere, concluding so erroneously from the fact of Alton winning in the open class. Hesper and Ben Lemon did their little act over again with the same result, but Lady Wellington turned the tables on her rival, Miranda, though she only scores in muzzle and color. In open dogs, Alton was quickly sent out of the ring with the blue ribbon and Mr. Mortimer settled down to decide on the merits of an inferior lot of dogs. Prince, excellent in bone and markings, but moving badly behind, was given the red. Third was withheld and c. given to Dennis. Melrose, the winner in 1887, is all gone behind, and as his very bad hocks seem to be transmitted to his progeny, we should advise Mr. Stucky to seek farther afield for stud dogs. The three cracks, the two Ladies and Plevna appeared in the open bitch class and were a welcome relief. Lady Livingston's superior quality again put her ahead, but Lady Snerwell had to give place to Plevna this time. The latter is certainly improving in coat and her excellent body and bone is very catching, but she loses in quality to the other as well as in muzzle and skull. Puppy prizes were withheld. In smooth challenge bitches Cleopatra's better quality and markings put her in front of Lola, who has

done some winning herself when competition was not so keen. In dogs, Keystone Mars, one of Melrose's get, was given first. He is very bad behind, plain in head, coat the best part. In bitches first prize was withheld and second given to Keepsake, who is a bit, long-faced, good front, coat and body; Irma Keystone stands fairly well but is platu-headed; coat and bone good. But for the presence of the Melrose Kennels quality would, as may be judged, have been poorly represented.

NEWFOUNDLANDS—(JAMES MORTIMER).

The quality here was better than anything seen this year. Mr. Marshall's team springing quite a surprise. Prince George won easily in dogs over his son, Prince Hal, in size, head and ear. Albany Lass beat Troy Lass II. in bone and head; coats are correct, and these dogs, in this respect, stand as object lessons to the owners of the general run of Newfoundlanders it is our misfortune to see at our shows.

BLOODHOUNDS—(JAMES MORTIMER).

Two dogs were entered, but the rather coarse Jack the Ripper won somewhat easily in head, peak, wrinkle and leather.

GREAT DANES—(JAMES MORTIMER).

There were only two entries, but Melac met a by no means unworthy competitor in Oakron Pascha, whose lack of size compared to the other is his most noticeable fault, as he is a well-balanced dog all round. Melac is simply invincible at present. Splendidly formed, he is activity itself, and his good disposition should make him eagerly sought as a stud dog.

DEERHOUNDS—(JOHN DAVIDSON).

Olga was alone in the challenge class. The dogs were the same as at Baltimore and occupied the same positions. Alida being alone in her class took the prize.

GREYHOUNDS—(JOHN DAVIDSON).

Gem of the Season and Charles Davis again contended with the same result, and their presence so completely smothered the others that no further awards were made. In bitches, Maud Torrington easily accounted for Lady Clare, who loses in body, ribs and front. Bess of Braddock, faulty in pasterns, nicely ribbed, but too flat in loin, received the vhc. card, and Gyp was lucky to be commended.

FOXHOUNDS—(JOSEPH LEWIS).

An excellent pack from the Cook Kennels showed us what careful selection and breeding can do for the American type of hound. Brawl carried his challenge honors well, though a little throaty now; he is excellent elsewhere. Drum II., the winner in dogs, is also a bit throaty, but his excellent head, ear and front make him a good winner over his kennel mate, Bill. Rob, vhc., is the whippet style of hound we are accustomed to associate with the American type. Bernhart, the winner in bitches, is not so truly formed in head, but is well off for other hound properties. Florah, vhc., lacks substance.

POINTERS—(JOHN DAVIDSON).

An excellent entry in most of the classes faced the judge in both this breed and setters. In heavy-weight challenge dogs no less than five were entered, Robert le Diable being the absentee. Graphic, looking well, put in an appearance and gained the ribbon over Duke of Vernon, Trinker's Chief getting the reserve, a bit out-classed in this company. Revel III. took care of the bitch class. Twelve dogs looked anxiously toward the judge in the next class, and after a careful examination as the limited ring would admit of, Pontiac proved to be the judge's choice. He is well known, and Glamorgan, transferred from the light-weights, came in for second money. He is good in head, a bit throaty and might be stronger in pasterns. Tory White, well known, came third, reserve going to Don, whose good front and body offset a rather coarse head, full eye and straight stifle. Trinker's Chief, Jr., vhc., is coarse in head, throaty, but good behind the head and looks every inch as his fair mistress informed me, a worker in the field. Dick Swiveller, hc., I have spoken of before, and Rex C. is faulty in skull and eye. In the corresponding bitch class Dell, transferred from the light division, though too fat, is a well formed bitch and rightly beat Cicely for first place, her bad feet and faulty skull putting her back. Faustina third. In the light weight challenge class for dogs, in the absence of Duke of Hessen and Naso of Kippen, Launcelot proved the winner over Spot Sting, who is a bit heavy in shoulders and out of condition. In the bitch class Sally Brass II. was placed over Rosa May, though she loses to the latter in head, and is better in body. Belle Randolph, reserve. Open dogs saw Tribulation, now well known, the winner. Bing of Kippen, also described several times before, and Graphic Foxie, a new one, third, a bit long and short in muzzle and not quite true in front. Nick Naso, reserve, is a little long cast, thick in skull and light in eye. Mack Naso, hc., is light in eye, bit lathy in body, and muzzle could be improved. There was quite a class of bitches, no less than sixteen coming to the scratch, and first went to Miss Meally, wrongly catalogued as owned by H. S. Paine; she belongs to Charles Heath; she is a bit plain faced, but excellent in body and legs. Lou Croxethel Nellie, second, prominent faults are a stary eye and snipy muzzle. Siberian Girl stands a bit wide in front, and was shown heavy in whelp or seemed to be. Lady Trinker, reserve, is hardly straight in front, a bit too straight in stifle, throaty and coarse in tail. Lorain, vhc., has a nice head, but is heavy in shoulders. Nellie Fawcett Graphic, hc., has bad pasterns and feet, and Belle Beaufort is houndy-headed and stands wide in front. Nellie II., c., must get it for her nice body. Puppies were fair. Nod, the winner in dogs, has a nice head, but feet are too open.

ENGLISH SETTERS—(JOHN DAVIDSON).

This town has always a large setter entry, as there are many men in the neighborhood who think the English setter takes the Spratts as a sporting dog. In the challenge class Count Howard had a walk-over, and afterward met Monk of Furness for the special. Though rather heavily formed in head and a bit lippy, his excellent coat and body, legs and feet, put him nicely ahead of the other, who looked soft and coat not in good trim, though profuse enough. Count also beats in movement. In bitches Princess Beatrice II. beat Zona, both are well-known. Fifteen dogs were present in the open class, and the judge had no easy task to pick the winner. Competition was keen between the two first, Monk of Furness and Sir Tatton. The latter may be beaten in size and head, but is infinitely better in coat and quite as good in bone. Rodrigo came third, Roger took reserve, all well known, as well as Joe Noble, vhc. Gladstone II. is a bit broad in skull, full in eye, and faulty in muzzle, good body, legs and feet. Ben Hur of River View, Dad Wilson's Boy, a bit slack in loin, and Tony Gladstone, have all been noticed before. Dan, c., is coarse and is faulty in quarters, good legs and feet. In bitches Albert's Nellie, a field trial winner, though faulty in muzzle and stop, is well off in body, legs and feet, is short of feather just now. Lilly Hill, second, is a bit straight-faced and stands wide in front. Bonnie Gladstone Girl has a fair head, is not ribbed well enough, and is faulty in carriage of stern. Vic, reserve, is not quite straight enough in front. Rosa Lee, vhc., is light in muzzle and bone. Bessie Arent has been commended on. Nellie Kitson, hc., is very snipy-muzzled, good body, and Evan's Flirt is too broad in skull and muzzle, not right in body and legs fair. Joe Noble was the winner in puppy dogs, and Nettie Novice in bitches, nice body, legs and feet, but too fine in muzzle.

IRISH SETTERS—(JOHN DAVIDSON).

These were a good display, especially the open dog class, but the limited space and bad light on the stage made it

difficult for the judge to pick the best. A rattling good dog is Mack N., and he made the familiar ones, such as Max A. and Kildare, take a back seat. This is the type of dog we require to perpetuate, while his head is of the correct formation, his color, bone, body, legs and feet leave little to be desired, though he shows age a little round the muzzle. Max A. beat Kildare for second place. Dick Swiveller had been refused entrance because of mange, though his only apparent sore was on the nose, which seemed to have been bruised against the crate. In open dogs, Beau Brummell scored again; he seemed to have eczema on the hock, and his muscle on the off hind leg seems to have shrunk away. Glen Jarvis, second, is a dog of nice type, head though might be better. Minstrel, third, in fact all the mentioned dogs have been commented on so recently it is needless to repeat. That nice bitch Endora was here the winner over Red Bell, both described at Baltimore, as was Hazel Nut III., third. Bessie Glencho took reserve again, and Norna hc. Dog puppies saw Sandy's good head put first over Buffalo Tim. No bitch puppies shown.

GORDON SETTERS—(JOHN DAVIDSON).

In challenge dogs Ivanhoe beat his kennel mate Leo B. in head and color. In bitches, Becky Sharp was ahead of Meadowthorpe Blossom. King Item again proved the winner in open dogs, followed by Tyrus, also well known. Rexmont, third, loses in muzzle and body. Bob, reserve, is faulty in front, nice tan. Parker's entry and his Quail were placed vhc. and hc. With Beemont and Plomont absent in the bitch class the prizes fell to Parker's Gyp and Jess, some distance removed in quality from those mentioned, being small and faulty in heads and coloring. No puppies were shown.

SPANIELS—(JAMES MORTIMER).

Irish water spaniels, or rather the Irish water spaniel, as there was only one entered, was judged by Joe Lewis, and Patsey O'Connor was the entry. I believe he is well known. In Clumbers, a challenge class was made for Boss III., which relieved the judge of his presence. Lady Belle then beat Johnny, Jr. They may all be counted now among the rounders. Two good ones came up in the field spaniel dog class, and competition was keen. Baron, by his better front and body, beats Beverley Negris. Toady Obo, third, was at Baltimore. Lady was alone in bitches. Both challenge cocker entries were absent. In the open dogs, Dan Brown beats Snowball in coat and head. Pippo, third, is poor. In bitches, Vera, the winner, has a topknot like a water spaniel, is faulty in muzzle, nice body and front. Dimple is light in eye, wavy-coated and leggy. Chip K. was at Baltimore. Nona, first in puppies, has a nice head, is hardly straight enough in front. Queen is leggy, long in muzzle, but boasts a nice straight coat. As may be imagined from the above, outside of the field dogs there was little quality.

COLLIES—(JAMES MORTIMER).

There were only about a dozen collies present, the Chestnut Hill Kennels supplying most of the winners. Roslyn Wilkes proved the winner in challenge dogs and a Western winner, Rob Roy, came second, loses in head, front and coat to the other. Flurry III., brimful of quality as she is, took the corresponding prize for bitches, and afterward downed Wilkes for the special. Wellesbourne Hero again snatched the prize from his now old opponent, Hempstead Zulu, third was withheld. Wellesbourne Gypsy again proved the winner in bitches, other prizes withheld, and vhc. was given to a curly, soft-coated, short-headed specimen, which must be considered a lucky animal. Robin won in puppies, only an ordinary specimen. Second withheld.

POODLES—(JAMES MORTIMER).

Mr. Mortimer indorsed the Baltimore decision by placing Dexter over Berria. If the first named dog could have a little more attention paid to his cords, what a grandly coated dog he would be; at present he is simply a good dog wasted.

BULLDOGS—(JAMES MORTIMER).

Harper, standing the strain in good shape, was alone in challenge class, and The Graven Image accounted for the only prize given in bitches, the other two looking like promising competitors for the Monongahela special. Dogs no entries.

BULL TERRIERS—(JAMES MORTIMER).

In challenge bitches the winner proved to be Starlight, beating Enterprise in shoulders and head. A nice class of dogs came together in the next class, and as large and small were about equally divided, the class was split up. In heavyweights a rattling good dog, a bit short in head, but standing well all round, was placed over the well-known Spotted Prince. Dufferin, being a little outclassed here, took third. Yale, vhc., is light in eye and might be improved in body. Nelson, the same, is thick in skull, faulty in eye, shown fat, and is a bit too wide in front. In the under 30lbs. division, Mister Dick was first this time, second going to Rogue, who shows too much stop, and though well furnished in body, is faulty in eye. Jim, third, is full in eye and short in muzzle, and stands a trifle wide in front. In bitches, Duchess of York proved the winner, Loomont Kit this time taking second, losing in legs, feet and shoulders. Busy, vhc., is faulty in head, muzzle especially. Lady Dinah won in puppies, has good legs and feet, butterfly nose and badly cut ears. Rose, second, is not up to much.

DACHSHUNDE—(JAMES MORTIMER).

This city is a stronghold for these quaint little hounds, and one of the best we have seen over here, at least the truest to type outside of Rubenstein, is Fritz K., who lowered the colors of his kennel mate, Feldman K., who has done so much winning. Fritz beats in stop, cleanness of head, has excellent crook, chest coming well through and low down, nice lengthy back and correct loin; the other is coarse beside him. In bitches, Lena, Jr., had to succumb to a daughter of Feldman's; nice coat and length, well crooked and chest well let down, firm on her pins and better in mouth than Lena. Bertraud was the sole representative of the Bassett race.

BEAGLES—(JOSEPH LEWIS).

The classes here were similar to those at Baltimore and as many of those winning here were commented in that report it is no use going over them again. The judge went for good working stock. That good little worker Frank Forest had to give way to Little Duke, who stands better in front and is better in shoulders. Lou had her class to herself. Quite a class of clever dogs faced the judge and Don, a bit long in muzzle, full in eye, but good in running gear, was placed over our old friend Tony Weller, who is a bit coarse in skull and hardly strong enough in pasterns. Roy K. here went back to third place, this is simply a matter of opinion, he is, I think, quite the equal of either placed ahead of him. Sport is wide in front, soft in coat and a bit coarse in skull. King, hc., might be improved in legs and feet. Some of the others might have been mentioned too. In bitches Twintwo was again placed in front and Mollie, hardly true in front, coarse and thick in ear, but excellent body and coat, came next. Flora K. third. Cris, hc., is a trifle long in head and wide in front. In puppies Belle of Rockland, hardly straight enough in front, has an excellent coat, muzzle might be squarer. Emeline, loses in coat, I almost preferred for the place. Fitzie, third, is fair.

FOX-TERRIERS—(JAMES MORTIMER).

An excellent display, and the Blenton and Orjole kennels had it nip and tuck. Lucifer had an easy win over Volunter, who is out of shape, and Rachel accounted for Blenton Brilliant. Our only German was in it again in the dog class with Blenton Victor II.; needs a little trim in body,

but in head, correct carriage of ears and legs and feet, certainly beats Ruby Trigger, second, and is without doubt the best the Blenton Kennel has yet turned out. Endcliffe Spice, third, was at New York and Baltimore. Le Logos, vhc., loses in head. In bitches that smart terrier Dona was placed over her kennel mate Dominica again, the latter has her time to come yet. Blenton Enid is large in ear, a bit slack in loin, and does not stand true in front. Verdict, reserve, is well known as a terrier all over. Barrow, by Shifty, was nursing a litter, is faulty in front, and Betsey Splaunger, hc., is round in skull, and ears are not well carried, but has a nice front. Dominica won in puppies with Betsy Splaunger second. Muncie Lily is a bit coarse. Capsicum was the only representative of the wire-hairs, she was at Baltimore last week.

IRISH TERRIERS.—(JAMES MORTIMER).

An excellent lot of these dare-devils turned up, but as the supply of good ones is limited the prizes fell to the old winners. Here Mr. Mortimer reversed the Baltimore decision and put the faulty-fronted Mars over Dunmurray, Breda Bill, who is unfortunate in having had two front teeth knocked out in a fight, is a well-fronted terrier, and but for the above defect, if such it can be called, when earned in a hard-fought battle, would always be placed higher up. Breda Tiny again came in for vhc. Nevermore Gessala, hc., too big and coarse and short of coat, was lucky in getting the letters.

SCOTCH, DANDIE DINMONT AND SKYE TERRIERS.—(JAMES MORTIMER).

Two were entered in the Scotch class, and Killston proved an easy winner over Glencoe, beating the other in coat, front and head. In Dandies Border Clunker II., owned by Henry Linzer, was given the prize. In Skyes Sir Stafford had to give place to Lovett, though why I am at a loss to say. Sir Stafford beats in head, coat, length and bone. In bitches Effie Dean beat Bessie, and judging from the former class Bessie should have been first.

BLACK AND TAN TERRIERS.—(JAMES MORTIMER).

Beaconsfield scored again, but was beaten for the special by Meersbrook Maiden. Dixie, hc., got all he deserved. In bitches Meersbrook Maiden, though she showed herself as cold as charity, was placed ahead of Meersbrook Empress, her mother, Rochelle Nadgy reserve, all well known. Pansy, vhc., has poor tan and ears, just the ordinary sort. Lotta is a fair dog, and so is Tiny C. Nellie, the winner in puppies (!), is a nicely marked toy.

YORKSHIRE TERRIERS.—(JAMES MORTIMER).

Toon's Royal was alone in dogs, and Venus, from the same kennel, completely shut out Lucy.

PUGS.—(JAMES MORTIMER).

With Bessie, Vesta and Nellie Bly in the challenge class made competition keen, but Bessie's nice shape and condition could not be denied and they were placed in the order named. Penrice, the new dog, here made his first appearance at a big show; he is a nice cobby-built little fellow, good skull, fair muzzle and carries himself as a pug should do, is not in good condition yet. Eastlake Curtis is not so good in skull as Ben Hur, vhc., also loses in ear and is plain faced. Carmine again won in bitches, followed by Little Bessie, who only needs time to develop into something nice. Lady, vhc., has a nice skull, ears badly carried and is faulty in front.

TOY SPANIELS.—(JAMES MORTIMER).

The King Charles came out strong; Calumet Ben d'Or, the winner, has an excellent skull, might be better in eye, is a bit too large size, good tan. Nigger, second, as his name denotes, is dark in markings. Bentick, vhc., is faulty in muzzle, curly-coated and large. The class was divided and this let in Calumet Alice for first in bitches; she is a nicely skulled, short-faced little animal, tan a bit smutty, especially on legs. Topsy, second, is well known as a good one. In Blenheims a good one in Calumet Cromwell, though a bit wavy-coated, is better in this respect than Calumet Lulu who also loses in skull and muzzle to the other.

ITALIAN GREYHOUNDS.—(JAMES MORTIMER).

A larger show of these than any outside of New York, Lewis's Spring winning nicely over Cupid, whose ears are faulty. Rex vhc. In bitches Lady Lee is nice size, head and ear faulty, won over Lewis's Star, whom I preferred for the place, better in head and action. Sprite is a bit too straight in back, but can give either points in shape of head and front. Lady, vhc., is faulty in muzzle and has tulip ears.

SHAGGY FOXHOUNDS.—(JAMES MORTIMER).

These dogs were so mixed up on the benches I do not feel like tackling them. To all appearance they differ in no way from ordinary foxhounds, they may be a little rougher round the neck. All the claimants for miscellaneous prizes were sent back without mention. They were a funny lot.

SPECIAL PRIZE LIST.

MASTIFFS.—Best kennel, Flour City Kennels. American Mastiff Club medal for best American bred mastiff and bitch (2), Caution's Own Daughter. Best dog or bitch, Lady Colous. Best dog, Clifford Chancellor. Second best, Moses. Second best bitch, Lady Dorothy. Best winning vhc. in Allegheny county, Benedict Neville. Best dog owned by a member D. K. C., Reginald Neville.

ST. BERNARDS.—Best kennel (2), E. H. Moore. St. Bernard Club medal best American bred smooth dog, no entry. Best American bred bitch, Cleopatra. Best rough dog, Prince Victor. Best smooth, Cleopatra. Best rough dog or bitch, Sir Bedivere. Best bred by Keystone Kennels, Keystone Mars.

NEWFOUNDLANDS.—Best kennel, John Marshall. Best dog or bitch, Prince George. Bloodhounds.—Best in show, Jack the Ripper. Great Danes.—Best dog, Melac. Deerhounds.—Best kennel, George Shepard Page. Best in show, Allan Breck. Greyhounds.—Best kennel, Dequesne Greyhound Kennel. Best in show, Gem of the Season. Foxhounds.—Best kennel, H. E. Cook. Best dog, Brave. Best bitch, Bernhard.

POINTERS.—Best kennel, Chas. Heath. Best dog (2), Graphic. Best bitch, Revel III. Best dog or bitch started in field trials 1889-91, Belle Beaufort. Best bitch puppy, Lon Croxteth Nellie. Largest collection of English setters, Joe Lewis.

IRISH SETTERS.—Best kennel, Kidare Kennels. Best dog or bitch (3), divided, Mack N. and Ruby Glenmore. Best bitch, Ruby Glenmore. Best dog, Mack N. Best brace of bitches, Mollie Bawn and Ruby Glenmore. Best dog or bitch with field trial record, Tearaway. Best brace, dog and bitch, owned by one exhibitor, Bear Brummell and Ruby Glenmore. Youngest with a field trial record, Covent's Tearaway.

GORDON SETTERS.—Best kennel, S. G. Dixon. Best dog, Ivanhoe. Best bitch, Becky Sharp.

SPANIELS.—Best cocker (2), Dan Brown. Best Irish water spaniel, Patsy O'Connor. Best Clumber, Boss III.

COLLIES.—Best kennel, Chestnut Hill. Collie Club medal best American-bred, Roslyn Wilkes. Best collie, Flurry III. Best bitch in open class, Wellesbourne Gypsy. Best dog ditto, Wellesbourne Hero.

POODLES.—Best dog or bitch, Dexter. Best collection, Purbeck's Dexter and Nell. Bulldogs.—Best in show, Harper. Best bitch in open class, The Graven Image. Bull-terriers.—Best dog or bitch, Starlight. Dachshunds.—Best dog, Fritz K. Best bitch (2), Maggie K. Best red bitch, Lena K. Best kennel of four, Lewis and Klocke.

BEAGLES.—Best kennel, Glenrose Kennel. Best dog, Little Duke. Best bitch, Twintwo. N. B. C. Specials.—Best kennel, Glenrose. Best dog, Little Duke. Best bitch, Twintwo. Best beagle started in a field trial, Rutter's Don. Best dog or bitch in open class, Twintwo.

FOX-TERRIERS.—Best Kennel, Blenton Kennels. Best dog, Blen-

ton Victor II. Best bitch, Rachel. Irish Terriers.—Best dog, Mars. Best bitch, Dunmurray. Best dog or bitch, Mars. Scotch Terriers.—Best dog, Killston. Dandie Dinmonts.—Best, Border Clunker II. Skye Terriers.—Best in show, Lovett. Best bitch, Effie Dean. Black and Tan Terriers.—Best in show, Meersbrook Maiden. Yorkshire Terriers.—Best in show, divided. Toon's Royal and Venus. Best collection, Northfield Kennels. Best bitch, Venus. Best dog, Toon's Royal. Pugs.—Best kennel, Dr. M. H. Cryer. Best dog or bitch, Bessie. King Charles Spaniels.—Best dog, Calumet Ben d'Or. Best bitch, Calumet Alice. Blenheim Spaniels.—Best in show, Calumet Cromwell. Best bitch, Calumet Lulu. Italian Greyhounds.—Best collection of three, Joe Lewis. Best brace, Joe Lewis. Wolfhounds.—Best in show, Zloceem. Shaggy Foxhounds.—Best kennel (2), A. B. Whitlock.

TEXAS FIELD TRIALS.

[Special Report.]

THE fifth annual meeting of the Texas Field Trials Club began Feb. 24 and lasted three days. The prizes being of small value none of the "regulars" were in attendance, and the number of entries was small, but some of them were fine workers, and the All-Aged Stake showed a remarkably even lot of good dogs. The weather was warm the first two days, but quite cold the third, and a high wind prevailed at all times. Although birds were known to be reasonably abundant they were at times hard to find, and some heats were decided without much actual work. The judging was done by various members of the club assisted by Mr. C. M. Rounds, of San Antonio. The first day Messrs. R. P. Littlejohn, W. J. Wolz, W. J. Rosborough, Sr., and Hon. A. H. Cooper judged; on the 25th Messrs. C. M. Rounds, W. J. Rosborough, Sr., W. E. Winston, Behn Cook and Hon. A. H. Cooper were the judges; on the last day the Messrs. Rosborough and Cook judged. All decisions were carefully and well made and received with satisfaction, by the competitors.

The Derby was won by Amory R. Starr's June, a rather small white, black and tan English setter, whelped April, 1889, and bred by B. M. Stephenson, of La Grange, Tennessee. He is a dog of fine speed, range and nose, with about perfect style. Second was won by J. L. Appling's Maud, a black and white dropper. She presents a curious appearance, being a setter in form, action and color, with a pointer's coat. She had a great local reputation, and it was to test her merits that the trials were made "open to all bird dogs." She is a good killing bitch, and has a fair nose, with tolerable range, speed and moderate style. She was accidentally bred by W. C. Cook, and is small. Barney, the winner of third, owned by C. M. Rounds, of San Antonio, Texas, and bred by Robt. Schuetz, of that place, is a very handsome liver and white pointer of medium size, he has good nose, range and speed, with fine style in motion and tolerable on point, he shows high quality and has a blood-like appearance.

Craft, owned by Amory R. Starr, won the All-Aged Stake. He was also bred by Stephenson, and is a half brother to June. He is not so brilliant a performer as his younger brother but a very pretty, accurate worker, his speed, range and nose are good, as is his style on point, in motion he is only moderate. June won second and Barney third. Mr. Starr, who secured the bulk of the honors, had a decided advantage, as his dogs were especially prepared for the trials while the others had only been used in regular shooting; his trainer, W. B. Harvey, is a novice, but deserves much credit for the condition in which he started the dogs in his charge; his handling for a beginner was also quite good. The running was as follows:

DERBY.

First Series.

J. L. Appling's black and white dropper Maud (whelped March 29, 1889), by Capt. Craig (setter) out of Ress (pointer), handled by W. C. Cook.

beat

Amory R. Starr's white and black English setter Manitoba Frisk (whelped Sept. 11, 1889), by Dick Bondhu out of Western Belle, handled by W. B. Harvey.

Amory R. Starr's June, white, black and tan English setter, by Corsair out of Tchula (whelped April, 1889), handled by W. B. Harvey.

beat

C. M. Rounds's liver and white pointer Barney (whelped March 16, 1889), by Spot out of Queeny, handled by owner.

W. J. Rosborough, Sr.'s white and black setter Glad's Doncaster (whelped July 16, 1890), by Gladson out of Ruby Doncaster, handled by owner.

beat

A. H. Cooper's white, black and tan English setter Texas Rake (whelped July 10, 1890), by Ran Tucker out of Lady Ethel, handled by owner.

Second Series.

June beat Maud.
Glad's Doncaster a bye.

Finals.

June beat Glad's Doncaster (withdrawn) and won first.
Maud beat Barney and won second.
Barney beat Manitoba Frisk and won third. In this heat Barney ran immediately after a very long heat with Maud, his work was better than in the first heat, showing him to be a dog of fine bottom.

Glad's Doncaster was awarded a special prize of a gun case, offered by Mr. Lake, of Marshall, for best puppy under 12mos. old.

ALL-AGED STAKE.

First Series.

Amory R. Starr's black pointer bitch Onyx, 4yrs. old (Wat—Flash), handled by W. B. Harvey.

beat

J. F. Cock's white, black and tan English setter Tennessee Belle, 5yrs. old (Gladstone's Boy—Flirt C.), handled by W. C. Cook.

Amory R. Starr's black and white English setter Manitoba Frisk, 17mos. old (Dick Bondhu—Western Belle) handled by W. B. Harvey.

beat

W. E. Winston's white and black English setter Chatham II., 5yrs. old (Mingo—Fausta II.), handled by owner.

Amory R. Starr's black, white and tan English setter June, 22mos. old (The Corsair—Tchula), handled by W. B. Harvey.

beat

C. M. Round's liver and white pointer, 23mos. old (Spot—Queeny), handled by owner.

Amory R. Starr's black, white and tan English setter Craft, 2½yrs. old (Ben Hill—Tchula), handled by W. B. Harvey.

beat

J. L. Appling's black and white dropper Maud, 23mos. old (Capt. Craig—Ress), handled by W. C. Cook.

Second Series.

June beat Manitoba Frisk.
Craft beat Onyx.

Finals.

Craft beat June (placed by judges without running) and won first.
June (placed by judges) won second.
Barney beat Maud and won third.

In the Craft-Onyx heat the former was handled by his owner and Mr. Appling handled Maud in her heat with Barney.

Manitoba Frisk, the winner of the last Manitoba Derby, failed to secure a place. He is a very fine dog, but when received from Canada was from some cause badly cowed, so much so that it was at first almost impossible to get him to hunt at all, and he could only be worked very little before the trials. Some of his work was brilliant, but it was quite irregular.

Mr. Rounds and his little pointer acquitted themselves well for beginners and made many friends.

Craft was awarded the collar offered by the Alexandria Rod and Gun Club for the winner of the All-Aged Stake and a case of cleaning tools offered by Mr. E. J. Fry, of Marshall, for the best setter.

NOTES AND NOTIONS.

I DO not personally know Mr. Krehl, the editor of the *London Stock-Keeper*, but it is possible to withhold the most hearty and thorough respect and admiration for the man, after his large-hearted offer as to the mastiff for the little blind, deaf and dumb girl? Not only does he ask the privilege of making up any deficit in the proposed subscription, but should the subscription fall through, asks Mr. Wade to buy the mastiff and send him the bill. In some men or some papers this might have an air of ostentation, shrewd advertising, etc., but Mr. Krehl instills an amount of heart into the tone of his offer that shows beyond all question that it is simply the moving of a kindly, generous heart. Such a man reflects credit on all dog lovers, and each of us may feel proud that there are such men among us.

Thinking over the extravaganzas of fanciers, the thought occurs to me that after all it is not the eminent authorities, the great fanciers that do the mischief of exaggeration of desired properties. It is the all-round man, the authority who shares his knowledge between a dozen breeds. Take the case of the collie Marcons recently commented on. It is unquestionable that Mr. W. W. Thomson, the peculiar and eminent authority on the breed, held the dog of very high merit. I strongly suspect that our best judge, Mr. Appar, holds the same view. Yet I never heard a general judge who did not say the dog was a rank bad one, a duffer or something to that effect. "The History of the Mastiff" shows that its author, M. B. Wynn, is a devotee of the extreme of short, broad head, yet nowhere do I find bodily perfection so strongly insisted on. The inference I draw is that it is the diluted authority who incites the rage of elevating some marked feature to a preposterous extent, or as Mr. Fellows defines it, "renders long and low, as longest and lowest."

How many times have you run yourself tired over a dog show to meet a certain party, and how long has it taken you to find the party who was in the same show with you all the time? It seems to me that shows would render the paths of visitors much less thorny if they would set up a sort of bureau of information. Suppose Tom leaves word at the bureau office that he wants to see John at the bureau window, this to be posted on a bulletin, and *habitués* make it a practice to call at the bulletin occasionally? This is only a rough sketch of a plan, but it might be worth while thinking such a plan out.

Going to shows, with many men, now means more to meet doggy friends, exchange notes, talk over old times, and generally to have a good time than it does to see dogs, and in view of this it would be a great accommodation if committees would provide a sort of general meeting room whenever it is possible. Of course I know this is impossible in many cases; at Pittsburgh it was evidently out of the question, so it was in New York in the old Garden or the American Institute building. In the new Garden building the restaurant afforded a convenient place. I think the Boston building has a good place, and I hope all committees will bear this point in mind.

I was pleased to hear you, Mr. Editor, say that while you proposed that FOREST AND STREAM should have and express its opinion on every public subject, you further proposed that the antagonistic view to yours should be allowed the utmost freedom of expression as long as a proper manner was chosen. Not only is this the only fair course, but it is the most effective one toward strengthening the side you hold by, for it adds to the independent, outsider, estimate that readers are apt to put on editorial utterances, while a policy of excluding or belittling adverse expressions of opinion, only lead to the conclusion that the journal is partisan, and its views being strictly partisan, of no weight. Most of us can recall instances of two kennel journals who totally ruined their influence by indiscreet and blind championship of one side of a dispute of a national character, as far as dog matters went.

THE ONLOOKER.

NATIONAL BEAGLE CLUB.

Editor Forest and Stream:

At a meeting of the executive committee of the N. B. C., held March 13, 1891, the following business was disposed of: It was voted to hold a banquet on March 31, 1891, at a place to be selected later. The president, Mr. O. W. Brooking, and Mr. W. S. Clark were appointed a committee to make all necessary arrangements in regard to above.

As it is absolutely necessary that the executive committee should know how many to provide for, it would be well if those who intend to be present would send in their names to the secretary as soon as possible. The tickets will be \$2. In order to make this a success each member who possibly can should be present, as a most enjoyable evening is expected. It was voted to send the following letter to each member of the late A. B. C.:

Dear Sir: At meeting of executive committee of the N. B. C. and A. B. C., held at W. K. C. bench show at New York, Tuesday, Feb. 24, with full authority to act on premises, it was voted that that club, A. B. C., amalgamate with the N. B. C. under following conditions: First—The name shall be the National Beagle Club. Second—The officers shall be the present officers of the N. B. C. Third—They shall pay no initiation fee. Dues shall commence July, 1891, provided that if members wish to compete at present show for special prize they shall pay dues for first half year of '91. Otherwise they shall enjoy all privileges of members. Fourth—They shall accept constitution and by-laws of the N. B. C. In accordance with above we send herewith an application blank which we would be pleased to have you fill out and return as soon as possible.—F. W. CHAPMAN, Sec'y.

Since the last meeting the following members have been elected: The Field Kennels, Mr. Geo. W. Rogers and Mr. J. J. Dwyer. The resignation of Mr. H. S. Gilbert was accepted with much regret. It was voted to offer the following specials at Cleveland: Suitable piece of silver (value \$15) for best kennel of four beagles; suitable piece of silver (value \$10) for best beagle bitch; suitable piece of silver (value \$10) for best beagle dog. It was voted to make a suitable decoration at the New England Kennel Club show at Boston, and Messrs. Chapman and Clark were appointed as committee in charge. Meeting adjourned.

HUBERT.

MASTIFFS AT NEW YORK SHOW.—Peoria, Ill.—*Editor Forest and Stream:* I cannot refrain from thanking the FOREST AND STREAM and Mr. Chas. H. Mason for the thorough, able, and comprehensive review of mastiffs at the New York show. To us poor souls who are much interested and unable to attend the show, such a report cannot be overestimated. I do not think many who were there have as good an idea of the dogs as could be gained from a careful study of that report.—C. E. BUNN.

DOG CHAT.

PROFESSOR BARILLI, of Atlanta, Ga., is a nephew of the "divine" Patti, and wishing to make his celebrated relative a present, he has through Jos. P. Sharp, Springfield, O., purchased a pug pup from Al. G. Eberhart, of Cincinnati, O., who takes for his motto in the dog business "a square deal." The pug will, we presume, be shipped to Craig-y-nos, the home of the great singer.

J. H. Pritchard, who has for several years been connected with the Wulawn and Mrs. Grant's kennels of mastiffs on Staten Island, writes us he has been engaged as manager of the Flour City Kennels, Rochester, N. Y. From what we know of Mr. Pritchard, Mr. Whitney could hardly have made a better selection.

Miss Van Buren has sold her Italian greyhound Cupid to Mrs. Andrews, of Douglaston, L. I., for \$125. Cupid was entered for the last time in the name of Miss Van Buren at the Pittsburgh show, where after his winning he was delivered to his new owner. Cupid, it will be remembered, has done a good deal of winning in years past.

At the annual meeting of the Michigan Kennel Club the following officers were re-elected for the ensuing year: Dr. L. Younghusband, President; Dr. John Younghusband, Vice-President; Dr. M. V. B. Saunders, Secretary; C. H. Royce, Treasurer; H. E. Cook, Delegate; Prof. Will Tracy, member of executive committee.

The Mascoutah Kennel Club desires to announce an additional special prize in the setter class, viz.: The Gordon Setter Club of America offers \$10 for the best Gordon setter exhibited. Arrangements have been made, for the benefit of Canadian exhibitors, with S. T. Percy, agent of the Canadian Express Co., Port Huron, Mich., to forward all dogs for their coming bench show upon the following conditions: Each dog must be returned dead or alive immediately after the show, otherwise duty will be collected, each shipper will have to pay 50 cents for a bond and express charges in advance. Consular invoices will be unnecessary if the valuation is placed at less than \$100. Each express invoice must be in duplicate and state the names of the dogs, color and value, countersigned on the back by the shipper and directed to S. T. Percy, Port Huron, Mich., for Geo. H. Hill, superintendent, Battery D, Chicago, Ill. Shipment should be made to allow for at least the delay of one day. Negotiations are pending with the railroads centering in Chicago for reduced round-trip passenger rates, which if secured will be duly announced.

Mr. C. M. Munball writes us that at the solicitation of many exhibitors they have changed and added to classes in their premium list as follows: Class 66, cocker spaniels, any other color, not over 23lbs., open class, dogs, first \$10, second \$5. Class 66½, bitches, first \$10, second \$5. Class 67, Clumber spaniels, challenge class, dogs and bitches, first \$10, 67½, open class, dogs and bitches, first \$10, second \$5. Class 105, black and tan terriers, over 7lbs., dogs, first \$10, second \$5. 105½, bitches, first \$10, second \$5. The list of specials for the show is increasing daily, and they will be attractive enough to induce the largest kennels to make entries there.

We have received letters from Dr. Whitaker and "Mark the Boy," the one about the Malcolm matter and the Gordon Club and the other questioning our report of the Baltimore show regarding its success, etc. It is not our policy to encourage the nagging spirit which seems to be abroad at present. It leads to no good end, and only opens an avenue for those who want everything their own way and cannot get it, to annoy and stir up bitter feeling in dogdom. Our aim is to keep all interests friendly. We wish to see still more men of standing and respectability come into the fanciers ranks, but we are sure that should they get a whiff of the odors which are flying around at present, they will "bide a wee" before venturing in and dogdom loses so much, and those who are already in it may become disgusted and shake the dust from off their feet and retire into private life again, thus will the kennel interests suffer still more. Our business is to give the dog news of the day and not to open our columns to a discussion of every petty quarrel, which some dissatisfied members of dogdom seem to delight in. In addition to this, as the several libel suits are now *sub judice*, it is in bad taste for any one to discuss their merits in the public press. Let the courts decide who is right and who has been wronged, till then we decline to discuss the subject in any way except to again deplore the fact that such discordant elements should arise in our kennel world.

There were blanched faces among the boys at Pittsburgh on the Wednesday night of the show. About 11:50 P. M., when after a pleasant hour spent in talking over doggy matters the word passed round among the boys that a fire was raging near the dog show building, a rush was made for the Central Rink, and had not two or three of the club men and exhibitors kept their heads there would have been trouble, confusion and many dog collars ruthlessly cut. The burning building was a large paper warehouse, situated several blocks away and the wind carried myriads of burning lumps of paper right over the frame building which held the dogs. Men were at once stationed on the roof with Babcock extinguishers and buckets of water. From the street ran an awning to the entrance of the hall, and at one time this caught fire a few feet from the door. It was an anxious moment, and there were several fellows there who pretty nearly lost their all in that fearful Columbus fire three years since, and no wonder they were anxious. Even the sawdust in the exercising ring outside the building caught fire in several places. Happily the fire burned too fiercely for the dangers from sparks to last more than an hour, and then one had time to look around and take in the humors of the situation. Not the least of these was the appearance of "Honest John" with his valise, all ready to leave the town should the fire become general, as it threatened to do at one time. When asked if he had settled his hotel bill he said no, he'd told them if they were not burnt out he'd come back and stop a little longer with them. Then Harry Goodman went to release Melac, the great Dane, from his room in the hotel, and in the excitement got the wrong key, and between this and the dogs he had in the building poor Harry was nearly driven to distraction. Then Frank Windholz sat at the door of the building on his dog crate with Count Howard and Princess Beatrice boxed up, patiently waiting for the building to catch fire, so he could move out. One of the best features of the affair was the solicitude the club men felt for their charges, Mr. Boggs going to the extent of sending across the river into Allegheny City for a special fire engine as, all the Pittsburgh ones were at the main fire. During the balance of the show two men were stationed at each end of the building all day long with Babcocks ready for emergencies, but happily they were not required.

Here is a pretty good one on "our only German." During dinner at the hotel, German amused the company with several of his choicest adventures, till the colored waiters were in ecstasies. As one of them was passing his chair he asked him if he'd ever seen a "blasted Britisher" before. "Oh, yes!" he said, "he'd done seen lots o' dem curiosities!" German paid up like a man.

The "rounders" were delighted with their treatment at Pittsburgh. On arriving at the city from Baltimore, having guaranteed ten tickets, they were provided with a special car

for the dogs by the B. & O., they found the president of the club, Mr. S. L. Boggs, in waiting with several wagons at 6:45 Sunday morning. Arrived at the building free of expense, they found meat and all that was necessary to make their dogs feel at home. Wise is the club that puts itself out a little to make things easy for the handlers, for traveling round to shows is not all fun by any means, and these little attentions are treasured up and remembered another year.

This was the first show we have seen where the crowd was so dense that it was necessary to have a number of policemen stationed at different parts of the hall to keep people on the move and working round in one direction.

Mr. Frank Windholz would like to get the names of those exhibitors and handlers who intend going to Chicago show next month, and if a party of ten can be secured to go by the Pennsylvania road, considerable reduction can be effected in ticket rates and three dogs will be allowed free on each ticket.

One of the most conscientious and hard working men on Spratts staff is "Captain" Murphy, who puts up the benching and attends to the feeding on the circuit. But he had a tremendous scare the last evening of the Pittsburgh show. Frank Dole told him with his usual serious smile, that there was a petition going round for signatures to get Spratts Co. to appoint another man in his place, as the boys were not altogether pleased at the way he was doing his work. Murphy felt injured, but when the paper with about fifteen signatures attached was handed him, he drew some consolation and fifteen dollars from the envelope. It is more than likely that the "Captain" will finish the circuit after all.

At Pittsburgh, Mr. H. E. Cook, of Detroit, showed four of the most sorry foxhounds we have seen for some time. They were a handsome team of four black and tans, as level as a table, and looked like the thorough workers they are said to be. Englishmen are wont to speak slightly of American hounds, but could they see this team and old Brave, they would, we are convinced, alter their opinion. These hounds would make an interesting exhibit at the coming Kennel Club show.

As we told our readers last week, Toronto having come to the conclusion, though rather late in the day, that it needed a kennel club to protect the good work private fanciers have already done in encouraging dog breeding and to further advance the kennel interests in the town, last Thursday a meeting to organize was held, and from the Canadian papers we find that such well known kennel men as the following were present: R. W. Boyle, setters; J. S. Williams, St. Bernards; F. J. Smith, fox-terriers; W. B. Fraser, Irish terriers; C. G. Winchell, English setters; J. Douglas, Irish setters; R. P. Forshaw, greyhounds; J. Yorke, toy spaniels and Gordon setters; J. J. Sheedy, greyhounds; J. Hynes, Bedlington and fox-terriers; T. J. Keating, cockers; J. A. Quill, Irish setters; T. J. Fitzsimmons, greyhounds, fox-terriers and cockers; D. Jackson, Scotch collies; H. F. Russell, fox-terriers; G. B. Sweetman, cockers; P. J. Horrocks, St. Bernards; W. E. McKay, C. Campion, English setters; Dr. Campbell, J. G. Mitchener, cockers and fox-terriers; H. J. Hill, pugs; F. H. Elmore, poodles; G. C. Taylor, greyhounds; R. Wright, black and tans and bull-terriers; Geo. Bell, cockers; H. B. Donovan, editor *Kennel Gazette*; John Trebilcock, Allan Trebilcock, Wm. Davidson, toy spaniels; J. Scholes, greyhounds; H. P. Thompson, greyhounds and fox-terriers; C. Stone, English setters; J. Smiley, dachshunde; F. Habart, greyhounds and foxhounds; F. J. Nelson, cockers; R. Junor, wire-haired fox-terriers. Mr. R. W. Boyle was appointed chairman of the meeting, and Mr. J. G. Mitchener secretary. After some preliminary discussion pointing to the great advantages of such a club, it was decided to form a kennel club, the name of the Toronto Kennel Club being suggested. It was also proposed to hold monthly shows on the plan of the Hamilton Club during the year. A committee consisting of Messrs. H. P. Thompson, W. Fraser, C. A. Stone, J. S. Williams and J. G. Mitchener was appointed to draft a constitution and set of rules for the new club, and it was decided to adjourn until March 18, when the committee will report and all arrangements will be made.

Uncle Dick won his customary "special" at New York. This time it was \$25 in cash. Authorities differ as to what Dick won it on. Some say it was his cap, others his diplomatic smile. So we go.

One of the most dastardly acts we have heard of for some time was committed at Mystic, Conn., last week. A lot of boys had incased a dog in some loose cloths, which they had soaked in kerosene, and then set it on fire. The dog was burned to death after rushing wildly through the streets. We are glad to see that the matter is being investigated by State Agent Thrall. An introduction to the "cat" would, no doubt, have a very beneficial effect in this case.

Here is an extract from an interesting letter on Barzois, which Colonel Wellesley received from Prince Dimitry Obolensky (Uncle Dick and the member from Hulton please keep quiet), who is vice-president of the Tual Racing Club and a member of several hunt clubs in Russia. He says: "The dogs that have been catalogued at various shows in England for the last three years are pure Barzois, and have come originally from the best kennels in Russia. The specimens are very far from being poor. For instance, Krlut, Págooba, Sobol, Zloem, and others were not ordinary working bounds, but dogs that were admired in their native country, both on the show bench and in the field. Págooba, for example, who is of exceptional size for a bitch, has several times pinned wolves single-handed. The English traveler mentions the size—viz., 32in.—of the dogs he saw as tremendous. There are exceptional cases where the Barzoi has stood very near that height. At the dog show in Moscow this year a dog called Pilal measured 31½in., or 80 centimetres; but the average height is from 28in. to 29½in. It often proves to be the case, however, that, for working purposes, the smaller dogs show itself to excel in speed, pluck, and tenacity. For wolf hunting I personally prefer the English greyhound, acclimatized here (i. e., born in Russia from English parents), but I am also a great admirer of the Russian rough-coated Barzoi. I may claim to know something about the latter, because for many years I have bred and hunted them, and my dogs are the lineal descendants of those bred by my grandfather, General Bilibikoff, who is himself renowned for his sporting proclivities and for the excellence of his breed of dogs. So valued is that strain now that it can be found in most of the best kennels in Russia."

A peculiar case of superfetation in a bitch is related in this week's London *Field*. A gamekeeper's night bitch, 12 years (½) old, pupped on Feb. 16 a grizzled-colored pup to a sheepdog on a farm. On March 2 the same bitch gave birth to another black dog, and died shortly afterwards. It appears, from reliable information the writer had received, that the sheepdog served the bull mastiff bitch in the first instance, and a fortnight later his black retriever likewise served her. He asks, "Is this not a rather unusual freak of nature?" and no wonder.

Deerhounds are more extensively used in this country than many have an idea of. Mr. J. P. Bampfield has a kennel of those shaggy fellows at Niagara Falls. We are told they worked splendidly on deer in Muskoka last fall.

The fox-terrier Pitcher will no doubt by this time be in his new home at Youngstown, O., in the Oriole Kennels. Such a reputation as a sire has this dog that directly his book was opened at New York he had twenty services booked at twenty-five dollars, which covers the price of the dog, \$500. It would seem that the Oriole Kennels have made some judicious purchases lately. Dona and Dominica are two bitches that any one need be proud of. By the way, these two arrived at the show from the vessel at 3 P. M. Tuesday of the New York show, and were judged at 3:30 P. M., a close shave indeed, but quite near enough for a terrier.

Mrs. Diffenderfer is as fond of St. Bernards as her son, and though too ill to come to the show at Baltimore, she could not forego a sight of the crack Sir Bedivere, so he was taken to her room, where a wreath of flowers repaid him for the trouble. Speaking of the secretary of the Baltimore club reminds us that all the English papers speak well of his new bitch Hepsey. "Cheerful Horn," in *Caring World*, says: "In buying Hepsey the Americans have made a good stroke. They have undoubtedly run after the gold, and forgotten the mint wherein the precious metal was coined. Therefore, if such bitches as Hepsey go out of the country—especially in whelp to high-class dogs—breeders in this country will have to look to their laurels."

The premium list of the Continental Kennel Club's show at Denver, Colo., April 22 to 25, has been received. Challenge classes are made for most of the breeds and \$10 given to the winner. In open classes to every breed \$10 and \$5 is given, but we regret that in most of the important breeds the same is given for puppies. They would secure a much better entry had they put this money on the regular classes and left the puppies out altogether. The bankers of Denver give \$65 to the best and \$35 to the second best kennel of five dogs owned by a non-resident of Colorado. Owners must prove ownership of dogs for sixty days prior to the show. The real estate dealers give the same amount of money to the first and second largest exhibit of dogs of any breed owned by one kennel. The hotel men give \$100 in the same way for first and second best kennels of four dogs of one breed owned by one person, a resident of Utah, Colorado, Wyoming or New Mexico. These handsome cash specials will no doubt induce Eastern kennels to send something on, especially as the dogs will be well on there when at Cleveland, which comes the week before. Entries close April 6 and the fee is \$2.50. Mr. A. C. Waddell, of Kansas City, Mo., will be the judge. The club will do their own feeding and benching, new benching is to be supplied by the Berry Iron Works and Spratts dog biscuit will be fed. Sanitas will be used to disinfect.

In the list of awards of the Irish setters at Baltimore, Tearaway's name is given as the winner of third in open dogs, when it should be F. S. Cheney's Henmore Shamrock. In our detailed report of the show the dog is given proper credit. In the greyhound dog class the first report should read Gem of the Season first, Charles Davis second.

The Kennel Club show in England will be held this year at the Agricultural Hall, Islington, London, April 7 to 10. Some 325 classes are distributed among the various breeds. The specialty clubs come out in great form with specials, the St. Bernard Club donating their two 100 guinea challenge cups, etc.

Stock-Keeper says: "The Onlooker" in *FOREST AND STREAM* has taken up the question of Barzoi-headed collies. We will forward a cutting to W. W. Thompson without the p, please "Onlooker."

"Nutcracker" stirs the boys up a bit again in *Stock-Keeper* this week. In speaking of the kennel papers he gives first place to *FOREST AND STREAM*. Well, the old *FOREST AND STREAM* does get ahead a bit when it comes down to show reports and news.

The stranger within the gates appreciates the kind courtesies of fellow fanciers, and our thanks are due Mr. E. J. Farber and Mr. F. H. Kennedy, the one for the freedom of Baltimore city clubs and the latter for the use of the rooms of the Western Pennsylvania Sportsmen's Association. One becomes tired of dogs and dog shows at times, and a little relief in another atmosphere is greatly appreciated.

Pittsburgh seems to have played sad havoc with the health of several members of dogdom. Frank Dole was looking forward to Washington show, but La Grippe holds him fast in bed. Friend Jarrett, of Chestnut Hill, is also laid up with bronchitis, and saddest of all, Mr. Menckins, who brought Mr. J. Daniels's team of pointers to the Pittsburgh show, succumbed to a sudden attack of pneumonia, dying at Pittsburgh. All the boys are ailing more or less, and it behooves some of them to take good care of themselves and their dogs or neither will last the circuit out.

The dogs have suffered too. Prof. Maenner had the misfortune to lose his promising pup Mentor II., who died in two days after the Baltimore show, where he took second, from pneumonia, and to make things more pleasant still, he lost through some carelessness the litter sister to him, a better one even than the dog pup.

W. C. Farber's Baltimore bulletin board arrangement seems to have "caught on," but it is hardly so well managed at other shows as the original.

That Prof. Parker's performing dogs are the main attraction at a show is amply evidenced by the increased attendance at shows about the time he is advertised to give his performance. Every one seems to be delighted with those three somersault dogs with the euphonious names of Rags, Bottles and Jerry. Their back somersaults are very cleverly done.

Now that everything is settled up and we come to talk the Baltimore show over with some of the committee, we are pleased to find that they came out at the right end of the lane. Considering the troubles they have encountered this is a very happy result.

The boys must have a little laugh now and then; this time it is on the Tullaw Kennels' advt. in the catalogue at Washington, "Young dogs, bitches and puppies in whelp."

Now that there are so many important kennels in the country and such a number of excellent specimens of different breeds of dogs, it is always a question how to keep the dogs in good coat and condition and the kennels sweet and pure. It is therefore a pleasure to find something that will help the kennel men in both these essentials. This is Cynoline, which those in whom we have implicit confidence tell us is quite as effective as a quick disinfectant as it is a ready and handy healing medium for kennel sores, mange and other skin diseases that dogs are liable to. We can therefore recommend it with the fullest confidence. Sufficiently diluted it is also a pleasant addition to the toilet table.

The latest from the Boston committee is this: "The Spaniel Club offer a silver cup, value \$100, for the best field spaniel in the show, open to members of the Spaniel Club only. We are in the midst of a heap of entries, and from appearances are going to have a big show."

CONTENDED.—“If you marry Mary Mortimer you'll lead a dog's life.”
“Well, if it's as agreeable as the life of Mary's dog I shall be content.”

Mr. Hough writes from Chicago, March 11: Some one is running a very good, albeit slightly English, little kennel department in the Cincinnati *Commercial Gazette*, copies of which Mr. M. Phister sends up. Can it be Mr. Phister himself, who does this? Hardly, though possibly. Mr. Phister, I understand, has charge of the engraving department for the paper. I first heard of him as the dramatic editor of the *Commercial Gazette*, and I know he was connected with dramatic work very favorably and well. In this connection, and apropos of Fullerton's third addition to Col. North's glories, which I see again nicely described in the clipping before me, there is a bit of gossip which I do not remember to have seen in print, bearing upon the way in which Mr. Phister got over some of his dogs from the North Kennels. He was after Col. North for some young ones for a long time, but Col. North did not want to part with anything for America, and remained obdurate for months. Mr. Phister remained equally persistent. He had to have the dogs, but couldn't get them. Miss Minnie Palmer, the actress, is a great friend of Mr. Phister's, and also a great friend of Col. North's. She was in England and Col. North could not refuse her request to let her American friend have two or three greyhounds, and this is how the Greentick and the Bit 'o Fashion blood got over to Cincinnati. At least, so goes the story. I never heard it affirmed by Mr. Phister. Preparations for Mascoutah Club show go bravely on and Supt. Hill is level up to his eyes in work. The show this spring is going to be a great society event, and beyond all doubt a very great canine success as well.

WASHINGTON DOG SHOW.

WASHINGTON, D. C., March 17.—This show opened this morning in the Riding Academy, a building which, though small, is peculiarly well adapted for a dog show. The only drawback is the size of the judging rings. It is almost impossible to judge a large class of dogs in a ring only about 18ft. across. In the catalogue there is an entry of 487 dogs, but there are a good many absentees.

Miss Anna H. Whitney and Messrs. Tracy, Diffenderfer and Mortimer are on hand to do their duty in the ring, but this part moves very slowly. Miss Whitney, as usual, was the first to get to work on the St. Bernards at 11:20 A. M. There is an excellent show of this breed, the rival kennels and many from Baltimore making competition keen. Sir Bedivere competed in the open class, and the decision was the same as at New York, Sir Bedivere first, Alton second. Both are, however, showing signs of the traveling they have undergone this last few weeks and evidently need a rest to flesh up a bit. Pointers and setters are, as might be expected, on hand in good force. With the Marshall Kennels the Newfoundland make the best showing yet seen, and this time Prince George had to give way to his son, Prince Hal, who is at present in better condition. Sir Tatton here finds himself in the challenge class, and in the absence of Cincinnati has a bloodless victory. The open dog class is a treat for the field trial men, with such dogs as Roderigo, Chance, Gath's Mark, Dan Gladstone, Reverdy, Tory Lieutenant, Roi d'Or, Ben d'Or and Toledo Blade entered, though all are not on hand. Irish setters are quite strong.

Beagles no doubt are being kept for Boston, as entries are poor, the same judge officiating here. Fox terriers are very strong, most of the well-known dogs being present. Top Sparkle and Young Marquis, both newly imported bull-terriers, are entered; but the former, having had his foot bitten by a bulldog, stays at home to sympathize with his master, Frank Dole. Outside of the Flour City Kennels, the mastiffs are poorly represented as usual. Pug entries are good. Black and tan terriers, though few, are choice, with Beaconsfield, Meersbrook Maiden, Siltan and the others on hand. Judging progresses slowly, Miss Whitney getting through by 4 P. M., when Mr. Mortimer started in with his long string of classes, taking the fox-terriers outside in an alleyway. Judging will not be done till late to-morrow. The attendance has been fairly good through the day, but the situation of the building is so far out of the busy center of the city, that I much doubt if a paying crowd will be forthcoming.

Among the visitors present to-day I noticed John A. Logan, Jr., J. H. Winslow, F. R. Hitchcock, W. S. and C. D. Diffenderfer, W. C. Farber, Harry Malcolm, T. J. Shenbrooks, Harry Granger, F. R. Carswell, R. M. Agnew, Jas. Thompson, A. C. Coffin, C. A. Shinn, Prof. Maenner, W. Tallman, Major Taylor, Victor Haldeman, Dr. H. Clay Glover, H. F. Smith, and of course the regulars. The following are the awards made to-day:

ST. BERNARDS.—ROUGH-COATED.—CHALLENGE—Dogs: 1st, Wyoming Kennels' Hesper; 2d, E. H. Moore's Ben Lomond. Bitches: 1st, E. H. Moore's Miranda; 2d, Wyoming Kennels' Lady Wellington. OPEN—Dogs: 1st, Wyoming Kennels' Sir Bedivere; 2d, E. H. Moore's Alton; 3d, E. H. Moore's Lord Melrose. Reserve, Wyoming Kennels' Lothario. Very high com. A. A. Cobb's Lion; Robt. M. Agnew's Bruce; and Swiss Mountain Kennels' Archduke. High com. V. Petrola's Count St. Vincent. Com. Gair Kennels' Tantalop. Bitches: 1st, E. H. Moore's Lady Livingston; 2d, E. H. Moore's Lady Sneerwell; 3d, Maryland Kennels' Republican Belle. Reserve, E. H. Moore's Moore's Lady Melrose. Very high com., Wyoming Kennels' Lady Adelaide II.; E. H. Moore's Melrose Pinner; and Maryland Kennels' Prudence and Piedad. High com. Theodore Wasserbach's Veda II. Com. J. M. Ford's Rosa and George Scala's Josephine Marie Sanderson. Puppies: 1st, V. Petrola's Count St. Vincent; 2d, George Scala's Josephine Marie Sanderson. Reserve, Gair Kennels' Lady Floris III. Very high com., Hugh Pitzer's Princess. High com., Hall-Way Brook Kennels' Max.

ST. BERNARDS.—SMOOTH-COATED.—CHALLENGE—1st, Daniel Mann's Cleopatra; 2d, Wentworth Kennels' Thisbe.—OPEN—Dogs: 1st, Maryland Kennels' Lord Hector; 2d, James E. Wilkinson's Adonis II.; 3d, Lieut. Everett Hayden's Fritz. Bitches: 1st, Jacob Rupert, Jr.'s Empress of Concomack; 2d, Julius J. Joseph's Countess; 3d, F. E. Lamb's Keepsake. Puppies: 1st, Halfway Brook Kennels' Swanhill; 2d, F. E. Lamb's Keepsake.

NEWFOUNDLANDS.—1st, 2d, reserve and high com., Gair Kennels' Prince Hal, Prince George, Albany Lass and Troy II. Very high com., Mrs. W. T. Hildrup's Rover Hildrup. Com., C. H. Lambert's Rover.

POINTERS.—CHALLENGE—Dogs (50lbs. or over): 1st, Hempstead Farm Kennels' Robert le Diable; 2d, Charlottesville Field Trial Kennels' King of Kent. Bitches (50lbs. and over): 1st, Fleet View and Reading Pointer Kennels' Belle Randolph.—OPEN—Dogs (50lbs. and over): 1st, E. R. Bellman's Graphite; 2d, J. R. Purcell's Nick of Ion; 3d, L. A. Biddle's Glen Morgan. Reserve, Hempstead Farm Kennels' Tory White. Very high com., Mrs. E. S. Ayin's Trick's Chief, Jr., J. R. Trisler's Duke of Richmond. Com., St. Julian Kennels' Bianco, L. M. Levering's Von Littlejohn. CHALLENGE—Dogs (under 50lbs.): 2d, B. L. Stephenson's Trilobation; 3d, J. P. Cartwright's Spot Sing. Bitches (under 50lbs.): 1st, S. P. Cartwright's Rosa May; 2d, Hempstead Farm Kennels' Queen Fan; 3d, E. R. Bellman's Stella B. OPEN—Dogs (under 50lbs.): 1st, Charlottesville Field Trial Kennels' Trip Rap; 2d, F. G. Taylor's Inspiration; 3d, S. Webster's Bloomo II. Com., Very high com., J. S. Sumner's Bing of Kippen, E. K. Goldsborough's Don't Deronda. High com., Chas. E. Connell's Rock II. Bitches (under 50lbs.): 1st, Charlottesville Field Trial Kennels' Maid of Kent; 2d, Chas. E. Connell's Fan Fan; 3d, E. A. Hodge's Eva. Very high com., Mrs. Jos. H. Hunter's Delta. High com., E. Holly Smith's Lizzie Porter, D. W. Oyster's Bloomo III. Com., F. S. Webster's Lassie Bang.—PUPPIES—Dogs: 1st, J. W. Perkins's Fritz; 2d, withheld. Bitches: 1st, J. P. Ryan's Trixie R.; 2d, Austin Herr's Nellie Stauch. Reserve, G. F. Zeh's Star.

ENGLISH SETTERS.—CHALLENGE—Dogs: 1st, West End Kennels' Sir Tatton; 2d, J. E. Dager's Ocinotanus.—OPEN—Dogs: 1st, J. M. Aven's Roderigo; 2d and 3d, F. R. Hitchcock's Roi d'Or and Tory Lieutenant. Reserve, F. S. Brown's Edge Mark. Very high

com., V. L. Bossa's Reverdy. High com., E. W. Jester's Dick Roy. Com., W. E. Burford's Hair's Belton, J. M. Aven's Rayon. Bitches: 1st, J. M. Aven's Bessie Aven; 2d, F. R. Hitchcock's Annie E.; 3d, J. H. Hunter's Nellie Rly. Reserve, F. R. Hitchcock's Anita. Very high com., Mrs. M. E. Keller's Bosobel. Com., R. H. Goldsborough's Dolly.—PUPPIES—Dogs: 1st, Larne's Sig. Gladstone; 2d, Ormes' Cliff. Reserve, St. Julian Kennels' Ivan. Com., Lynel's Briff and Daly, Jr.'s Rockefeller. Bitches: 1st, Poll Daly's Virginia Rockingham; 2d, Dickinson's Nantucket. Reserve, Chadwick's Bird.

BEAGLES.—CHALLENGE—1st, F. W. Chapman's Lou.—OPEN—Dogs: 1st, J. R. Graves's Jim Simmons; 2d, F. W. Chapman's Restless. Don, over size. Bitches: 1st, F. W. Chapman's Twintwo; 2d, W. F. Rutler, Jr.'s Mollie; 3d, F. W. Chapman's Glenrose Topsey.

PUGS.—CHALLENGE—Dogs: 1st, M. H. Cryer's Bob Ivy. Bitches: 1st, M. H. Cryer's Vesta; 2d, M. H. Cryer's Bessie. Reserve, R. T. Harrison's Nellie Bly.—OPEN—Dogs: 1st, Miss Bissig's Poodle II.; 2d, Seminole Kennels' Kash, Jr.; 3d, Graham Pearce's Bitters. Reserve, Mrs. W. R. Traver's Pip. Bitches: 1st, Miss Bissig's Cassina; 2d, M. H. Cryer's Lady Victoria; 3d, G. W. Wambach's Rustic Kate. Reserve, M. H. Cryer's Little Bessie. Very high com., Mrs. W. R. Traver's Dora.

FOX TERRIERS.—SMOOTH—CHALLENGE—Dogs: 1st, Blemton Kennels' Lucifer; 2d, Regent Kennels' Ducky Trap. Bitches: 1st, Blemton Kennels' Rachel; 2d, Regent Kennels' Blemton Consequence.—OPEN—Dogs: 1st, Woodale Kennels' Stardens Jack; 2d, Blemton Kennels' Blemton Racket; 3d, L. & W. Rutherford's Warren Laird. Reserve, Chas. Bernheimer's Baby Trigger. Very high com., Regent Kennels' Regent Brisk and Joseph W. Kerr's America; then when eight from Melrose Kennels ranged themselves before the judge. After scrutiny Mr. Moore once again plucked the blue ribbon by the aid of his good bitches. Mr. Tracy then began with

WEDNESDAY.—[Special to Forest and Stream.]—To-day's regular judging was delayed this morning by the whole two rings being required by Miss Whitney to decide the St. Bernard kennel special. A finer display of St. Bernards has never been seen in America than when eight from Melrose Kennels ranged themselves before the judge. After scrutiny Mr. Moore once again plucked the blue ribbon by the aid of his good bitches. Mr. Tracy then began with

IRISH SETTERS.—CHALLENGE—Dogs: 1st, Kildare Kennels' Kildare; 2d, Armour's Max A. Bitches: 1st, Kildare Kennels' Winnie II.—OPEN—Dogs: 1st, Kildare Kennels' Beau Brummel; 2d, St. Cloud Kennels' Minstrol; 3d, Redcliffe's O'Donovan Rossa. Reserve, Shammore. Very high com., Jones's Limerick. Com., Hudson River Kennels' Tim Dandy. Bitches: 1st, Oriole Kennels' Jeannette; 2d, St. Cloud Kennels' Endora; 3d, Price's Nora. Reserve, St. Cloud Kennels' Bessie (champion puppy); 1st, Seminole Kennels' Sandy; 2d, Glendyne Kennels' Lisinore; 3d, Dodge's Clonmel. Reserve, Barr's Frank.

GORDON SETTERS.—CHALLENGE—Dogs: 1st and 2d, Dr. Dixon's Leo B. and Ivanhoe. Bitches: 1st, Campbell's Becky Sharp; 2d, Dixon's Blossom.—OPEN—Dogs: 1st, Item Kennels' King Item; 2d, Mont Kennels' Rosemont; 3d, Waggerman's Don. Reserve, Rowell's Rob. Very high com. and high com., Key's Eldorado and Scott.

MASTIFFS.—CHALLENGE—1st, Whitney's Lady Colens.—OPEN—Dogs: 1st, Whitney's Ilford Chancellor; 2d, Swedberger's Trooper; 3d, Leach's Duke. Very high com. Jumbo. Com., Hewlett's Tiger and White Nimrod. Bitches: 1st and 2d, Whitney's Lady Dorothy and Caution's Own Daughter. Puppies: 1st, Nelson's Jefferson; 2d, Wade's Sport. High com., Fitchynn's Stanley.

BLOODHOUNDS.—1st, Mrs. Rockefeller's Jack the Ripper. GREAT DANES.—Dogs: 1st, Macuner's Pedro. Bitches: 1st, Minca Mia.

GREYHOUNDS.—Dogs: 1st, Purbeck's Gem of the Season; 2d Barber's Hector; 3d, Mrs. Loving's Sir Donald.

This is all that have been judged up to 1 P. M., the time of our going to press. There is a fair attendance and the weather is charming; the hall last night was crammed, and the show looks like a success; and the managers are working hard. H. W. L.

CORRECT INTERPRETATION OF STANDARDS

Editor Forest and Stream:

Our annual dog show suggests to me several subjects for discussion and which I think ought to be decided. One is the size of setters. It seems to me a mistake to favor small sized dogs as some judges and sportsmen seem inclined to do. Surely we want an animal that can see and be seen among the high, rank weeds, etc., that so abound in our fields. It is an error to suppose that speed and power accompany diminutiveness. Runts are not wanted, either on the bench or in the field, and especially in the Irish setter it is natural to expect size and even "legginess."

Another matter to be decided is whether judges are to follow the standards in their decisions. If not, why do the specialty clubs go by the trouble of elaborating standards? Mr. Davidson goes by his "intentions," "inner consciousness," etc.; Mr. Wenzel by another rule of thumb; Mr. Brown and Mr. Smith by some other equally indefinite and varied standard; and, so, where are we breeders and how shall we know what to breed for?

And another as important a matter is the rating of shows. Surely small exhibitions should not count for as much as the large shows; and yet many dogs in the challenge classes simply because their owners perseveringly sent them to village shows, where they were almost sure to win the necessary number of firsts to entitle them to enter the challenge class. This is all wrong. BREEDER.

NEW YORK CITY.

CRITICISMS AT NEW YORK SHOW.—Philadelphia, Pa.—Editor Forest and Stream: I see in your report of Irish terriers at the New York show Mr. Lacy says Kathleen, reserve, has nice front but is faulty in body. I would like Mr. Lacy to explain where she is faulty in body, as in my opinion she has a grand body, legs and feet. I admit she could be improved in head, being weak before the eye, much too cheeky and could do with more coat, although what she has is of the right texture, but wrong in body never. In black and tan terriers he says Sultan's tan is good but hardly bright enough and head is a bit narrower than he likes. I fail to see where Sultan's tan could be improved by being brighter, as the standard, as set forth by the Black and Tan Terrier Club of England, calls for a rich mahogany color, head should be narrow, almost flat. Perhaps Mr. Lacy can tell us why a black and tan terrier's head should be wide.—EDWARD LEVER. [Mr. Lever has his opinion and we beg to be allowed to retain ours. A bright tan does not necessarily mean a light tan, the tan on a black and tan may be a good mahogany color and still be dull. Mr. Lever's last question hardly requires an answer.]

MR. WILLEY'S COCKER KENNEL.—Mr. J. P. Willey writes us from Salmon Falls, N. H., March 16: "I have just bought of our friend George H. Bush his kennel of cocker spaniels, consisting of champion Novel, Bessie W., Idea, Jersey Obo and several other good ones never shown. Don't think I want all the good ones, but we must have good bitches to breed good youngsters. I shall not show much as I prefer to retire from that part of it. I have a large lot of spaniels and should breed some good ones this season. I have champion Obo II., the king of cockers, champion Black Pete, champion Jersey, Jersey Obo and several other stud dogs. For bitches there are such as champion Miss Obo II., champion Shina and two of her litter sisters, and some of Jersey's sisters, champion Dolly Obo and lots of other winners. I could show a rattling strong team if I only brought them all out. My plan is to retire them when they qualify in the champion class, as I only show cockers and only a few shows. I don't push them along very fast, but I have the quality just the same."

A HELEN KELLER FUND.

NO one can have read of the brutal killing of Helen Keller's mastiff and the child's grief and forgiveness, without having had his heart touched. The facts are doubtless fresh in memory; Mr. Wade, of Hulton, Pa., gave the little blind girl a mastiff, which straightway became a companion, protector and friend; and on Helen's leaving her home for Boston mourned about the house for days, refusing to be comforted. One day in January the mastiff, at large in a public square, was shot and killed by a policeman, in compliance with a brutal city ordinance. Never was Helen more distressed, wrote her teacher, than when the news of this deed was broken to her; but with the spirit of forgiveness which is one of the most marked traits of her character, she forgave the cruel wrong, saying, "They could not have known what a good dog Lioness was, or they would not have done it."

Upon reading the note of the death of Lioness, Mr. Geo. O. Goodhue, of Danville, Quebec, wrote to us offering to contribute to a fund to purchase another mastiff to replace the one killed. But immediately upon learning of the death of Lioness, Mr. Wade had written to "Uncle Dick" Fellows and bought Eriant, an elder sister of Lioness, and sent her to Helen's home in Birmingham, Ala. In this he had anticipated not only Mr. Goodhue but Mr. Fellows himself, whose kind heart had already prompted him to send Eriant as a gift.

But while Mr. Wade's prompt action has thus taken from others the occasion of contributing for Helen's pet, many a reader of the FOREST AND STREAM will welcome the announcement that there is still a practical way of showing interest in the sweet child.

While visiting Mr. Wade at Hulton, Helen became warmly interested in a little blind deaf mute boy; and her sympathetic heart was filled with a desire that he might be sent to Boston for the same course of instruction which has proved so successful in her own case. Not long ago, one of Mr. Wade's children received a letter written by Helen, expressing this wish, and Mr. Wade has sent it to us, thinking that it may prompt many a reader to add to a proposed Helen Keller fund for the purpose sending little Tommy to the Boston school for the blind. Here is the letter, and a wonderful letter it is, too, from a child not yet ten years of age:

SOUTH BOSTON, Feb. 17, 1891.

Valentine, O Valentine,
Pretty little love of mine.

I send you many sweet thanks for your dear love and for the gentle pets you sent to tell me of my dear Valentine. I have been sick for a long time and am not quite all well yet, but teacher said I could write to you a little letter. I am so glad that your papa is coming to Boston. You must ask him to bring you with him. We will have great fun at the dog show. I think. Did you know that my beautiful Lioness was dead? She was killed while playing with some other dogs near my home. My heart is so sad about it. The tears come whenever I think how terrified she must have been to have people unkind to her. We had all loved her so. I cannot tell how I knew that my beautiful dog's expression softened and became more intelligent when I caressed her, but I am sure it was true. She would lay her great head in my lap whenever I told her how fine dogs ought to behave, and I am sure she understood. At first I was delighted to hear that your papa had another dog for me, but now I fear that something might happen to it, and that would be too dreadful. I would rather try to be happy without one, than that the faithful friend should be killed. Tell your papa that when I am well I am going to write a letter to the boys and girls in Boston and tell them about darling little Tommy, and ask them to send their pennies to Mr. Anagnos so that he can bring Tommy to Boston in April. I hope I can teach him something myself. Now my own Valentine I must say a loving good-bye. Give your papa and mama and dear sister Lois my love and many kisses.

Your Valentine,
HELEN KELLER.

Some of the "dog men" Mr. Wade spoke to about this, at the New York show, have asked him to accept their contributions, and the following have already been received. We will gladly acknowledge others.

THE HELEN KELLER FUND.

BEAGLES ON THE BENCH.

Editor Forest and Stream:

One learns little, one learns much. This thought came to me to-night on perusing the awards given at New York, Baltimore and Pittsburg by three different judges. Can one tolerably conversant with the beagle adopt a standard from the ideas expressed in the awards that would be of any practical service to a breeder? It strikes me very forcibly that in order to show to win, we must first ascertain who is to officiate, and make entries accordingly. My dogs may win hands down this week and next week they are not in it. Is it purely a matter of fancy or favoritism? If fancy, then let us endeavor to adopt a standard or scoring rule, so that the disadvantages which the unpopular strain is laboring under may be reduced to a minimum, and at the same time force the popular strain to come up to the required standard. As now done, your dog beats mine this week, mine gives yours a go next week, and so on through the entire circuit. At its termination, good, bad and indifferent have all won a blue ribbon.

As an improvement, I would suggest that the National Beagle Club adopt a standard, and that two judges duly appointed shall schedule each dog separately, submitting differences to an umpire previously agreed upon, and the decision of any two to be binding. This would to a large degree do away with one-man power, fancy or favoritism. Will brother beagle breeders kindly express their views?

MR. BROWN.

MASTIFFS AT NEW YORK.—Troy, N. Y.—Editor Forest and Stream: In reading the criticisms of Mr. Mason in your publication on the mastiffs I notice that he states that Ingleside Princess was unnoticed in the bitch class at the New York dog show. According to my understanding she took third prize, and I have the card so signifying. His order is Lady Dorothy first, Duchess second, Edda third and Caution's Own Daughter fourth. Please inform me if I am correct, and if so, please correct such criticism of Mr. Mason's in your next issue.—C. E. GREENMAN. [Mr. Mason is correct; your bitch was not mentioned.]

NEW YORK CITY SCHUETZEN.—The shooting committee of the New York City Schuetzen Corps was fully represented on Monday at the meeting of the German American Shooting Society, and acted on the shooting plan submitted by the first shooting master, J. W. Schneider. The plan was adopted with a few slight modifications, and the shooting days were fixed for April 24, May 22, June 26, July 24, Aug. 28, Sept. 25, and Oct. 23. On the regular 25 ring target the members will be classified according to marksmanship. The prizes will consist of handsome gold medals, to go to the shooters making 1,800 points in the first class, 1,600 in the second, and 1,400 in the third class. On the bullseye target, at 30 shots for 50 cents, no limit. On the man target the money shot in every day will be divided *pro rata*, after a deduction of 25 per cent. The corps has also given four medals, and J. Schneider a fifth one, which will be presented to the marksman making the greatest number of red flags, 20 line, during the entire shoot. Gold medals will be given to all scoring 100 points on the point target; the red flag counting 3 points is the center ring, 2½ in. diameter; the white flag counting 1 point is the center ring, 2½ in. diameter; the 3½ in. from the center ring and he will be credited with 2 points; the rest of the 12 in. bullseye will count 1, a white flag being shown.

SAN FRANCISCO, March 8.—A large number of marksmen assembled at Shell mound to-day for the day to rifle shooting. The occasion was one of more than ordinary interest, as Captain Siebe had placed 25 prizes in competition and the marksmen present tried hard to make top scores. Co. B, 3d Infantry Regiment, held its monthly medal shoot and some good scores were made. Companies C and G (Nationals) of the 1st Regiment were present in strong numbers to compete for the trophies of the companies. The independent rifles held their final monthly medal shoot and brought out a good many members, who tried hard to place good scores to their names. The San Francisco Schuetzen Verein turned out strong and used their best endeavor to win the handsome medals which the company places at the disposal of its members. Representatives of the California, Germania, and in fact nearly all the rifle clubs of the city were present to participate in the prize shoot. Captain Siebe, the members of Co. B of the First were present at the range and indulged in a little practice preparatory to the Tobin trophy shoot, which will take place next Sunday. At the conclusion of the day's contest Captain Siebe invited all the marksmen to a banquet which he had prepared as a surprise for them. F. Attinger acted as toast master and kept the riflemen in a constant vein of good humor by his many witty remarks. The marksmen who participated in the day's shoot were surprised to see good shooting done by the old champion, Philo Jacoby. For several days he has been a very sick man, under the doctor's care. He showed that he was still alive and would remain so for some time to come.

BOSTON, March 14.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day under very unfavorable conditions, a very strong wind blowing from 8 to 11 o'clock. W. C. Prescott wins the bronze membership badge. Following are to-day's scores, distance 200 yds., American target, recently allowed:

All-Comers' Off-Hand Match.			
W Charles.....	79	W Hawley.....	45
C H Eastman.....	77	J B Mason.....	73
B L Fuller.....	77	F W Chester.....	72
All-Comers' Rest Match.			
F Mansfield.....	104	W C Prescott.....	95
T Warren.....	102	J W French.....	94
A H Ballard.....	97	J French.....	94
Pistol Match, 50 yds.			
H Severance.....	86	S C Sydney.....	79
W Charles.....	83	C F Gray.....	75
H Cushing.....	83	G L Hosmer.....	75
A D Stevens.....	81	D Martin.....	70

CONLIN'S GALLERY, corner Broadway and Thirty-First street.—The first of the series of annual contests at Conlin's gallery, the Beginners' Revolver Match, was terminated March 12. The conditions were as follows: Any ammunition, any trigger pull, position standing, free and clear, standard decimal target, best three targets to count. The match was well patronized by a number of beginners and some of the shooting made by competitors who did not prove winners gave much promise for good scores in the future. The following are the names and scores of the winners: First prize, C. B. Bishop, of Clifton, N. J., 50, 50, 49—149. Second prize, R. Hoag, of 23d Regiment, Brooklyn, 45, 44, 44—133. The next match will be for amateurs.

LAURENCE, Mass., March 14.—There was a small attendance at the range to-day. These scores were made:

Record Match.			
O M Jewell.....	80	E D Sargent.....	68
A A Philbrick.....	76	I E Olmstead.....	61

Rest Match.

E D Sargent.....	89	E F Richardson.....	88
I E Olmstead.....	85		

EMPIRE RIFLE CLUB, N. Y., March 11.—The following scores were made by members of the Empire Rifle Club, of 12 St. Marks Place, at their regular weekly shoot March 10, on the standard American target, 1/4 bullseye: W. Rosenbaum 95, C. Zettler, Jr. 93, A. Stahl, Jr. 92, W. M. Schell 89, J. Miller 89, J. Grimm 88, H. Zettler 86, J. Zettler 84, G. Hillmeyer 74, W. Miller, Sec'y.

REVOLVER CLUB, New York, March 14.—At to-day's shoot of the New York Pistol and Revolver Club, of 12 St. Marks Place, the following results were attained on the Zettler decimal target: Stein 57, Janter 56, Oehl 56, Bussee 54, Walther 53, Hecking 52, G. L. Hoffman 47, out of a possible 60 on six shots.

TORONTO, March 10.—The challenge cup belonging to the Off-Hand Rifle Association of Ontario was shot for at Bradford to-day, Mr. Alfred Graham, of Everett, heading the score with 92 points out of a possible 100, ranges 100 and 200 yds.

THE TRAP.

Scores for publication should be made out on the printed blank prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

- March 21.—White House Gun Club Tournament. Open to all. M. S. Anderson, Sec'y.
- March 24.—Detroit Tournament, assisted by the Inter-State Manufacturers' and Dealers' Association. \$1,000 guaranteed.
- April 9-11.—Rutherford Tournament of the Boiling Springs Gun Club, at Rutherford, N. J.
- April 28-30.—New London (or New Haven) Inter-State Association.
- May 5-6.—Algona (Ia.) Gun Club Tournament. Open to all. John G. Smith, Sec'y.
- May 7.—Pittsburgh Tournament. Open to all. Elmer E. Shaner, Sec'y.
- May 7.—Anburn, N. Y., Gun Club Tournament. \$800 guaranteed. Professionals barred. Chas. W. Brister, Sec'y.
- May 9.—Grand Tournament of the Hill City Gun Club, Vicksburg, Miss. Open to all. Geo. H. Hill, Sec'y.
- May 13-16.—Harrisburg, Pa., Shooting Association Tournament, assisted by the Inter-State Manufacturers' and Dealers' Association. Three days targets. One day live birds. H. M. F. Wooden, Sec'y.
- May 19-21.—Washington (D. C.) Capital City Gun Club, assisted by Inter-State Manufacturers' and Dealers' Association. Club gives \$1,000, Association guarantees \$1,000, total \$2,000.
- June 2-5.—Saratoga Gun Club shoot, assisted by the Inter-State Manufacturers' and Dealers' Association. Association guarantees \$1,000, club adds \$2,000, total \$3,000.
- June 15-19.—Thirty-third Annual Tournament of the New York State Association for the Protection of Fish and Game, at Rome, N. Y. M. R. Bingham, Sec'y.

THE DETROIT TOURNAMENT.

DURING the coming week the new Inter-State Manufacturers and Dealers' Association will lend its aid to the extent of \$1,000 guarantee toward the shoot of the Detroit Tournament Association. The days for the shoot are the 24th, 25th and 26th with a state of events each day. The successor to the old American Association has a membership of a dozen concerns all directly interested in encouraging sport at the trap.

In explanation of its object the Association prefaces the Detroit programme with a brief card saying: "This organization is composed of people all well known to parties interested in shooting. Their object is to encourage the Association to promote trap shooting, which is a worthy one and should receive hearty support everywhere. Tournaments will be held in different States, and the profits arising from these tournaments will be turned over to the club in each city in which a shoot is held. The club to invest such money in securing grounds and club house."

The rules governing all shoots of this Association embrace all the well known rules of the Association, except the following changes: The gun may be sighted while at score, when ready to shoot the butt of the gun must be held clear below the arm pit until the shooter has called "Pull." The load of shot for both 10 and 12-gauge guns must not exceed 1 1/2 oz., struck measure. Disposition of ties—Any contestant may draw his share of entrance money where such share equals or exceeds the amount of entrance money. Standard Keyston targets will be used. The unknown Protected—All experts will be classified and amateurs will have an equal show for winning purses with the best shots. A scheme has been devised which should bring our amateurs to all our shoots, and is as follows: 10 traps will be used and the contestants shot in squads of 11. The experts must shoot first and at unknown angles. When they shoot the indicator will be used and the shooting will be very difficult. They will also shoot at unknown angles, different distances and unknown traps. All experts will be debarré from entering the contest after the last gun of the first squad has been fired. While rotating from No. 1 to No. 5, these traps only will be sprung. After passing No. 5 the shooter will get birds from No. 6 to 10. After all the experts have finished

their spring the indicator is laid aside and the amateur squads begin the shoot at known angles from the trap directly in front of them. Thus it will be seen that a shooter in the expert class may be in front of No. 1 and have a bird from No. 4, while the amateur will know each trap and flight. The full programme of events include the following:

March 24.—No. 1, 10 singles, entrance \$1; No. 2, 10 singles, \$2.50, \$50 guaranteed; No. 3, 15 singles, \$1.50; No. 4, 15 singles, \$4, \$75 guaranteed; No. 5, 6 pairs doubles, \$2; No. 6, 20 singles, \$5, \$100 guaranteed; No. 7, 6 pairs doubles, \$3; No. 8, 10 singles, \$1, \$25 guaranteed.

March 25.—No. 9, 10 singles, entrance \$1; No. 10, 15 singles, \$4, \$75 guaranteed; No. 11, 15 singles, \$2; No. 12, 15 singles, \$4, \$75 guaranteed; No. 13, 6 pairs doubles, \$2; No. 14, 20 singles, \$5, \$100 guaranteed; No. 15, 20 singles, \$5, \$100 guaranteed; No. 16, 15 singles, \$2.50, \$50 guaranteed.

March 26.—No. 17, 10 singles, entrance \$1; No. 18, \$2.50, \$50 guaranteed; No. 19, 15 singles, \$1.50; No. 20, 15 singles, \$4, \$75 guaranteed; No. 21, 6 pairs doubles, \$2; No. 22, 20 singles, \$5, \$100 guaranteed; No. 23, 15 singles, \$4, \$75 guaranteed; No. 24, 10 singles, \$1.

All surplus money divided as follows: 40 per cent. added to purses, 20 per cent. to first and 10 per cent. to second for best average in expert class to those shooting in all guaranteed purses this day; 20 per cent. to first and 10 per cent. to second for best average in amateur class to those shooting in a guaranteed purses this day. All averages paid each night. The shooting will commence at 9 A. M., sharp, each day. All purses at this tournament will be divided in all events, 30 per cent., 25 per cent., 20 per cent., 15 per cent. and 10 per cent.

CHICAGO SHOOTERS.

CHICAGO, Ill., March 13.—As was announced last week, the sportsmen of Illinois have this year won at least one substantial success in the State Legislature, in the killing of the bill intended to prohibit pigeon shooting. The measure never got beyond the committee room, and its stopping there was a very nice bit of work ingeniously done. The Humane Society will not wait a while yet. I do not see how this rebuke to that organization can be looked upon in any sense as a triumph of the baser elements or more cruel tendencies in society. It may be, quite as well, the triumph of the old principle that he who would ask equity must come in with clean hands. The Humane Society and its leaders have no better friends than are to be found among the sportsmen, but these friends are not all blind. The Humane Society of this or any other city is, in its proper idea, a noble thing, but as carried out it may or may not be a noble thing. It should be entitled to respect, not for its name but for its works. The day of sentimentalism is past for the world. It is practical to-day. "By their fruits ye shall know them," never so true before. The press had this idea right. Let not the Humane Society be discouraged at this defeat. There remains still a wide field of activity for it. For instance, it has won on a bill prohibiting the docking of horses' tails. Let it now prevent the beating, overloading and overdriving of animals. Mr. Shortall should be interested in this last especially.

WATSON'S PARK, March 13.—As was announced last week, the sportsmen of Illinois have this year won at least one substantial success in the State Legislature, in the killing of the bill intended to prohibit pigeon shooting. The measure never got beyond the committee room, and its stopping there was a very nice bit of work ingeniously done. The Humane Society will not wait a while yet. I do not see how this rebuke to that organization can be looked upon in any sense as a triumph of the baser elements or more cruel tendencies in society. It may be, quite as well, the triumph of the old principle that he who would ask equity must come in with clean hands. The Humane Society and its leaders have no better friends than are to be found among the sportsmen, but these friends are not all blind. The Humane Society of this or any other city is, in its proper idea, a noble thing, but as carried out it may or may not be a noble thing. It should be entitled to respect, not for its name but for its works. The day of sentimentalism is past for the world. It is practical to-day. "By their fruits ye shall know them," never so true before. The press had this idea right. Let not the Humane Society be discouraged at this defeat. There remains still a wide field of activity for it. For instance, it has won on a bill prohibiting the docking of horses' tails. Let it now prevent the beating, overloading and overdriving of animals. Mr. Shortall should be interested in this last especially.

Same day: R. O. Heikes and P. F. Rock shot a match at 100 Peoria blackbirds each. Score: Heikes 94, Rock 65.

Same day: Rock, Steck, Foss, Hamline and Heikes shot four live birds each. The usual 7 bird money in each sweep: Stice got first once, Foss first once, Hamline and Heikes div. first once, Hamline and Foss div. first once, Hamline second twice, Foss second once, Rock second once.

March 14.—The Pullman Gun Club for club cup, 10 live pigeons each, Illinois State rules, small sweep added:

James Finn.....	021201302-7	G Fieldhouse.....	011020112-7
Chas Williams.....	023023012-7	J Schuttler.....	020301212-6
Chas Sleeth.....	023023012-7	E M Gardner.....	010020201-2
W Dallyn.....	020212112-8	W Walpole.....	010000101-3
Chas Williams.....	011120220-7		

On shoot-off: Gardner cup and first, Williams second, third div. Same club, blackbird medal and added sweep:

E M Gardner.....	011101101-8	W Dallyn.....	011111101-8
Chas Williams.....	010000001-9	J Schuttler.....	011111100-8
Joe Finn.....	100000100-2	Chas Sleeth.....	000000001-2
Jim Finn.....	000011111-6	G Fieldhouse.....	100001011-5

* Not in sweep. Ties div.

BROOKLYN TRAPS.

BROOKLYN, March 10.—Nearly all of the best shots in the Coney Island Rod and Gun Club were at Woodlawn to-day at the regular monthly shoot. The usual 7 bird money was shot at by 19 members, club handicap, and only three could make the money for the Schlieman badge. P. Ward won it by killing 6, after ties with Dwyer and Eppig. The second prize was won by Captain Cranmer. J. B. Dyer and C. Juch divided the third money, G. Engelheim took the fourth money, and H. P. Donnelly won the fifth.

March 12.—Fourteen members of the Unknown Gun Club went to the range at Dexter Park in to-day's rain and put up very creditable scores, considering the disagreeable weather and the difficult rules. J. Johnson, one of the veterans in the club, captured the club medal and first prize; G. Pfohlmann took second money; the third prize went to H. Hausman, and fourth money was divided between H. von Staden and W. E. Skidmore. A 3-bird sweepstakes followed the regular shoot. Club shot, handicap rises, old Long Island rules, 7 birds each man, for the club medal and four additional cash prizes: J. Smith 5, G. Pfohlmann 4, Johnson 6, I. Hyde 8, H. Hausman 4, E. A. Vroom 5, H. von Staden 2, W. E. Skidmore 2, Dr. Schwartz 5, W. Simering 4, A. Langenberg 4, J. Offermann 1, H. Knebel 3, W. W. H. Schumacher 2. Shoot-off for first prize and the club badge, 3 birds each man, the miss and out: J. Johnson 3, I. Hyde 3, H. Knebel, Sr., 2, Schumacher 2. Johnson won in the next round, allowing his birds, while Hyde missed. Shoot-off for second prize, same conditions: J. Smith withdrew, E. A. Vroom missed his first and killed his second, Dr. Schwartz vice versa. Pfohlmann won on 3 straight. Shoot-off for third prize: Langenberg missed 2 straight, while Hyde killed his first and missed his second bird, Hausman killed all three and won the money.

March 13.—The Crescent Gun Club held a shoot at the Dexter Park grounds this afternoon, nine members competing for the handsome gun given by the club and three extra cash prizes. G. Ellerhorst was the only marksman who made a clean score, and he won first prize. The second, a cash prize, went to W. Tomford on 3 straight. H. Rathjen, M. Schmidt, and J. Vagts tied for the next prize, and agreed to shoot off for the club medal and sweepstakes. H. Hopkins and J. Mohrman divided the last prize. The birds were a great deal better than the weather. The scores: Regular club shoot, handicap rises, 7 birds each man, gun below the elbow until the bird is on the wing, 3 traps, unknown pull, 80 yards boundary: Gilman 6, Rathjen 5, Schmidt 5, Hopkins 4, Tomford 6, Vagts 5, Hilmner 3, Ellerhorst 2, Mohrman 2.

First sweepstakes and shoot-off for second money of the club contest, \$1 entrance, two prizes, 3 birds each man, 25 yds. rise, otherwise club rules—Gilman, Rathjen, Schulz and Hopkins tied on 3 Vagts, Ellerhorst and Mohrman tied on 2 for second money; Tomford withdrew.

Second sweepstakes, same conditions, all previous ties to be shot off in three rounds—Gilman killed 3 straight and won second money of the club shoot, first money of the first event, and half of first money of the second event. J. Vagts killed 3 straight and took the first sweepstakes. Rathjen, Tomford, Hopkins and Mohrman divided second prize of the second event.

March 14.—The shooters who went to Dexter Park this afternoon to shoot at five birds had their hands full trying to kill the pigeons which had been shot all the way from Illinois. Of course the high wind helped the birds considerably, and the general result attests well the marksmanship of the sportsmen present:

First event, 10 live birds, 2 prizes: E. H. Williams killed 8 out of 10 and took first money, G. Remsen, J. Muench and A. C. Hunt divided second on 5.

Second event, 5 live birds, \$1 entrance, 2 prizes: J. Muench took first money on 5 straight, G. Remsen and G. Pfohlmann divided second on 4. Hunt killed 3 and missed one, and Williams, who was evidently in hard luck, missed all but his first bird.

Both sweeps were shot under modified Hurlingham rules, 25 yds. rise, unknown pull. In a subsequent 15 bird match, 25 yds. rise, otherwise same conditions, Jacob Link killed 9 and missed 6, while A. Baur killed 8 and missed 7, the latter had to bear the expenses. Both shooters would be glad to arrange a live bird match with C. Muench, of the Acme Gun Club, the contest to take place in Dexter Park, and Mr. Muench to name the conditions.

March 15.—The Kings County Gun Club, of Brooklyn, held a shoot at live birds and bluebirds at Dexter Park to-day, The rules in the first event were 25 yds. rise, H. and T. traps, Long Island rules, both barrels allowed. The bluebird sweepstakes followed. The scores:

Live bird shoot, at 10 pigeons each man, L. I. rules, both barrels: Zirkel 6, Greiner 4, Boegel 4, Bieber 6, Raehm 3, Duerner 3, Lindstedt 6, Schottler 9, C. Thiel 6, Short 6, Keller 4, Link 7, Dethloff 6. Regular club shoot, at 20 bluebirds each, right and left angles: Schottler 13, Raegel 13, Zirkel 12, Lindstedt 12, Link 11, Short 10, Bieber 9, Thiel 9, Dethloff 9, Keller 6, Greiner 4, Duerner 3, Raehm 2.

First sweepstakes, at 5 bluebirds each, club rules, 3 prizes: Zirkel 2, Greiner 0, Boegel 4, Bieber 3, Lindstedt 3, Schottler 4, Thiel 1, Short 2, Keller 1, Link 5, Dethloff 4. Link won first money, Schottler won second on shoot-off and Lindstedt took third.

Second sweepstakes, same conditions: Greiner 0, Boegel 2, Bieber 3, Lindstedt 3, Thiel 2, Keller 2, Dethloff 1. In the shoot-off Bieber outshot Lindstedt and won on the fifth round; for second prize Thiel was shot out on the second round, but it took six more rounds before Boegel could be decided the winner. Dethloff took third prize.

LAKE ONTARIO GUN CLUB.

ROCHESTER, March 12.—Regular club shoot of the Lake Ontario Gun Club, held at the Forest House in Irondequoit. Strings of 7 Peoria blackbirds, 25 yds. rise, unknown angles. Sweepstakes, 4 money. First string:

A Evershed.....	0011111-5	J C Aman.....	0111101-5
O E Walzer.....	1100111-5	W S Smith, Jr.....	0101011-5
H D McVean.....	1000000-1	F Knebel.....	0101100-3
F L Smith.....	1010111-5	D Walzer.....	0101010-2
D Foreman.....	0101011-4	D Walzer.....	1101111-6
J Aman.....	1010101-4		

D. Walzer first money, W. S. Smith second, F. L. Smith third, Knebel fourth.

Second string:

Evershed.....	1111111-7	J C Aman.....	1111010-5
O E Walzer.....	1111111-7	W S Smith, Jr.....	1010101-5

ST. LOUIS TRAP SHOOTERS.

ST. LOUIS, March 16.—The Sharp Shooters' Union of Western America will hold their biennial tournament in St. Louis, June 8 to 13. It is expected that about 2,000 shooters will participate in the tournament, representing about 100 different associations. Local committees have been appointed to take charge of the visitors and delegates to the convention.

Rawlings Bros. are now nicely located in their new store, and to the great convenience of sportsmen they have set aside a portion of their large room, where meetings can be held and matters of general interest discussed. Heretofore there has been no common meeting place for the sportsmen of St. Louis, and this bit of enterprise and generosity is highly appreciated.

For some time past the trap shooters of St. Louis have been trying to form a central organization. A meeting was held last night at Rawlings Bros.' store for the further consideration of the question. The president of the Trap Shooters' Association is Mr. Peter Kling. At present there are some 50 trap shooters in St. Louis, divided among about 20 clubs. The plan is to form these clubs into a central organization for the purchase of a tract of land, which shall be fitted up for the use of all the clubs. Nothing definite has been done so far, and the matter has been referred to committees for action.

ABERDEEN.

NEWARK, N. J., March 12.—The Newark Gun Club held its monthly shoot on John Erb's grounds this afternoon. The rain came down in torrents, but eight men were present out of the total membership of twenty-two. In the club shoot each man fired at 10 birds, under club rules, 10-bore guns (Hedden and Briental) shooting at 30 and 12-bore guns at 25 yds. rise. The score:

Castle.....	111111111-10	Pushsee.....	101110111-8
Class.....	111111110-9	Erb.....	111100111-8
Class.....	111111110-9	Whitton.....	110110111-8
Lindley.....	111111110-9	Leddy.....	101110111-8
Jones.....	101111111-9	Griffen.....	101110101-7
Heath.....	101110111-9	Hilfers.....	101011110-7
Reinhardt.....	111110111-9	Briental.....	110110101-7
Hollis.....	111110111-9	Fairchild.....	111100100-5
Collins.....	101110111-9	Bruen.....	002023002-4

Castle took first money. Second money was shared by miss and out. Class winning second by killing 7 straight. Hedden seventh bird falling dead out of bounds, and the others being shot out early in the race. Third was div. by Collins and Pushsee.

JEANNETTE SHOOTERS.—The annual meeting and election of officers of the Jeannette Jagd Club took place at the headquarters, 183 Duane street, on March 12. The following gentlemen were elected members by acclamation: H. Wilking, E. Brosner and President G. Wallbaum, of the Hudson County Jockey Club. The Jeannette Club is a new organization, and has no previous contest for the G. V. Hudson trophy was declined with thanks, as the Jeannette men never shoot under Hurlingham rules. It was decided to purchase three new medals for competition in the three classes, and the executive committee was empowered to classify all new members. President Cordts donated a handsome gold badge, which at the end of the year will go to the marksman who has killed in the regular club shoots the most pigeons by using one barrel only. As soon as the center field at the Guttenburg race track has been put into shape the Jeannette men will again hold their shoots at Guttenburg, but until then they will meet at Dexter Park. The annual report of the secretary was accepted with loud applause. The club has greatly increased in membership, and the treasury is in a very satisfactory condition. Last year's have been increased tenfold. The following officers were elected: President, H. W. Cordts; Vice-President, J. Vagt; Secretary, T. J. Christen, Financial Secretary, L. Lebing; Treasurer, N. B. Brunie; First Shooting Master, J. Boesch; Second Shooting Master, H. Elbsen; Collector, C. Disch. All officers were re-elected with the exception of C. Meyer, who declined positively to accept the office of financial secretary again.

NEW JERSEY SHOOTERS.—C. H. Townsend, the energetic Major Domo of shooting matters in New Jersey and therefore in getting the 16 active gun clubs of Essex county into line for a county organization. A trophy, probably a pennant, will be purchased, each of the clubs entering teams to pay a pro rata share of its cost. This trophy will become the property of the club whose team wins the most contests during the series, the club team making the highest aggregate score in each monthly shoot to hold the trophy until the next shoot. There will also probably be prizes offered for the best individual average made by members of teams. By making the teams small, all the clubs in the county may be able to enter teams, beside which each of the clubs will be able to hold one big day's shooting during the series.

GREENLEAF VS. LANGCAKE.—Nearly 500 men and boys went to the Jersey City Heights Gun Club grounds, at Marion, N. J., on the afternoon of March 18, to witness the live-bird match between "Abel Greenleaf" of Union Hill, and "Tom Langcake" of Brooklyn. The men shot for \$250 and the boys for \$100. The rules. The scores were: Langcake 39 kills, Greenleaf 38 1/2 kills. Considerable money changed hands on the result. Mr. J. Pentz was referee.

A CRUISE TO THE WEST'ARD.

PART I.

NOT being able to own as fine a cruising yacht as the Yampa, I Sea Fox, or even the Titania, is no bar to the enjoyment of a summer cruise, and so far as that goes, last summer in Newport I met a gentleman who owns two as fine yachts as float, who had just bought a large Cape cat, and with one man to help him, starting out on a cruise in it, as he said, for real pleasure. He said he ran his sloop and schooner for style, and got down to a cat-boat for pleasure, as that entailed no drunken cooks, no enormous supply bills, no champagne suppers and their attendant headaches at every port, and no crowd of "necessity" friends, and he could get around as well and nearly as quickly and fully as safely. I know some persons will hold their hands at the idea of a cat-boat being safe. But no sailor but swins salt water for its size, and a good Newport or Cape cat, in competent hands, and no boat is safe in others.

It was the 21st of September before we could leave our business for two weeks to take care of itself, so on that date, at 9 P. M., we found ourselves sailing into Newport Harbor all ready for a fortnight's cruise to the west'ard in the morning. My boat, a 25ft. night's rest, and a crew of six, including the skipper, and a cook, and 3,500 lbs. of pig iron closely stowed below the floor, looked, and was, able to meet most any kind of weather, and she certainly had to before she got back to Newport again. We use an alcohol stove for general purposes, being much more cleanly and easily handled than kerosene or wood, although we had a small wood stove for cold weather or emergencies. We had on board plenty of cracked ice, beer, cream, and cold meats, and the water tank full of clear spring water. A complete change of clothes from head to foot, with extra shirts and stockings. A Winchester rifle and a shotgun, and a little good whisky for medicinal use.

That night we slept as only tired men can sleep, and turned out early to find a heavy fog covering everything, including our spirits, like a white blanket. The fog was so thick that it was in order while I went up town for a spare pipe. About 10 o'clock the fog lifted some, and the wind being light, but from the north-west, we concluded to try for Stonington or New London. Taking our compass course at Castle Hill, we were soon out on the broad Atlantic, the wind proved lighter out here, but the fog cleared away, and the sun came out. We were at Point Judith, and the crew trying to get dinner and keep the remains of my breakfast down at the same time. The long, lazy swell off this point made the latter job so difficult an undertaking I soon saw I was to dine on cold water and hard tack, with my pipe for dessert, and proceeded to do so.

The long stretch of low, sandy beach in sight from here, over sixteen miles in a nearly straight line, is anything but pleasant to see, wrecks being nearly as numerous as houses, and no ghost of a harbor. The air continued very light and from nearly ahead, necessitating a long leap and a short one from here to Watch Hill, and the tide just starting to run ast. For the rest of the afternoon the crew busied himself in trying to keep alive and hold the various parts of his anatomy together, and I speculated about where the black cloud in the north would catch us. At sunset the crew tried to get dinner and keep the remains of my breakfast down at the same time. The long, lazy swell off this point made the latter job so difficult an undertaking I soon saw I was to dine on cold water and hard tack, with my pipe for dessert, and proceeded to do so.

The wind had crawled around well to the north by this time, and it was thick looking and dark. Suddenly a line of white water came on, and the crew, wakers! and that one word I heard his senseless instantly. I knew I had stood too far in, and was close in to Watch Hill. It only took a minute to come about and lay off shore on a line parallel to this line of white water. We held off with a good stiff breeze for perhaps ten minutes, when smash! something struck our boom; it was the buoy, and glad enough I was to see it, even in this unceremonious manner, for it told us we could see the land, and that was a relief. A flash of lightning. The barometer was down, and a heavy rain fell all the afternoon, so I was not afraid of a serious blow, but it made my hair raise just a little to think of running into Fisher's Island Sound for the first time at night, and in a thunder squall.

We lay to and took in a couple of reefs, then laid our course for Latimer's Reef Light, which soon bore in sight. "Eaching this in sight," said the skipper, "we had a good haul up northeast for Stonington. I had a good many misgivings about this haul, here, as my chart was two years old, and I had heard that a break-water was in process of construction, which was not down on my chart. Stonington Light showed clear and white ahead in a short time, and the wind and rain had greatly subsided. Suddenly a flash of lightning showed a long gray line of rocks ahead, stretching across the water as we could see, and the skipper, with a gasp, said, "That's the end of us!" The crew mutinied and insisted that the captain did not know his business, and although the captain did not feel very comfortable in his own mind, the crew did not find it out.

Two things were plain. One was that Stonington Light showed clear right ahead, distant about a mile, and the other was that an apparent light stone wall was stretched from shore to shore of the bay. The skipper concluded that the Government was not fool enough to build this wall with no opening, so decided to sail westward for a piece till an opening or the shore showed up. No sooner was this decision reached than a red light suddenly showed on the starboard bow and very near. Steering for this took us in a few minutes into smooth water and a good harbor in Stonington. At 10:30 P. M. Only yachtsmen can appreciate how good our supper of beefsteak, egg, coffee and bread tasted, that night, and no dreams or nightmare to follow, as such a supper would surely cause to a landsman. Only a peaceful and unbroken sleep till 7 A. M. next day.

One thing I never could understand about sailors, and that is how they can wake up after only four hours' sleep. I know nothing about it, but I can tell you that when I am asleep on the water, unless I am especially and about the Government, I can rain and thunder, and do anything but throw me on the floor and only cause me to sleep the sounder, and the bare idea of having to turn out after only four hours' sleep would almost prevent sleep, and my crew are generally full as bad. If more persons suffering from insomnia would try this cheap remedy the doctors would lose a good many dollars.

We left Stonington at about 8 A. M., and had a very pleasant and uneventful sail to New London. How in the world a large vessel can sail through Fisher's Island Sound I don't see, as we found a perfect forest of buoys marking shoals and ledges, until we were tired of thinking of them. We arrived at New London about noon, and agreed to get dinner ashore, as our own cooking did not seem quite up to the mark, though in another week we did not care who cooked, so that we got something to eat. The afternoon was pleasantly spent in rambling around over the old city and in visiting the ruins of Fort Griswold across the river and hearing of its brave defense in 1781. It was well after dark when we started for our boat.

The crew and I went just where she lay and so did the captain, but the two places were not identical by about half a mile. As the crew's locality was nearest, we tried that first, and after a long trouble, climbing over a 10ft. fence, we found ourselves in a large lumber and coal yard combined, and immediately met with a rather warm reception from a big watchman and his dog. I never could tell how we both got back over the fence in less than a second, for it certainly took us all of ten minutes to climb in. Holding on to the street side of the fence we came to the conclusion our boat was not there, so agreed to investigate the locality where the captain was sure she lay. After tumbling over a lot of oil barrels on an old wharf, we saw a schooner at an adjoining wharf that I felt sure was the one our small boat lay side of, but soon found that nothing is more deceptive than strange sensations.

In the following half-hour we boarded at least half a dozen vessels trying to find the right one, meeting with different receptions, and often with none at all. It was now 10 o'clock and very dark, so, almost despairing of ever finding our skiff, we hailed a passing boat and asked the occupant if he had seen a strange cat-boat in the harbor. He had. Would he put us aboard her? He would. So a few minutes later we were sitting round getting supper in our own comfortable cabin. Next morning, however, our skiff was in plain sight right where we had left her, and we soon had her alongside.

Anchored just astern of us was a large scow sloop, with Centennial, Greenport, painted on her stern. Now here was our chance, too, but our course was up to the sticking point. Soon a frowsy-looking man appeared on deck, and a half hour was produced the information that he was the captain, and was bound to Greenport if the wind held out. Taking our bottle of medicine I put myself aboard the old sloop for a yarn. The captain was not in a very talkative mood, so I asked him to take an eye-opener. "You can't," he said, "I hardly use it, but carried it for accidents." He allowed he was an "accident" man, and had the pleasure of seeing a good quarter of my quart disappear down his throat. But it limbered his tongue, and he agreed to pilot me through Plum Gut and into Greenport, as soon as his "old woman" woke up enough to help him hoist his sails, cautioning me, however, that he would not slow up for me, and that his boat was very fast and could out-run all the yachts on the coast; a statement that her looks certainly belied.

I foolishly agreed to help him get up his sails, so as to hurry matters somewhat, and very soon found myself pulling and away, and all my 200 lbs. of weight and he obligingly holding the turn; but I was too proud to back out now, and before I had left him I had hoisted the mainsail and jib and gone aloft and loosed his top-sail. While he got his anchor I slipped over her side into my skiff, mentally cursing myself for being such a fool, and I am afraid the cursing was not all mental when I got aboard my own boat and found my crew nearly dead from laughter and the breakfast suffering from my absence.

When we got ashore on our boat and things cleared away in good shape the Centennial was out of sight around the bend below. Before he had got to Bartlett's Reef we had passed him, and in a good steady breeze, too, and from there to Plum Gut we luffed quietly along in his wake, our greatest labor being not to get too far ahead of him, but our much-dreaded Plum Gut was growing nearer and nearer the time, and soon we could see the tide rips at the entrance and also two steam yachts trying to get through and apparently having a hard time of it. We concluded that if our pilot did not know the way any better than he did the sailing qualities of his old sloop we stood a slim show of getting through that day; but in this we were disappointed.

Just before we reached the tide rips the skipper hailed us and at the Centennial's head and took in his top-sail. He told us to keep right in his wake, and we went on, but the skipper was very careful and follow him exactly, as he was going through inside the beacon to avoid the tide. This information rather staggered us, as the chart gave the passage as impossible, and I began to hope my whisky had not gone to his head. However, we told him to wait ahead and, sure enough, in a very few minutes we were through and ploughed the time, without fairly knowing how it was done. I think he held on to the reef of rocks, and in time to see the Orient shore, until he took a back current, and then run through on the west side of the beacon and very close to it, keeping in the back water all the way through. Anyway it was well done, but I would not advise a stranger to try it. The two sloops that had tried to get through the Gut had given it up and gone around Plum Island.

As soon as we were well through the skipper luffed, and told me to come aboard and bring my medicine, as his "old woman" needed some to brace her nerves after the passage. I had not seen any female on board so far all day, so was inclined to think his own nerves were the ones needing bracing. I went on board, and the skipper went below, taking a good pint and a half of whisky with him. I got tired of waiting for him to appear, and poked my head down the companionway just in time to see the last drop in the bottle disappear down the throat of his old woman. I said good-bye, and told him to keep the bottle to remember me by, and got into my own boat as fast as I could consistent with due dignity. In half an hour, when we rounded the light near Orient, the old sloop still lay about as we left her, with no signs of life aboard. This trouble was so that we sailed in to Greenport we took a stretch back to help the hour, but saw the skipper was then on deck and able to navigate. But it was a good lesson well learned, and never since have I had more than one good drink on board my boat for strangers at any one time.

We had a brush going up to Greenport this time with a couple of anchor boats that said they were fast; they might have been. We had a very rough time of it, as they did not prove it. We cast anchor between two very handsome schooner yachts in the harbor, and had commenced preparations for dinner and supper in one, when the crew informed me we were running short of grub. I told him if he could not give us quail on toast, to give us what he could. I may have been a little sharp in my remarks, for I was in a hurry. Anyway, he shut his mouth tight and went below, and in half an hour called to supper on it. I noticed he had apparently eaten most of his, so called for mine. "None left," he said. Of the generous supply we started with none was left but one potato and one egg, and that was small rations for a hungry man. It is astonishing what an amount a man can get away with and still live when on the water.

The morning dawned as clear and beautiful an autumn day as one ever sees, and Shelter Island opposite looked so pleasant and inviting we sailed over to cultivate its nearer acquaintance. Its high bluffs covered with trees, its beach all white pebbles of nearly uniform size, its green lawns and beautiful summer houses, all combined to make it seem almost a paradise; so much so, that after sailing for an hour and finding a pretty little bay, we decided to anchor near the shore, and stay the day on the island. Our small anchor had perhaps twenty fathoms of rope, and we sailed in to within about 100 yds. of shore and cast it overboard. Down it went, faster and faster, until it finally bit up at the end of our warp; but no bottom. The tide runs very strong here, and the amount of back-ache and sweating required to get that anchor aboard again can be imagined. This time we stood nearly ashore before casting anchor, and found about twenty feet of water and good holding bottom.

We got breakfast here. Then had a smoke and decided on further plans. The result of the conference was that we decided to stay where we were that day and see the place and enjoy ourselves, also to stock up on enough provisions to last a week. Then for Peconic Bay, Sag Harbor, and back home over nearly our old course, and I think we could look to this we would have had a better time of it, but would have missed much valuable experience.

[TO BE CONCLUDED.]

THE FRYE BILL.

IN addition to the many emphatic protests from such clubs as the New York, Eastern and Larchmont, as well as from American yachtsmen generally, against the obnoxious "Frye bill" prohibiting the sailing of foreign-built yachts in American waters, "Article of Association" of the English, French and German, are outspoken in condemnation of the measure. Now that Congress has adjourned, there is no immediate prospect of the passage of such a law, and the matter may never be brought up again; but even in that case a great harm has been done to the fame of American yachtsmen.

While the features of the bill which provoked the most general condemnation, and which, according to foreign-built yachts, they were hardly worse than the final provision, which prohibited a small class of American-built yachts were prohibited from flying the American flag.

Although all immediate danger in both directions is averted, the same malign power which inspired this bill, and which has already done so much in a short time to annoy yachtsmen and to discourage and retard the growth of yachting, is still at work; and its evil influence is likely to bear still harder on yachtsmen this year than ever before.

Before submitting to the added restrictions and exactions, there is one thing for American yachtsmen to bear in mind; that there is no law of the United States which compels a yacht of any size to take out a license or other papers, and that it is entirely voluntary. "Article of Association" of the English, French and German, are outspoken in condemnation of the measure. Now that Congress has adjourned, there is no immediate prospect of the passage of such a law, and the matter may never be brought up again; but even in that case a great harm has been done to the fame of American yachtsmen.

A FOOLISH VENTURE.—On March 14 a match was made between Capt. Wm. A. Andrews and Capt. Josiah W. Lawler for a race across the Atlantic in 15ft. dories, the agreement being as follows: "Article of Association" of the English, French and German, are outspoken in condemnation of the measure. Now that Congress has adjourned, there is no immediate prospect of the passage of such a law, and the matter may never be brought up again; but even in that case a great harm has been done to the fame of American yachtsmen.

MANHATTAN ATHLETIC CLUB.—At a meeting of the yachtsmen of the Manhattan A. C. on March 14, the Club's annual year was organized, its object being the encouragement of boat racing and racing. The limit of length for boats was fixed at 33ft. l.w.l. Among the yachtsmen present were William Whitlock, Joseph W. Gibson, Seymour Hyde, and C. S. McCulloch. After the name of the club had been chosen, Messrs. Whitlock, Brown, and Gibson were appointed as a nominating committee to elect officers for the new club. The committee submitted by them as follows: Com. J. C. Summers; Vice-Com. Edmund C. Steator Rear-Com. William J. Swan; Sec'y-Treas. C. H. Krabel; Fleet Captain, Joseph W. Gibson. These gentlemen were unanimously elected. A committee was then appointed to frame a constitution and by-laws for the club.

Yachting.

Model Yachts and Boats. Their design, making and sailing, with designs and working drawings. Postpaid, \$2.

Yachtsmen who do not see what they want under this heading will please look under the headings of the *Canoe*, *peep into the Kennel*, *squint down the barrel of the Rifle*, *open the Fish Car* and *Game Bag*, inquire of the *Sportsman Tourist*, and if their yearnings are still unsatisfied, push their explorations into the *Editorial* and *Advertising Departments*.

STARLING, steam yacht, built by A. D. Story for E. A. Secomb in 1888, has been sold to W. C. Langley, owner of the once famous Ellsworth schooner Comet.

THE EAFFON STEAMER.—On March 13 at Lawley's yard the new 55ft. steam launch for C. S. Eaton, owner of Rosalind, was successfully launched.

MINEOLA.

THE first of the new 46-footers was launched on March 14 at Lawley's yard, the Mineola, designed by Mr. Burgess and owned by Mr. August Belmont, who has owned and raced the 40-footer Mariquita for two seasons. The new yacht is a keel cutter with practically the same beam as her 40ft. sister Mariquita, though 6ft. longer. She will be fitted solely for racing, the wheel and large American cockpit of Mariquita being replaced by a tiller and a small steering well. Her dimensions are: Length over all, 44ft.; beam extreme, 13ft. 6in.; beam 1 w. l., 12ft. 10in.; draft, 10ft. 6in. Her lead keel weighs 46,000lbs. The construction is semi-composite, with 10 steel angle frames $2\frac{1}{2} \times 2\frac{1}{2} \times 2\frac{1}{2}$, and steamed oak frames $2\frac{1}{2}$ in. square. The planking is of $\frac{1}{8}$ in. yellow pine; the deck of $2\frac{1}{2}$ in. white pine. The accommodations will include a main and after cabin, captain's stateroom and toilet room. Her sails will be made by Wilson & Silsby, the outfit including a mainsail of ordinary cotton duck and an extra mainsail of Egyptian cotton. Capt. Harry Hall, Jr., who has been in Mariquita since she was launched, will command the new boat. Mr. and Mrs. Belmont were on board when the yacht was launched, with Mr. Burgess and some other yachtsmen while Gen. Paine, Mr. John B. Paine, C. H. W. Foster and others were present. The yacht was christened by Mrs. Belmont.

THE LOSS OF THE NYANZA.—A marine court of inquiry has been held at Victoria, Hong Kong, into the loss of the Nyanza, schooner yacht, 215 tons, owned by Mr. James Cunningham Dewar, in July last on a voyage from Kusan (Caroline Group) to Ponape, under circumstances already detailed in the *Field*. The log, chart, etc., were lost with the vessel, and the court had to be guided entirely by the evidence given. The mate (Robert George), a certificated officer, was in charge of the watch after midnight of July 23, when the vessel struck, but he said he did not know where the yacht was with reference to the reef, neither did he see the chart, or ask to see it. Soon after she struck, the captain (John Carrington), who was sailing master, came on deck, the sails were lowered, and the boats got out, but nothing further was done to save the vessel. The court was of opinion that the master was in error in that he did not exert himself to verify the position of the ship on the afternoon of July 23, and further, that he did not remain more constantly on deck on the night of the 23rd before the ship struck. The court was further of opinion that steps should have been taken, either by letting go an anchor, or by any other means, to prevent the yacht driving further on the reef, and the court were unable to agree with the master in his opinion that this would have been of no avail; on the contrary, they thought it might have been the saving of the ship. The court were also of opinion that, after obtaining help, some attempt should have been made to heave the vessel off. They recognize that there were difficulties, and were not prepared to say that these could have been overcome, but still they thought an attempt should have been made. These errors of the master they did not consider amounted to wrongful acts or defaults, and they did not, therefore, deal with his certificate, but the court thought it would be well for him to avoid like errors in the future. The court expressed their opinion that the services of the first mate did not appear to have been of much use in the navigation of the ship, and that if the cross bearings taken by him during the afternoon had been made use of it was possible that it might have avoided the disaster. The court was composed of Commander Robert Murray Rumsey, stipendiary magistrate; Staff-Commander W. R. Stevens, R. N.; H. M. S. Victor Emanuel; Mr. W. H. Watton, master of the British steamer Phra Nang; Mr. James Mooney, master of the British steamer Riverdale; and Mr. W. B. Seabury, master of the British steamer China.—*Field*.

NEWARK BAY Y. C.—The Newark Bay Y. C., of Bayonne, N. J., has elected the following officers: Com., A. Van Buskirk; Vice-Com., John Spavin; Treas., E. D. Scott; Sec., J. J. Vreeland; Meas., S. Mowrey; Fleet Capt., H. Mainhard; Delegates to the N. Y. Y. R. A., W. P. Vreeland, T. Windas and H. D. Voss; Trustees, H. Mainhard, E. Carrigan and James Spavin; Regatta Com., Wm. P. Vreeland, T. Windas and John Spavin.

TALISMAN, steam yacht, J. W. Thomas, was at Jacksonville on March 12, bound for New York.

THE COST OF RACING YACHTS.—The cost of one of the new 46-footers is estimated at \$9,500. The Herreshoff boat will cost considerably more than the others, as she will be double planked, which adds greatly to the cost of construction. Altogether, with nine new boats started, the total cost of the new 46-foot fleet will be not far from \$100,000. A suit of new sails for a 46-footer costs about \$1,100, while the cost of the lead for the keel will go about \$2,000. It is plain from these figures, that the yacht racing of the present has no place for a poor man, or even one of moderate means. Building a yacht every year or two at an expense of \$10,000, is a sport for millionaires to indulge in. Looking over the list of names of owners of the new 46-footers, embracing such names as Thayer, Vanderbilt, Turner, Belmont, Prince, Paine, Foster and Maxwell, it is evident that one cannot jibe his mainboom next season without hitting a millionaire. "It is the long purse that wins," and money will win every time, as modern yacht racing has developed.—*Boston Globe*.

DELAWARE RIVER.—The sloop Nance is being changed to a keel boat, with a new iron keel of 2,100lbs. The Burgess cat, J. S. M., has been changed to a sloop. Moore & Schute are building a small cutter for Dr. Chas. P. Tuttle, of Camden. She will have 3,800lbs. of iron with a folding iron board that will not come above the cabin floor. Her dimensions are: Over all 31ft., load line 23ft., beam 10.2ft., draft 4.2ft., with 5ft. 7in. head room in the cabin.

NEWARK Y. C.—The annual dinner of the Newark Y. C. was held on March 9. The following officers have been elected for 1891: Com., J. M. Foote; Vice-Com., A. F. Wobke; Treas., Chas. Schade; Rec. Sec., Frank Long; Fin. Sec., Thos. Luff; Meas., J. Sanford; Board of Trustees, C. E. Cameron, T. J. Roche, E. L. Phillips, Fred Miller and J. W. Smith.

L. W. FERDINAND & CO.—The new catalogue of yacht and boat hardware and fittings to be issued by L. W. Ferdinand & Co., of Boston, has been delayed by the electrotypers' strike, and will not be ready before April 1.

MASSACHUSETTS Y. C.—The subject of the "Smoke Talk" on March 13 was "Meteorological Instruments, Weather Charts, Storm Charts and Barometers," by U. S. Signal Service observers. On March 20 the subject will be "Marlinspike Seamanship and Wire Rope."

ROWING ALMANAC AND OARSMAN'S COMPANION.—We have received from the *Field*, London, the edition of this useful little handbook for 1891, containing the full records of English rowing.

BOSTON YACHT AGENCY.—We have received the new and complete catalogue of the Boston Yacht Agency, containing a large list of yachts for sale. The firm makes a specialty of designing and building, having its own yard and shops.

VENTIZIA.—This sloop, owned by Arthur Colburn, for a long time one of the cracks of the Delaware River, has this winter been entirely rebuilt with 16in. of freeboard added. Collins, of Cooper's Point, is doing the work.

PAYONIA Y. C.—The Payonia Y. C. has decided to build a wharf 600ft. long, and costing \$1,500, in front of its headquarters at Atlantic Highlands.

MOSQUITO RACING.—The Savin Hill Y. C. has its floats out and will open the season with the usual race of mosquito boats on Fast Day, April 2.

WANTED.—Wanted at once, good boat builders for planking and finishing high grade rowboats, canoes, work boats and small launches. Only first-class workmen need apply. Write, stating previous experience, reference and wages required. Address St. Lawrence River Skiff, Canoe and Steam Launch Co., Clayton, Jefferson Co., N. Y.—*Adv.*

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 230 pages, price \$2.50. For sale by FOREST AND STREAM.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

WILL Dr. M. G. Ellzey please send us his address? T. C.—Name and address, please, before we can answer your question. J. R., Providence, R. I.—You will find the remedy in the books ordered.

J. O. P.—Address Chas. Reiche & Bros., animal dealers, Park Row, New York.

CONSTANT READER.—We know nothing about the ways of deciding bets on such events.

C. M. B., Lakefield, Ont.—We can put you in communication with a person who will sell you a Gazetteer.

N. O. F.—1. Camping is practicable in Florida in January. Care should be taken to select high and healthy ground. 2. Write to S. D. Kendall, Tarpon Springs, Fla.

A. C. U., Buffalo, N. Y.—Please inform me where I can purchase a greyhound dog or bitch cheap. I want a thoroughbred. Ans. We have answered your letter by mail. It would be to the interest of greyhound men to advertise, as we have numerous inquiries for stock.

W. W. B., White Plains, N. Y.—Would you mind letting me know what height and weight an Irish setter bitch should be, also any other points in regard to same? Ans. From 20 to 23in. high and weigh from 50 to 55lbs. There is no definite weight as in pointers. An Irish setter should not be heavily built and should appear rather leggy than otherwise.

TEXAS GAME.—L. S. E., Sedalia, asks, Can some of your numerous readers tell me the kind of game to be found on or near the Brazos River, in Texas, east of where the map shows the forks? I would like particularly to know if turkey, quail, squirrel, coon, possums and chickens are to be found. I would also like to know if there is any trout or bass fishing in Brazos River. I expect to make a trip there next fall and want to know how to prepare myself. I have seen accounts in your paper of hunts on this river by parties and if some of them will answer this through FOREST AND STREAM and give addresses I would like to write to them.

W. B., Toronto.—Could you tell me if there is any place within an easy distance of Chicago where you can get any kind of small game, such as squirrels, rabbits, etc., and also where is the nearest place to get chickens from there? Ans. Rabbits, squirrels, quails in numbers, and a few ruffed grouse can be found within 50 to 60 miles of Chicago. De Motte, Jasper county, Indiana, or other small towns on the edge of the Kankakee Swamps, would be good objective points. Snipe and ducks also in season. Ashton, Bloomington and Jacksonville are points in Illinois out of which some prairie chicken shooting can be had. Unless unlawfully killed off next summer, there should be fair shooting at prairie chickens next fall within 100 to 200 miles from Chicago.

Assuming that one contemplates training a setter or pointer after the instructions of Hammond in "Training vs. Breaking" and "H. H." in "Scientific Education of dogs for the Gun", would it be impracticable (1) to keep and train one or more beagles, housing them in same kennel and training them so far as possible in the same enclosed yard. I have Hammond's book and that of "H. H." but find nothing on training of beagles, nor do I find anything elsewhere. 2. Can you tell me of any source of instruction on this point in books? Ans. The training of beagles is far different from that of the pointer or setter. Beagle training can only be done in the woods or on the trail of the hare, they of course could be kept in the same kennels. 2. There is no book that we know of on the subject. We shall shortly have an article on beagle training, which will give you no doubt every information.

A & I is said to stand for A^{NO} 1 That certainly is the classification of ABBEY & IMBRIE'S FISHING TACKLE in the register of all good anglers.

STEVENS SPECIAL FIRE ARMS.

Wherever shooting is done, in all parts of the world, the Stevens Rifles and Pistols are being introduced, and on account of their superior accuracy are preferred.

STEVENS PISTOLS have made more brilliant records and have done finer work than any other pistol ever made.

STEVENS RIFLES have made records which were considered impossible.

STEVENS POCKET RIFLES are carried by ladies, anglers, tourists and hunters. They are marvels of accuracy, compactness and beauty.

STEVENS LADIES' RIFLE is the proper rifle for ladies. It is wonderfully accurate and has no recoil.

The .22 long rifle and the .25 rim-fire cartridges, the most accurate small-bore cartridges made, were originated by this company. These celebrated rifles and pistols are manufactured by

FISHERMAN'S AUTOMATIC REEL.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR The Automatic Reel.

FIRST—It will wind up the line a hundred times as fast as any other reel in the world.
SECOND—It will wind up the line slowly if the angler chooses.
THIRD—No fish can ever get slack line with it.
FOURTH—It will save more fish than any other reel.
FIFTH—It will prevent tins, lines and snells from being broken by large fish.
SIXTH—It enables the angler, and makes it desirable, to use lighter tackle.
These claims have been substantiated by the most skillful fishermen in America and Europe.

This reel is manipulated entirely by the hand that holds the rod.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, MARCH 26, 1891.

VOL. XXXVI.—No. 10.
No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices \$1.00 per line.

SUBSCRIPTIONS.

May begin at any time. Subscription price for single copy \$4 per year, \$2 for six months. Rates for clubs of annual subscribers:

Three Copies, \$10. Five Copies, \$16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, \$5 per year; \$2.50 for six months.

THE OYSTER PROBLEM.

THE evident and alarming decrease of the yield of the oyster beds of Chesapeake Bay, recently emphasized by the removal by nineteen oyster packing firms of the whole or a part of their plant to other localities, led to an important meeting of parties interested in the subject in Baltimore on the evening of March 18.

At this meeting Mayor Davidson presided; and addresses were delivered by Prof. W. K. Brooks, of Johns Hopkins University; Marshal McDonald, U. S. Commissioner of Fisheries; Hon. John K. Cowen and Col. Thomas S. Hodson, of Crisfield. Prof. Brooks, twelve years ago, warned the State authorities that the extermination of the oyster by injurious methods of fishing and lack of suitable protection was imminent. The small yield of 3,000,000 bushels of oysters in 1890 as compared with the output of 17,000,000 bushels in 1875 is sufficient evidence of the soundness of Prof. Brooks's prediction.

In the course of the addresses it was shown that the oyster industry of Chesapeake Bay involves an outlay, for wages, labels, boxes and transportation, of about \$3,000,000 annually, this not including the cost of the oysters. It is safe to assume that the value of the oysters, together with the cost of putting them on the market, will represent a sum not less than \$4,500,000 to \$5,000,000.

Prof. Brooks estimates that since the establishment of the oyster packing industry fully 400,000,000 bushels of wild oysters have been taken from the waters of Chesapeake Bay. This magnificent resource, however, is threatened with complete destruction unless speedy measures be taken to arrest the decline and foster the growth of the industry. The Professor further states that in other countries, where the grounds are much less valuable, they have by cultivation been made to produce oysters at a rate per acre which in our superior waters would bring the annual yield far above the entire harvest so far gathered by the packers of Maryland and Virginia.

There was perfect agreement among the parties interested in the Chesapeake oyster as to the need of prompt

action, and this agreement found expression in a series of resolutions calling attention to the threatened destruction of the oyster beds under present conditions, with the consequent throwing out of employment of thousands of workmen, and a greater injury to the people of Maryland engaged in allied industries. This threatened extinction is charged to the want of legislative encouragement of artificial propagation, and stress is laid upon the necessity of selling or leasing to individuals certain portions of the beds, for the experiment of oyster rearing. The desirability of State supervision of oyster grounds has been demonstrated in North Carolina, South Carolina and Georgia, as well as in Massachusetts and New York, and particularly in Connecticut, where the natural beds are reserved for public use, but all other waters capable of producing oysters are sold to individuals, whose vested rights are amply protected and hence enjoyed without molestation. As an illustration of the practical working of this plan it is stated that the oyster crop has quadrupled in Connecticut in the last decade.

Some experiments have been made by the U. S. Fish Commission in the artificial culture of oysters, but so far without demonstrating methods which are entirely practical and satisfactory. We understand that the subject will continue to receive diligent attention, and, in addition to this, the methods of rearing oysters in artificial basins, so successfully practiced in certain parts of Europe, and especially in France, will be studied in detail, with a view to utilizing the information in behalf of the oyster industries of the United States.

THE HOME FIRESIDE.

WEEKS ago the camp-fire shed its last glow in the deserted camp, its last thin thread of smoke was spun out and vanished in the silent air, and black brands and gray ashes were covered in the even whiteness of the snow. The unscared fox prowls above them in curious exploration of the desolate shanty, where wood mice are domiciled and to whose sunny side the partridge comes to bask, the woodpecker taps unbidden to enter or depart from the always open door, and under the stars that glitter through the net of branches the owl perches on the snowy ridge and woods in undisturbed solemnity.

For a time, camping days are over, for the sportsman, and continue only for the lumberman, the trapper and the merciless crust-hunter, who makes his secret lair in the depths of the forest.

In the chill days and evenings that fall first in the interim between winter and summer camping, the man who makes his outings for sport and pleasure, must content himself by his own fireside whose constant flame burns throughout the year.

Well may he be content, when the untamed winds of March howl like a legion of wolves at his door, snow and sleet pelt roof and pane with a continuous volley of storm from the lowering sky, or when the chilly silence of the last winter nights is broken by the sharp crack of frozen trees and timbers, as if a hidden band of riflemen were besieging the house. Well may he be content then, with the snug corner of his own hearthstone, around which are gathered the good wife, the children and his camp companions, the dogs.

Better this cozy comfort in days and nights such as these, or in those that fall within that unnamed season that lies between winter and spring when the whilom white carpet of the forest floor is untidy with all the downfall of winter litter, and if one stirs abroad, his feet have sorry choice between saturated snow and oozy mold, a dismal season, but for its promise of brighter days, of free streams, green trees and bird songs.

Better, now, this genial glow that warms one's marrow than the camp-fire that smokes or roasts one's front while his back freezes. With what perfect contentment one mends his tackle and cleans his gun for coming days of sport, while the good wife reads racy records of camp life from Maine to California and he listens with attention half diverted by break or rust spot, or with amused watching of the youngsters playing at camping out. Or when the callow campers assail him with demands for stories, and he goes over, for their and his own enjoyment, old experiences in camp and field, while the dogs dream of sport past or to come, for none but dogs know whether dog's dreams run backward or forward.

Long used rod and gun suggest many a tale of past adventure as they bring to mind recollections of days of sport such as may never come again. The great logs in

the fireplace might tell, if their flaming tongues were given speech, of camps made long ago beneath their lusty branches, and of such noble game as we shall never see; moose, elk, deer, panther, wolf and bear, that are but spectres in the shadowy forest of the past. But the red tongues only roar and hiss as they lick the crackling sinews of oak and hickory and tell nothing that ordinary ears may catch. Yet one is apt to fall dreaming of by-gone days and then of days that may come to be spent by pleasant summer waters and in the woods gorgeous with the ripeness of autumn.

So he is like to dream till he awakens and finds himself left with only the dogs for comrades, before the flameless embers, deserted even by the shadows that erstwhile played their grotesque pranks behind him. Cover the coals as if they were to kindle to-morrow's camp-fire, put the yawning dogs to bed and then, to bed and further dreaming.

SNAP SHOTS.

THERE was at last accounts a bill before the Pennsylvania Legislature, introduced into the Senate by Mr. Brown, of York county, to reinstate fish baskets in the streams except the Delaware and Schuylkill. Through a misstatement to the effect that the measure as amended was acceptable to the Pennsylvania Fish Commission the bill has reached a second reading and will probably be voted upon during this week. The result of such a move would be to undo all the good already accomplished in stocking streams, and destroy the fish introduced at a cost of much patience and money. It will place a basket and dam across every trout stream of large size and result in the total destruction of both trout and shad.

It is only human to regard things which are at a distance as better than those which we know well. The Illinois farmer is likely to believe that land in Dakota is more fertile than his own farm, the unsuccessful Eastern business man that he would make money in Seattle, the Montana prospector that his luck would be better on the other side of the range, while the big-game hunter sighs for some distant game ranges of which he has only heard. A good many years ago it was thought that the English sparrow—about which we then knew a little less than nothing—would rid our streets of the unpleasant measuring worms which festooned the shade trees. We have had an object lesson in sparrows, and now a Frenchman suggests that a small European owl will deliver us from the plague of sparrows and recommends that a cargo of these pigmy owls be imported to do this work. We have native owls and shrikes enough for this purpose, if they were properly protected and encouraged, and it seems scarcely necessary to go to Europe for help. As things stand now, however, if an owl, a shrike or a small hawk attempts to capture a sparrow in any of our city streets, the lives of the larger bird, and of a considerable portion of the populace, are put in jeopardy. Boys and men—including policemen—turn out and open fire on the aggressor, and if not killed he soon becomes disgusted with urban life and retires again to the woods and fields.

Mr. Alexander Starbuck, of Cincinnati, O., has recently presented to the Cuvier Club Museum a collection of brilliantly-plumed birds from Guatemala. Among them is a specimen of the *alma perdit* or lost soul, which takes its name from its mournful note, which sounds like a wail of despair. Whittier has written of it, in his well known poem, as

"The pained soul of some infidel
Or cursed heretic that cries from hell."

The Emperor of Brazil liked this poem so well that he translated it into Portuguese and sent the translation with two mounted specimens of the bird to Whittier; and a Michigan doctor liked it so well that he transcribed the verses direct from Whittier, signed his own name to them and sent them in to the FOREST AND STREAM as an original specimen of native Michigan minstrelsy.

The Audubon Monument Committee, after four years of hard work, have succeeded in raising less than \$3,000 toward the fund for the proposed monument to the naturalist. The total sum it is desired to raise for the purpose is \$10,000.

Any subscriber may supply a friend with a copy of the current issue of the FOREST AND STREAM by sending us on a postal card the name of that friend.

The Sportsman Tourist.

A TRIP TO POPPLE CAMP.

WITH the advent of cool September weather the Nessmucks put aside their boat and tackle and began to make preparation for that most fascinating sport of all the year, bird shooting over a good dog. No mighty hunters have we in our little band, nor dogs with world-wide reputations as bench or field trial winners, yet we worry down a few birds during the fall; and as Charlie Pierce puts it, "manage to keep them off of us," and get no end of exercise and amusement out of our efforts. And it's not terribly wearing on the birds unless it's just after we have killed a cat or in some like manner removed the hoodoo which seems to overshadow us.

Of course the season could not be allowed to pass without the "First Annual Big Hunt of the Nessmucks." During the early fall we had been invited, through one of our members, to pay a visit to the camp of Mr. R. D. Perry, at Phillipston, and we decided that no better place could be found for our hunt.

Oct. 17, 8 A.M., found us all up and cussing a dismal, cold rain which drove us all back to bed. During the day it let up a little and one of the Mrs. Nessmucks predicted a fair day for the following one, then more rain. She hit it exactly.

Saturday morning we were off, the two Hicks with the light team, Charlie and Half-Breed following with the democrat and most of the duffie.

We had arranged to meet at the "horse pasture" as soon after sunrise as possible; and before the sun was up little Hicks had knocked down a "woody" in the "green patch" just for a starter. Meeting at the "horse pasture" we changed partners, little Hicks and the Half-Breed heading for "Bryants" and the "Browning" cover, Hy and Charlie looking after what might be in the "side hill" and the upper end of "Browning."

The next meeting was at West Rutland at 11 A. M., where we were disappointed at not finding Charlie Pierce at home, and so pushed on for Colebrook.

As we came to our "best ground" we ran on to a party from West Rutland, who advised us of Charlie's whereabouts. One of them knocked down a pair of woodcock in a strip of alders beside the road as we sat in our wagon talking dog. The birds were beauties, as handsome a pair as I ever saw, and their proud possessor was not at all bashful about showing them. They made an impression on me somehow, and when the "pony team" turned in a pair that night that must have been reared in the same cover the coincidence struck me as singular.

Just before reaching Colebrook we turned down an old cartroad beside a cold brook and soon had the horses out and feeding, and were busy looking after our own lunch, which consisted of chicken salad, bread and butter, and a cup of hot coffee. We carry our tools right with us for this sort of thing when we are on a pilgrimage. Then we started again, and passing through Colebrook took the river road for Barre, celebrated for its annual cattle show. Barre isn't the highest town in the State, but you would never suspect but what it was if you approached it from the south or east. Leaving Barre we took the old Petersham road and branching off crossed the Rutland brook, stopping to hunt out the cover at its head.

From here we crossed to "Moccasin Brook" cover, and when we had partly hunted the upper end out darkness began to fall and we struck out for Phillipston, where we arrived about 7 P. M. tired and hungry. Putting up our horses with neighbor Miller we proceeded to establish ourselves across the way at the Mecca of our long but enjoyable drive, "Popple Camp." The owner of the camp, Mr. Perry, who nearly all know to be a sportsman, whom it would be presumptuous for me to attempt to eulogize. His camp, which is prettily situated in the center of the village, next the church, is a plain story and a half old-fashioned country house, its small, heavily-shuttered windows looking out upon the village green. On the ground floor of the house proper are five rooms. The parlor, with its open fireplace, boasts a carpet which Mr. Perry had made by guess. Any surplus he intended to double under, but that carpet is nowhere doubled. The walls are adorned with sporting pictures and mounted birds, the latter the handwork of the owner. Across the hall is a large double chamber, back of this the kitchen, dining-room and another sleeping room.

In the ell are the sink room, pantry, wood shed, and further back the kennels, all under the same roof. A good cellar is underneath and an extra sleeping room up stairs. The house is thoroughly furnished throughout with dishes, cooking utensils, bedding, everything, in fact, necessary, including a half dozen suits of clothes if you should chance to come in wet, and a pile of slippers, hunting shoes, arctics, leggins, moccasins, rubber boots, etc., that filled most of the kitchen, not occupied by the stove. Over the front door is an arch which bears the legend "Popple Camp—Sportsmen Welcome."

We soon had a fire going, the bedding aired and preparations were under way for dinner. One slice of steak was the *pièce de résistance* for four men, but that same steak weighed 3½ lbs., and after we had trimmed the ends so the cook could get it over the stove front, we arranged the table and soon sat down. Then we adjourned to the open fire place to talk over the events of the day and burn a little of Dill's best. Every one had some pleasing experience to relate, even the Half-Breed, who had missed a partridge clean, sitting under an apple tree, was made to see the humorous side of it. It was probably the first gun Half-Breed ever had in his hands outside of an "M. V. M." musket, but when it comes to catching trout? You don't want to fish a brook for a week after he has been down it. They can't resist the way he approaches them. Everything has to come, trout, suckers, chiven, pouts, all pay tribute to his untiring zeal. The dogs came in for their share of praise in connection with the day's sport, and after each shot, successful and otherwise, had been gone over to the minutest detail, the fire was smothered and we followed Charlie's example, who declared his intention of crawling into his "payamas."

Sunday morning opened with a northeast rainstorm which increased as the day wore on. At noon we started for home, where we arrived at 5:30. Soaked! Well, it was twenty-eight miles in an open wagon during one of the hardest and wettest rains I ever experienced.

Well, the trip had been a pleasant one for all that, but there still was an unsatisfied feeling about it, and a couple of weeks later as Charlie and Hy were working up a shoot

for Friday, Popple Camp was thrown out as a feeler. This was Thursday noon, and it was argued that as the weather clerk would only have a half-day's notice of our intention, he might not be able to cook up anything very bad for us on such short notice.

Little Hicks and Half-Breed were telephoned, but they could not get away till Saturday, so it was arranged for Charlie and Hy to start Friday morning and hunt up, putting in Saturday about Petersham and meet the pony team at Moccasin Brook Saturday P. M.

Four A. M. Friday found Charlie and Hy on the road. The first stop was made at the "side hill," and a woody was downed in no time. From there they touched up the upper end of Browning, and finished up the day between Cradle Rock and Petersham. Everything was in order at the camp, and they were warmly greeted by Mr. Miller, who informed them that they were just in time, as he was going to have a "husking" that evening. You who have attended a country husking know that they had indeed "struck it rich." After they had cleared up the supper dishes and "spruced up" by the aid of Mr. Perry's spare hunting shoes, neckties, etc., they started for the husking. Lanterns were flitting about the yard and buildings, and evidently something of importance was on the tapis. The barn floor was lit up by a dozen or more lanterns suspended from rake-stakes stuck in the hay mow. Every school marm within a radius of ten miles was there. Every man, woman and many children who knew Ed. Miller was there, and soon the two Nessmucks were there, right in the midst of it, making an onslaught on the cornstalks which threatened an early lunch for all hands.

How the boys did search for the red ears, and what a wrestle they had in trying to secure the prize a red ear is supposed to entitle them to. One in particular seemed to have unusual luck in picking out red ones, but he admitted that he "come heeled." Charlie did not husk more than twenty-five ears the entire evening, yet he had five reds, while Hy stripped bushel after bushel—well, a good many ears any way—and gave the search up in disgust. Noticing a stray ear on the floor as they were clearing up he picked it up and had the prize of the evening, a beauty about 14in. long and the size of your wrist. None of these of course were redeemed. After sampling Mrs. Miller's pumpkin and mince pies they returned to the camp, leaving a happy crowd in possession of the house.

The next morning the hunt was continued. Birds were scarce. The woodcock had mostly gone, and partridges were not found in the usual places, but a sufficient number were bagged to insure a game supper for all hands. The day was perfect. Ned and Karl, the setters, worked to an "allspice," and a pleasanter day was never put in by two hunters.

Not finding the pony team at the appointed place, the hunters pushed on for camp, dressed the birds, got a roaring fire under way, and were just preparing to put the birds away and broil a steak, when a warwhoop which roused the entire village announced the safe arrival of the other two.

Such a supper as we had! Broiled partridge and woodcock with crabapple jelly, baked sweet potatoes, chicken salad, bread and butter, chopped cabbage, and the inevitable crackers, cheese and coffee for a finish. Could you ask more? We don't go in much for variety, you know, but we want something substantial, then we want lots of it and a cup of "Nessmuck" coffee and we are happy.

Washing the dishes was deferred even longer than usual this night, and after we had burned the last lump of sugar we offered to back Charlie to beat the world as a hungry man's chef.

After clearing away and washing the dishes and putting things in order we arranged a little dinner party, with the help of Mr. Perry's spare clothes, which we left in possession of the dining room to see that all went well until our host should return. He has since asked Charlie how he liked the way he had arranged his dining room. We all liked it immensely. I wonder how he liked the way we arranged it.

Sunday morning more rain, but not nearly so severe as on our first trip, and after leaving Templeton we left the storm and the rest of the drive home was most enjoyable. Just above North Rutland we stopped and had our lunch, arriving home about 6 P. M.

And so ended our trip to Popple Camp, which every one declared to be as pleasant an outing as they had ever experienced, and if we don't look after some of the trout streams in that vicinity another season we are very much mistaken.

HAL.

SOUTHWARD BOUND.

WE have come 150 miles on our southward journey to the land where the deer feeds in winter, where the silver-tip never hibernates, where the mountain lion breeds in February and where the big-horn has his line of limitation—a beautiful land, timbered and well watered, but one upon which the farmer has not entered; neither has it been explored by the prospector, nor has the shepherd any claim upon its verdant parks. We is a collective noun, equivalent in this case to "We, Us & Co." The firm is composed of Shoshone and his man Friday, of two ponies and a pack mule, of a dog that is useless except for purposes of companionship, *i. e.*, to keep my feet warm on a cold night, of firearms, grub and a camping outfit.

The trip would be most enjoyable if it were not for the knowledge that we have yet a hundred miles to travel over the snowy divides before reaching the "Dixie" of the Rio Colorado, Rio Virgin and Santa Clara. If this intermountain plateau were not so far up in the air, we would find a very mild climate, but for the last hundred miles our altitude has been from 5,500 to 6,500ft. above the sea level, an elevation that assures a bracing and healthful climate. Still, we cannot complain, for the weather would be mild in New York or New Jersey. If a haystack is handy we make a bed in it when night comes; if not a rubber blanket and the tent under us, with a pair of army blankets above is all that can be desired. When we have no oak or pine our camp fire is of sage brush, and when game is wanting bacon and hot bread keep us from starvation. We have already taken the advice of St. Paul and learned in whatsoever state we are there-with to be content. But a man has no business to be either cold or hungry in this country, for a more hospitable people than the Mormons of southern Utah would be hard to find.

We have not yet commenced fishing in earnest. Our

route has been along the highway and in the midst of settlements and ranches, but the mountains have at no time been more than three miles distant, and far up their rugged sides we have more than once seen the bounding deer. Jack rabbits are too common for shooting. Two white hares have, however, fallen to our marksmanship, and they have furnished two very savory suppers.

Of the birds of the air we have not had a taste. Magpies and snowbirds are all we have seen. This is not because grouse are not to be found, but because we have not looked for them. Twenty-five miles more and we will reach the last of the long line of valley settlements and our next town, after that will be upon waters that empty into the Gulf of California. Twenty-five miles of up-hill climb and then we must depend on our guns for game.

Among the hills through which we have passed the mountain lion reigns and he is a beast for which the hunter must be well armed. To the flocks, and this is a pastoral country, he does immense damage, but colts are his favorite article of diet. At Thistle station, where we entered the mountain region, we saw two lions, just a year old. The male measures 9ft. from tip to tip, the female 8ft. 2in. They have been in confinement ever since their eyes were open and have become accustomed to the presence of man. But woe betide the unfortunate quadruped that ventures within reach of their claws. Last week an adventurous old mule went sniffing about the cage. Ben's paw flew through the bars like a flash of lightning and Mr. Mule retired minus a nose. I doubt if the beast can ever be worked again, excepting as a pack animal. At Manti we saw a pair of kittens less than a month old. Each stood higher than a Newfoundland dog.

So we have traveled through holiday week. Every settlement through which we have gone has had its dance, these have been our diversion. In good, saintly settlements, where Gentle sentiments have not entered, but one round dance is allowed during the evening. I have just come from a good orthodox ball, and have seen nine consecutive quadrilles. They call them quadrilles in this country. Heaven only knows what they would be termed in any other portion of the footstool. The costumes, the strictly original figures, the pigeon-wings, and the high stepping, have never been equalled, can never be surpassed. I would rather go to a Mormon dance than to a circus, which is saying a great deal, as I have not been within reach of a circus for five years. But dances must be left behind, as well as the daily papers. We are two days from the Salt Lake papers now, and at the last town on our route that enjoys a daily mail and that comes sixty miles by stage. The settlement where we expect to camp to-morrow night has a tri-weekly service, and then into the wilderness where mails are unknown.

SHOSHONE.

RICHFIELD, Utah, Jan. 1.

Natural History.

COONS PREY ON RABBITS.

Editor Forest and Stream:

Some winters ago I arose one morning to find the snow had melted all night, and the first thing that popped into my head was to go coon hunting; and after an early breakfast, accompanied by a colored man with a good axe, and two good hounds we started. We had no trouble to find plenty of tracks of different animals, and when about a mile from home we ran across a large coon track. We had no trouble to follow this fellow, for he soon left the woods and made for a thicket; we followed through this thicket, about two hundred yards wide, and came to a clover field. Just at the edge of the thicket we came upon a rabbit about half eaten. The impression in the snow was as plain as could be, and there was no other track there except those made by the coon and rabbit. The rabbit tracks terminated there. There was no sign of a chase; the coon was going south and the rabbit came from the east and seemed to have run right in the coon's mouth, as the coon did not seem to vary any in his course, nor did he take it to any spring and wash it. He simply ate about half of it, and left the remainder right there and went on across the clover field. We followed him to some open woods about a quarter of a mile and went to a large elm tree. Failing to find any tracks leading from this tree we proceeded to cut it down, and as soon as it fell the dogs told us that our work was not in vain. He was one of the largest coons I ever saw, and I was surprised to find him so fat, this being in March. That the coon killed and ate the rabbit I have never had the slightest doubt. I cannot say though that they make a business of it; this coon had no doubt been in his den for a month on account of bad weather, and was hungry. I wish now I had made a post-mortem examination of him, but did not think it necessary.

L. S. E.

SEDALIA, MO.

Editor Forest and Stream:

I have just read Mr. Lathrop's interesting letter in current number of FOREST AND STREAM in answer to my criticism of a former letter on the subject of coons preying on rabbits.

In his conclusion Mr. Lathrop offers to enlighten me to the best of his ability on any questions concerning coons, and I take this opportunity to profit by his offer. I am interested in coons and the study of hibernation, but have not had Mr. Lathrop's advantages of observation. And here let me say that I never objected to Mr. Lathrop's "practices." The authority for that statement rests with the intelligent compositor. What I said was in relation to the premises from which Mr. Lathrop argued that coons catch rabbits. If Mr. Lathrop had followed up the track of the animal—coon or what not—that killed the rabbit and found it in reality to be a coon, then I should have had no difficulty in believing that coons eat rabbits; but since Mr. Lathrop did not mention killing any coon the day of his discovery, the proof of his assertion did not seem to me above question.

I know perfectly well that coons do not go into a state of hibernation at a given time to remain so till the season is over; that they do not conform to an orthodox calendar of feasts or fasts, but I have seen it stated that when they come out on warm nights during the winter they never eat, and my experience has heretofore confirmed this.

I have tracked a number of coons this winter, but at no

time did I find any indications that they were in search of food or had eaten anything. If Mr. Lathrop will tell what he knows about coons eating during the intervals of hibernation, I will be very much obliged. Were his tame coons kept in a warm place, or were they allowed to shift for themselves, and if the latter, would they accept food?

I made a careful post mortem on the last coon I killed this winter, and found the stomach empty except for a teaspoonful of a muddy sediment. The bowels were closed with a considerable quantity of excreta, which was in cylinders, hard as slag, and almost metallic. This coon had traveled from his den tree several miles on the two days immediately preceding its capture, and had unconcernedly passed abundant rabbit sign.

I always imagined a coon did not care much for cold weather so long as he had an abundant supply of fat on his body, and only stayed in his den in the very coldest weather of the early winter; but that later, when the fat supply was burned away, he took advantage of his ability to hibernate to save himself from an otherwise almost certain death.

To hibernate an animal must be in a peculiar state, with circulation almost nil, and if it eats one warm day how will it be prepared for the cold snap that comes the next? The digestive process necessitates a free and rapid blood circulation, and I should think considerable time would be required to regain a state of torpidity.

HARTFORD, March 21.

J. B. BURNHAM.

HOW TO DESTROY PRAIRIE DOGS.

LEAVENWORTH, Kansas, March 16.—*Editor Forest and Stream:* In your paper of the 12th inst. I notice an inquiry by "J. H. B.," Punkapog, asking how prairie dogs can be kept out of a sheep pasture.

On the open ranges poisoned grain is used, wheat, corn and oats. The grain is poisoned by soaking it in water in which strychnine and arsenic are dissolved, and the solution sweetened with sugar to disguise the bitter taste of strychnine. This method, while killing a great many, is not always successful; and there is danger of poisoning the stock, as the grain (about a tablespoonful) is placed on the ground near the holes.

If the land is inclosed and valuable, or the dog town not too large, the following method is certain and free from any objections, except as to cost. After three years experimenting I think it is as cheap as the work can be done—costing from 50 to 100 cents a hole.

Procure a carboy (3 to 4 lbs.) of bisulphide of carbon, which will cost wholesale from 15 to 18 cents a pound; a half-dozen rolls of cheapest cotton batting, an oil can (which keep closed when using), an old pan, and last but not least a hoe or spade, with which to cover up the holes. Then with an assistant visit the dog town except when the frost is in the ground. Take a roll of cotton batting about the size of a base ball and saturate it with the bisulphide of carbon and throw it *instantly* into the hole and *at once* cover up the hole with dirt air-tight.

To do this work properly requires two persons, one to make the ball and saturate it and one to attend to the covering. Boys can do the work as well as men when once shown.

The way it works is thus: The bisulphide of carbon is very volatile and instantly forms a heavy poisonous gas, heavier than air, which sinks to the bottom of the hole and then poisons the dogs. It is perfectly safe and harmless in the open air, and there is no danger attending the use of it. I am informed that it is liable to spontaneous combustion, and should therefore be kept outside of buildings and not handled near a light. Its fumes while on fire are dangerous to man. I use the oil can for convenience while working, refilling when necessary, and the pan is to catch the waste, which I use on the next ball. Be sure and keep corked air-tight when not using, or you will find yourself minus the carbon. A pound will be enough to use on six or eight holes.

Go over the town regularly, covering all dead as well as live holes, and in a day or two revisit the town and repeat where necessary. If there are two or three holes near each other be sure to treat all of them, as they frequently connect. The owls will frequently uncover the holes, so it is not to be taken for granted that at all uncovered holes you have failed.

The above method was tried on a dog town on the Uhl & Carney ranch, in Burton county, Kansas, in the spring of 1888, and a town of over a thousand holes annihilated by two men in about a day and a half. I and my brother went over it again two days afterward and found that not more than fifty holes needed attention. It is on this ranch that the American Coursing Club hold their annual jack rabbit chase.

E. L. CARNEY.

WHISTLING UP A WOODCOCK.—Dolores, Colo.—Snow bound; no mail for a week. Have read up on back numbers of FOREST AND STREAM, and am now wondering how a close observer can venture the opinion that woodcock do their whistling with their wings! Most hunters know, perhaps, how easy it is to imitate the call of a "scattered" quail, in order by his response to locate him, or call him to you, which can be done. Well, in like manner I have called woodcock to me. The bird on the ground, wings motionless, running toward me, as it whistled its response. I did this often for my own amusement, and once to prove to a skeptical old fellow who knew it all that I could do it, and of this latter occasion I still have a living witness. I further believe that none of the woodcock's whistle comes from its wings.—JOHN J. HARRIS.

ANOTHER FLYING SQUIRREL PET.—The Cedars, Oakdale, Long Island.—I have read with much pleasure the interesting articles on the intelligence of the flying squirrel. Memory carries me way back to early in the fifties, when in one of my boyhood outings in Westchester county, I captured a young flying squirrel, and carried it home, where he grew to be one of the most affectionate and intelligent creatures I ever saw. When playing with my companions on the block in Twenty-second street, I would let the little fellow free; he would roam through the tops of all the largest trees, and on to the roofs of the houses, his range being the length of the whole block. I often, while engaged in my play, forgot about him, but he never got lost; all I had to do when I wanted him was to call "Bunnie," and in a short time he would appear sailing from the roof of a house or the tops of the tallest trees, and land on my shoulder; and in a twinkling would be in my coat pocket, where he always loved to get. There was a dozen or fifteen boys, my

companions. I used to enjoy hiding out of sight in the midst of the boys, and then calling to the squirrel. As he came out of the air, not seeing me, he would light on the nearest boy, and then spring from one to the other until he found me and my coat pocket. I had him a long time, and every one living on the block was much attached to him. But alas! he went the way of most all small pets. There was a pretty little maiden living opposite, who used to come regularly to the house (when I was away), to play with Bunnie. One day he got in my bureau drawer, as she supposed, and in shutting the drawer the squirrel was jammed and killed. Many tears were shed for the little fellow, not only by the little folks, but some of the older ones too. That same little maid afterward became the wife of Francis Endicott, so well known to many of your readers. Years have rolled away since those happy times, and Frank and his wife have gone to that great unknown from which no traveler returns.—ALFRED A. FRASER.

HARLEQUIN DUCK AT COHASSET.—Boston, March 16.—Mr. C. V. Barnes, while cooting at Cohasset, Mass., on Nov. 3, 1887, shot a harlequin duck (*Histrionicus histrionicus*). The bird was an adult male and in fine condition. This is the first instance of *H. histrionicus* having been taken at Cohasset.—E. H. CLARK.

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

PRACTICAL TRAPPING.

I.—LAND TRAPPING.

FOR twenty-two years, off and on, I have trapped for fur in the winter time. There are two great divisions of trapping—land trapping and water trapping. The latter, which is intended for the capture of beaver, otter, mink and muskrats, needs the use of steel traps. For trapping land fur we use dead-falls and twitch-ups.

There are many different patterns of these devices, but the one I generally use is sketched in these illustrations, one of which gives a ground plan and the other a front view of the structure.

The letters will show how these traps are made, but I will give a few words of general explanation besides:

The cross-stick, C, runs between two guiding door posts, D, D, which are about a foot apart, and is heavily weighted by the logs, W W. The bait-stick, B, is laid on the round

bottom log, L, and the cross-stick is held up by the trigger, P, which is balanced on the bait-stick. Sticks are laid on each side of the door posts, and also slanting down from the cross-stick to the ground behind, so as to form walls and a roof, in order to force the victim to go in the door for the bait. The roof is weighted with rock. Now, when an animal smells the bait he goes in the door and gives the bait a pull. This throws the trigger off and the cross-stick falls on the animal, who is thus crushed between the bottom log and the cross-stick, while the weighted roof, which comes down too, helps to keep wolves and wolverines from eating up the animal caught or spoiling his fur.

The principal fur-bearing animals caught by land trapping are the marten, the fisher, the fox and the mink. Lynx, wolverines, and sometimes wolves are caught in steel traps, though they are not water animals. Bear also are occasionally caught in steel traps, and sometimes in dead-falls, but this is not in the winter time, because the bears "hole up" then, and they cannot be considered a regular fur for the trapper. Many of these animals are also taken by poisoning with strychnine, but what I am now telling about is the trapping of land fur in the most ordinary and profitable way.

My trapping grounds have been in Oregon, Washington and British Columbia, and my way of doing it is as follows:

I start out pretty early in the season, say in August or September, to look up a location where I think that there is plenty of fur and that it will pay to put out a line of traps. After I have found a section that suits me and where the signs indicate that there is an abundance of fur, the first thing that I do is to build a cabin—which is to be my headquarters, where I intend to store everything that I may need during the winter; provisions, fur, etc. When the cabin is built, I start off in the direction which seems most favorable, and, after prospecting a little, select another spot about a fair day's journey from the main cabin and build a second cabin. Then I build a third in another direction and about the same distance from the headquarter house, so that I have two days' journey covered by my shelters. The two side cabins do not need to be nearly as substantial as the main one, for they are only intended to serve as shelters during the night; and no great amount of time will be spent in them. Sometimes, when the country will admit of it, I build only two houses, and make a circle of which these two houses are on opposite sides of the circumference. This saves labor, and, if the country is favorable, is a very good way.

When these houses have been built, you have to get your bait. If there is a salmon stream near at hand—within a dozen or fifteen miles—you want to catch and dry a lot of salmon. Dried salmon makes the best bait of all. If you can't get salmon you must use dried meat, for you can not be sure of securing fresh meat in winter. I generally kill and dry deer for my bait, if I cannot get salmon. When the bait is all dried and stored, it will be time to get in your winter's provisions, and this is no

small job when you have got to pack it all in from the water, a distance sometimes of from fifteen to twenty-five miles. I generally take a simple prospector's grub list; bacon and beans, coffee, sugar, tea, flour, a little vinegar, and if I can get them, some dried potatoes; these last are useful in keeping off scurvy. But I believe that the best remedy against scurvy is rustling round. Hard work and exercise are in my opinion better preventives of this disease than most people think.

After you have packed all your provisions in to your headquarter house, it will be about the first or middle of October. It is now time to begin building your traps, and you start out for one or the other of your two end cabins, blazing your way on both sides of the trail as you go. You build a trap every two hundred yards from the central cabin to one of the shacks, and then returning to headquarters, build off toward the other shack. The marten and the fisher, which are the most valuable as well as the most numerous of the fur taken on such a line of traps, are animals about which but little is known by most people. They are both weasel-like, inhabiting the timber and very active. The marten is very quick and active, and the fisher is lively enough to catch the marten, on which to a great extent it preys. Both animals feed largely on squirrels, mice, birds and on fish when they can get them. The rutting time for fisher is in March, but I do not know when their young are born, nor whether they breed more than once a year. I know nothing of the breeding habits of the marten. The fisher from tip to tip is about as long as a good-sized cat, and the skin when taken off and cased will often measure a yard in length. The color is black, except for a sprinkling of gray hairs on the head, neck and shoulders of the male. The tail is very bushy. The female fisher is smaller than her mate and has less of this gray hair. The marten is about the size of a mink, and in color is yellowish brown with a bushy dark brown tail. In the high mountains and to the far north, the body color is darker, and when you get in toward the Peace River country they are perfectly black.

Until all your traps are built you set none of them. At some time during three weeks of preparation you have looked up some straight cedar for stretchers, that is, for sticks on which to dry your fur, and have cut a lot of it and brought it to the cabin and put it inside where it will dry. A stretcher is a flat board about $\frac{1}{4}$ in. in thickness and $2\frac{1}{2}$ ft. long, for a marten, and about $\frac{3}{4}$ in. wide, tapering to a point from about $\frac{3}{4}$ in. from the head end, so as to run down into the small neck and head of the skin. The boards are carefully smoothed and the edges rounded so that no splinters should stick out to tear the skin. For each of these boards two additional sticks are needed of the same length, but about $\frac{1}{4} \times \frac{1}{4}$ in. for the greater part of their length, but tapering as does the larger stick from the shoulder of the animal to the head. After the skin, inside out of course, has been drawn as far as possible on the larger board, one of these sticks is shoved inside the skin on either side, so as to completely stretch it. These stretchers of course can be manufactured during your evenings. They must be perfectly dry before being used.

When your traps are all made you start out with a load of bait to set them. Your bait-stick must be sharpened at one end and notched a little below the point. You take a piece of meat or fish, say $1\frac{1}{2}$ in. \times 1 in. and thrust the bait-stick through it up to the notch, so that the bait cannot be pulled back, for of course the animal cannot get around to pull it off, and then set your trap. You ought to be able to set the traps between your main cabin and one of your side camps in a day. When you start out from one camp to another you always want to carry your blankets, and provisions enough to last you for a day or two in case you get caught in a storm and have to lie out.

When your traps are all set, you wait for a day or two before visiting them again. The work of visiting the traps is very exciting. Sometimes you will go along nearly the whole line of perhaps a hundred traps without getting a fur, but you are always expecting each further trap to be sprung. On one trip I got thirty-six martens. The traveling, after the deep snow has fallen, is done on snowshoes, and you drag a little toboggan to pack your load. This is much easier work when the trail is once broken than going on foot and packing loads on your back.

The animals caught in these traps are always dead when you get to them, and nearly always frozen, so you pick them up whole and carry the entire day's catch to the end of the route. Sometimes weasels or mice will set the traps off, and these animals are too small even to be caught by the crushing stick, so you must simply reset the trap. You always carry a supply of bait for resetting.

Some trappers smear certain kinds of strong-smelling mixtures they call medicine on or near their baits to attract the animals. This is especially common with beaver. In land trapping, too, this is much practiced. Among the various ingredients used at different times are oil of rhodium, oil of valerian, oil of anise, alcohol and the contents of the musk glands of the captured animals. I never use medicine for marten bait, but for catching fishers I rub on the bait-stick a mixture of alcohol, honey, and the contents of the fisher's musk glands, preferring the musk glands of the female. These glands are better medicine for this purpose than any essential oils, but the juice when squeezed out and bottled will not keep well, unless you mix alcohol with it.

The trapper's great enemy is the wolverine. These fierce creatures tear to pieces the animals that are caught, and sometimes tear down the traps themselves to get at baits, for the wolverine is too large to fit in the door of dead-falls. When I see a wolverine track I lay out some poisoned bait near by, but these brutes are very cunning about poison. On one occasion I tried to catch one with poisoned bait and failed, then I strewed a lot of unpoisoned bait along with the poisoned, and the wolverine would eat the good bait and let the other alone. Finally the idea struck me to poison some of the bait in the traps themselves, and this proved fatal to the shy fellow.

When the catch is carried to the cabin the first thing to do is to thaw out the bodies that are frozen; then they are all skinned by "casing," that is by opening the skin across the hind legs from heel to heel and pulling the skin inside out off over the animal's head. The tail is skinned by putting the bone of the tail in a split stick, pinching the sides of the stick together and pushing the skin of the tail off the bone. Then I run a sharp wire through the skin of the tail and through its tip to clean it. The tail, of course, is not turned inside out by this process.

The skin is then put on one of the stretchers I have

already spoken of, with the fur side in, and stretched so as to be as long as possible. Then the hind feet are fastened to the stretcher, to keep the skin from shrinking, and the skins are hung up to dry. They must be hung by the head, so as to let the tail hang down straight, and they must be hung as far from the fire as practicable, that they may not bake and harden. Skins dried too fast are said to be "burned" and are liable to crack and leak. When the skins are partly dried they should be carefully stripped of any flesh or fat that is sticking to them, and they should be constantly watched and worked over until they are thoroughly cured.

In this country we trap until the first or the middle of April. Anything you catch from Jan. 1 to April 1 is prime and brings the best prices. During the last month of this time you may very likely get a bear skin or two if you carry your gun, for by this time they have come out of their holes and their skins are now at their very best.

The winter, though not without its excitements, is a long and lonely one, and the work very hard. For six months you see no living soul and have only your dog for company. Very likely, too, you may be poorly paid for your time. I trapped one whole winter and only caught four marten by my land trapping. After I had been at it for a time I saw that there were no marten in the country, and as I happened to have two No. 4 traps with me, I started trapping otter and caught thirty-seven during the winter.

When the trapping is at an end, you begin to think of getting your fur to market. The skins must first be got out to your canoe, if you are trapping on the coast or on a large river, or else out to some settlement. The fur is made up into bales of a size convenient for packing and carried out, a cache being made of your first load if you have to make two or more trips. Then your canoe is stowed and you set sail for your market, which on this northern coast is generally Victoria, where the skins are sold at auction.

Nothing definite can be said about the returns in this business. Much depends on the skill and industry of the trapper, and quite as much on the abundance or scarcity of the fur. About the best winter I ever made in land trapping was 20 fishers and from 180 to 190 marten. Besides this regular fur a man may pick up some odds and ends by steel traps and poison; a bear or two, a few wolves, perhaps a wolverine. These would bring in a few dollars in addition to the regular catch. Then, too, a man may have an opportunity on his way down the coast to catch a few otter or bear or to trade for a few furs with the Indians, but on the whole, even in the best of years, a man got but small return for a season which lasted perhaps from the first of August to the first of June.

OKANAGAN COUNTY, Washington. R. V. GRIFFIN.
[A second paper on "Water Trapping" will follow.]

CHICAGO AND THE WEST.

CHICAGO, Ill., March 19.—To-day ducks are in all over the river country below us in thousands and thousands, yea by hundreds. A wire from Cumberland Lodge yesterday from Mr. Zeigler reports the shooting good. Everybody who has crossed the Kankakee marshes within forty-eight hours reports great quantities of game in sight. Mak-saw-ba marsh is full of ducks. Mr. Lincoln has been wiring from the Undercliff, down on Senachwine, that the outlook there was favorable, and it is likely that to-day and to-morrow will be big days there. Mr. Burton and several other shooters are awaiting telegrams, which they hope will summon them to Fox Lake to-morrow. Word is up from Water Valley on the south that the birds are there. In short they seem to be everywhere, and there is no doubt that the flight is now well up in this latitude. Two days ago I saw a splendid bunch of redheads which had been shipped to T. D. Randall & Son by the Dunnells on Fox Lake. In the market also the mallards are coming in now from the New Madrid marsh and points in Missouri. We shall hear of some shooting at the close of this week in all probability.

Mr. Wolfred N. Low, one of the pillars of Chicago sportsmanship, has been seriously sick for two weeks with the very prevalent lung trouble. Mr. H. D. Nichols, another of our notables, is also now lying at his home instead of at his place of business.

Mr. J. B. Clow and Col. Davis, director-general of the World's Fair, are reported now absent in Florida on a tarpon trip.

Mr. R. B. Miller, a prominent fly-caster of Fox Lake, is about to start for a trip to Texas, where I am afraid he will find a good deal more than he can shoot.

As stated in the Trap columns, there is another pigeon bill introduced in the Legislature, this time in the House. It will probably get lost in the shuffle in the mix and mazes of the great original deadlock Legislature.

Our esteemed and venerable friend, the *Tribune* of this city, is showing flattering signs of growth in its knowledge of field sports, if not in rhetoric. Commenting on the success of a certain politician in this same recent deadlock, it mentions the fact that "two suckers were jerked into the bosom of Democracy." Does the editor of the *Tribune* still jerk fish into his bosom when he goes fishing? It is very old fashioned.

But speaking of growth in matters of field sports as evidenced in the daily press, which is the immediate neighbor of the people, what a change there has been since ten or a dozen years ago. The fellow with the gun is coming into his innings. Witness the following from a late symposium in which a number of the most prominent thinkers, scientists and educators gave their opinions or what the "perfect man" should be. Professor William James, of Harvard, said:

"What are the cardinal points to be insisted on for the more perfect development of the coming young man? Out of a large number of answers to that question seems to me that something valuable may probably emerge in the shape of a consensus of opinion as to what the actual young man in America most lacks.

"The young man of the sedentary and commercial class in cities most lacks, as it strikes me, the wholesome and manly sort of animalism which gives to the very best of the youth of the upper classes so sweet a tone—the sort of thing which comes from plenty of dealings with the animal elements of things, as swimming, boating, fishing, riding, tramping, mountain climbing, and camping out. It seems fair to think that the 'athletic movement' may be productive remotely of great good in changing, little by little, the rather unmanly ideals of the 'middle class.'"

Another learned gentleman, none less than the president of Clark University, Worcester, starts right out this way about the perfect man: "1. Health is chief. Health is absolutely of prime importance—not physical culture merely, but right eating, drinking, bathing, breathing, exercising, sleeping. In Germany they have thrown out the classics to make room for hygiene. This was done long ago in Sweden. Dyspepsia, bad teeth, nervousness, and the seeds of phthisis are poor foundations for a perfect man."

The growth of the man with the gun into a practical prominence and into the most highly rational and scientific indorsement has not been instantaneous. In other words, the general press and the general tone of public thought is now getting along toward where FOREST AND STREAM was ten or fifteen years ago. But as testimony to the main exhortation I may say that more shooting and outing material is now sold in Chicago than ever was the case in any other year, while the fishing tackle trade for this coming season will altogether distance that of any period known before.

"It is funny," said a leading gun and tackle salesman to me the other day, "about the ideas our Eastern house has in regard to this Western trade. They think they can sell a lower grade of goods here than in New York. The exact reverse of this is true. I can not get enough of the very highest grade of goods for my customers. Chicago wants a higher priced and better grade of goods, on the average, than New York does, and the sales of our two houses, here and there, will demonstrate this." I shall not add more, for it would be unwise to make New York more jealous of Chicago than she is now.

Will "Scarlet-Ibis," or somebody else who knows a whole lot, please tell us what is the best wading gear, especially for angling? I can't find wading trousers which don't leak, or lose their boot soles, or otherwise cause grief. All these things are getting mighty important out here just about now, because the stir of the spring preparations is beginning to be heard out here unmistakably. Every sportsman you meet now has a sort of uneasy look on his face, and he is buying things.

E. HOUGH.

STOCKING OLD BAY STATE COVERS.

THE committee on restocking of the Massachusetts Fish and Game Protective Association is doing a good work, and one that must result in good, unless the best efforts of the Association to restore our game birds are frustrated by some very unfavorable circumstance or chain of circumstances over which the society has no control. Nature may not work in harmony with this committee, but its members have given Dame Nature considerable study. At the same time the committee—John Fottler, Jr., president, Henry J. Thayer, secretary, and Edward E. Hardy, treasurer, with Edward Brooks and Outram Bangs as efficient members, have been laboring earnestly in the work and gaining a good deal of experience that will be of good help to them in the future: an experience peculiar and not laid down in the books.

It is a fact that the restocking of the country with game, a most noble work, is deficient in literature, and mainly experimental. The society has furnished the means, but the brains of the committee have been severely taxed to do the work in the best manner. That they have, in a great measure, succeeded, is more worthy of praise than success much more replete can ever be in the future. This committee has opened the way, and the work of the future will be easy comparatively. In all the committee has liberated about 2,900 quail in different sections of the State, the warmer and seashore counties generally being selected, while avoiding too close proximity to the cities. Last year 800 were liberated, while the committee has just finished the distribution of 1,200. One quail is left of this number, a stray one that was found in the room where the birds were received and repacked for distribution. The committee has found that quail will absolutely die of starvation when food is plentifully scattered about them, the dead birds invariably being found with crops and intestines completely empty. The quail have also been found to burrow almost as successfully as the grouse. They invariably return to the coop or cage that they are liberated from each night, for some time after they are set free. The idea is that it is the food scattered about that draws them to the spot, but how the birds should be able to burrow down into the snow and find the cage is a fact that has interested the committee a good deal. The snows have been heavy since some of the birds have been put out this winter, and the fact of their burrowing under the snow for several feet till the old cage was found, has been observed by careful eyes.

The success of the quail put out in this State last year is not a matter of doubt with the committee. That the broods raised were very late is generally conceded, and how well the youngsters will winter is a question. The lateness of the broods is explained by Mr. John Fottler, Jr., upon this theory. A few years ago he put out some quail on private grounds, where there were no quail previously. It was months before the birds became sufficiently accustomed to their new surroundings to give attention to mating and raising broods, and consequently at gunning time the next fall the birds were remarkably small. The committee is satisfied that the broods may be expected to be late till the birds are more thoroughly acclimated than it is possible for them to become in one season. The committee is of the opinion that the quail fared fairly well last year, so far as the gunners are concerned, for the feeling was very good generally with the best informed gunners, and the little half-grown birds were not troubled. In Dedham a covey of birds were put out and were thoroughly watched by the gunners that were interested. It was generally understood that they should not be troubled till the open season, and then the understanding was that it would be small business to shoot the half-grown birds. A number of broods were seen many times in the season, and it is believed that the birds have wintered well.

The committee of the association has also succeeded in obtaining about 300 pinnated grouse, or prairie chicken, from South Dakota, and these are being liberated in Plymouth, in suitable locations in Barnstable and Bristol counties chiefly. These birds have borne confinement and transportation so long a distance, remarkably well, only a very few dying on the way. Some of the birds were nearly starved on arrival, and unlike the quail, they readily took to corn, even while in the hands of the person taking them from the coops. Putting them down in the midst of corn, they continued eating till evidently

satisfied. In a few days they became quite tame. They were taken from the coops, on arrival in Boston, and were liberated in a large upper room hung with cloth a little distance from the four walls, in order that the wild birds might not injure themselves by flying against hard substances. The windows also were first grated and then covered with white cloth in the same way, the cloth far enough from the grating that the birds could not be injured by flying against it. In this room the prairie chickens have actually become fat and hearty while awaiting distribution. It has been interesting to the committee and other privileged persons to watch the birds and listen to their notes. Some of their notes closely resemble the chirps or clucks of the barnyard fowl. The committee feels quite sure of the success of the birds in the localities where they are being put out. In the first place there have been for time immemorial a few pinnated grouse on Martha's Vineyard. Then in all the localities where the birds are being liberated the wild rosebuds or seeds are very abundant and the birds are believed to subsist on these seeds in winter, when other food is covered with snow. Again the land is much of it oak and scrub oak, and prairie chickens are noted burrowers after acorns. In summer, and in fact the greater portion of the year in the seashore counties, the ground will be bare and food abundant.

Only one feature gives the committee much uneasiness, and that is the possibility that the birds are immediately to fall into snares. Snaring is now permitted the farmer boys, on their own land, but if this is continued, the whole work of the committee will be in vain. The committee on fisheries and game of the Massachusetts Legislature will, without any doubt, report a bill to prohibit all snaring, and the Fish and Game Association will work for its passage. Indeed, the restocking committee feels very confident that the bill will become a law. They know of but one member of the Legislature that is really opposed to such a law. This man is making some talk about the rights of farmers' boys being infringed upon. But the sentiment of the farmers' boys is one of so much gratitude to the committee, especially in sections where the birds are being liberated, that they will urge their fathers in the Legislature to vote for just such laws as the committee desires.

But the restocking of the State with game birds is not all that the committee has undertaken. The association has instructed them to obtain game animals and 150 great northern hares (*Lepus canadensis*), and set them free in different locations of the State, a pair in each location. The committee has also engaged 100 more, making 250 in all. These animals they have little difficulty in obtaining. They are caught in Maine and Canada, probably in box-traps. But the shipment is not an easy matter. They will fight, and that too to the death. In the first lot one old buck killed four. One he "went for them" after the lot were taken out of the boxes they came in. He seized his antagonist, and with a few hard bites the under dog was finished. The victor drew away, but seeing a little motion he again bit the dying hare tremendously. This he repeated several times till not a motion was to be seen. The committee ordered the hares packed separately as they "would fight." The shipper left the work to his boy, and he did pack them separately. He put each hare into a separate compartment, separated by inch boards and so narrow that Mr. Hare could not turn round. But the fellows are tough and they came through all right.

SPECIAL.

WILD GEESE.

LAST fall I saw one goose, high up in the sky, flying southward, uttering a cry which sounded peculiarly loud and forlorn. I always scan the sky closely in spring and autumn for the migrating wildfowl, which fairly draw the heart of a genuine hunter out of his body after them as he watches them drive steadily and swiftly along in their high flight. With all my looking last autumn I saw but the one solitary goose. There would have been nothing remarkable in this in some parts of this broad land. But I live just now in eastern Illinois, in the very center of what was once an unequalled highway for all waterfowl. So recently as fifteen years ago they passed over this region in vast numbers. This part of Illinois was thickly dotted over with swamps and shallow ponds. Leaving the Mississippi River at Cairo, the chain of ponds made the duck and goose highway from south to north in the spring, leading up to the Calumet region, then to the great Skokie above Chicago, and so on up to the countless Wisconsin lakes and the waters of the far north.

What has wrought the change? I do not think it entirely due to the breechloader and the game dealer. But let me shift over on the other foot and say that the common belief out this way is that brother Hough is right, in supposing that game dealer has something to answer for in this direction. However, the game in this particular region has gone because the farmers have honeycombed the soil with tile. The swamps and ponds are all gone. There is hardly water enough in whole counties to attract a duck's eye or wet a goose's foot. Fine farming country, getting to be a superb chicken country, but the wildfowl are gone. The poor goose that leads off in this article had a cry that was not only lonesome but sounded as if the poor fellow had not had a chance to wet his throat for a long time. No game laws will ever bring back the ducks and geese to this country.

Word came this morning, from a friend living on the Illinois River above Beardstown, that the spring flight was on in good shape. But alas, that invitation, from a royal fowl, cannot be accepted this season. It will not make much difference in the quantity of the game that will get by to breed in the North, for I never made very big bags on my best shooting days. But it will make a big hole in the pleasure of one man's life—my own.

PAXTON, Ill., March 18.

RICHARD GEAR HOBBS.

A large flock of wild geese were in this vicinity March 11. Four separated from the main flock and dropped into a wheat field inside the borough limits. One man tried a shot at them with his rifle, but shot under; they rose, circled and came down about the same spot. He tried a second shot and again shot under. This time they went up the creek about a mile, where the balance of the flock were. We believe they left before the boys secured any of them. Quail and grouse have wintered well; two or three fine coveys of the former being reported in this vicinity recently.

H.

WYALUSING, Pa., March 15.

SIX YEARS UNDER MAINE GAME LAWS.

FORE-WORD.

To the Gentlemen who visit the Maine Woods:

When Capt. Drew, the genial "Kennebec" of the Boston *Journal*, wrote up his cruise to Australia, in order to get as long a start as possible, he went back to his trip to Trout Brook on the Passadunk; and so in writing on game matters I have begun by telling of the region round Nicasotwis because that is supposed to be as far away as anything can be from a wholesome love of what is lawful. That I have not told you what you expected to hear from that place, may have caused some speculation, and what I shall say will perhaps cause more; but whether you agree or not, hear me out. It is not an easy story to tell, and it is impossible for any one person to present all sides. I speak for the side which never has been told and for the people who cannot speak for themselves. If I make mistakes or misrepresentations, the road is open for both their criticism and yours. I would request, however, in advance, that critics sign their own names and place of residence, since otherwise discussion will not greatly help the matter which needs mending.

I ask your patience. What I have to say cannot be said so that all will take it kindly, and I must seem at times to speak bitterly, for I speak the thoughts of my people. Nevertheless, I have been at some pains to put these things as mildly as possible. I have written all the sketches previously published that you might be the more willing to take my word for what I shall now say, thus saving the bitter retort to facts, names, and dates. And I have chosen to treat it historically rather than polemically, because unless the statement of the facts is convincing, no amount of argument will be.

Those of you who have been in the country of which I have written, know that I have told the truth; those who have not been there but who know and love the woods, can tell whether my observation is exact, my eye correct, whether I know what I have claimed to know. I only ask those who have credited what has been said to believe what will be said. I know this a great deal better—was bred up to it from childhood, have studied it these three years and held my peace, have strengthened my own opinions and observations with those of the best informed men in the State. Now after all that I have seen and heard and written down, I prefer to let these papers on game rest entirely on my own credibility. I only ask you to remember that I do not always undertake to express my own views; that I am not writing what ought to be, but what is; that though I may sometimes seem to misstate facts, I am only undertaking to tell what is generally believed here, which whether true or false, influences public opinion; and that when our opinions differ, I am talking about matters concerning which I know more than most of you possibly can know.

I shall not undertake to exhaust any subject nor to tell all I might tell, rather to give such facts as appear to me best to represent the subjects treated; but, if I tell something of deer hounding, the cause of the warden-murder, the effects of the Graves case, the Jock Darling case, and other much disputed matters, it is agreed that for the time being all foregone conclusions are set aside, and these subjects are looked at from the standpoint of the people for whom I write? For we are at a crisis in game matters here, so serious that great caution in action and full freedom of discussion are the only means of our delivery. Few dwellers in our cities and larger towns can be aware just how matters stand, and it is harder yet for those outside the State to comprehend them.

I am speaking for the farmers, lumbermen, explorers, guides, hunters, and all others of the section hereafter to be described who may be classed as our rural population. I am addressing those who visit the Maine woods, which includes many of our own citizens with the many from outside the State; but more particularly the gentlemen who visit the Maine woods—a much smaller class, whom it may be hard to separate from the "outsiders" and "sports," so-called, for whom no great regard is professed. If I do not seem to distinguish the two, understand now for all that the present company is always excepted, and that you and I are the people who never broke a game law—at least I am sure I never did, and if you have done so at any time to meet your necessities for food we will not quarrel over that, knowing that as we say, you did it "reasonably." I have the honor to extend you a hearty welcome, irrespective of the money you have spent on the guides you have hired here. If you have come and paddled your own canoe, as some of you have, so much the better. If you have not hesitated to help the guides with the camp work and on the carries, it is to your credit. Your welcome here never is gauged by the money you leave, for the people whom I represent above all other things judge and prize a man for what he is.

FANNIE PEARSON HARDY.

I.—WHO OWNS THE DEER?—FARMER SPEAKS.

SOCRATES had just come from his easy conquest over Euthydemus, when Agelaus, one of the rabble, came up to him.

"I would like to ask you some questions, Socrates," said he.

"It would be more to your advantage if I questioned you, Agelaus," returned Socrates, seating himself on a curbstone; "however, if they are profitable questions I will answer them."

"Indeed they are profitable; they concern my moral duty to my neighbor and that of other men to me. I ask to be instructed. I am a farmer, Socrates, and the other day my goat broke her corral, so to speak, and put for neighbor Æpolus's garden, where she ate up all the winter cabbages which he was intending to sell at the Prytanæum at once and a half the market price—supplying government, you know; cabbages are cabbages this year, and the archons have all they can do to get enough to keep the visitors from Sparta in Spartan broth. It is about as cheap as anything after all, and seems palatable to them."

"It does not become such as you, Agelaus, to talk politics," remarked Socrates. "What is your point?"

"I want to know must I pay for those cabbages?"

"Certainly."

"But I shut her up all right, and the old idiot broke out without my connivance or cognizance, all on her own hook. Am I to blame for that?"

"Yes."

"Then a man must pay for damage caused by his own property?"

"Certainly."

"That's just what I wanted to find out. Æpolus, you see, keeps sheep and lets them run loose. It was only yesterday that they got in among my choice tomatoes and trampled them up so I must sell out the whole thing to the canning factory for ketchup at a big loss. Mustn't he pay me?"

"Certainly."

"But he won't."

"He can be made to; the laws see that all such injuries are redressed. It is the part of the good citizen—"

"It is your part to answer, Socrates; you've had your play, now ante. If the laws shouldn't touch this case, would I be justified in killing them until he took care of them?"

"No; for the law provides that the owner must pay such damages, as I have already told you, and it will make him care for his cattle."

"That's just what I want to know, Socrates, for we haven't got to the end of things yet. There is a herd of deer which come every night and trample down my beans and buckwheat. Unless that is stopped I am a ruined man, I shall have to come on the town. Will the State stop that, Socrates?"

"It cannot. These are wild creatures."

"But the State owns them?"

"Certainly."

"And they have come into my field and trampled down my crops—my beans, too; I had both white and black. This new ballot system, you know, requiring a fresh bean at every ballot to prevent fraud was going to make a big call for beans. I know of three or four election rings formed already to get around it, with all sorts of devices for making an over-count. I was expecting to make large sales. Now, will the State pay me for those beans, I want to know?"

"Of course not."

"Weren't they destroyed by the deer? and doesn't the State own them?"

"Very likely, but the State will not pay."

"Mustn't the State pay for damages caused by its property?"

"O, Agelaus, you are a clown and a rustic, and for aught I know a fool also not to understand that the State has peculiar privileges, peculiar rights—"

"Ha, the State! I have heard you talk about the State before, Socrates, you have queer notions about the State; but it seems to me that the State, which is so rich and powerful, ought to be at least as honest as the private citizen, and else pay damages or keep her cattle fenced in. I want to know what I can do about these deer spoiling my field of beans."

"If you wait till October, Agelaus, the State will allow you to shoot them, three of them if you know where to go and whom to go with. This should be ample payment."

"It seems to me I have heard something before now about a bird in the bag being worth two on the snag, and meantime my crops are spoiling. That kind of business won't keep a man in sandalia not to speak of chitons."

"But the State is wise and understands—"

"It's a poor kind of a State in my opinion, Socrates, that doesn't pay any attention to us farmers. I pay my taxes and I own a share in those deer if any part of the State is *me*. Are they all to be saved for the guests from Sparta so that the tavern keepers of Athens may have geese to pluck? But while we are talking of these matters I would like to know whether other States than Attica own the game in their countries?"

"Indeed they do, Agelaus—Boeotia and Argolis, Phocis and Arcadia, the whole of them in fact."

"How is it, then, if our deer go into Boeotia? Or if their deer come here? Or, indeed, as sometimes happens, if the whole tribe migrates from one State to another? Can they kill our deer because they have strayed across the boundary? You would not let me do that to my neighbor's sheep. You said that he was responsible for them. Do we pay the Boeotians damages? And how is it if theirs come here? Are they subject to our laws or do they still obey their own? I would like to know these things, Socrates."

"O, Agelaus, I am puzzled. I am floored. You are a dolt I know, but you do ask hard questions."

"There is one point more. If this game belongs to the State and the State prescribes certain days on which it may be sacrificed, as it were, I suppose that the State does it impartially, so that all the citizens may have an equal chance. It belongs to the State wherever it is, and at these stated seasons is free to all."

"Certainly. The State strives above all things to be impartial."

"Then it is not permitted one man to capture and hold alive any game animal; that he may keep it for his own pleasure or sport, and deprive the other citizens of their shot at it? Indeed I know it is not; for Penes, a neighbor of mine, who is a poor man, caught one a week ago intending to make a pet of it, but Therisites informed of him and the officers made him release it, saying that it was not legally captured."

"I heard of that, Agelaus."

"But Plutus and Croesus, who live near the Academe, have a whole park full of them—it is what I think they call a preserve—and what is more, they have special laws passed prohibiting any but themselves and their friends from killing the creatures, so that they are no better than licensed butchers in spite of their aristocracy. But I would like to know whether they really own these or whether the State does, and by what rights they obtained the privilege. Did they pay the State for them, or are the deer sold with the land like a kind of prize package business, in which they run their risks of something or nothing, a prize or a blank? But if it was by the beans, why should not I who am a bean grower—"

"Keep thyself from the traders in votes and from things above thy understanding," interrupted Socrates. "As for these, Dolus is their lawyer and craft is in him. I confess that I do not understand these matters. But it seems to me more the part of the good citizen to cry up the majesty of the State and the infallible justice of her laws than it is to dabble in dirty broils about dumb animals. For myself, I will return to my work of asking questions and training the youth to answer me with sense and fitness."

"Go your own way, old Soc," replied Agelaus. "If the laws won't adjust my grievance and don't undertake to be consistent, I rather think I can settle the matter myself. I pay my taxes, I vote, I serve in the militia, I do

my duty as a citizen. If the State won't either shut up her deer or else pay for the damage they do, I'll take my pay in venison whenever I can get any. That's all today, Soc."

FANNIE PEARSON HARDY.

IOWA GAME BIRDS.

WINTERSET, Iowa, March 16.—*Editor Forest and Stream:* Twenty years ago this was an ideal country for feathered game. It was the natural home of the prairie chicken and the quail. A country of rolling prairie with dense thickets of hazel and oak along the many streams, it furnished cover for untold numbers of both chicken and quail. It was an easy matter to load up a wagon with prairie chickens, even with our indifferent dogs and muzzleloading guns. The number of chickens one could bag came near being a question of how fast he could load and how well he could shoot. But the pot-hunters and the market-shooters, the quail netters, the excessively wet seasons that followed one another year after year, the plowing up of the prairie grass, the change from rail fences—in the corners of which many a Bob White made his nest—to barb wire, the heavy snows for a succession of winters, came very near exterminating both chickens and quail. During the whole of 1883 I saw but two quail; and a party of five of us with fair dogs and guns, in a two days' hunt, bagged six chickens and flushed but eight. So far as local shooting was concerned wing shooting became one of the lost arts, the dogs were sold and the sportsmen became pursuers of rabbits, or contented themselves within taking a shot at a squirrel in a treetop, or a sneak on a stray duck that dropped down to take a rest in his northward flight. So far had the extermination of game gone that when I returned from a short residence in Nebraska and brought with me a well broken setter, for two years I enjoyed the distinction of owning the only bird dog in a county twenty-four miles square and containing 17,000 people.

But in 1884 Iowa went dry both climatically and legally, but as a success the climate beat the prohibitory law all to pieces. Ever since then the hatching seasons have been nearly perfect and the game has increased wonderfully. The mild winters may have something to do with it, for the cornfields were the resort of many chickens driven down from the north by the heavy snows. In September, 1889, with Hamilton Lee, going after a covey that we supposed was the only one within a radius of four miles, we flushed not one covey but three in the same field. We found another in the field adjoining, and one in every field we tried. Most of the shooting was in the corn owing to the short stubble, but still we got fair bags every time we went out. Last May and June were almost perfect hatching months. There were no storms, scarcely any rains, and the nights were warm and dry. The coveys of both chickens and quail were unusually large and the birds strong and vigorous. On Sept. 2, Dr. Robert Davison and I, over the same country that in 1883 we found no birds, cracked the limits of the Iowa law—twenty-five to the gun—almost before we knew it, flushing eight coveys in one field of cat stubble. Mr. Lee and I the week following bagged forty-four in an evening and morning, and in October on the "Iowa Homestead farm," in Adair county, I killed twenty-two in one small field in about an hour's shooting.

The birds have come back. Of course not in such numbers as they once were, but there are enough of them to afford any man who likes shooting well enough to wade through wet corn, tangled stubble and high rosin weeds a fair day's shooting, and with the continuance of such seasons as we have had they will become still more plentiful. Along every hedge row and in every hazel thicket there is a covey of quail, and the winter was mild enough to let them come through fat and strong. With good weather in May or June the number of Bob Whites in the fall will exceed that for many years.

A. G. GOSHORN.

TEXAS HUNTING AND CRUISING.

CORPUS CHRISTI, Tex.—The country in the vicinity of Corpus Christi abounds with game of every description; deer are frequently killed within five miles of the city, and are very plentiful within a radius of fifteen or twenty miles. On what is known as Flower Bluff, ten miles from the city, wild hogs are numerous and afford great sport to the hunter, while an occasional panther or wildcat and scores of coyotes give the tenderfoot sportsman many opportunities to test his nerves.

During the winter season the small fresh-water ponds, which are frequently found on the islands and sandy bottom lands along the coast, are covered with wild ducks of every description, while the wet prairies along the coast and in the interior are the feeding places of thousands of wild geese and brant, which make this their winter home. The various kinds of snipe and curlews are so abundant as scarcely to attract the attention of the gunner, who generally goes for the larger game. Wild turkeys are very plentiful in the brush and timber along the streams, while quail are so numerous that many are frequently seen in the gardens and streets of the city.

A glance at any good map, or at the coast charts, will show what splendid facilities are here afforded the yachtsman and canoeist, especially those who desire to spend a winter vacation cruising in the Sunny South. Matagorda, Lavaca, Espiritu Santo, San Antonio, Aransas, Copano, Corpus Christi and Nueces bays, and the "Laguna Madre" form a connected system of inland (salt) waters, extending along the coast for hundreds of miles, teeming with fish of every description known to southern waters, including the highly-prized tarpon, while oysters of the finest flavor may be had for the taking, and, as the islands and shores at almost any point along these waters furnish deer, turkeys and other game in abundance, a cruise in these waters offers advantages unsurpassed even by the inland waters of the Georgia and Florida coast.

Good hotels may be found at the various towns along the coast, including some very fine ones at Rockport and Corpus Christi, and the prices charged are moderate, so that a sportsman can live well here at much lower cost than at other more frequented resorts.

J. S. P.

ILLINOIS GESE.—Lexington, Ill., March 14.—The geese have made their appearance. Mr. Chas. Scrogin killed two on the 13th less than a mile from town; they were fine birds. Grant Preble and I were out on the 7th and bagged 123 rabbits in six hours.—W. W. G.

ANOTHER POWDER TEST.

Editor Forest and Stream:

On Feb. 26 last you published a few tests that I made with my Colt hammerless 12-gauge gun, which Dannefeler has changed from a full choke to nearly a cylinder-bore. The test I made then was with Lyman expert powder and dead shot, black powder. Since then I have had numerous requests from shooters to try my gun with Schultze and E. C. powder; so to satisfy the numerous readers of FOREST AND STREAM I had Von Lengerke & Detmold load me some shells with those powders, using the usual trap charge, 42grs. of each powder, with 1½oz. No. 6 chilled shot.

The day was clear and cold, in great contrast to the day I made the other test, which was very damp. I used the same kind of paper and penetration pads that I used in other test, and shot at 40yds. on the same range. After shooting I made a 30in. circle, selecting the best pattern. While the patterns were not as good in percentage as the other test, there was very little difference in the penetration, but taking the distribution of the shot on the paper I find the E. C. powder gave the most even pattern, while the Schultze patterns were very spotty, the patterns of the E. C. run more even, and I should prefer the E. C. to the Schultze for best general results. I only shot 8 shells of each powder, and selected the best 4 of each to get the average.

Without any interest in any one powder, other than to get the best results for my gun, I have yet to find from my numerous tests the equal to the Lyman powder, for it always makes the best showing, not only in pattern but in penetration also, and good distribution.

Powder test, day clear and cold, distance 40yds., E. C. powder, 42grs., 1½oz. No. 6 chilled shot:

Right barrel, pattern 187 (71 per ct.),	penetration 27 sheets*
Left " " 166 (63 per ct.),	" 21 "
" " 176 (66 per ct.),	" 26 "
" " 176 (66 per ct.),	" 31 "

Schultze powder, 42grs., 1½oz. No. 6 chilled shot:

Right barrel, pattern 163 (61 per ct.),	penetration 26 sheets.
Left " " 181 (68 per ct.),	" 26 "
" " 163 (61 per ct.),	" 28 "
" " 159 (60 per ct.),	" 25 "

E. A. SUMMERS.

*Three shot.

THE INDIANS AND THE GAME.

IS it not time that active steps be taken to prevent the wanton destruction of game by Indians? To-day sportsmen have no rights that red men are bound to respect, and red men have no legal limitation upon either season or quantity. They want trout. The mountain stream is dammed; the waters are turned out upon the grass; the Indians pick up what fish they want; the rest perish.

In the days of muzzleloaders deer had a little chance, but now, with Winchesters of the most approved pattern, the Indian is nothing if not a wanton murderer. He is too lazy even to tan the hides. He takes them, just as they are ripped from the carcass, and barters them for cartridges with which to continue his work of destruction. Sometimes the skins are traded for whisky.

An experienced, careful hunter, who never kills one deer more than he needs for meat, told me that this fall he had found 900 fat deer that had been skinned by the Utes and then left for the crows and coyotes to pick. Not one particle of meat had been taken. A year ago, in Circleville Cañon, only twelve miles away, a little band of Utes hemmed in a bunch of fat deer and killed every one, taking only the hides. In the bunch were 80 does, and the slaughter amounted to the destruction of not less than 150 fawns. Now, under such existing circumstances, how is the preservation of game possible? These cases require immediate and decided action on the part of all hunters and lovers of legitimate sport, and I believe that if FOREST AND STREAM would take the matter in hand, it would prove a powerful factor in rapidly bringing about the desired result. Either confine the Indians to their reservation or else make them subject to the same laws and penalties as the whites. Call a halt! SHOSHONE.

UTAH.

ST. LOUIS NOTES.

ST. LOUIS, March 21.—The Coots fishing bill which I noticed two weeks ago, has now passed both houses of the Missouri Legislature and only needs the Governor's signature to become a law. Under the old law, seining and netting of fish was allowed during every month of the year except April, with nets of not less than 2in. mesh. Under the new law, seining is absolutely prohibited except as stated in a previous issue of your paper. The author of the bill, Mr. John W. Coots, writes me that while the law is not just what was wanted, yet it was the strongest that could be passed at the present session of the Legislature.

The Hawkins game law has passed the lower house and is now before the Senate. It is very strict in its provisions, and prohibits the transportation or marketing of game at any season of the year, and makes it a misdemeanor for any transportation company to carry game at any time.

The St. Louis Coursing Club will give its first meeting of the season a week from Sunday at the fair grounds. Thirty jack rabbits have been received from Nebraska for the purpose. This sort of sporting is of a kind that I hope will never become popular. It is too much like chasing a chicken around in a barn yard. All true sportsmen should frown upon such clubs as this.

Duck shooting during the week has been very good. They struck in here freely the fore part of the week. The trouble with the shooting grounds is that there is too little water and too much mud, so that it is difficult to recover ducks even when killed. One of the members of the Kidd Lake Club bagged a dozen snipe the fore part of the week, but as a general thing snipe have not yet put in an appearance. The heavy rain of the middle of the week will greatly improve the shooting grounds. One of the members of the Cuivre Club was fortunate enough to bag half a dozen wild geese.

EARLY YELLOWLEGS.—On Saturday, March 21, Mr. W. Duryea saw in a swamp near Haverstraw, N. Y., on the property of Mr. T. G. Peck, a flock of 13 yellowlegs and 2 curlews. No English snipe had as yet been seen there, but no doubt they are on now.

DEAD-BEATS.—There is a class of men in this city and State that by its acts brings into discredit and disgrace every individual who delights in the pleasures surrounding hunting and possesses the disposition to pursue this pastime in a thoroughly honorable sort of a way, without infringing upon the rights of others or occasioning property owners any annoyance. The class referred to is made up of dead-beats, unprincipled individuals, drunkards, fellows who think it is smart to commit some offense against the peace and dignity of the State, taking every opportunity when they go out into the woods to damage somebody's property. It is this kind of people that tear down walls, leave gates and bars open, set woods on fire, trample down grass, steal fruit and hens, put charges of shot into cattle and dogs and violate innumerable laws of right and humanity and decency. For the scoundrelly actions of these fellows men who respect the law and are careful not to injure in any way the property of people have to suffer. It is always gratifying to learn that one of these vandals has been caught in some act of depredation and made to suffer the penalty of his offense. Such was the case a few days ago with three Manchester fellows who went over to Gofftown after rabbits and shot a highly-prized dog owned by Peter Hanley. The killing of the animal was deliberately and cold-bloodedly done, and by chance a neighbor of Mr. Hanley's happened to hear the culprits talking over and laughing about their mean and brutal act. He informed the proprietor of the dog what had occurred and that gentleman immediately took steps to secure pecuniary satisfaction for his loss. The horse that conveyed the rascals from the city had been left at Mr. Hanley's house and by this fortunate step the dog killers were compelled to come to terms, for Mr. Hanley would not allow the horse to be removed from his shed until he had been paid \$10 and received as security for \$25 more a gun belonging to one of the trio of scamps. For several hours a wrangle of words continued, but Mr. Hanley, armed with a stick of cord wood, held possession of the horse and sleigh and at last got the price of his dog. The inhuman scamps several times sought to get away and once came very near doing so, but Mr. Hanley grabbed the horse by the bridle and his wife got the gun, so that finally, when these disgraces to the title of hunter left for home, Mr. Hanley had obtained his recompense. The fellows unsuccessfully sought to make Mr. Hanley believe that the person who killed his dog was one of a party of hunters that was pursuing a fox in the vicinity. The names of these brutes ought to be made public and if any information comes to the *Mirror* again of either of them being engaged in any act of a like or kindred nature they will all be exposed to the publicity that they richly deserve.—*Manchester (N. H.) Mirror and American.*

ARTISTIC SNIPE SHOOTING.—A few days ago Capt. T. H. Hyman, a great lover of dog and gun and rod, came by my store and left word for me to be ready early in the morning to go out for snipe. He was anxious to try his new 10-gauge hammerless Parker. When we reached the snipe ground it did not take us long to get out guns and put on rubber boots; and in a very short time our guns began to ring out. I shot at one about 50yds. The bird fell and on going up to it I found it sitting up apparently unhurt. I cautiously reached out and picked it up. It made no move till I touched it, then it fluttered and struggled. I examined it to see where it was shot but could find no shot mark whatever. I was puzzled and soon discovered that it could not see. I threw it up in the air, it could not fly but would sail slowly down. I gave it another close examination and this time was rewarded by finding a small red spot on the top of its head. The skin was not broken. The shot had paralyzed and blinded it. The Captain came up, and I showed him the bird and told him that was the latest and most artistic manner of shooting birds, and was much preferable to the old way of filling the bird full of lead, and I advised him to learn it. I have hunted a great deal but never saw anything like that before. Snipe are very scarce in this section. We bagged 31 that day.—YELDARB.

THE SPRINGFIELD CLUB.—Damon N. Coats and A. B. Wallace have returned from the Canadian winter camp filled with enthusiasm for the free and restful experiences possible in a region where the steady cold gives high zest to living. They saw caribou, one roving band of the big creatures coming within 200ft. of the camp, but the campers are guiltless of bloodshed in this connection. Edward S. Brewer tried a few shots at the caribou, but of course he was too tender-hearted to take fatal aim. When it came to trout, however, the party dropped all sentimental scruples, and a sample of the efficiency of Mr. Coats in this line may be seen in E. C. Barr's window to-day. The beauty weighing 4lbs. shows up a pound less than the largest caught last year. Mr. Coates, by the way, spent a full month in camp, and Mr. Wallace agrees that winter is the time to enjoy most in that locality—snow-shoe walks of 20 miles a day, for example.—*Springfield (Mass.) Republican, March 18.*

THE NEW JERSEY NON-RESIDENT TAX.—New York, March 19.—*Editor Forest and Stream:* I notice in last issue a very important statement of a bill passed by the New Jersey Assembly in regard to non-residents taking out a license and paying \$1 for same and \$1 to the clerk who makes out the paper for him. I must confess that as a son of an old resident of New Jersey I am ashamed of this. Is it possible that the people of New Jersey forget that New York and other States open their doors for all? Jersey people seem very willing indeed to visit the Catskills and Adirondacks, and there shoot and fish as they like without paying for a license, and why is it that New Jersey should act in such an ungrateful manner toward residents of other States? A movement of this kind will prove a very foolish and expensive one for New Jersey.—H. C. W.

CRUST-HUNTERS' HARD LUCK.—Rutland, Vt., March 14.—The FOREST AND STREAM has an item this week suggesting that sportsmen undergo with impunity severe hardships. They do; but recent events have shown that the way of crust-hunters is hard. Two men from New Hampshire were after deer over here in Vermont. They got lost, and were badly frost bitten. One of the hunters has had both feet amputated, and the other man may lose one of his. They won't crust-hunt any more this winter. This is a case where Nature took the law into her own hands; and Nature is sometimes an unrelenting dame.—WHELOCK.

MONROE COUNTY ASSOCIATION.—Rochester, N. Y., March 15.—A meeting of the directors of the Monroe Sportsmen's Association was held last week, Thursday, and very flattering reports were offered from parties to whom quail had been consigned, in regard to the condition of the birds. The subject of stocking the public streams in this county and adjoining ones with game fish was discussed and definite action will be taken at an early date. The membership of the association is steadily increasing and among the names are noticed many of the most prominent business men of this city and vicinity. A scheme is on foot to trap a large number of English sparrows and hold a mammoth trap-shoot using these little pests for targets. Doubtless this scheme will receive the support of many who would not subscribe to all the other tenets of the association.—OSCEOLA.

MAINE DEER.—A Maine correspondent tells us that he never saw the deer so plenty. He saw two last week and could have shot them both. The buck had the largest antlers he ever saw.

LONG ISLAND SNIPE.—Oakdale.—I bagged the first brace of English snipe March 13.—ALFRED A. FRASER.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

TROUT IN WEST VIRGINIA.

AT the approach of April and May, the most desirable season for trouting in the beautiful mountain streams of West Virginia, I am filled with the peculiar sensation experienced by all lovers of the gentle art, and until that time I will be constantly reminded of happy days spent amid scenery wild and too beautiful to be marred by any attempt to picture with the pen. Imagination alone can do justice, and I will only state facts in my pleasant experience.

Leaving Roncovev station, on the C. & O. R. R., our party first reached the ancient town of Lewisburg, the county seat of Greenbrier, where our stay, though brief, was made very pleasant, for we met some old and made some new friends, and enjoyed the warm hospitality of the good people.

This is the blue grass region of West Virginia, and it has been my experience that where you find blue grass and cattle you will find a well educated, cultivated and hospitable people.

The distance from Lewisburg to the mountains is quite a long day's journey, so we had so muster ourselves quite early in order to reach our proposed camp. When we reach a small mountain known locally as Muddy Creek Mountain, we leave the limestone belt and note quite a difference in the character of the country. After crossing this mountain we leave the waters of the Greenbrier River and soon reach the tributaries of the Meadow, a very slow running stream, which is fed mostly from Clear creeks, both Little Clear and Big Clear. After crossing Little Clear we continue our journey in a westerly course for a mile or two, when we reach Big Clear.

These two creeks have a general southwesterly course, making quite a curve, but always keeping very nearly parallel and quite close together, being divided only by a very small mountain. These two streams derive their names and have always been noted for their clear, pure, beautiful waters, and tradition has it that they were never known to be in the least muddy until the past few years; even during long-continued spells of rain they become slightly clouded on account of the byways and paths made through the mountains by the rude foot of man, which lead the muddy waters from the clearings into the streams.

We are now at the mouths of these streams and at an elevation of 2,500ft. above sea level. Now picture these streams dashing down over moss-covered rocks many feet high, forming crystal cascades along which nature has planted all varieties of beautiful ferns and flowers, which she has seen fit to distribute in this particular climate.

Well, we have reached our camping ground, and as I had never experienced the joy and comfort of hooking or tasting a trout, and as the sun was only just edging the distant mountain tops, which left me from one and a half to two hours of daylight, for you must know that hemmed in as we are here by the mountains, we have a much longer twilight than those on the lowlands or plains. So I hied myself to the brook to investigate, while others looked after putting the camp in order. To my great surprise and joy, I was soon given a chance to decide the question which had long troubled me, "Is the trout all that is claimed for it?" Verdict thus, it may be the novelty of the first catch, or it may be the appetite, but "They are the stuff."

Then I don't know much about "fly"-fishing and am not very delicate in the manipulation of bugs, but I am willing and trying hard to learn how; but these trout just suit me, for you can use a fly or a bug, natural or artificial, or a vulgar worm, and when your insects have all gone you can just reach out to the nearest bush (should you be fishing at that season) and take the first blackberry or raspberry, and they go for all with equal avidity. Should all of these give out you only want to catch one trout to supply you with plenty of bait, for there is none better than the anal fin or the eye of the trout properly adjusted to your hook.

In these streams the trout are abundant and attain to good size, as they have a chance to become fully grown and matured, weighing often 1lb. and sometimes 1½lbs. Usually they run from 9 to 11in. long, but after fishing several hours and out of a catch of forty to sixty fish you will find eight or ten 12 to 16in. in length.

As all the brethren know, I will only state for the benefit of the heathen, that the best mode of taking these fish is to seek the headwaters of these streams and fish down. These trout abound more plentifully way back in the mountains, so near the source of these streams that there is scarce water enough to float them, yet here are found the best fish.

In fishing this way you can take double the number of

fish, as they do not see you as you cast down just below some large stone, where you find the constant washing of the water has washed the stone away and left a beautiful little pool just below, where Sir Brook Trout delights to lie in wait for some tempting bug or berry.

Just drop something over to him and see if you do not feel a drop on the tip of your rod.

The trout's mode of feeding is very similar to that of the black bass, which abounds in the Greenbrier River; that is, he is very quick to "catch on." I have often amused myself by going off some 50ft. from some pretty quiet pool and watched the trout catch flies or any insect flying just above the water, they leaping sometimes clear of the water.

In these cold clear streams the trout seems to be gorgeously colored and they are just too lovely, and I always want to be taking them in out of the wet.

I want to say a word about the great enemy of the trout in these streams and the great pest of the anglers thereof.

They are known out here by the right name, for he is a hellbender. Whether he is a serpent or a snake or an alligator, or whether he has a scientific name or not, I do not know, for I hope he is not known anywhere else in the world. He attains to a length of 14 to 16 in. and looks like a young alligator or a big lizard, and is of an ugly dark brown color.

Little Clear Creek is about 10 miles long and Big Clear about 18. They rise in the Greenbrier Mountains, in Greenbrier county, W. Va., and both are good trout streams. Other fishes in these waters are chubs, suckers and stone-toters. Hominy Creek, a tributary of the Cherry, which falls into the Gauley, is a fairly good trout stream. The trees of the region include hemlock, yew pine, poplar, chestnut, linden, ash, oak, birch and beech.

The scenery in this country is sufficient to induce the lover of nature to return should he never catch a trout—but I promised not to spoil it by an effort at description.

LONG ISAAC.

OUR TROUT PRESERVE.

ABOUT two years since, my brother and myself purchased a large tract of land some twelve miles from here. Most of the land was covered with second growth, affording very good cover for rabbits, partridge and in some seasons woodcock. There was also a small house, which, in the days of staging, had been a wayside inn, a barn in tolerable state of repair and a sawmill. The mill pond and the stream emptying into it were the chief attractions to us. The brook started high up on the mountainside and flowed through wood, pasture and meadow land, over falls and under its banks, beautiful itself and an ideal trout brook. For years this stream had been noted for the large number of trout annually taken from its waters, but continued and persistent fishing had sadly reduced the number of fish and taken away much of the pleasure of former years. From the pond, however, with a fly one could, at most any time, take a few fine fish.

Our object was to protect the brooks and pond, as well as we could, from the market-fishermen and from those whose greatest enjoyment seems to be to bring in a large basket filled with fish, no matter how small, and boast of the great number they catch. The land was well posted, but we gave all our friends a standing invitation to fish whenever and wherever they pleased, provided only that they would put back into the water all trout caught less than 6 in. in length. It was a beautiful drive to the brook, through the woods for most of the way and past two charming ponds. On the average during the season once every week we would drive out after lunch, cast a fly for one hour or so, generally catching eight to twelve trout of fair proportions, and return home in the twilight hours. We had hoped the number of trout would increase and that during many years to come we might enjoy the weekly outing, not so much on account of the fish which we might be able to catch, but on account of the pleasure derived from the clear fresh air, the scenery, the drive, in fact, from all the factors which make life out of doors, whether in pursuit of fish or game, so beneficial and enjoyable. Our anticipations were, however, soon overthrown; as fast as we could put up notices they were destroyed, the house and barn were repeatedly broken into and nearly every window was demolished. But the climax of all was the damage done to the stream as a stream for the preservation or maintenance of trout.

One Monday early in July, as we approached the place about two o'clock in the afternoon, to our dismay we discovered that there was no water in the pond. Upon examination we found that some person or persons had raised the gate, and what was formerly a pond covering several acres was now only a small stream without the least signs of any trout in it, but worse, for here and there was a small pickerel. If whoever raised the gate had only been wise enough to have lowered it when he had accomplished his purpose, we might never have known of it, and would probably always have wondered at the sudden scarcity of trout and the sudden appearance of pickerel, for during the time the gate was raised small pickerel ran up from the larger stream just below, into which our brook empties.

From the best of proof the pond was full at five o'clock the evening previous, so the time in which the deed was done was limited to about 18 hours. We offered a large reward for evidence sufficient to convict whoever did it, and notified all the proper officials in the vicinity, but there was a wonderful ignorance about the matter. To be sure everybody said it could only be one person (a lawless sort of a fellow who spent most of his time fishing, hunting or trapping for market), to be sure he was seen in that neighborhood about the time of the occurrence, to be sure he sold a very large amount of fish immediately after, and many other small things pointed to that one person, but no official would proceed in the matter with the evidence obtainable.

We repaired the damage done to the dam, and last spring placed in the brook 10,000 small trout obtained from the State hatchery. These trout were doing finely late in the autumn, as we took pains to look after them whenever hunting in that vicinity.

This spring we intend to place as many more fish in the brook, and hope to be able to again have good fishing for ourselves and our friends in our own stream and pond.

There seems to be a feeling of resentment against any one who tries to preserve fish or game in this locality, and all

seem to work against his efforts; and also, the majority of people cannot understand how any particular person can claim ownership in a fish or game bird.

Besides the market-fisherman, poacher, stealer of fish or whatever you would call him, there are many who will fish all the day long and save every identical fish they may catch, and in the daily paper of the following day you will read, "Yesterday over there Mr. So and So caught ninety-nine fine trout." There are others, however, who are content with a moderate number of fair-sized fish, and who get as much real enjoyment out of the ride, the views, the lunch and rest at midday, as they do out of the actual time spent in fishing.

If we could only persuade the former of these two classes that if they would only be satisfied with fewer fish now, in coming years they might continue to enjoy their favorite sport; but that unless something is done fishing for trout will be only to the favored few who can possess their own brooks and afford to fully protect them.

W. H.

DO NOT DROP THE ROD TIP.

OF all the cranks known to man since Adam "knew it all," there are few that equal and none excel a fisherman. Let three or four gather together at the corner grocery or club rooms, it matters not which, and immediately the diversified hobbies of each will bubble up like the phantasies of the "Wimodaghsis." They accept no man's *ipse dixit*. The experience of each is, *per se*, the only safe and perfect way to success, and while extended and practical knowledge would lead most persons to put by the bad and accept the good, you can no more harmonize the views of these men than you can hope to harmonize the views of the governors of the States of New York and Connecticut; and each remains happy and contented in the ways he has accepted.

Now, while such noted writers as Henshall and Hallock, and Wells and Green and others do not always entertain the same views of doing the same thing, they seem in some instances to have accepted certain vagaries as foregone conclusions; and they lay down as an axiom that when salmon or bass leap from the water in their efforts to free themselves from the hook, "the tip of the rod should always be lowered," on the supposition that otherwise the fish may fall on a taut line and wrench the hook from its hold.

With great respect for the opinions of these writers and others, as one of the aforesaid "cranks" I beg to state, it has been my experience that dropping the tip of the rod under such circumstances is of all the most fatal way, and will cause more fish to escape than it will save; and while no man can or ever has saved all fish that may be hooked, I have found it a surer way when there be an indication of a bass coming to the surface, to place the rod near the water, the line taut, in the same position you would lay a half hoop on its side. Nearly the entire line is thus under water, you lose no tension nor spring of the rod, and if the fish leap there is no slack, nor can he fall on the line.

If a bass go to the bottom and remain in one place, with a short, quick, tremulous pull of the line, you may rest assured he is availing himself of some friendly rock or stone to detach the hook from its hold.

No hesitancy now, to bring the fish from his position, or in nine cases out of ten your hook will come back to you as placidly as a spring flower is swayed by the air of a summer morning.

There, reader, a "crank" has touched the button, you must do the rest. Try it. ONEOVEM.

ANGLING RETREATS OF MAINE.

IV.—THE MONSON LAKES AND PONDS—CONTINUED.

ONE of the most popular resorts for the angler in this entire region is the Twin Doughty ponds. A ride of about two miles from Lake Hebron in a northwesterly direction over the highway known as the "lake road" brings one near the summit of "Doughty hills," where is one of Maine's now famous "abandoned farms," and which was once the humble home of one of the early settlers, Uncle John Doughty, and for whom the places thereabouts are named. He no longer tills and toils on these sloping and rugged acres, but has joined the invisible throng who have passed over the dark river. He is not there now to gruffly warn trespassers to "keep off that grass" and to direct them in somewhat stentorian tones how to take the most feasible, which is the pasture path to the wilderness, which surrounds the fishing grounds.

The long-used walk and well-trodden path is visible, however, which soon leaves the withered pasture with its meek kine and continues through a forest and some swampland to the shore of the first pond. The distance from the Doughty farmhouse is less than a mile.

The first pond is not generally as certain for fishing, but the trout are rather larger than in the other. A walk of a few rods in a well defined pathway brings one to the Westerly Doughty Pond. Both are in a wilderness unchanged since it was fashioned by nature's own hand.

A brook of clear pure water wanders down the declivity between the two, and by its side many anglers have built lodges and camped while enjoying their sport. This is called Cold Brook, and near it are charming places for a sportsman's temporary outing. Only spotted trout inhabit these waters, and they always take the fly during the months of July, August and September.

Monson Pond, sometimes called "Goodale," in honor of an old inhabitant, is the second largest pond in Monson, lying on the south side of the Elliottsville road about two miles from the village.

The "Thompson Ledges" are high and ragged bluffs on its east side, under the broken brows of which in fifty feet of water the lake trout fishermen have at times great success, often capturing some very large ones.

Spotted trout weighing from one to five pounds are also taken there with both fly and bait. An eminent divine, of Portland, Maine, for many years until his decease, a few years since, could always be found during the summer months with rod and reel, enjoying sweet communion with Nature at this beautiful retreat. Moores and Meadow ponds were also among his favorite resorts. Eighteen Pond, thus named because a part of it is in lot No. 18, in the east half of Monson, is about the size of Meadow Pond, and is well filled with spotted trout above the average in size. It is about three-quar-

ters of a mile from Monson Pond in a southeasterly direction.

In a due north course from Lake Hebron is an old wagon way, known as the "Savage Road," which now terminates at the farm of Chandler Watson, formerly known as "The Moores Place." It was in the more primitive times the only and main traveled way to Moosehead Lake. It was over this road that Seba Smith traveled, many years ago, when he was a famous author and wrote sketches of this section of Maine for his book entitled "Way Down East," which once delighted many American readers. This road then crossed the Spectacle Pond outlet, where were mills and a small hamlet of settlers. The road has since been legally discontinued and abandoned.

The old mill has rotted and tumbled down and the farms have been forsaken. Where broad fields of silken grain once waved, and where the busy sounds of life and industry was once heard the poplars and firs now mingle their whisperings to each other with the murmurs of the sparkling stream which winds its way through a rocky and mountainous country to the larger water-ways below.

The weird ruins of an old burying ground alone remain to remind the tourist of the scenes of those days. The only permanent habitations there are those of the deer and caribou.

This old way can now be used with buckboards for a mile beyond the Watson farm.

In the immediate vicinity of this road are the two McLarigu ponds, the Moores, Bell, Lillie and Ward ponds, all of which have the spotted trout. The angler who visits them all will find it a matter of great difficulty to determine which is the most delightful or which one affords the most satisfactory sport. This entire northern portion of Monson is a vast natural park where the scenery is wild and magnificent. It is a succession of meadows, hills, valleys, gulches, bluffs and ravines, all covered with verdant forestry.

Among them all is a perfect network of brooks and streams, cataracts and cascades, ponds and small lakes.

Thatcher and Curtis ponds are also in this park in an easterly direction.

The finest and most enchanting view that one gets from any point in the whole of Monson is from the summit of Horner's Hill, overlooking the village and a wide stretch of country life, a boundless forestry, Lake Hebron and numberless other lakes and ponds. The height of this hill is 800ft. above Lake Hebron, or some over 1,800ft. above the level of the sea.

J. F. S.

MONSON, Me.

ANGLING NOTES.

THERE has been a great increase during the last season or two in the number of anglers who have visited the Yellowstone Park. Many of them have been somewhat disappointed in the fishing, not because there are not plenty of trout there, but on account of the difficulty in getting reliable information as to the proper localities in that wild country of immense distances.

Most people in that section will inform the visitor that he cannot kill the black spotted trout with artificial flies, but must use grasshoppers or some other bait equally difficult to obtain. But he need pay no attention to this advice, let him stick to his flies, and if he is anything of a fly-fisherman he will have no trouble, provided he selects the proper kinds.

The following information furnished by Mr. F. W. Foos, an experienced angler and excellent fly-fisherman of this city, can be relied upon as being correct.

After the angler has rested himself from his long journey at the Mammoth Hot Springs Hotel in the Park, let him leave word at the post office that he wishes to go to Yancey's. The stage, which makes two or three trips a week to that locality, will stop for him at the hotel bright and early, and he will have a fine drive of twenty miles that will repay him for the rough journey. In five hours' time he will arrive at Yancey's little hotel, and will be able to get some good fishing the same day within a short distance of the house.

When he tires of the fishing to be had there, where a catch of 40 trout, weighing from 1 to 2lbs., is not unusual in an afternoon's fishing, he can hire a horse or mule for a trifling sum and go over the old deer trail back of the house, to a branch of the Yellowstone, where 3 or 4lb. trout are quite common and even a 6 or 7lb. fish is occasionally caught. Perhaps Yancy himself will go along and try to show you how much better he can catch fish with a pole and grasshopper than you can with your fancy split bamboo and flies, as he did with Mr. Foos, only on that occasion he was badly "left," as it was a good day for flies and hoppers were at a discount. The fishing on this romantic stream is wild and exciting. The water rushes madly between great boulders and over falls, and when a big trout takes to the swift current there is fighting enough to satisfy the most ardent angler. The following flies have been thoroughly tested and may be relied upon: Governor Alvord, dark-coachman, brown-hen, professor, royal-coachman, March-brown, jungle-cock and brown-palmer. A long handle landing net of good size is indispensable.

Early on the morning of the first of April people will find the markets supplied with trout. They naturally say to themselves, "How is this? These fish must have been caught out of season." They forget that Rhode Island and Canada supply many of these fish and their laws allow fishing March 1, so that they can be shipped to reach New York very early on the morning of the first. The trout breeders on Long Island can also get their fish to the dealers by daylight, so there is no reason to suspect that these trout have been taken unlawfully.

The New York Recorder is setting a good example by publishing the kinds of game out of season with the penalty attached in its weekly market reports.

SCARLET-IBIS.

MIXED METAPHORS.—Ex-Protector Drew publishes elsewhere a letter which he states to be one he sent to this office where it was refused publication. The printed letter, however, is not the letter as sent us. It lacks, for one thing, the choice characterization of a public official, "who," Mr. Drew wrote, "is learning that public opinion can cut even through bristles, but, loathsome reptile-like, when trampled underfoot, in his impotent wrath, attempts to strike his fangs at any object that comes before his distorted vision."

SEALS PRESERVE THE FOOD FISH.

THE EXISTENCE OF THE FUR SEAL IS BENEFICIAL, NOT INJURIOUS, TO THE SUPPLY OF FOOD FISHES FOR MAN IN THE WATERS OF ALASKA AND THE NORTHWEST COAST OF AMERICA.

Editor Forest and Stream:

In Census Bulletin No. 39, March 16, 1891 (Washington, D. C.), upon the "Wealth and Resources of Alaska," Superintendent Porter makes the following statement in his letter of introduction to Special Agent Petroff's report:

One of the most eminent authorities on Alaska recently stated it as his belief that the salmon, cod, and herring fisheries of the Territory would become of such immense value in the event of the entire destruction of the fur seal, which now preys upon the fish, that its possible extermination is a contingency that need not excite serious alarm.

As this subject of what influence the fur seal herd had and has upon the supply of food fishes for man, is one which has often been discussed during the last six or seven years among ichthyologists and naturalists generally at the Smithsonian Institution and of the U. S. Fish Commission, it is not a new theme; but the verdict of experts here is diametrically opposed to the statement above made by Mr. Porter's authority as he quotes him.

Curiously enough, on page 8 of this Bulletin No. 39 appears the following significant suggestion by Special Agent Petroff of the real and most destructive enemy which these food fishes have to encounter:

The waters of Prince William Sound contain, perhaps, less fish than other sections of the Territory, the most abundant species being the dogfish, which seems to have driven away the codfish and nearly exterminated the herring, upon which it feeds.

This is the same dogfish (*Squalus acanthias*) that vexes the soul of the East coast fishermen from Massachusetts up to the Gulf of St. Lawrence; it is the same ill-favored sea-wolf that these men recognize there as the most active and deadly enemy of the cod, lake and pollock. It is none the less destructive in the waters of the Northwest coast and Alaska, going as far north as the 60° of N. lat. in Behring Sea, and ranging as far south as Cape Mendocino, coast of California.

It is especially numerous and voracious all through the littoral waters between the Straits of Fuca and Kodiak, and it feeds largely upon young codfish, from 2 to 6 in. in length, young salmon fry and herring.

Now, what has mainly prevented these dogfishes from so multiplying so as to produce the same result of ruin to the cod and herring fisheries everywhere else in Alaska, as is declared to be the case in Prince William Sound, by Special Agent Petroff, above cited?

Why, the fur seal. He is the chief and only pronounced hunter of the dogfish; man rejects all fishing of that creature as unprofitable, except in a very small way for its oil; but the fur seal regards the *Squalus* as its especial and most toothsome game, and feeds fat upon its plump oily body, with soft gelatinous fins; bites the head off at the nape and usually rejects it, because the teeth are sharp and hard and unpleasant when involved in the slight mastication that this animal ever gives to its food. Of course, I do not deny that the fur seal eats cod, salmon and herrings, wolf-fishes, sculpins and crabs.

A little reflection will teach most men that nature has kept a perfect system of checks and balances upon the relative status of all wild life, and that when man steps in to disturb that system of natural equilibrium he generally makes a blunder and strives hard to atone for it afterward.

Of course, if we could protect the food fishes of Alaska from this dogfish, their own most natural enemy, and other enemies, as well as the fur seals can and do, then there would be no argument on that score in favor of saving these animals; but until we are equal to that task it is best to let the fur seal life remain, without reference to several other excellent and weighty reasons why it should not be greedily and thoughtlessly exposed to the positive danger of swift extermination by the hands of unchecked pelagic sealers.

If your readers who are really interested in the subject of the preservation of the food fish fisheries of Alaska will turn to a recent report upon "The Salmon and Salmon Rivers of Alaska," by Dr. T. H. Bean, U. S. Fish Commission, they will find in its pages abundant proof that the chief enemy to-day, and its only one, to the well being and perpetuation of this industry up there is man himself, and that the seals cut no figure in the trouble.

HENRY W. ELLIOTT.

SMITHSONIAN INSTITUTION, March 20.

LANDLOCKED SALMON AND TROUT.—We have been asked whether or not the landlocked salmon will interfere with brook trout if placed in the same waters. These two fishes are now associated in various localities without apparent injury to either. In Sunapee Lake, N. H., we have perhaps one of the most striking illustrations of this fact. Here the brook trout is native and the landlocked salmon was introduced in the early days of American pisciculture, and at numerous intervals within recent years. The landlocked smelt was put in also as food for the salmon and trout. The smelt has multiplied exceedingly, and both the brook trout and landlocked salmon are abundant and thrifty in the lake, the trout attaining a weight of 6 lbs. and the salmon 14 lbs. It is generally known that the landlocked salmon and the winninish are identical. We described in our columns of Sept. 18 and 25, 1890, the winninish of the Metabetchouan. The first of these articles contains a reference to the food of the fish, which in the specimens examined consisted of small insects and insect larvae. Mr. Dana has found the winninish in the Grand Discharge with its stomach filled to the utmost capacity with insects. The probability is, therefore, that even if the smelt be not present in a body of water suitable for trout and salmon, a plentiful supply of insects would satisfy the appetite of the salmon and save the small trout from destruction. To be on the safe side, if we were going to associate the landlocked salmon with the brook trout, we should at once supply the smelt as a food fish for both species.

GREAT SOUTH BAY FISHES.—*Editor Forest and Stream:* In your issue of March 19, "Scarlet-Ibis" calls attention to the omission of the redfish and spot from my notes on Great South Bay fishes in the last report of the New York Fish Commissioners. The spot is mentioned on page 260 and the redfish was not included because I did not know it had been caught in the bay, although the fish ranges north to Cape Cod occasionally. Both Mitchell and De Kay describe the redfish among the New York species.

Mitchell styles it the beardless drum and branded drum, and DeKay calls it the branded corvina. Neither of these authors names the Great South Bay as one of the localities for the redfish. I trust that "Scarlet-Ibis," as well as other observers, will continue to note additions to the list through the columns of FOREST AND STREAM. The writer knows upward of thirty species, besides twenty-two mentioned on page 241, which are found both north and south of Great South Bay, and probably form a part of its fauna.—T. H. BEAN.

"KELPIE" says of the *Book of the Game Laws* that "it is the most important contribution to sportsmen's literature which has been brought out of late years. It is a remarkable compilation."

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

March 31 to April 3.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Secretary.

April 3 to 11.—Third Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 14 to 17.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Munhall, Secretary.

April 15 to 18.—Dog Show of the Southern California Kennel Club, at Los Angeles.

April 28 to May 2.—Dog Show of the California Kennel Club, at San Francisco, Cal. R. F. Keating, Sec'y.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

WASHINGTON DOG SHOW.

THE veriest pessimist in dogdom must needs retire into the darkest corner, for never has there been a year like 1891 from a dog show point of view. Unlike former years, when blank ruin has faced most of the clubs holding shows outside of the three large cities, success seems to crown every effort. I thought Pittsburgh was phenomenal in the way of attendance, but Washington was equally good, considering the price charged for admission, and especially the class of people who simply swarmed into the Riding Academy from Tuesday, March 17, to the end of the week. At times it was simply impossible to move about, except with the swim. Up to the time of our leaving the building, Thursday night, about 6,000 tickets had been sold at half dollar each, not to mention nearly a thousand at half price for the rising generation. The class of people who attended were, as might be expected, of the best, and most of the society people spent half an hour at one time or another "doing" the dogs, and the elegant equipages which stood outside went far to give the show the needed tone. The management fully deserved the encouragement they received, for they worked hard, and though most of them were novices in show management, and this was very apparent the first day, they soon fell into the routine and afterward matters worked more smoothly. It would be well if clubs, and especially those which are new to the business, would engage one of two or three men who are professional superintendents, and who, knowing most of the dogs and exhibitors and the number of attendants required, can at once put the show in order. On this depends the celerity to a great extent in which the judges get through their work. If the club members are all helping a local superintendent to run the show there is no one left to do steward work in the ring; and a good steward is half the battle for the judge. The disfigurement in the ring was hardly what it should have been, and the straw in the stalls did not seem to get the attention that is necessary to secure perfect freedom from offensive odors. The president, Mr. Stiner, and the able secretary, Mr. Webster, were conspicuous in their endeavors to make every one feel at home, and they were ably seconded by the bench show committee, Messrs. E. K. Goldsborough, Jos. H. Hunter, John A. Hoffer, who also acted as superintendent, and W. R. Traver. As I have already given your readers in last week's issue the principal features of the opening days it is needless now to say much more. There was some grumbling among the sporting class exhibitors at the way the field trial dogs carried all before them, and in some instances not without cause. The judging, owing to the limited space allowed for judging rings, extended over the two days, for it was 12 o'clock on Wednesday before Mr. Mortimer could get down to regular work, though he judged fox-terriers the previous evening in an alleyway outside the hall, and it was 6 P. M. on Wednesday before everything was judged. Although Miss Whitney and Mr. Tracy were the first to begin I will take the breeds, as usual, as they are found in the catalogue, but as many of the dogs are well known my task becomes easier every week.

MASTIFFS.—(JAMES MORTIMER.)

In the absence of Sears's Monarch, Lady Colens was the only one present in the challenge classes. In the open classes, with the exception of those from the Flour City Kennels, the entries were chiefly local, and type was very mixed. Most of the dogs from the above kennel, having had an uninterrupted run of luck, will soon be in the challenge classes, and there does not seem to be much of anything to take their places. Ilford Chancellor walked out as usual with the blue ribbon without any trouble, his nearest opponent, Troop, having a fair head, but is faulty in carriage of ears and is inclined to be cow-hocked; Duke, third, is rather bony-headed, otherwise fairly well formed. Jumbo II. hardly deserved his three letters, he is long and flat-faced, besides being too black. Of Tiger and Nimrod, the former is a bad one, leggy, long and narrow in head, badly-carried ears, and the latter is snipy-muzzled but deserved mention for his bone. Lady Dorothy and Canton's Own Daughter were placed as at Pittsburgh under the same judge, the other two entered were absent. Jefferson, first in puppies, is one of the long-headed ones, and Sport, second, has only good bone to recommend him, head and ears wrong. Stanley, h.c., is very poor, and I am afraid the letters will raise false hopes in his owner's mind. Mastiffs, as may be gathered from reports of shows, are not improving in type, if I except those of one or two kennels. The kennel special went to the Flour City Kennels, and Trooper won that for best dog or bitch owned in Washington.

ST. BERNARDS.—(MISS A. H. WHITNEY.)

The entries in these classes have a reflex of Baltimore with several new faces from the two Melrose kennels, which served to increase the interest when the two kennels came up for the kennel special, which as usual was one of the events of the show. In challenge rough dogs, Hesper and Ben Lomond, walked into the ring again and went out in their accustomed order, but this time Miranda reversed her Pittsburgh position and no longer played second fiddle to Lady Wellington. An excellent class trooped into the ring when open dogs were called. They filled the ring completely, so much so that it was almost impossible to move them. Mr. Sears showed Sir Bedivere and Lothario, and Mr. Moore,

Alton and Lord Melrose. They divided the honors between them, Sir Bedivere scoring his second first with Alton a good second. Neither are in their proper bloom. Lord Melrose's size and well-formed head, albeit he is so faulty behind, could not be denied for third place; Lothario, a nicely-formed dog, though small, taking the reserve. Lion, third at Baltimore, found the company a little too strong, but gained the three letters, and so did Bruce; both were described in that report. Archduke also came in for v.h.c.; has a nice head though lacking in shadings, his body lacks depth and substance. Count St. Vincent occupied the same place as at Baltimore, h.c. Tantalion, c., is a white with brindle markings, bit long in head and not in show condition; has good bone. The bitch class was the strongest that can be shown at present. Lady Livingstone and Lady Sneerwell occupied the same positions as at New York, but Plevna was reserved for the specials only. Republican Belle upheld the Baltimore decision in the same company, with the exception of Lady Melrose, who came in for reserve; she was looking better than at New York, though still short of coat. Another from Pine Hill Kennel, Melrose Pinella, a new face, took v.h.c.; she is a nice bitch of good quality, eye and muzzle could be improved, but is well off for bone. Lady Adelaide II. is another bitch of excellent type, might be better in head, but very good in body, bone, legs and feet, color a little too light. Prudence and Pleiad, both v.h.c., were commented on at Baltimore. If Prudence could be fleshed up a bit she would stand higher no doubt. Veda II., h.c., has a sharp, long, flat face. An excellent class and handled with Miss Whitney's accustomed ability. Count St. Vincent turned up the winner in puppies, and that bitch with the terrible name, J. M. S., for short, was put second, so friend Mortimer will have to write it out once more. Lady Floris III., reserve, though good in bone, is a bit flat-faced and straight behind. Max looks as if his head will be too long when matured. There was a big class here, but no doubt this will be the last appearance of many of them in public.

In smooth challenge classes Cleopatra and Thisbe were placed as named. The former stands the racket well. In open dogs the judge reversed Baltimore awards, placing Lord Hector over Adonis II., his Lordship's superior quality no doubt catching his eye; Fritz, long in head and not straight in front, was given third. Empress of Contoocook had an easy win in the next class, and but for excessive dewlap she is an excellent bitch. Keeskape, second, was shown in poor shape and Countess, wrongly recorded as second in our last week's list of awards, was given only c. She is brindle marked and too snipy in muzzle. In smooth puppies Swanhill, a little slack in back, nice legs but feet hardly close enough, fair head, was placed well over Keeskape. As already stated last week, Mr. Moore captured the kennel prize. Best dog or bitch owned in Washington, D. C., V. Petrola's Count St. Vincent. Best rough bitch owned in Montgomery county, Md., J. M. Ford's Rose. Best smooth dog or bitch, Jacob Ruppert, Jr.'s Empress of Contoocook.

BLOODHOUNDS.—(JAMES MORTIMER.)

In the absence of the Fair Haven, Vt., entries, Victor and Judith, Jack the Ripper, who utterly belies his dreadful name, took first in the dog class.

NEWFOUNDLANDS.—(MISS A. H. WHITNEY.)

Mr. Marshall is doing good service to the Newfoundland breed by sending his dogs round the circuit, and I trust that the breed will be benefited by it, for though they are not crack specimens, still they are of good and correct type, especially in coat. Prince Hal turned the tables on his sire, Prince George, who, though better in type of head, lost in condition and coat. Albany Lass, reserve, and Troy Lass, h.c., were at Pittsburgh. Rover Hildrop loses in head and coat to the others, and Rover is hardly the stamp.

GREAT DANES.—(JAMES MORTIMER.)

Only two were shown, Pedro and Minca Mia, and both won in their classes. Mentor II. having died since the Baltimore show, is quite a loss to his owner, for he was certainly a most promising youngster.

GREYHOUNDS.—(JAMES MORTIMER.)

Gem of the Season had an easy win in his class. Hector, second, is prick-eared, none too straight in front, flat-ribbed and straight stifles. Sir Donald is better type, though his feet turn in and needs a little more rib, is heavy in shoulders and tail not correct. In bitches Lady Clara won over Spinaway, as the latter was shown too thin; Lady Clara is none too healthy looking in skin, but was here admitted by the vet. she was commented on at Pittsburgh, Spinaway in condition can give her points. Lady Ringgold, third, has a nice head, is well-ribbed but too straight in shoulder and but for her temporary lameness would have been higher up, no doubt. Trixie C. is only moderate and Ida is too long, waisted. First was withheld in puppies and second went to Hector, of no account. Best greyhound owned by a resident of Washington—Dr. Snyder's Lady Ringgold. Best greyhound—A. W. Purbeck's Gem of the Season. Second best owned by a resident of Washington—E. L. Barber's Hector. In Russian wolfhounds Ivan won, beating Ivan Romanoff, both are well known. Prokaza, though hardly in good shape, was alone in bitches. She can beat either of the dogs.

DEERHOUNDS.—(JAMES MORTIMER.)

Some old faces turned up here, Mr. Thayer sending down Robber Chieftain and Clansman, Breck Allen, who won at Baltimore, winning second to the former and beating the latter, with Wallace, v.h.c., loses to all in head, bone and coat. In bitches the well-known Wanda beat Theodora, both from the Lancaster Kennel.

POINTERS.—(J. M. TRACY.)

These classes showed up well, and the field trial element was well to the fore. Robert le Diable was placed over that sterling good pointer King of Kent in challenge heavy dogs. In bitches Belle Randolph was alone. Open dogs had a big class, and a very small ring made it a difficult matter to pick out the best of a rather indifferent lot, as far as bench-show form goes. Graphite proved the winner, and Nick of Ion was called up for second, he was at Baltimore; Glen Morgan, third, has also been described; and Trinke's Chief, Jr., v.h.c., loses to Tory White, reserve, in head and quality; Duke of Richmond, v.h.c., is big and coarse; Von Littlejohn, c., is a bit long-cast, light in eye, but head nicely formed, pasterns faulty. Tempest must have been overlooked. In bitches Woolton Game was well ahead over Bey R., commented on at Baltimore, and so was Cicely, third; Queen C. is rather dish-faced and was in poor shape for showing. In challenge light-weights Duke of Hessen was easily ahead of Tribulation, and Spot Sting was outclassed. Rosa May's nice head caught the judge's eye for first place, though she loses to Queen Fan in body; Stella B. a good third. In open class dogs Rip Rap, though as a field dog he has few superiors, is not a bench show dog, and his poor head, light eyes and pasterns are enough to defeat him, against such dogs as Inspiration, Flockfinder, and others behind him. Inspiration was given second; Prince Don, third, is a new one, is well ribbed and stands well all round, eye too full, and muzzle snipy. Bing of Kippen, v.h.c., is well known, and Daniel Derondin, who is throaty, hardly straight enough in front, has a fair body. Rock II., v.h.c., is too much cut out before the eye, is heavy in shoulder and a bit straight in stifle. Maid of Kent, a bitch of nice quality and a good performer in the sedge, won in the bitch class. She has hardly enough depth of chest, is a bit long cast, not right in front, head might be better, eyes light and is faulty in stop, is well ribbed. Fan Fan, second, has fewer faults, though is faulty in head, but is better in front and body. Eva B., third, is only fair—faulty in head and front. Delta, v.h.c., I did not see. Bloome II., though shown a bit above

herself, is a nice stamp, with a fair head; she has a well ribbed body and good loin, is straight in front and should certainly have been higher if not the winner. Lizzie Porter, he., first at Baltimore, was certainly badly treated; she has been described, beats the winner in head, body and legs. Lassie Bang is too open in feet and straight in shoulder. Puppy dogs saw Fritz the winner; is too long and narrow in head, otherwise fair. Second prize withheld. In bitches Trixie R., faulty in muzzle, has a bad light eye, but nicely formed body. Nellie Stauch, second I did not see, nor yet Star, reserve.

Hampstead Farm Kennels took the kennel special and their Woolton Game special for best bitch in the open class. Best bitch pup sired by Robert le Diable, F. S. Webster's Nautilus. Best dog or bitch sired by Dick Swiveller, J. R. Purcell's Nick of Iona. American Pointer Club special for best pointer with two of his get, King of Kent with Maid of Kent and Rip Rap. Best dog under 55lbs. owned south of the Ohio River, Charlottesville Kennels' Rip Rap. FOREST AND STREAM subscription: best pointer owned in Washington, F. S. Webster's Prince Don. Best three or more with a field trial record, Hampstead Farm Kennels, with Woolton Game, Robert le Diable and Duke of Hessen.

ENGLISH SETTERS—(J. M. TRACY).

In the absence of Cincinnati, Sir Tatton had a walkover in challenge dogs. The bitch class had no entry. A class of twenty-two next puzzled the judge. Roderigo, carrying his years well, was put down for first, he is well known, Roi D'Or, that won one of the Lorillard medals at Lexington, N. C., coming next, he is a bit snipy-muzzled, has a nice skull and is well set in other respects. Tory Lieutenant, a bit faulty in head, is well formed in body and legs. Edge Mark, reserve, is faulty in muzzle, a bit long cast, and is not ribbed up enough. Reverdy, vhc., was described at New York. Dick Boy, he., is short in muzzle and out of coat. Rayon, c., has been described before. Gath's Mark, though large and a bit coarse, deserved some letters. In bitches, Bessie Avert, second at New York, moved up one and took the blue, followed by Annie E., faulty in head, but nice body, legs and feet. Nellie Bly, third, loses in muzzle and eye, otherwise good. Anita, reserve, is a bit domy in skull, is small-sized and nicely formed. Boscobel is short in muzzle, also snipy. Dolly, c., is coarse. Puppies were nothing to speak of. Best kennel, F. R. Hitchcock. Best dog owned by a member of the club, J. H. Hunter's Nellie Bly. Best in the open class, J. M. Avert's Roderigo. Best three with field trial record, F. R. Hitchcock's team. English Setter Club medal to breeder of the best three over 12mos. old, Memphis & Avert Kennels. Best dog or bitch with field trial record, J. M. Avert's Roderigo. Best bitch owned by a member of the W. C. K. C., J. H. Hunter's Nellie Bly, also FOREST AND STREAM subscription for best owned in Washington.

IRISH SETTERS—(J. M. TRACY).

In the challenge dog class Max A. had to succumb to Kildare, though he is only beaten in head, and Nannie II. was alone in her class. Many of the winners in the open class are now so well known that it is needless to describe them. Beau Brummel again took premier honors, second going to Minstrel over O'Donovan Rossa, who is too thick in skull and short in muzzle, not of good type. Shammore, reserve, is too sharp in muzzle, excellent front and fair body. Limerick, vhc., has been commented on before and Tim's Dandy, c., was in the New York report. Glen Jarvis, second at Pittsburgh, certainly should have been in the money, he got nothing, neither did Scotland Chief. The Killarney Kennels entries were absent in all classes. In bitches that fine bitch Jeannette again came to the front, followed by Endora and Norma third, Bessie Glencho vhc. They are all familiar faces now and were well placed. In puppy dogs Sandy, first, has a nice head and is fairly well off otherwise. Sisona is faulty in head. Cloumel, third, has the same faults, not type enough. No bitch puppies entered. Kildare Kennels' took the two kennel prizes and also the best brace special. Best Irish setter owned in Washington—R. L. Jones's Limerick.

GORDON SETTERS (J. M. TRACY).

The challenge class was divided and Leo B. and Ivanhoe changed places, though the latter beats in head and color. In bitches, Becky Sharp again came out ahead of Blossom. In dogs, King Item beat Rexmont in muzzle and body; Don, third, loses in tan and head. Bob, reserve, is better in this respect and equally as good in body and legs. Eldorado, vhc., is faulty in head and tan; Scott, he., is hardly straight in front. Critic II. won in bitches. Best brace, Dr. Dixon's.

FOXHOUNDS—(JAMES MORTIMER).

Mr. Avert had his full pack and took in all the prizes; they were placed as at New Orleans, Fox and Rock first, Rob second, Nellie vhc., and Florah he. They are all of the racy American style of hound and according to their type show plenty of quality. Mr. Avert took the two specials for best foxhound and kennel. Duke was the only Chesapeake shown; he is as was stated at Baltimore, a poor one.

SPANIELS—(JAMES MORTIMER).

These classes did not fill well. Patsey O'Connor, of course, held up the honor of the water division. He really ought to be initiated. Boss III. was alone in challenge Clumbers, and Lady Belle and Johnny, Jr., were placed as at Pittsburgh under the same judge. In field spaniels' challenge class Baron had no difficulty in disposing of Lady, the Sussex; this left Beverly Negus to capture the blue ribbon in the open class, which he found pretty easy work with only Toady Obo, more of a cocker than a field dog, to contend against, the others being nondescripts, but of good working type. In the bitch class Rosedale Dolly, in future to be known as Saybrook Dolly, won over Miss Ben D'Or, who was shown too fat; Floss, third, is wavy-coated and faulty in muzzle. Black Duke was alone in challenge class. In open dogs Adam, a dog of nice quality, a little long and sharp in muzzle, but good otherwise, won over Snowball, described before; Jacco, third, is too curly in coat, light in body, and muzzle not square enough. Eve was an easy winner in bitches, with a look of great quality she combines a good cocker head, if her skull is a bit domy at present, she is hardly straight in front, but excellent for her age in body and coat; Zulu, second, has a fair head, skull nicely formed, but is a bit out in front; Maggie, third, is snipy in muzzle and poor in coat. In puppies Eve beat her kennel mate, better in head.

COLLIES—(JAMES MORTIMER).

There was quite a fair show of collies. The challenge dog class had Roslyn Wilkes at the head of affairs, Scottilla, his sire, is getting a bit seedy, Roslyn Dandy, third, did not look his best. In bitches Roslyn Clara, in the absence of others from her kennel, had a walkover, she was looking well. In open dogs Wellesbourne Hero had to give place to a young one from Wilmington, who is better in head and coat and shows a bit more quality; Hempstead Zulu, third, is well known, the others were poor. In bitches, Zulu Princess II. proved the winner, though it is a near thing between her and Roslyn Parole; Avena, third, has a fair head, is a bit faulty in front. In puppy dogs Duke scored again, and Glenfoyle, soft and woolly coated, but with a nice clean head, came second. Bitch puppies had a nice class. Avena, who will need some care when she gets home, as she was coughing, won nicely from Emelina, not quite right in muzzle and coat could be better; Gypsy Dublin Scot, reserve, shows too much stop; Primrose, vhc., is a bit coarse in skull. There were a good many absentees in these classes. Chestnut Hill Kennels won the kennel prize. Best puppy dog, F. R. Carswell's Duke. Best brace bred and owned in Washington, S. E. Rabbit's Roxie and Dublin Lassie. Best collie sired by one

of the Chestnut Hill stud dogs, Seminole Kennels' Roslyn Dandy. Best owned in Washington, D. C., R. W. Lee's Peter the Great.

POODLES—(JAMES MORTIMER).

Dexter again beat his old rival Beri, and Jim Jim, too woolly-coated, but fairly well formed, came next, and Nell, well known, vhc.

BULLDOGS—(JAMES MORTIMER).

Harper was here at home and reclined in a tastily decorated stall with his consort, the Graven Image, both winners in their classes. In open dogs a fairish specimen in Trot took the blue ribbon, but the others were hardly the thing and prizes were withheld. Best bulldog, F. W. Sackett's Harper.

BULL-TERRIERS—(JAMES MORTIMER).

In the challenge class Starlight again beat Enterprise, and in the open heavy dogs it was simply a repetition of Pittsburgh, Dick Whittington, Spottless Prince and Dufferin. In bitches there was a little trouble: through some misunderstanding Duchess of York should have been entered instead of Pickens, the Irish setter. The prize was awarded to her, though she was not in the catalogue, but afterward Frank Moulton, owner of Lady Melville, protested, and his protest was allowed, so all moved up a peg. Lady Melville took first; she was at Baltimore, and Queen Bendigo, losing in stop and shortness of face, was given second place. Loumout Kit coming next; though a bit cheeky she is better by far than the winner. In light weights Mr. Dick won over White Duke, who loses in body, loin and eye, though shape of head is better. In puppies two fair ones were shown. Best in the show, Frank Dole's Starlight; best bred in Washington, D. C., T. W. Moulton's Loumout Bess; best owned in Washington (2), T. W. Moulton's Lady Melville.

DACHSHUNDE—(JAMES MORTIMER).

A nice little show. Feldman K. again proved himself superior to Black Prince, who only got vhc., while Waldman, a rather coarse dog, came second; he is a bit better in crook and pasterns. In bitches Countess Lina changed places with Lizette, though the latter is better quality and is better in crook and let down Joan d'Arc, vhc., is too straight in front.

BASSET HOUNDS—(JAMES MORTIMER).

Bertrand, that has been winning right along, had a rebuff here when he met Babette, who, though shown so heavy in whelp that she almost touched the ground, and on this account ought to have been put back, is so much superior in quality, chest and coat, that were she in good shape the decision could not be questioned. Man, vhc., is out at elbows, faulty in crook and head. Krooks is too much of a good thing in front.

BEAGLES—(W. STEWART DIFFENDERFFER).

There was not the show here I expected to see. I suppose as the same judge officiates at Boston the entry will be strong there. Lou upheld the challenge honors. In open dogs Jim Simmons, second at Baltimore, beat Restless in body and compactness, losing in head to the other. Don was thrown out for being oversized. There will have to be some reliable standard made to measure these dogs with, as when it comes to a close fit there is always some doubt. Twintwo again won in bitches, followed by Mollie, who is a bit wider in front and coarse in ear, otherwise fair. Glenrose Topsy came in third, she was commented on at Baltimore, she has the best head in the class. Restless won the puppy prize. F. W. Chapman took the two kennel prizes and Restless took the N. B. C. special for best dog, and Twintwo that for best bitch.

FOX-TERRIERS—(JAMES MORTIMER).

Several new faces turned up in these classes, while the others take a needed rest. Lucifer and Dusky Trap had another innings, with the result as usual in favor of the former and Rachel accounted for Blenton Consequence. In dogs that good-bodied and good-legged Starden's Jack proved the winner. He is faulty in head, and Blenton Rackett's good front pulled him into second place, third going to Warren Laird, described at New York. Baby Trigger, also now well known, taking the reserve card. Warren Dandy, vhc., has a fair front, is faulty behind and shows too much "frill." Regent Brisk, a little full in brow and a bit wide in front, and ears not carried right, also got three letters. Le Logos and Radcliffe Spice, he., are well known. In bitches the judge was not so generous with the cards. Dono and Dominica occupied their accustomed positions, and Ebor Nettle, a little light in bone, but nicely put together, came in for third money. Verdict, vhc., and Blenton Enid, described at Pittsburgh, reserve. In puppy dogs Warren Tripper, third in novices at New York, easily beat Dean and Dominica was away ahead of anything in her class. Blenton Kennels took the kennel prize. Best terrier owned in Washington, D. C., P. A. Plant's Frisk. American Fox-Terrier Club specials: Best in show, Rachel. Best in open classes, Starden's Jack. Best in puppy classes, Oriole Kennels' Dominica. Tomboy Stakes, Oriole Kennels' Dominica. Best fox-terrier in puppy class, Oriole Kennels' Dominica. No wire-hairs shown.

IRISH TERRIERS—(JAMES MORTIMER).

The Park Kennels had competition to themselves, Mars again beating Dummurey, and Which and T'Other had their usual little game in the Welsh terrier class, Killston again beat Kilbord, as at Pittsburgh. In Scotch terriers, Fighter, a fair one, and one of friend Baillie's breeding, took the three letters. In Bedlington, Tick Tack again showed his superiority over Qui Vive, better in coat, ears, top-knot and arch of loin. Sir Stafford courted defeat after his experience at Pittsburgh, Lovett taking the ribbon once more and Tobac has a profuse coat, but not the sort that is wanted. Effie Dean and Bessie were placed as at Pittsburgh.

BLACK AND TAN TERRIERS—(JAMES MORTIMER).

Meersbrook Maiden, standing her travels exceedingly well, was alone in the challenge division. In the open the two cracks Beaconsfield and Sultan crossed swords again and the New York decision was upheld; as these two will very likely come under me at Boston, I reserve my opinion till then. Empress again very properly beat Broomfield Madge in bitches.

YORKSHIRE TERRIERS—(JAMES MORTIMER).

Toon's Royal again had an easy win, his nearest opponent, Dandy, is short of coat and head tan is too light. Venus here met Minnie York again, and as at New York, was placed well ahead of her kennel mate. In toy terriers Tiny had to give place to Cute, in better shape, and though lacking pencilings and thumb marks, has nice tan, is rather apple-headed and is well on the large size.

PUGS—(MISS A. H. WHITNEY).

Bob Ivy was alone in the challenge dog class, and Vesta succeeded in reversing the Pittsburgh decision, being placed over Bessie, Nellie Bly reserve. Prince II., owned by Miss Bisbing, who is a new exhibitor in the field but is starting well, beat Kash, Jr. in make up and head. Bitters, third, loses in ear and muzzle. Flip reserve. In bitches Miss Bisbing's Cassina, late of Dr. Cryer's kennel, won again, beating Lady Victoria but with little to spare. Rustic Kate loses in face, muzzle especially. That nice little puppy Little Bessie won in puppies. Dr. Cryer won the kennel special. Best pug dog owned in Washington, D. C., Mr. Traver's Flip. Best pair owned by a lady residing in Washington, Mrs. Traver's Flip and Dora. Best bitch owned in Washington, Mrs. Traver's Dora.

KING CHARLES SPANIELS—(MR. MORTIMER).

Topsy after trying several times managed to get in ahead,

this time beating his kennel mate, though in muzzle only. Flossie, vhc., off in tan and light eyed. Dandy is too long in muzzle, faulty in eye, but has a fairly good skull.

ITALIAN GREYHOUNDS.

Sprite here won well over Skip, beating in front and head. Fancy, vhc., has something the matter with her eyes, loses in skull and front. Best Italian greyhound owned by a lady residing in Washington, D. C. (2), Mrs. Webster's Skip. Mexican hairless had only one representative, Mrs. Hard's Pippo, who is now well known and seems to thoroughly enjoy a show. He won the special as well.

In the miscellaneous class a sort of Mexican spaniel won over an abbreviated Russian setter, one of Fred Kirby's Jokes, and Monte Carlo came in for third. The prizes not awarded at the time our going to press last week are appended:

GREYHOUNDS.—Puppies: 1st withheld; 2d, S. Wren Howard's Hector.

RUSSIAN WOLFHOOUNDS.—Dogs: 1st, Paul H. Hacke's Ivan; 2d, Wm. K. Wolf, Jr.'s Ivan Romanoff. Bitches: 1st, Paul H. Hacke's Kokoz.

DEERHOUNDS.—Dogs: 1st, John E. Thayer's Robber Chieftain; 2d, George McDougall's Brock Allen. Reserve, John E. Thayer's Chumsman. Very high com., Mrs. E. E. Irving's Wallace. Bitches: 1st, John E. Thayer's Wanda; 2d, John E. Thayer's Theodora.

FOXHOUNDS.—AMERICAN.—1st, J. M. Avert's Fox is Rock; 2d, J. M. Avert's Rob. Very high com. and high com., J. M. Avert's Nellie and Florah. ENGLISH.—No entries.

CHESAPEAKE BAY DOGS.—Dogs: 1st, Mrs. H. M. Walker's Duke.

IRISH WATER SPANIELS.—1st, B. F. Lewis's Patsy O'Conner. CLUMBER SPANIELS.—CHALLENGE.—1st, Mercer & Middleton's Boss III. OPEN.—1st and 2d, Mercer & Middleton's Lady Belle and Johnny, Jr.

FIELD SPANIELS.—ANY COLOR (OVER 25LBS.)—CHALLENGE.—1st, Geo. W. Folsom's Baron; 2d, R. P. Keasby's Lady. OPEN.—Dogs: 1st, R. P. Keasby's Beverly Negus; 2d, Swiss Mountain Kennels' Toady Obo. Bitches: 1st, R. P. Keasby's Saybrook Dolly (late Bessie); 2d, D. A. Demmon's Mary; equal 2d, R. P. Keasby's Miss Ben d'Or; 3d, W. C. Kimpton's Bloss.

COCKER SPANIELS.—ANY COLOR.—CHALLENGE.—1st, Luckwell Douglass's Black Duke. OPEN.—Dogs: 1st, C. T. Taylor's Adam; 2d, Swiss Mountain Kennels' Snowball; 3d, H. T. Wright's Jacco. Bitches: 1st, C. T. Sackett's Eve; 2d, G. V. N. Ogden's Zulu; 3d, Thos. S. Kimpton's Maggie. Puppies: 1st and 2d, C. T. Sackett's Eve and Adam.

COLLIES.—CHALLENGE.—Dogs: 1st and 2d, Chestnut Hill Kennels' Roslyn Wilkes and Scottilla. Reserve, Seminole Kennels' Roslyn Dandy. Bitches: 1st, Chestnut Hill Kennels' Roslyn Clara. OPEN.—Dogs: 1st, F. R. Carswell's Duke; 2d, Chestnut Hill Kennels' Wellesbourne Hero; 3d, Hempstead Farm Kennels' Hempstead Zulu. Very high com., Ralph W. Lee's Peter the Great. High com., Linkwood Kennels' John Bright and Seminole Kennels' Scotch Laddie Don. Bitches: 1st, Hempstead Farm Kennels' Zulu Princess II.; 2d, F. W. Sackett's Roslyn Parole; 3d, F. R. Carswell's Avena. PUPPIES.—Dogs: 1st, F. R. Carswell's Duke; 2d, McVicar and Appleby's Glenfoyle. Reserve, Mrs. A. H. Lee's Vena. Very high com., Chas. Scherer's Robin Adair. Com., Mr. J. Edgar Smith's Sandy. Bitches: 1st, 2d and very high com., F. R. Carswell's Avena, Emiline and Primrose. Reserve, Austin Herr's Gypsy Dublin Scot. High com., Wm. E. Potbury's Flora VI. and S. E. Rabbit's Dublin Lassie.

POODLES.—1st and very high com., A. W. Purbeck's Dexter and Nell; 2d, Louis A. Biddle's Beri; 3d, Miss Bessie Stewart's Jim Jim.

BULLDOGS.—CHALLENGE.—1st, F. W. Sackett's Harper. OPEN.—Dogs: 1st, Columbia Athletic Club's Trot. Bitches: 1st, Mr. F. W. Sackett's The Graven Image.

BULL-TERRIERS.—CHALLENGE.—Bitches: 1st, Frank F. Dole's Starlight; 2d, Wm. F. Holbein's Enterprise. OPEN.—Dogs (over 30lbs.): 1st, E. L. Steven's Dick Whittington; 2d, Wm. F. Holbein's Spottless Prince; 3d, Wm. J. Bryson's Dufferin. Bitches: 1st, Frank W. Moulton's Lady Melville; 2d, Frank F. Dole's Queen Bendigo. 2d, F. W. Moulton's Loumout Kit. OPEN (20lbs. and under).—1st and 2d, F. F. Dole's Mr. Dick and White Duke. Puppies: 1st, A. G. Gedney's Loumout Benville; 2d, Frank W. Moulton's Loumout Bess.

DACHSHUNDE.—Dogs: 1st, Mount Washington Kennels' Feldman K.; 2d, Arthur Hennehoelter's Waldman. Very high com., Jacono Kennels' Black Prince. Bitches: 1st, Mount Washington Kennels' Countess Lina; 2d, Irouquois Kennels' Lizette. Very high com., E. A. Martices's Joan of Arc.

BASSET HOUNDS.—1st and high com., E. W. Jester's Bahotte and Krooks; 2d, C. B. Gilbert's Bertrand. Very high com., F. M. Buckingham's Man.

IRISH TERRIERS.—1st and 2d, The Park Kennels' Mars and Dummurey.

WELSH TERRIERS.—1st and 2d, Prescott Lawrence's T'other and Which.

SCOTCH TERRIERS.—1st, North Fields Yorkshire Kennels' Kilstor; 2d, F. F. Dole's Kilbord. Very high com., E. W. Jester's Fighter.

BEDLINGTON TERRIERS.—1st, W. H. Russell's Tick Tack; 2d, M. A. Theberge's Qui Vive.

SKYE TERRIERS.—Dogs: 1st, Woodbury Kennels' Lovett; 2d, Clifford A. Shinn's Sir Stafford. Com., Joseph Prather's Tobac. Bitches: 1st, S. H. Sanderson's Effie Dean; 2d, C. A. Shinn's Bessie.

BLACK AND TAN TERRIERS.—OVER 7LBS.—CHALLENGE.—1st, Rochelle Kennels' Meersbrook Maiden. OPEN.—Dogs: 1st, Rochelle Kennels' Broomfield Sultan; 2d, North Fields Yorkshire Kennels' Beaconsfield. Bitches: 1st, North Fields Yorkshire Kennels' Meersbrook Empress; 2d, Rochelle Kennels' Broomfield Madge.

YORKSHIRE TERRIERS.—Dogs: 1st, North Fields Yorkshire Kennels' Toon's Royal; 2d, W. R. Traver's Dandy. Bitches: 1st and 2d, North Fields Yorkshire Kennels' Venus and Minnie York.

TOY TERRIERS.—OTHER THAN YORKSHIRE.—UNDER 7LBS.—1st, B. E. Braden's Cute; 2d, Woodbury Kennels' Tiny.

PUGS.—CHALLENGE.—Dogs: 1st, M. H. Cryer's Bob Ivy. Bitches: 1st and 2d, M. H. Cryer's Vesta and Bessie. OPEN.—Dogs: 1st, Miss Bisbing's Prince II.; 2d, Seminole Kennels' Kash, Jr.; 3d, Graham Pearce's Bitters. Reserve, Mrs. W. R. Traver's Flip. Bitches: 1st, Miss Bisbing's Cassina; 2d, M. H. Cryer's Lady Victoria; 3d, Wm. Wamach's Rustic Kate. Reserve, M. H. Cryer's Little Bessie. Very high com., Mrs. W. R. Traver's Dora. Puppies: 1st, M. H. Cryer's Little Bessie.

KING CHARLES SPANIELS.—1st and 2d, Robert Paul Forshaw's Topsy and Ruby. Very high com., Woodbury Kennels' Flossie. High com., J. M. Soule's Dandy.

JAPANESE SPANIELS.—2d, Austin Herr's Toma. ITALIAN GREYHOUNDS.—1st, Mt. Washington Kennels' Sprite; 2d, Mrs. F. S. Webster's Skip. Very high com., H. Walker Tucker's Fanny.

MEXICAN HAIRLESS.—1st, Mrs. L. G. Hurd's Pippo.

MISCELLANEOUS.—1st, Lieut. T. G. Fillette's Daisy; 2d, Woodbury Kennels' Czar II.; 3d, Miss May Huyck's Monte Carlo.

RECORDS OR MERIT.—Sheffield, England.—*Editor Forest and Stream*: Your issue of Feb. 19 has just come to hand and I am greatly surprised to find Dr. Foote's most unfair attack upon the black and tan terrier Beaconsfield. From gentlemen who profess to have the fancy at heart and desire to see improvement and progress made in a breed we expect something in a different spirit from his letter, and I am pleased to see you draw his attention to the Oldham show and the reports of the Palace show, 1890. I think I am correct in saying that it was the only time Beaconsfield and Sultan met and they were placed as follows: Beaconsfield first, Dewy Bess second, Sultan third. Now if this is the best performance of what the Doctor styles "the best of Mr. Ellis's superb kennel," it is certainly making Beaconsfield far away the best dog, unless Mr. Astley was a long way out in his judgment, and if the Doctor also refers to the report of this show in our leading canine papers he will find the award entirely agreed with. I am awaiting results of the judging at New York, and then probably (with your permission) I shall have more to say in reference to the Doctor's flowery announcement that Sultan is coming.—RICHARD TOWN.

THE LYNN DOG SHOW.

THIS show opened this morning in weather not at all propitious, a nasty drizzly rain making things very uncomfortable. The Music Hall, where the show is held, is about the worst building one could think of for a dog show, the flooring being of course on a theatrical slant and every six feet raised above the other. There are 343 entries in the catalogue, and this is just about forty more than the hall can comfortably hold. St. Bernards are in a bad place, and so are setters and pointers; in fact the club is working under many disadvantages, but they seem the right sort of fellows and deserve every encouragement. The quality of the dogs present is excellent, and competition in some of the classes very hot, especially beagles, fox-terriers and bull-terriers. Mastiffs have nothing very striking, excepting of course Cambrian Princess and Lady Phyllis. In St. Bernards Mr. Sears has it all his own way, Mr. Moore's kennel not being entered. Deerhounds are an excellent show, all the entries coming from Mr. Thayer's kennel, the Heath, Hyland and Fleet View & Reading Kennels are well represented here in pointers. English setters are only fairly well filled, and Irish setters have most of the regulars. Gordons are, with the exception of King Item and Becky Sharp, rather poor. Great Danes show up well, New York winners being on hand. Mr. Wiley is here with his spaniels, and Clumber classes are well filled. Beagles are here in force, the local kennels showing up well. Little Duke was beaten in the challenge dog class by Frank Forest, which created no little excitement, and Twintwo, under Mr. Mayhew, had to go back to third place.

Collies are only moderate, Kilmarnock Kennels being the principal exhibitors. Bulldogs have the regular winners, but the fox-terrier classes are excellent, Mr. Harris showing most of his kennel. Frank Dole's new dog Top Sparkle's tail did not please the judge and he got nothing; he is quite a good stamp. Fox-terriers are very strong, but competition lays between the Thayer and Logan kennels. Mr. Comstock shows his new black and tans, which make a favorable impression. Yorkshires of course are good, for this is Mr. Symonds's own doorstep, and so are the other classes of terriers. Judging did not commence till after 12 M., as the train from New York on which the three judges came up was delayed by a broken bridge. About 2 P. M. all the judges, exhibition and press representatives, in all about 80 people, sat down to a bountiful and extremely enticing dinner at the Revere House, tendered by the club, and the courtesy was much appreciated. The following is a list of awards made up to 6 P. M. this evening:

MASTIFFS.—CHALLENGE—Dogs: 1st, Wyoming Kennels' Sears' Monarch.—OPEN—Dogs: 1st, O. Kammern's Duke II.; 2d, E. E. Dearborn's Don; 3d, L. M. Ranger's Ranger's Rex. Very high com., J. G. Whorff's Lord Rochester. *Bitches:* 1st and 2d, W. C. Sanborn's Cambrian Princess and Lady Phyllis; 3d, G. W. Glazier's Madge Miffling. Very high com., Mrs. W. C. Sanborn's Lady Beatrice. High com., F. W. Connolly's Meg Merrilies.

ST. BERNARDS.—ROUGH-COATED.—CHALLENGE—Dogs: 1st, Wyoming Kennels' Phylommon, Jr. *Bitches:* 1st, Wyoming Kennels' Channon Lady Wellington.—OPEN—Dogs: 1st, Wyoming Kennels' Lothario; 2d, Albert Bernard's Nero; 3d, Thomas Boomer's Prince Draco. *Bitches:* 1st and 2d, Wyoming Kennels' Plevna and Lady Adelaide; 3d, Col. J. Ruppert, Jr.'s Ellen Terry. *Puppies:* 1st, R. C. Bachelier's Grover Cleveland. **SMOOTH-COATED.**—CHALLENGE—Dogs: 1st, Daniel Mann's Cleopatra.—OPEN—Dogs: 1st, M. J. McCall's Nellie Bonivard. *Bitches:* 1st, Col. J. Ruppert's Empress of Ootocook.

GREYHOUNDS.—CHALLENGE—1st, W. J. Middleton's The Lady Belle.—OPEN—Dogs: 1st, A. W. Purbeck's Gem of the Season; 2d, W. J. Middleton's Demon; 3d, D. J. Donohue's Nero. *Bitches:* 1st, Woodhavan Kennels' Spinaway; 2d, W. J. Middleton's Spice; 3d, D. J. Donohue's Belle. *Puppies:* 1st, D. J. Donohue's Bruno.

DEERHOUNDS.—CHALLENGE—Dogs: 1st and 2d, J. E. Thayer's Robber Chieftain and Clansman. *Bitches:* 1st and 2d, John E. Thayer's Kamona and Wanda.—OPEN—Dogs: 1st, 2d and 3d, J. E. Thayer's Douglas, Hillside Warrior and Hillside Harold. *Bitches:* 1st and 2d, J. E. Thayer's Hillside Ruth and Hillside Sylvia.

GREAT DANES.—CHALLENGE—1st, Teutonia Kennels' Irene.—OPEN—Dogs: 1st and 2d, Big Ground Kennels' Pascha and Nero. *Bitches:* 1st and 2d, High Ground Kennels' Flora Florida and Flora; 3d, Harrison & Lawson's Fitz.

DACHSHUNDE.—1st, J. Lewis's Feldman; 2d, Mr. Mannise's Joan of Arc; 3d, B. Cannon's Waldmann.

BASSET HOUNDS.—1st, C. B. Gilbert's Bertrand. **BEAGLES.**—CHALLENGE—Dogs: 1st, Forrest Beagle Kennels' Frank Forrest; 2d, H. Bennett's Little Duke. *Bitches:* 1st, Glenrose Beagle Kennels' Lou.—OPEN—Dogs: 1st, E. Ledyard's The Rambler; 2d, E. Greenleaf's Sunday; 3d, Glenrose Beagle Kennels' Restless. *Bitches:* 1st, W. A. Small's Opsy S.; 2d, Forrest Beagle Kennels' Forrest Queen; 3d, Glenrose Beagle Kennels' Twintwo. Reserve, E. C. Tarr's Lady. High com., Waldinfield Kennels' Lonesome.—UNDER 12IN.—1st, Bradford S. Turpin's Clyde; 2d, Glenrose Beagle Kennels' Bannerqueen.—*Puppies:*—Dogs: 1st, witheld; 2d, Forrest Beagle Kennels' Forrest Prince. *Bitches:* W. M. Sanborn's Daisy II.

COLLIES.—CHALLENGE—Dogs: Chestnut Hill Kennels' Roslyn Wilkes.—OPEN—Dogs: 1st, Kilmarnock Collie Kennels' Resown; 2d, Hempstead Farm Kennels' Hempstead Zulu; 3d, Kilmarnock Collie Kennels' Kilmarnock Chief. Very high com., Kilmarnock Collie Kennels' Kilmarnock Ghibbie. High com., Kilmarnock Collie Kennels' Box. Com., Kilmarnock Collie Kennels' Kilmarnock Mac and Kilmarnock Soft. *Bitches:* 1st, Hempstead Farm Kennels' Zulu; 2d, Princess II.; 3d, Kilmarnock Collie Kennels' Kilmarnock Stella; 4d, Kilmarnock Collie Kennels' Kilmarnock Winnie. Reserve, F. R. Carswell's Miss Nancy. Com., Kilmarnock Collie Kennels' Kilmarnock Pearl. *Puppies:* Prizes withheld.

BULLDOGS.—CHALLENGE—1st, F. W. Sackett's Harper. OPEN—Dogs: 1st, H. Kendall's Bathor; 2d, John Coles' Carlsbrook. *Bitches:* 1st, F. W. Sackett's The Graven Image; 2d, H. D. Kendall's Dolly Tester.

BULL-TERRIERS.—CHALLENGE—OVER 25LBS.—1st, Frank F. Dole's Starlight. OPEN—Dogs: 1st, Frank F. Dole's Dick Whittington; 2d, H. Fred Church's Prince Bendigo; 3d, H. A. Harris's Greenhill General. Very high com., W. J. Bryson's Dufferin. High com., Northfield Yorkshire Kennels' King of Hearts. *Bitches:* 1st, 2d and 3d, H. A. Harris's Violet, Mr. Queen, and Count's Nell. UNDER 25LBS. CHALLENGE—No entries. OPEN—Dogs: 1st, H. A. Harris's Little Donovan; 2d, Abbott Lawrence's Silver Nugget. *Bitches:* 1st, H. A. Harris's Stanley Belle. *Puppies:* 1st, 2d, and very high com., H. A. Harris's Little Donovan, Stanley Belle, and Stanley Bill.

PUGS.—CHALLENGE—1st, Roger T. Harrison's Nellie Bly. OPEN—Dogs: 1st, Associated Fanciers' Little Jewel; 2d, Mrs. J. Smith's Bridge. *Bitches:* 1st, Mrs. W. S. Clark's Lena; 2d, R. F. Harrison's Nellie M.

FOX-TERRIERS.—CHALLENGE—Dogs: 1st, J. E. Thayer's Baby Mixer; 2d, Regent Kennels' Dusky Trap. Reserve, J. A. Logan's Blemton Volunteer. *Bitches:* 1st, Regent Kennels' Blemton Consequence; 2d, J. E. Thayer's Richmond Dazzle. Reserve, J. A. Logan, Jr.'s Blemton Brilliant. OPEN—Dogs: 1st, Woodside Kennels' Stander's Jack; 2d, J. E. Thayer's Russley Joker; 3d, Warren Vexer. Reserve and very high com., Northfield Yorkshire Kennels' Endcliffe Spice. Very high com., John A. Logan, Jr.'s Le Logos. *Bitches:* 1st, 2d and very high com., John A. Logan, Jr.'s Donna, Dominica and Verdick; 3d, Woodside Kennels' Ebon Nettle. Reserve, John E. Thayer's Rosa Canina. *Puppies:* 1st, J. A. Logan, Jr.'s Dominica; 2d, J. E. Thayer's Hillside Rachel.

BLACK AND TAN TERRIERS.—Dogs: 1st, The Park Kennels' Salisbury; 2d, Joseph O. Savore's Pring. *Bitches:* 1st and 2d, The Park Kennels' Queen III. and Louie; 3d, J. J. Lang's Rochelle.

SKYE TERRIERS.—1st, Clifford A. Shinn's Sir Stafford.

YORKSHIRE TERRIERS.—CHALLENGE—Dogs: 1st, Northfield Yorkshire Kennels' Tom's Royal.—OPEN—Dogs: 1st and 2d, Northfield Yorkshire Kennels' Fishpool Gem and Prince A. I. *Bitches:* 1st and 2d, Northfield Yorkshire Kennels' Venus and Minnie York.

SCOTT TERRIERS.—1st, Northfield Yorkshire Kennels' Kilstori; 2d, F. F. Dole's Kilboard.

BEDFORD TERRIERS.—1st, Wm. H. Russell's Tick Tack. **IRISH TERRIERS.**—Dogs: 1st, The Park Kennels' Mars. *Bitches:* 1st, The Park Kennels' Dummurey; 2d, Trimont Kennels' Nora S.; 3d, Northfield Yorkshire Kennels' Carey.

POODLES.—CHALLENGE—1st, A. W. Purbeck's Dexter.—OPEN—Dogs: 1st, S. Biddle's Berri. *Bitches:* 1st and 2d, A. W. Purbeck's Nell and Volga.

KING CHARLES SPANIELS.—1st, T. Plant's Cockney Charley; 2d, Northfield Yorkshire Kennels' Belle.

MISCELLANEOUS.—OVER 25LBS.—1st and 2d, T. Plant's Nellie and Stubbs.—UNDER 25LBS.—1st, Harrison & Lawson's Jumbo; 2d, R. Weiner's Smasher; 3d, R. M. Hook's Topsey. Reserve, J. B. McCallach's Miggles.

SCHIPPERKES.—1st and 2d, F. W. Connolly's Prince, Jr., and Dorothy Stanley.

TUESDAY, March 24.

[Special Dispatch to Forest and Stream.]

LYNN, Wednesday noon, March 25.—Last night the attendance was quite good and the managers are well satisfied. The weather is charming, and everything is running smoothly but slowly. Dr. Hoon began with his classes at 10 A. M., but is going on the slow and sure principle, the pointer light-weight bitch and open English setter dog classes giving him something to think about. Mr. Mayhew has finished his specials, but as they follow in most cases the regular awards they can be left over. The Doctor has foxhounds, spaniels, Chesapeakes and round-heads to do yet; and judging will not be completed till night.

POINTERS.—CHALLENGE—Dogs: 1st, Heath's Laucelot. *Bitches:* 1st, Fleetview Kennels' Belle Randolph.—OPEN—Dogs: 1st, Heath's Pointa; 2d and 3d, Biddle's Glenmorgan and Wizard. Reserve, Caswell's Ned. Com., Foster's Don F. *Bitches:* 1st, Biddle's Cicely; 2d and 3d, Stoddard's Bess's Beauty and Beauty.—**LEGH-WRIGHT.**—CHALLENGE—Dogs: 1st, Hempstead Farm Kennels' Duke of Hessen; 2d, Stephensons' Tribulation. *Bitches:* 1st, Heath's Sally Brass.—OPEN—Dogs: 1st, Hyland's Ossing; 2d, Taylor's Inspiration. Very high com., John's Mack. High com., Stoddard's Sancho Dash. *Bitches:* 1st, Heath's Miss Mealy; 2d, Hyland's Lady Graphic; 3d, Heath's Bloome. Reserve, Neal's Mamzelle. High com., Rice's Naso's Belle and Gifford, and Finney's Patti of Portland. Com., Owen's Inc.—**PUPPIES.**—Dogs: 1st, witheld; 2d, Phillip's Nick of Graphic. *Bitches:* 1st, witheld; 2d, Leslie's Cora Lynn. A good pup and well deserving first; very wrong.

ENGLISH SETTERS.—CHALLENGE—Dogs: East End Kennels' Sir Taiton.—OPEN—Dogs: 1st, Brown's Edge Mark; 2d, Lovell's Glen Belton; 3d, Coburne Kennels' King Reserve. Colonel Kennel's Royal Kent. Very high com., Lewis's Princeton Lane and Haine's Gus Bondhu. High com., Joe Lewis's Tony Gladstone. Com., Gifford's Prince Harry and Brown's Livingstone. A good class. *Bitches:* 1st, Hartmann's Albert's Nellie; 2d, Ives's Adas; 3d, Clark's Jessie Noble. Reserve, Moore's Katie Howard. Very high com., Lovell's Lady Snowflake.

IRISH SETTERS.—CHALLENGE—Dogs: 1st, Armour's Max A.; 2d, Kildare. *Bitches:* 1st, Ruby Glenmore; 2d, Whittle.—OPEN—Dogs: 1st, Scanlon's Inchiquin; 2d, Gilchrist's Dan Mybica; 3d, Kildare Kennels' Beau Brummel. Reserve, Gaffney's Sunset. Very high com., Garland's Duke. High com., Scanlon's Red Nat and Brewer's Huntington. Com., Nelley's June. *Bitches:* 1st, Logan's Jeannette; 2d, Glendyne Kennels' Mollie Glendyne; 3d, Gaffney's Hammett. High com., Gaffney's Gipsy Bell, Gannon's Daisy and Finney's Belle. This is all up to press time.

H. W. L.

CHAMPION DICK SWIVELLER AT PITTSBURGH.

Editor Forest and Stream:

I wish to call your attention to the farce that occurred at Pittsburgh show last week, in which my champion Dick Swiveller was disqualified and refused competition in his class because the attendant veterinarian claimed he had the mange.

Now, I do not know what standing this vet. has in Pittsburgh or any other part of the country, but I have taken the trouble and gone to the expense to prove beyond all doubt that the same vet. passed an opinion wrongfully and with great injury to me and my kennel. On this basis, that if Dick Swiveller had the mange others of my kennel must be likewise affected, as the disease is contagious and would soon spread all through it. The following certificates from prominent veterinarians and M.D.s. prove beyond all question that this Pittsburgh veterinarian either does not know his business or else he made an unpardonable and damaging error in claiming to be what was not the case.

Mr. Harry L. Goodman, who had charge of my dogs at this time, made a strong protest against what was a very unjust decision, but he could get no satisfaction from any source; consequently Dick Swiveller could not be shown, which proved a great disappointment to thousands of people, as he and other members of my kennel had been largely written up by the local papers. Following I give you the certified opinions of every veterinarian and M.D. that has examined champion Dick Swiveller, thus proving beyond all question that I have been very badly treated.

First (copy)—Pittsburgh, Pa., U. S. A., March 12, 1891: "I certify that I have carefully examined the Irish setter Dick Swiveller on March 10, and again on March 12, 1891, and that I unhesitatingly say that he has no symptom, sign, or indication of having any contagious, infectious or communicable disease. I further certify that he has not any symptom or sign that would justify any one acquainted with the diseases of dogs and the pathology of their diseases, to question the innoxiousness of the very slight dermal troubles with which he is affected."—J. B. GRIMES, M.D.

Dr. Grimes is an entire stranger to me, hence his testimony must be unbiased. He is attendant on Mr. Paul Hacke's Russian wolfhounds. This certificate is corroborated by Mr. Wade, who examined Dick Swiveller and pronounced him not diseased.

You will note he was examined on the very day he was disqualified, viz: March 10. The second certificate is from R. J. Withers, M.D., V.S., of Chicago, a man of the strictest integrity and a veterinary of the highest standing:

Second (copy)—Chicago Veterinary College, 2337 and 2339 State street, Chicago, March 16, 1891: "This is to certify that I have this day examined the Irish setter champion Dick Swiveller, and find that he is free from mange or any other contagious disease."—R. J. WITHERS, M.D., V.S.

The third is even more clinching, being a microscopic examination by Dr. F. S. Billings, V.S., who is authority.

Third (copy)—Chicago, Ill., March 16, 1891: "Harry L. Goodman, of Auburn Park, brought to me this day the champion Irish setter dog Dick Swiveller, which presented a slight cutaneous eruption of the skin of the nose, which had some of the appearance, though nothing of the essential characteristics, of mange. I made a most careful microscopic examination of the pus of the few pimples present, and hereby certify that the dog has not any form of a contagious cutaneous disease known as mange, as neither sarcoptes mites nor acarus folliculorum were to be found after repeated examinations."—FRANK S. BILLINGS, M.D., Pathologist of the Chicago Veterinary College. Late director of the Patho-Biological Laboratory of the State of Nebraska.

Is there no recourse for such an unjust decision? It may be a trifling affair to some, but to me, I assure you, the damage is very great and entirely uncalled for. Mr. Goodman also informs me that dogs that really had the mange, belonging to other parties, and in other classes, were allowed to be benched and compete for prizes. He also states that several dog owners were of the opinion that the disqualification was entirely uncalled for. I have failed to find any one that thought the decision just, and the evidence proves that champion Dick Swiveller has neither mange nor any other contagious disease.

GEO. H. COVERT.

CHICAGO, Ill.

BOSTON SHOW.—New England Kennel Club, Boston, March 24.—Editor Forest and Stream: Please find below a list of entries: Mastiffs 21, St. Bernards 48, great Danes 7, deerhounds 17, greyhounds 13, Chesapeake Bay dogs 5, pointers 59, English setters 48, Irish setters 41, Gordon setters 30, spaniels 38, beagles 35, foxhounds 10, collies 39, poodles 7, bulldogs 9, bull-terriers 24, round-headed bull-terriers 25, fox-terriers 63, Dandie Dimont terriers 5, Scotch terriers 2, Irish terriers 11, black and tan terriers 16, Skye terriers 1, Yorkshire terriers 4, pugs 9, toy spaniels 8, Schipperkes 4, and miscellaneous 16; total 629.—**BENCH SHOW COMMITTEE.** The American Fox-Terrier Club offer \$10 for best fox-terrier in the show, same in open class; \$25 for best exhibit; also the Home-bred Puppy Stakes of 1891 and cup and Yankee Stakes of 1891.

DOG CHAT.

A SHORT time ago Mr. J. W. Munson of St. Louis had a fine young dog stolen which he valued very highly. Although a heavy reward has been offered, no trace of the stolen dog has been found. In this connection a prominent sportsman of St. Louis would like to have FOREST AND STREAM agitate the matter of the formation of a protective association for the purpose of recovering stolen dogs. His idea is that all owners of dogs in the West should join into an association with a nominal fee of say 25 cents per annum. This would give a sufficient fund to distribute photographs or cuts of any stolen dog to every member, and by this means it is thought that stolen dogs could be recovered. As it is now, the stealing of valuable hunting dogs goes on almost unchecked. The plan proposed seems feasible, and it is strange that such an organization has not been formed before this. The fees might be made higher still, and the purposes of the club include the prosecution of the poison fiend.

Mr. J. S. Hamaker, of Wyalusing, in writing to us of the death of his English setter King's Rocket (17,342), which died March 13 from distemper caught at the Elmira show, complains of the management not having had a vet. to examine the dogs. His dog was in splendid shape when he arrived at the show, but was taken sick after winning first and special.

The Mascoutah Kennel Club announce the following additional specials: Guy N. Virtue offers \$10 for the best pair (dog and bitch) rough-coated St. Bernards, owned and exhibited by a lady a member of the St. Bernard Club of America.

The Duquesne Kennel Club have hardly cleared the building of their last show before they claim dates for their next one, March 15 to 18, 1892. Nothing succeeds like success, and we trust that next year they may have as good a show as that just past. They deserve it.

Mr. Chas. D. Cugle, secretary of the Bulldog Club, writes us that the souvenir catalogue of the Bulldog Club is now ready for delivery, and will be sent post paid on receipt of price, 50 cents for each copy, upon application to P. O. Box 602, Baltimore, Md., or John Matthews, 333 East Twenty-sixth street, New York.

There was a notable funeral at Bucyrus, O., last week. Frank, the pet dog of the men employed on the Toledo & Ohio Central Railroad, died last week. His body was placed in a handsome casket, and on the day of the funeral an engine and car were draped in black, the casket was placed in the car, and the train bore Frank's remains to the grave, while all the engine bells in the yard were tolled. Frank did not, in life, rely upon his good looks for recognition, but as he had barked in a neighborly way and wagged his tail socially among the trainmen for years, he completely won their hearts by his happy disposition.

The Cleveland Kennel Club have divided the classes for King Charles and Blenheim spaniels: Class 113, \$10 and \$5. Class 113½, bitches, \$10 and \$5. Class 114, dogs, \$10 and \$5. Class 114½, bitches, \$10 and \$5. They also have received the following additional specials: \$5 cash for best collie in show, dog or bitch; \$5 cash for best collie bitch in open class; \$5 cash for best Irish setter in open class, dog or bitch; \$5 cash for best bull-terrier in show, dog or bitch; and more to come. Entries for this show close April 1.

We understand that Mr. Hollowill had nothing to do with the recent purchases in England for the Northfield Kennels. Mr. Toon buying them for Mr. Symonds on his own judgment.

The Mascoutah managers have an eye to aesthetics; a member offers \$10 for the most tastefully decorated stall or stalls at the coming show.

We have received lately several inquiries for the addresses of reliable trainers, and we therefore take pleasure in recommending Horace Smith, whose training kennels are situated at Monroe, N. C. He is in the midst of good game country, and judging from the testimonials he has received from gentlemen who have trusted dogs to his care, there is little doubt that he is the right man in the right place.

Melac will have to look to his laurels for we hear that a noted great Dane came over on the S. S. Fulda last Saturday, consigned to W. E. Hagans, of Chicago. He has, under the name of Sandon, won in Germany numerous prizes and at Berlin last May he took four firsts from among 150 competitors. He will now be known as Imperator and is considered one of the tallest great Danes on the bench, 35in. is given as his height. He is fawn colored with a black mask and is three years old. He will, we understand, be shown at Boston next week.

The last day of the Washington dog show must have been more interesting than the others, if that was possible. The hall was graced by the presence of the President's wife and Sara Bernhardt. Mrs. Harrison was accompanied by several ladies and seemed to take great interest in the dogs, but did not stay very long. On the contrary the celebrated French actress devoted considerable time to the show and accompanied by several members of her company, found much amusement in patting the different dogs. The crowd on the last day is said to have been greater than on any other and of course the venture is a pronounced success.

The Charlottesville Kennels we hear during the show disposed of that sterling good pointer and sire of good field dogs, King of Kent to the W. K. C., for something over \$1,000. The president, Mr. Stinemetz, also disposed of a pointer pup for \$100.

"Wash" Coster, so well and favorably known to all field trial men as the secretary of the Eastern Field Trials Club, has been distinguishing himself before the traps. The other day he won the final shoot for a superb trophy given by the Eastern New York Shooters' League. As he had already won it twice the medal becomes his own property. The medal is a massive gold one.

The Toronto Kennel Club was finally organized on Thursday last. There was a large attendance at the Rossin House, and every one was very much interested in the proceedings. The provisional committee presented a constitution which was adopted after several amendments. Membership is limited to Toronto and suburbs, and the annual fee is \$3 with an initiation fee of \$3. Quarterly meetings will be held on the third Thursdays of March, June, September and December. Officers were elected as follows: Pres., R. W. Boyle; First Vice-Pres., J. S. Williams; Second Vice-Pres., J. G. Mitchener; Sec'y., C. A. Store. Executive Committee, Robert Wright, G. C. Taylor, Robert Junior, R. E. Forsyth, H. P. Thompson. The executive will choose a patron, treasurer, honorary veterinary surgeon, and three additional members of the committee. Votes of thanks were passed to Mr. R. Wright for his services in the organization of the club, and to the proprietors of the Rossin House.

The Tattersall sale of dogs at Philadelphia is creating considerable interest among dog men all over the country,

HEMPSTEAD FARM KENNELS' POINTER DUKE OF HESSEN.

First in light-weight challenge class at New York show.

J. E. DAGER'S ENGLISH SETTER CINCINNATUS.

First in challenge class at New York show.

There are already about 115 dogs entered, and some of them have won many honors on the bench. Among the St. Bernards we find the names of Marquis of Stafford and Prelate. Quasimodo, the bulldog, is also on sale. In collies the Chestnut Hill Kennels have Maney Trefoil, Wellesbourne Hero, Wellesbourne Flurry and others. Clifton Maid is also to be put up. Mauprat and Chef, the bassets, will also be brought to the hammer, and so will the Irish terrier Roslyn Murphy and Kathleen. Little Jewel, the pug, and several Schipperkes will also be sold to the highest bidder. Nearly every breed is represented, and if good prices are realized there is every likelihood that such sales will become regular in the future.

Mrs. Smyth, the owner of the Swiss Mountain Kennels, has, through Mr. Watson, purchased a bitch by Alton out of a bitch by Rhoderick Dhu, the sire of Hepsy, from Mr. Sydney W. Smith. She has been bred to Scottish Prince. This enthusiastic fancier has also bought a bitch from Mr. Schillocock, of Birmingham, England, and bred to Lord Bute. Mrs. Smyth is determined to have the best blood and we trust her venture will prove successful.

At the Washington show Mr. J. H. Winslow purchased the nice looking pointer bitch Bloomo III. and a puppy by Dick Swiveller, 10 months old.

Mr. James Watson will only get back from his European trip just in time for the Boston show, for he sails on the Umbria Saturday next.

We deplore the fact that bench show committees are falling back into the old slipshod way of benching the dogs. At the last two or three shows, and New York as well, the dogs are benched here, there and everywhere, just as it seems to suit the whim of the exhibitor. This is not right, nor is it fair to the public who pay admission and help to make the shows a success. At Washington it was worse than ever, and one could walk almost down a whole aisle, especially among the sporting classes, and scarcely one number would be in rotation. This must be altered. It detracts from the interest of the show to the visitor and is a source of annoyance and confusion to the reporter, for when dogs are benched this way they are generally placed more with a view to their dispositions than anything else, dogs being benched irrespective of the numbers that may be above them, and consequently mistakes arise in reports that not only annoy the owners but discredit the paper in which they appear.

Mr. Dexter, the owner of the Charlottesville Kennels, was an interested spectator at the Washington show. He informed us that Maid of Kent will be bred to Duke of Hessen, and some future Derby winners are therefore expected as a result. Mr. C. E. Buckle, who, with Capt. McMurdo, has charge of his kennel, sails for England on the 8th of the month, and besides taking to himself a bride will also skirmish round for a good pointer dog to furnish an outcross for this kennel. If they can get another as good as King of Kent they will do well.

We regret, and so will all St. Bernard lovers, to hear of the serious illness of Mr. Moore's good dog Alton. It seems on Friday last he developed symptoms of pneumonia, and when Arthur was ready to go home on Saturday it was found impossible to move him. He is still at Washington. At first it was reported that all hope for him was gone, but the latest telegram says he shows a slight improvement. We trust it will continue, as such a loss would indeed be hard to bear, and Mr. Moore has had quite all of his share in the past.

Sydney W. Smith, we hear, will arrive on the S. S. Umbria, having been ordered by his doctor to take a sea voyage. It would have been very interesting had he brought his Scottish Prince over here, it would have livened things up a bit.

The Columbus, O., people have given up the idea of holding a show this spring, owing to their inability to secure a suitable building.

During the Pittsburgh show Frank Dole sold the bull-terrier Mr. Dick to Mr. Moorehead, of the Duquesne Kennel Club, and also the bull bitch Jessup to Mr. Brereton. She has been served by Harper, and something good is expected from the union.

Mr. Stucky, of Pittsburgh, is having a fine kennel built, with twenty yards. Besides his St. Bernards he will also kennel Mr. Hacke's Barzois.

In a cage at Pittsburgh we noted a cat and a terrier which seemed to be the greatest friends, frequently indulging in sham fights and other eccentricities. The cat derives her notoriety from the fact of her being the only seven-toed feline in America.

After long and baffling experience of the law's delays, Mr. Chas. T. Pesball has succeeded in having his trial in the libel suit set for next Tuesday, March 31.

The following committee has been appointed to take charge of the bench show to be held in connection with the

Central Canada Fair, Ottawa, Sept. 29, 30, and Oct. 1, 1891: Alfred Geddes, Dr. T. Wesley Mills, F. H. F. Mercer, P. G. Keyes, W. G. Young, C. E. Living, W. H. Middleton, L. N. Bate, D. Gordon, V. S., and H. Kirby.

We have received \$5 from Mr. F. H. F. Mercer, for the Helen Keller Fund, for sending the little blind mute of Pittsburgh to the Boston school.

The crack St. Bernard bitch Hepsy arrived Wednesday in good health, though heavy in whelp.

GUNSHYNESS.

Editor Forest and Stream:

If you will put colts in any number, of any age or breed, from a Conestoga to a thoroughbred, in a pasture through which a railway runs, they will in a few days' time cease to take notice of the train as it goes rushing past within 20 yds. Their freedom from restraint and constraint seems to remove all apprehension of harm, and so, if you will snap caps, or beat a tattoo on a tin pan in the distinct hearing of a litter of young puppies, most of them will scamper off and hide away in their nest or box; and let them hide as much as they choose, but take no notice of them; and in a short while they will come to understand that no harm is meant. From this beginning, it is easy to accustom them to the report of a gun by shooting in the yard, away from them, but in full hearing. In case your puppy comes to you at several months of age, give him time to learn that you are his friend and guardian, and that your home is his home, then take your gun down in the garden and shoot a half dozen, or so, of catbirds, or go over in the orchard near by, from time to time, and pop away at hairy woodpeckers. Very soon he will be out in the orchard enjoying the fun with you. Of course, all this is only necessary in the case of a timid puppy; but every puppy should be made acquainted with the sound of fire arms before he is taken afield. I am satisfied the mistake in all the rules I have read for curing gunshyness is that there is too much form and ceremony in the whole proceeding. The puppy's attention is too sharply drawn to all that is doing; you take him at close quarters, and cut off his retreat, all of which is very demoralizing. Never intercept a dog's line of retreat to his place of refuge in time of alarm. We never hear of city dogs being afraid of city noises, and it is because they are left to themselves to settle the question of sound in their own way. Yet let a half grown puppy go in the street away from home, and ten to one the first loud noise he hears will send him back like a blue streak to his familiar quarters; but in a little while he will be as bold as the bravest. At the same time, it is my opinion that if there were less inbreeding there would be very much less of gunshyness, though this is neither here nor there, for inbreeding is the fashion, and fashion rules in all things both great and small.

"Breeding in-and-in is good for the blood,
But it plays the devil with the flesh."—Byron.

W. A. W.

WELSH TERRIERS.—San Francisco, Cal.—*Editor Forest and Stream:* In the report of the Binghamton show in the FOREST AND STREAM the reporter calls Rowton Vixen undoubtedly the best Welsh terrier in America. At the Liverpool show, the largest show of Welsh terriers in England, she is good enough to win second. At New York she takes 1st, vhc. withheld, beaten by Mephisto Bob (a dog I own) that is not worth one side of her. In a Chicago paper I read: "Which, though suckling puppies, was the only decent terrier of the five representatives that entered the ring." I don't know T'other from which personally; but when I read comments on T'other's topknot it strikes me forcibly that the judges and reporter don't know a Welsh terrier from a hole in the wall. What on earth does a Welsh terrier want with a Bedlington's topknot? If some intelligent old country man will kindly step forward and comment on the lot I think his remarks will be read with pleasure by many that desire to be enlightened on this subject. Mr. Mayhew may have seen a few, but it is quite evident that he has forgotten what little he did know. As all exhibitors know, I am the last man on earth to kick about being beaten. T'other and Which, for all I know, may be better dogs than any of mine. I wish to confine my comments to the placing of the son of Mephisto Bob (first, Bangor, 1889, in a class of sixteen dogs) and champion Bangor Dan Liu (a winner of twenty firsts) second in a class of five, with Rowton Vixen, a bitch that smother him for quality, he.—A. RUSSELL CROWELL.

THE HOSPICE KENNELS.—Arlington, N. J., March 21.—*Editor Forest and Stream:* I am on the eve of breaking up my kennels of St. Bernards, expecting to leave for Montrose, Colorado, in the early part of May. Though the Hospice Kennels will no longer be represented at bench shows it is not my intention to desert the breed entirely, for I shall take a few specimens with me to the Rockies, where the climate, in all probability, will be more congenial to the dogs than in New Jersey. To the members of the St. Bernard Club of America, and to the board of governors especially, I tender my thanks for the confidence they have shown me since the club was organized, and I trust that the good feeling they hold toward me will continue though, after my departure, I shall no longer be in a position to take any active part in club matters.—K. E. HOPK.

SPECIALS AT CLEVELAND.—*Editor Forest and Stream:* The following specials have been donated for our coming show in April. We will have more later on. We have made class 106, Yorkshire terriers, open class dogs, \$10 and \$5; class 106½, bitches, \$10 and \$5. President of club offers \$10 for agent or handler having in charge largest number of dogs; a member offers \$10 to person or kennel making largest exhibit. Prizes for best shown: Case whisky for brace setters, any breed, dogs or bitches. English Setter Club's silver medal for bitch and two of produce over 12 mos., regardless of ownership, prize to go to bitch; to breeder of three dogs or bitches or both over 12 mos., regardless of ownership; silver medal for dog or bitch with public field trial record; meerscham pipe (value \$30) for dog and bitch in open class. The Pointer Club of America offers \$10 each for best dog and bitch in open class owned by member; English coal hod (value \$15) for dog under 18 mos. owned in Cleveland; stud service of Lord Graphic to bitch in open class; gold-headed cane for best get of Lord Graphic. The National Greyhound Club offers a solid silver medal for dog or bitch, to be competed for by members of the club and by such dogs as are registered in their stud book. The Collie Club of America offers silver club medal for collie not over 2 yrs. in open class belonging to member; bronze club medal for second best; bronze medal for dog in puppy class; also for bitch. Silver-mounted silk umbrella (value \$15) for American-bred St. Bernard dog or bitch; \$10 for the best in show; the St. Bernard Club of America offers silver club medal for American-bred rough-coated dog, same for rough-coated bitch, same for American-bred smooth dog, same for American-bred smooth bitch, the awards to be made in accordance with the rules of the club; a water-color picture (value \$15) for smooth-coated St. Bernard owned by a lady, a resident of Cleveland. Ten dollars cash for mastiff dog or bitch; collar (value \$5) for bitch in open class. Solid silver cup (value \$30) for fox-terrier dog or bitch in open class; same for dog or bitch in puppy class; dozen cakes Whitman's Unique dog soap for dog. Service of cocker spaniel Brush W. for bitch in open class, donor not to compete; \$10 for field spaniel owned by member, also the \$100 cup for the cocker spaniel in show owned by member. The National Beagle Club offers piece of silver (value \$15) for kennel of 4 beagles owned and entered by one exhibitor a member of the club, also piece of silver (value \$10) for dog owned by member, same for bitch; dozen bottles Whitman's Unique mange cure for bitch; \$5 for smallest in puppy class over 4 months. Five dollars cash for the best brace of bulldogs, dogs or bitches, owned by one person or kennel. Five dollars cash for pug dog in open class, same for bitch. Ten dollars cash for largest dog in miscellaneous class.—C. M. MUNHALL, Sec'y.

SPECIALS FOR BEAGLES AT BOSTON.—*Editor Forest and Stream:* The following special prizes for beagles have been offered at the New England Kennel Club's show at Boston by a friend of the National Beagle Club: A suitable piece of silver, valued at \$10, for the best beagle bitch, having the best field record. A suitable piece of silver, value \$10, for the best beagle bitch that started in the N. B. C. field trials. A suitable piece of silver, value \$10, for the best beagle puppy sired by champion Bannerman.—HUB-BITE.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Dimple and Triv. By D. B. Kelton, Holyoke, Mass., for black and tan Gordon setter bitch and dog, whelped Jan. 4, by Ned Kelton (Dash II.—Fan) out of Glady's.

Lady Joan instead of Our Joan. By Mercer & Middleton, Ottawa, Can., for Clumber spaniel bitch, by Boss III. out of Lady Judy.

Signo. By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pug dog, whelped Feb. 27, 1891, by Spokane (champion) Kash—Lady Thora) out of Lady Verne (Joe II.—Mandie).

BRED.

Prepared Blanks sent free on application.

Zimmer's Blue Belle—Fairy Lee. J. M. Barnes's (North Adams, Mass.) beagle bitch Zimmer's Blue Belle (Blue Cap II.—Constance) to George Laick's Fairy Lee (Lee II.—Fairy), March 6.

Glady's—Ned Kelton. C. E. Bidwell's (Holyoke, Mass.) Gordon setter bitch Glady's (Munkland Ranger—Buelas) to D. B. Kelton's Ned Kelton (Dash II.—Fan), Nov. 4.

Squaw—Kaiser. J. F. Campbell's (Montreal, Can.) black and tan terrier bitch Squaw (Saltord—Nettle) to his Kaiser (Punch—Luce), March 10.

Fly—Kaiser. B. Wall's (Montreal, Can.) black and tan terrier bitch Fly (Othello—Sarah) to John F. Campbell's Kaiser (Punch—Luce), March 5.

Grit (formerly Rochelle Grit)—Kaiser. John F. Campbell's (Montreal, Can.) black and tan terrier bitch Grit (formerly Rochelle Grit) (champion) Buffalo General—Meersbrook Girl) to his Kaiser (Punch—Luce), March 18.

Mollie—Champion Red Rover. Theo. J. Hook's (Rome, N. Y.) cocker spaniel bitch Mollie (Carlo—Beauty) to his champion Red Rover (Obo II.—Woodstock Dinah), Jan. 29.

Topsy S.—Champion Red Rover. O. S. Sykes's (Alexandria Bay, N. Y.) cocker spaniel bitch Topsy (Snapp—Walkill Bess) to Theo. J. Hook's champion Red Rover (Obo II.—Woodstock Dinah), March 7.

Donna—Champion Rockingham. Roscroft Kennels' English setter bitch Donna (Yale Belton—Forest Dora) to F. Windholz's champion Rockingham, March 4.

STOCKING up our food seemed easy enough, for a cottager on shore told us that all we had to do was to climb the bluff and we would find stores enough. Very plain and easy enough, and after dinner I set out with a large basket up a path through the woods. The bluff was very high and steep and the day very hot, and that, combined with a generous allowance of flesh, started the perspiration in great shape. To make my trouble complete, I had been in a very bad mood, and I soon found I was making a circuit of the place instead of going straight. After half an hour's climb I found a store that seemed to have everything I wanted, and I soon filled my basket with a generous supply. When I came to pay for it, I imagine my despair on finding I had not a cent with me.

Up to now the storekeeper had been very bland, but his manner changed in a hurry. He hinted that that racket had been played on him by boatmen as often as he would have given me to understand that I stayed in the store till my bill was liquidated. How I could stay in the store and go after the racket at the same time he could not say; so I left him my regards and my basket, and started out over those crazy paths to find my boat and my money. It took nearly two hours to do this, and when I came back I found the owner gone. I was obliged to come home to supper. There was nothing to do but wait till he came back, which he did about sunset, apparently much surprised to find me there. I made good time back to our boat this time, as I had learned the path pretty well. After supper we spent the time very pleasantly for a few hours aboard a fishing schooner lying near us, picking up points about that part of the coast and telling tales.

Next morning such a breeze met our faces on turning out as one rarely feels, so cool and clear, and bracing. Overboard we go for a swim, then put a piece of salt pork on a hook, and in a few minutes catch a mess of small bluefish for breakfast. They were small, but very sweet and tender and tasted good. After breakfast was over away we go sailing up with one reef in for comfort, and then the water was so calm we took that reef in for the rest of the cruise, for we could, in a great track.

I think no finer sail can be had than through Shelter Island Sound and into Peconic Bay, and one wonders as you sail along if the old pirates who made these small bays and bold headlands their hiding places ever appreciated the great beauty of the scenery. What tales this Sound could tell. We enjoyed every minute. Soon after starting a large catboat came along and asked us if we were not an Eastern boat coupled with the information that Eastern boats were always naturally slow. This caused us to trim a little flatter, and, as a smashing breeze was blowing, we soon hauled out under his lee and gave him a chance to read our name, but he knew the tides, and for a couple of hours gave us all we wanted to do to hold our own, and but for the great power of our boat we should have come in second best. His inability to catch us was all that saved us.

The barometer was rising and the wind looked like a change, presaging a northeaster, so when half across Peconic Bay we decided to put back and go for Sag Harbor, as it is hard beating out of Peconic Bay in a nor'easter. The run from Jessup's Neck to Sag Harbor was fully as beautiful as from Greenport to Peconic, and we hope to spend a week on that same ground this year. We were in Sag Harbor about dark, and did not go ashore at all that night.

Next morning being Sunday, we decided to lie quiet, and spent the day very pleasantly in rambling around the old place and hearing stories of its former prosperity in whaling, and of the cruises of some of its famous old ships. In the afternoon we went aboard a small steam yacht lying there at the invitation of her captain, and the conversation that followed was very pleasant, freely on the beauties of the country around Fort Pond Bay, on the hospitalities of its inhabitants and the good harbor there, that we made up our minds to go there on the following morning and stay two or three days in that paradise of game, according to his tale. How we could have been so green I don't see. The rest of the afternoon we spent in looking up our course on the chart and picking up information about the locality.

Early next morning we were under way, with a fresh southwest breeze. We decided to go over the shoals to the south of Gardner's Island, as that was the most direct way, and the chart gave a fair channel, although rather crooked. All went well in getting out of Sag Harbor, as there is a buoy about every hundred yards in the channel, then we lay to in a case, single reefed, down toward Goff's Island and as near the channel as we could make out. When about half way across, and two miles from the shore, our centerboard, which was half down to prevent her gripping, came up with a bang, much to the discomfort of the captain, who was astride the box at the time enjoying a smoke. We luffed in a hurry, and as soon as we could recover our senses pulled out to the eastward, and you could see the two feet of water where the chart distinctly said seven or eight feet. The wind was blowing pretty fresh, and the white caps were plenty all over the bay; so we concluded to keep on under short sail and try and find some kind of a channel. The water that day was clear as crystal and often fooled us; about every five minutes it would seem as if the bottom was not more than a yard under us, all sand and kelp, but when we came down and you could see the bottom, it made one feel queer, for to strike there with that sea on would mean speedily pounding to pieces.

At last we made the can buoy off Napeague, and were well clear of the shoals, and in another hour or so made the headland of Fort Pond Bay. This bay is beautifully clear and deep, and free from all obstructions, but is no place for a small boat, or large one either, as a narrow channel leads to a very shallow anchorage, and round for signs of the hospitable inhabitants, but could see nothing but an old shanty at the south end. Sailing down abreast of that, we cast anchor, and both turned to get dinner. After dinner we both took to the surrounding hills for a tramp, and to get our legs out of kink. We had a most enjoyable tramp over the brown hills and through the green valleys. One peculiar thing about this place was that the very valley containing a little clump of trees or bushes, and a small pond of water. We enjoyed our tramp very much, and prolonged it till nearly dark, but we only got one or two plover, and saw no ducks.

We found on returning to our boat that the wind was coming out of the dreaded northwest, but was light, and looked as if it would continue light for the night. We got supper and turned in. About 11 o'clock the place was very quiet, and we were all fast asleep, but about 1 o'clock a pleasant sound, and found ourselves pitching around considerably. Putting on our clothes we went on deck, and decided to warp her in nearer shore, and make fast to an old wharf there, so we could get ashore easily in case it blew too hard, for trying to get out of the bay at night in the face of such a wind was out of the question. We did not sleep any too well that night, and were glad to see daylight the morning after.

As the sun rose the wind increased, and the barometer had dropped considerably by 8 o'clock. We got breakfast and made everything snug, then concluded to get out while we could.

Putting in three reefs we made a start, and a lively time we had of it, making good enough way till we struck the heavy tide and went back to the head of the bay, and then we went on and down. This would not do, so we put back and took out a reef and tried it again. This time we got clear of the bay and headed up the beach for Napeague Harbor. The wind and water took us abeam, and the way we rolled and jumped made us anxious about our mast. Plenty of water came aboard but that did not greatly trouble us. The sail, almost new, commenced to take in the reef grommets, and taken all in all we had enough to keep us busy.

We made the can buoy off Napeague about noon and turned sharp around it, heading in through the narrow passage, guided by three or four birch trees stuck in the channel. The chart and the Coast Pilot both said this was a hard harbor to make, being shoal and crooked, and we certainly found it so, running on to the beach as we touched anchor at least five feet from the anchorage, but when we did get there we found a good harbor, smooth and safe for any wind.

Soon after coming to anchor we found a small catboat near us, but did not take much notice of her at the time. We were out of fresh water so I took our tank and went ashore on Goff's Island and asked the first person I saw, a dorky, if I could find any good water there. He said he said he thought he might be able to get a tank at a pump before tasting of it, and one taste was enough till I got pretty thirsty, it was only a little less salt than the sea and had a very strong taste of dead menhaden, yet all the persons on the island, over 75, drank it through the summer, and we had to, but it took a good deal of coffee to take the taste away.

We went back to the boat, the crew was sitting on the stern with such a look of despair on their faces I thought perhaps the bottom had fallen out of the boat. Before starting from Fort Pond we had made everything as snug as we could, but on opening the cabin door while I was gone for water the crew had been appalled at the damage done. He had a nearly new pair of trousers, of a very nice light stripe, that he had kept for a long time. These were on the bottom of the cabin, and a quart bottle of tomato ketchup was carefully emptied into the sea, and had run down both legs. Then the coffee pot, stove cover, shoes, pillow, kerosene can and all the odds and ends of a boat's cabin, were all in a mass on top of them, and all well soaked from the water we had shipped, and which had splashed up when sheeled. Such a mess I never want to see again, and I think that can be said.

We managed to partially clear away and get supper; then, chancing to look at our neighbor in the open boat, we saw that he was an old man, and had to spend the night, which promised to be rainy, in the open air only covered with an oilskin, and the crew pulled over and invited him aboard for a cup of coffee and something stronger. He readily came, but you can imagine our horror at finding him in the morning. He was a Methodist minister at Sag Harbor. He had come over after beach plums, intending to stay only one day, but the blow had detained him for two already, and bid fair to for two or three more. He was a man about seventy, but rugged as ever. He made the evening pass very agreeably for us, in relating the past history of the place, and of the people, and sometimes offering enough. He readily accepted our invitation to stay all night and sleep on a good mattress.

In our snug harbor we did not feel the northeast gale blowing outside, but it was quite apparent the next morning that we should have to spend the day there. Such a day as that is the great drawback to yachting. Cold, raw, drizzling, mean, no chance to get out and enjoy the view, and the wind is so strong that it is that and its abominable smell. Toward night the wind moderated somewhat, and our plucky old minister bade us good-bye and set sail for home. He had over two bushels of beach plums, both purple and yellow, and generously left us about a peck of the finest, which were very fine eating. The last I ever saw of him he was standing up toward Sag Harbor, and handling his little boat in a heavy sea better than most professionals could. His sermons would be worth hearing.

The next two days were but monotonous repetitions of the first: eat, sleep, drink vile water, play cards, and then commence all over again. The morning of the third day dawned much like its predecessors, but not so much wind. We concluded to try for the head land, as we could fetch it by one long leg and a short one if the tide favored, and we were heartily tired of staying where we were.

We put in two reefs about eight o'clock and started out; it was not as bad as we expected and we made comfortable progress.

Soon after leaving land a large thrasher shark came alongside and followed us for several hours, much to our discomfort. He was such a big fellow and had such a wicked look it made us feel uncomfortable, even if he could not get at us. We fired a number of .38 cal. bullets at him, and I presume hit him several times, as he would drop out of sight for some minutes, then reappear. It was nearly night when we got into Block Island Harbor, which was full of craft, hardly room enough to turn around, and the old swells rolling in made it a mighty uncomfortable berth for us all night.

We bid the place good-bye early in the morning and gladly started for home with a warm and pleasant breeze from the southwest, and in about four hours were in Newport. Fourteen days had passed since we left it, and we almost looked to see the place changed. We stayed here till nearly night, and then started for home, arriving in good season and finding every one well and glad to see us. Our two weeks had cost us, for food, supplies, some slight repairs to sail and all money spent for pleasure, \$27.10; and for that small sum two of us had a splendid time and came home feeling tough as oak knots and all ready for a year's work. We would not advise any small boat to cruise for pleasure nearer Montauk Point than Sag Harbor, but through Shelter Island Sound and Peconic Bay is splendid cruising ground, and both sides of Long Island Sound cannot be beaten, except perhaps by Narragansett Bay. Climbing mountains may be pleasure for some, but a good summer cruise along shore is hard to beat for solid comfort and cheapness. QUEBECOR.

YACHT BUILDING ON THE CLYDE.

THE influence of the present rule and classification in Great Britain has been to produce more boats and better boats, and the results there in three seasons have attracted the notice of the likelihood of such dangers as have been foretold in case corrected length should be generally adopted in America. While building and racing have both greatly increased under the new rule, they have followed very much the same course as on this side; as the trouble and expense of racing increase, the size of racing yachts has rapidly decreased. This is now on the sale list and will not race this year. Valuable and probably made out, and the best class promises to be the 40-raters, of about 60ft. l.w.l. Of the yachts building the majority will be in the smaller classes, from 10 to 2½ rating, or 36 to 26ft. l.w.l. The centerboard has already been tried in several of these smaller boats, though with but moderate success, in spite of the yarn concerning a wonderful centerboard craft, the Archer, which has been circulating in American papers. This year, however, Mr. Watson will have a new centerboard craft about in a class which possesses such known boatmen as Yvonne and Phantom, and in the hands of the tried sailor who have won over 100 prizes in the old 5-tonner Doris; so that the merits of the board are more likely to be fairly tested than ever before. We take from the *Field* the following account of the thing on the Clyde:

"The Clyde is now so busy building racing yachts as it is just now. There are none of the big cruising yachts which were the features of the yacht building yards years ago. There are no 100-tonners for racing, even 60-tonners are out of date on the Clyde. The racing yachts with which Clyde builders are busy are 40s and under. But the racing 40 of the period costs quite as much as the 100-tonner of some twenty years ago, and the sport has fortunately been put out of the hands of the 'racing machine' which conservative yachting men regarded as an unnecessary invention, has triumphed, and the Clyde is devoted to 'racing machines.' Lead keels have given a new lease to the sport, and on the Clyde the casting of lead keels has become an important industry. Some twenty years ago lead ballast was regarded as a dangerous innovation; at the present time lead keels involve the whole question of winning prizes. It is startling to find the denouncers of lead keels among their most enthusiastic advocates.

"To Mr. James Reid, of the firm of John Reid and Co., Port Glasgow, belongs the merit of understanding the full value of lead, and in the Boreas, Leander, Merle, and Florence he showed that could be done with outside ballast. All of these cutters were such; and the Merle, of Greenock, has been particularly noted for 60 tons of lead, as they desired, on the keel of the *Garrion*. Instead of 11 tons, the *Garrion* would have been remembered as the flying 90-tonner of her day, and the fore-runner of the lead keel 90's. But prejudices had to be overcome, and a weary fight it was. To Mr. G. L. Watson belongs the merit of following up the innovators by crushing out the crowd of yacht-racing captains and well-to-do owners of winning prizes. The 'racing machine' of 40-rater now building in Messrs. Inglis's yard at Point House, Glasgow, for Prince Henry of Prussia ought to be answer enough to the Clyde captains and owners who regarded lead as the most hazardous of all ballast. This cutter is planked up with teak and American elm below, and has a sheer strake of steel, on which the keel is cast. She is of a composite build, and shows a long overhang in her bow, as well as a lengthened counter. Like Mr. G. L. Watson's 40-rater of last year, the *Creole*, she is strengthened throughout with steel diagonals, steel ties, and all the appliances requisite for strength under the enormous strain of a lead keel weighing about 35 tons. She resembles the *Creole*, in being cut away very much forward, and depending on her deep keel for support. The cutter is altogether a Watson's up to date, and presents in her prominent features a very ordinary contrast to the racing cutters of ten years ago. Up to that date a fore-foot was a recognized advantage going to windward; but Mr. Watson has done away with this, and shown in *Creole* that it is not wanted.

"At Fairlie, Messrs. Wm. Fife & Son have a racing 40 in hand for Mr. John Reid, of Port Glasgow, which cutter is planked up with teak above and American elm below, and has a sheer strake of steel. This cutter is so far a novelty at Fairlie, that her frames, or timbers, are alternately wood and angle steel. She is, besides, strengthened with steel diagonals and straps, and is altogether a most substantially built yacht, and will carry a lead keel considerably over thirty tons. To look at, she shows somewhat deeper water than the *Creole*. She is of a composite build, and shows a long overhang in her bow, as well as a lengthened counter. Like Mr. G. L. Watson's 40-rater of last year, the *Creole*, she is strengthened throughout with steel diagonals, steel ties, and all the appliances requisite for strength under the enormous strain of a lead keel weighing about 35 tons. She resembles the *Creole*, in being cut away very much forward, and depending on her deep keel for support. The cutter is altogether a Watson's up to date, and presents in her prominent features a very ordinary contrast to the racing cutters of ten years ago. Up to that date a fore-foot was a recognized advantage going to windward; but Mr. Watson has done away with this, and shown in *Creole* that it is not wanted.

"The most numerous class of raters building at Fairlie and elsewhere in the Clyde are the 2½-ton cutters. Messrs. Fife have no fewer than five of these fashionable craft in hand. Messrs. Cunningham and Reid are building three, and Messrs. Brice and Richmond Allen, whose old *Doris* gained a fine reputation. This new 10-rater will be sailed by her owners in the same perfect style *Doris* was handled, and the value of a centerboard in small cutters will be thoroughly tested. The vessel is a great departure from the *Doris*, and is of a composite build, and shows a long overhang in her bow, as well as a lengthened counter. Like Mr. G. L. Watson's 40-rater of last year, the *Creole*, she is strengthened throughout with steel diagonals, steel ties, and all the appliances requisite for strength under the enormous strain of a lead keel weighing about 35 tons. She resembles the *Creole*, in being cut away very much forward, and depending on her deep keel for support. The cutter is altogether a Watson's up to date, and presents in her prominent features a very ordinary contrast to the racing cutters of ten years ago. Up to that date a fore-foot was a recognized advantage going to windward; but Mr. Watson has done away with this, and shown in *Creole* that it is not wanted.

"At Fairlie Mr. Boaz is converting a fishing sloop into a roomy fishing yacht for Mr. Fenton Livingstone, and a good-looking craft he is making of her.

"The Clyde is now so busy building three centerboard cutters for one racing from the designs of Mr. G. L. Watson. These include one 10-rater and two 2½-raters. The 10-rater is for Messrs. Brice and Richmond Allen, whose old *Doris* gained a fine reputation. This new 10-rater will be sailed by her owners in the same perfect style *Doris* was handled, and the value of a centerboard in small cutters will be thoroughly tested. The vessel is a great departure from the *Doris*, and is of a composite build, and shows a long overhang in her bow, as well as a lengthened counter. Like Mr. G. L. Watson's 40-rater of last year, the *Creole*, she is strengthened throughout with steel diagonals, steel ties, and all the appliances requisite for strength under the enormous strain of a lead keel weighing about 35 tons. She resembles the *Creole*, in being cut away very much forward, and depending on her deep keel for support. The cutter is altogether a Watson's up to date, and presents in her prominent features a very ordinary contrast to the racing cutters of ten years ago. Up to that date a fore-foot was a recognized advantage going to windward; but Mr. Watson has done away with this, and shown in *Creole* that it is not wanted.

over all must be 10ft. or 12ft. longer than the load waterline. The lead keel is hung by angle steel floorings, and the oak frames are tied before and behind the slot for the gun metal centerboard, with angle steel floorings. The cutter is built of extra strength to stand the unusual strain, and nothing has been left to possible accident in any weather. The longshore critics shake their heads over the novelty, but it will be time enough to venture an opinion after a trial of speed. Mr. Henry Allan, also of the Allan Liners, is having a 2½ centerboard built by the same designer, in Mr. Adam's yard, and another of the same build and size is being constructed in the yard for a Clyde owner. About the performance of these centerboards a great deal of the interest of the coming Clyde season hangs, for with their success a new departure is certain.

"From the design of Messrs. Fife & Son, four 18ft. cutters are being built by Mr. Robertson, of Sandbank, Holy Loch, Clyde, for Irish owners. These boats will have Bangor, in Belfast Lough, for headquarters. They are big, powerful-looking boats for their length, and they will want their power in such an anchorage as Bangor. They are half-decked, with side decks and a cockpit. For Mr. Adam's yard, of Glasgow, Messrs. Fife are also building at Fairlie a 2½ cutter for the Holy Loch Yacht Club. This cutter will be completely decked, and she will want it in the Holy Loch, where the hardest squalls in Clyde blow. The workmanship of this boat is remarkable, the planks being so perfectly fitted that no caulking is required, save a single strand of cotton laid along the center of the plank.

"A Gourcock Mr. Paul Jones is building three 19ft. racing boats for the West of Scotland Yacht Club. These boats are of the lug sail and jib, and it is intended, by having the jiggers in every way identical, that the test of speed will lay with the amateur crews. The boats have been designed by Mr. Robert Ferguson, of Messrs. Ferguson, sailmakers, Greenock, and show he has a gift of designing yachts as well as fitting suits of canvas. Rod racing may be expected between these boats, as well as between them and the Royal Clyde boats.

"The above notes do not include all the new boats building in the Clyde of small tonnage for racing and cruising purposes."

THE PROTECTION OF THE HULLS OF VESSELS BY LACQUER.

BY LIEUT. J. B. MURDOCK, U. S. N.

Reprinted by permission from the Proceedings of the U. S. Naval Institute.

AMONG the many problems arising from the use of steel in naval construction, none is more important than that of protecting the under-water body of a vessel from the corrosive action of sea-water. The problem is a modification of the old one of protecting the bottoms of wooden or iron vessels, as steel is much more liable to corrosion under water than iron, and steel vessels, being generally constructed of much lighter scantling, are proportionally more injured by an equal amount of chemical action. So far as the purposes of construction are concerned, no material equals steel; but if steel ships cannot be protected against the destructive action of the medium in which they must exist, the question assumes another phase, and economical results might be obtained by the use of other materials. As however, the question of the naval architect to obtain results in speed and strength and lightness of hull which are otherwise unobtainable, this revision is practically out of the question. Steel must be used and protected.

In General Information Series No. VII., Lieut. Schroeder gives a most complete and interesting résumé of the whole question of the protection of the hulls of steel vessels. He refers to the process of lacquering, which has been tried on several of the vessels of the Japanese navy, but without giving any details. It has been my good fortune, while on the Asiatic Station to meet Mr. Hotta, and to receive from him quite full information as to his process of lacquering; and I have also had an opportunity, through the courtesy of the officials of the Yokosuka dockyard, of inspecting two of the vessels of the Japanese navy which have been treated in this way, the naval architect to obtain results in speed and strength and lightness of hull which are otherwise unobtainable, this revision is practically out of the question. Steel must be used and protected.

Nearly every book on Japan refers in greater or less detail to the subject of lacquering, and until the subject was analysed only little was really known of it. It may not be amiss to consider the question of our subject to examine somewhat in detail into the constitution and method of preparation of lacquer, using for the purpose such published accounts as have appeared in the proceedings of scientific societies, or in the works of residents of Japan who had carefully investigated the subject. The lacquer tree is indigenous to Japan, and is also found in Korea, China, and the countries of Farther India. In Japan it is systematically cultivated. New plantations are being laid out in Japan and will commence to yield in five years, and as the whole coast country of Asia is practically available for the cultivation of the tree, it is safe to say that a great demand, such as might be caused by an extensive application of lacquer to steel or iron ships, would create its own supply.

Lacquer is obtained from the tree by making incisions in the bark. Usually several cuts are made approximately parallel to one another and at various points on the circumference. The lacquer exudes from these incisions in the form of a thick grayish juice, and is gathered by a wooden spatula. As already stated, the trees commence to yield when five years old, and yield for ten or fifteen years. The inferior lacquer is sometimes obtained by grinding the small branches and twigs of the tree, but nearly all that is used is obtained from incisions in the bark. It is purified by stirring in a tub with a wooden spade, by which process the excess of moisture is given off and the consistency slightly increased. The pure commercial lacquer has a specific gravity of about 1.002 to 1.020. It is of a grayish white color and dextrinous consistency, and possesses a characteristic sweet odor. In contact with the air it darkens and hardens, forming a film that protects the lacquer underneath. The ordinary method of application to any surface is by taking a small quantity on a wooden spatula and placing it on the surface to be lacquered, working it down into a thin uniform coat by repeated strokes with a flat camel's-hair brush, the strokes being made in different directions, but in ordinary work most commonly at right angles. The lacquer rapidly darkens to a dark brown and afterwards dries, forming a lustrous coat. Colors are given to the lacquer coat when desirable by mixing metallic body pigments such as vermilion, cinnabar, ochre, or orpiment.

Lacquer has been frequently analyzed, with somewhat varying results. The analyses given below were made under the direction of Prof. H. Tottah, an Assistant Professor of Chemistry in the Imperial University at Tokyo, and recognized as one of the best authorities on lacquer in Japan. They are from a paper contributed by Prof. Yoshida to the Proceedings of the Royal Society of Edinburgh, on the Chemistry of Japanese Lacquer.

The constituents of pure lacquer are found to be a resinous acid, gum arabic, water, and a nitrogenous residue. The method of analysis used was to extract the resinous acid from the lacquer by treating it with absolute alcohol, evaporating the solution, and drying at 105° to 110° C. The residue was boiled with water and the extract evaporated on a water-bath, giving the amount of gum. The residue from the water solution consists of a coagulated nitrogenous substance and small quantities of coloring matter. The percentages of the above subtracted from 100 gives the amount of water and volatile matter.

Percentage composition of pure lacquer was obtained from a sample specially collected under official supervision in the province of Yoshino, celebrated for producing the best lacquer in Japan. It yielded the following results:	
Soluble in alcohol (muriatic acid).....	85.15
Gum in alcohol.....	9.36
Nitrogenous matter.....	3.15
Water and volatile matter.....	9.41

THE LACQUERING OF SHIPS.

The idea of lacquering iron and steel vessels as a protection against the action of sea-water was suggested to Mr. Hotta, a lacquer manufacturer of Tokyo, by the observation that pieces of old lacquer recovered from the sea showed but little action, the lacquer being practically unattacked. As the Japanese were then purchasing iron and steel ships from abroad, and were encountering the same difficulties that were met with elsewhere in protecting the metal, experiments were made on special test plates, which were immersed in sea-water for considerable periods, generally at the Yokosuka dockyard. The first results obtained were not fully satisfactory, but were very encouraging, and the tests were continued, varying slightly the composition of the lacquer, and using chemicals to assist in obtaining the desired results. In June, 1889, a practical test was made by lacquering about 1,200ft. of the bottom of the *Fuso-Kan*, using the preparation of lacquer that at that time had given the best results. The ship was docked again in September, 1887, and the condition of the lacquered portion was as satisfactory as the Admiralty had anticipated. The lacquer, as a whole bottom. In December, 1888, the ship was again docked, but the lacquer coat was found to be so good that no repairs were

made. In June, 1889, the ship was again docked, the lacquer being still satisfactory. In each case anti-fouling paint was applied over the lacquer. The *Fuso* was docked once more in April, 1890, and although the lacquer was almost perfect, it was for some reason all removed by scraping, and the bottom was painted.

Many other vessels of the Japanese Navy have since been lacquered, a list being appended. Experimentation has been going on continually. The work is all done by Messrs. Hotta & Co., they holding a monopoly under the laws of Japan, practically the equivalent of an American patent. Not content with merely protecting the metal against corrosion, the contractors have endeavored to meet all the requirements of the case by providing an anti-fouling lacquer preparation, as well as an anti-corrosive, the use of metallic anti-fouling paints over the lacquer having been found to be injurious, the urushic acid of the lacquer sometimes attacking the metallic base of the paint, resulting in the practical destruction of the useful qualities of both. This preparation was developed experimentally, and test-plates coated with both protective and anti-fouling lacquers having given most satisfactory results immersed in sea-water at Yokosuka for 18 months, the Japanese Admiralty ordered the lacquering of the new despatch-vessel *Yaeyama* with both kinds of lacquer. The work was performed in July, 1890, and the results will be watched with interest, as the test-plates remain perfectly clean, and if the same protection is afforded to the *Yaeyama* under the ordinary conditions of service, the anti-fouling lacquer will have vindicated its claim to be the equal if not the superior or any similar composition known.

The protective or anti-corrosive lacquer is mainly lacquer, small quantities of some inert minerals like mica or kaolin being added to increase the covering power and to prevent cracking. The composition of the different coats differs somewhat, that applied directly to the skin of the ship containing the largest proportion of lacquer.

In the first experiments special pains were taken to have the plates perfectly clean, the metal being washed off with acid in order to remove all oxides, but this process was soon discontinued, as the lacquer coats when applied to the clean iron were found to blister considerably. In later experiments the steel was merely brushed clean, removing all non-adherent oxides or films, the lacquer being applied over all adherent substances. An important point in which lacquer differs from ordinary protective compounds is in its insulating power against galvanic action. It is well known that if a steel plate having magnetic oxide on its surface be exposed to sea-water, a strong galvanic couple is set up between the oxide and the steel, underneath the protective covering, and pitting of the metal results. With lacquer the case is different. Lacquer has no chemical action on the magnetic oxide; and if the plate is dry when it is applied, galvanic action is prevented by the waterproof and insulating properties of the lacquer coat. The exclusion of water prevents any action whatever, and the best results with the test-plates have been obtained on plates on which the presence of the magnetic oxide was ignored. The removal of this oxide, which is ordinarily considered necessary, is therefore avoided.

The method of lacquering is as follows: The ship is docked and the bottom carefully scraped of all yellow rust, old paint, or other matter that is not strongly adherent. If old paint adheres firmly, it is considered unnecessary to remove it. The bottom of the ship is then shut in by screens of old canvas suspended from just above the water-line to the bottom of the dock. In winter, stoves or other heating apparatus are placed inside this screen to raise the temperature and thus facilitate the drying of the lacquer. It has been proposed to allow exhaust steam to escape inside the canvas screen to secure the requisite warmth and moisture for the drying; but although this practice is common in lacquer manufactories, it has not yet been tried on ships. In summer, the screen around the bottom is necessary in order to screen the metal from the direct rays of the sun, which might raise the temperature to such a point as to impair the lacquer by a partial coagulation of the albumen. With the screen in place, the lacquering can be carried on in almost any weather. When everything is in readiness, the first coat of protective lacquer is applied, and worked down into a smooth uniform coating by a soft brush, as already described. One man can lacquer 500 sq. ft., one coat, in 8 hours. The time of drying of the first coat, which as already stated, is almost pure lacquer, may vary from 3 or 4 hours to one day, according to the temperature and moisture of the air. In cold weather the drying process is tedious.

As soon as the first coat is dry the second is applied. This may contain mica or kaolin in small quantities, as also the outer protective coats. Five protective coats have generally been applied to the Japanese men-of-war, but a smaller number may be used when the anti-fouling lacquer is applied over them. The inner coat of the anti-fouling preparation is principally lacquer, the amount of poisonous mercury salt contained in the preparation increasing with each coat. The only ship that has thus far received both preparations, the *Yaeyama*, has four coats of the protective and three of the anti-fouling.

The number of coats considered necessary is at least three of the protective and the same number of the anti-fouling lacquer. Under favorable circumstances the ship would not be in dock more than six days, but ten would be more probable. The cost of lacquering is stated by the contractors as five years for 350 sq. ft., about 13 cents U. S. gold per square foot. If the work were to be carried on more generally, the expense could be reduced, as a permanent corps of employes have to be maintained, although frequently out of work. Work has been done at much less than above rates. The chief, in fact the only serious, objection to the use of lacquer is the expense. If dockage is cheap, this is not excessive, but the long time involved for the proper drying of the lacquer coats renders the operation a very costly one when the dock charges are high. The vital question is whether the protection afforded is worth the expense. If absolutely complete, preventing all fouling, the cost of the work would be less than economy to pay the highest charges in order to have the vessel always sound and in condition for service. It is just becoming known outside of professional circles that steel vessels are expensive, and that more money may be spent in excessive coal bills in trying to force a foul hull through the water than would be expended with proper economy in the frequent dockings necessary for keeping the hull clean.

It cannot be said with certainty that the use of lacquer is more expensive than the ordinary methods of protection. This depends very largely, of course, on the dry dock charges. The contractors claim that one thorough lacquering of a vessel's bottom will keep it clean and protect the metal for three years. The expense of this operation may be figured up as follows:

Taking the *Changshan* as an instance we have:

Cost of cleaning and lacquering 20,000 sq. ft. at 13 cents.....	\$2,600
Docking and nine "lay days".....	4,300
	\$6,900

For painting and cleaning we have:

Docking and one "lay day".....	\$1,490
Painting, etc., (estimated).....	600
	\$2,090

Allowing the claim of the contractors that one lacquering is sufficient for three years, and taking the common estimate that a steel ship should be docked every six months at least, the total cost of three years is:

Lacquering.....	\$6,900
Painting.....	12,000

These prices for Yokosuka dockyard. Accepting the data in Naval Constructor Hitchcock's article on the "Fouling of Ships" in relation to the work on the Chicago Government dockings, we have the cost of one docking and painting at New York as follows:

Docking.....	\$ 400
Painting.....	1000
	\$1400

Assuming that the cost of lacquering in the United States would be twice that in Japan, we have:

Docking.....	\$ 400
Lacquering 21,000 q. ft. at 26 cents.....	5400
	\$5800

Taking the cost as before for three years, we have:

Painting.....	\$1400x3=\$4200
Lacquering.....	5800

It may be questioned whether the lacquer will last three years, and it is also possible that the painted ship would need docking oftener than once in six months. In the absence of data a careful estimate is impossible, but enough has been shown to render the statement probable that protection by lacquer is not in the long run expensive.

The experience of the Japanese navy must be largely relied on, and the unanimous testimony of all the naval officers whom I have met is that lacquer affords excellent protection to the hull, but is expensive. It is noticeable that the work is being continued in the Japanese navy in spite of the expense.

Through the courtesy of the officials of the Yokosuka dockyard I was allowed to inspect the condition of the lacquered bottom of the *Takachino* in January, 1890, the ship having been in the water

since May, 1889. The water-line belt had been lacquered in September, 1886, and repaired in May, 1889, when the rest of the ship was lacquered, as a result of the good condition in which the belt was found. The *Takachino* when the hull was examined in January, 1890, it was found that on the bilge and floor plates the lacquer was perfectly smooth and unbroken and had afforded complete protection to the metal. On the sides below the water line there were numerous small blisters, averaging about a quarter of an inch in diameter; but these were dry inside, the lacquer coat being unbroken and the metal underneath was bright and uncorroded. Occasionally larger blisters were found which contained water, the film of lacquer having become broken. Underneath these the metal was dull but uncorroded, and there were no signs of rust. In cases where the lacquer had been scraped off, rust cones had formed, and their position marked the number of breaks that had occurred in nine months. In the entrance, especially in the wake of the anchors and other aids, the lacquer was considerably broken and the metal consequently rusted, but in no part of the hull was there any extensive corrosion or pitting, except underneath the lacquer, showing that it antedated the application of the lacquer in May, 1889. An interesting feature illustrating the effect of the lacquer in preventing galvanic action existed in the starboard side of the run, where some of the plates showed extensive corrosion apparently the result of galvanic action between the steel and the propeller and its fittings. Here was not a single rust spot, showing that no corrosion had taken place since the application of the lacquer.

The impressions derived from the appearance of the bottom of the *Takachino* were that lacquer is a perfect protection against the action of the water, so long as the coat remains unbroken. Although much more elastic and adherent than any kind of paint can be, it is somewhat susceptible to mechanical injury, and especially so forward where the anchors and chains and the impact of floating bodies are liable to break it. Every break becomes a spot of corrosive action or pitting. As it seems impossible to prevent this injury, and as the protection afforded by the lacquer is of the worst order, it would seem desirable in practice to dock the ship oftener than once in three years for examination and, if necessary, for repairs to the lacquer coat. If this were done, the metal of the ship would suffer but little deterioration.

Another use of lacquer that has not been tried as yet is as a substitute for cement on the inside of ships and for the protection of the inner skin throughout. There can be no question that its use here would prevent all rusting, as it seems absolutely impracticable in air. It has been used with success as a substitute for galvanizing, and seems to admit of numerous applications in places where metal is to be protected against the chemical action of gases.

Messrs. Hotta & Co. are making preparations for carrying on the lacquering of ships in other countries than Japan, and it is possible that in the near future the process may become widely known.

MEN-OF-WAR LACQUERED BY MESSRS. HOTTA & CO.

Fuso,—June, 1889, 1,224 sq. ft. lacquered for trial. Sept., 1887, entire bottom lacquered. Dec., 1888, docked but no repairs made. June, 1889, slight repairs made. March, 1890, lacquer scraped off. *Ritsio*,—April, 1888, armor shelf lacquered. A wooden ship copper sheathed; armor belt much corroded. *Tsukushi*,—Aug., 1887, entire bottom lacquered. June, 1888, docked but no repairs. Feb., 1889, slight repairs. *Naniwa*,—Sept., 1888, 5,200 sq. ft. (water-line belt) lacquered. May, 1888, additional surface lacquered. Feb., 1889, entire bottom lacquered. *Takachino*,—Sept., 1889, water-line belt lacquered. May, 1889, entire bottom lacquered. Jan., 1890, docked and slight repairs made. *Atago*,—May, 1889, entire bottom lacquered. *Torpedo-boats 1, 2, 3, 4, 5*,—April, 1888, entire bottom lacquered. These boats have all been docked since and slight repairs made as necessary.

Katsuki,—Sept., 1888, entire bottom lacquered. The above were lacquered with the anti-corrosive preparation only, generally five coats. Metallic anti-fouling paint was used over the lacquer, and the vessels had to be docked to renew this paint.

Yaeyama,—July, 1890, entire bottom lacquered with four coats of protective and three of anti-fouling preparations.

Battle-ship Dmitri Donskoi,—Nov., 1888, armor belt partly lacquered. Nov., 1887, armor plate wholly lacquered. Oct., 1888, lacquer on steel portions was found to be in very good condition. On the armor plate had been detached through the action of urushic acid on the zinc.

Admiral Nakhimoff,—Aug., 1889, steel armor belt found to be very much corroded and was therefore lacquered.

NOTE BY LIEUT. COMMANDER CLIFFORD H. WEST, U. S. N.

Messrs. Hotta and Company, of Tokio, Japan, have sent two plates to the United States for trial by the U. S. Navy Department. One plate is of steel and one of iron, each 4 ft. square, and covered with three coats of anti-corrosive and three coats of anti-fouling lacquers. These plates arrived at New York City in November, 1890. Chief Constructor C. D. Wilson, U. S. Navy, has directed that the plates be submerged in tide water at the Navy Yard, New York, for a period of three months, when they are to be taken up, and a report made to the Bureau of Construction and Repair as to their condition.

CORINTHIAN NAVY.—The Delaware River squadron held a meeting at 123 Market street, Camden, N. J., on March 26, when all the details of organization were completed and a programme of events outlined for the season. The New York squadron is growing rapidly and will have a busy season. The New York squadron held a meeting at 47 Dry street on March 25, when arrangements were made for a two day squadron cruise on May 20. The East River squadron and Long Island Sound squadron have been ordered to assemble at New Rochelle on May 30 and 31 for a cruise. This will be an informal affair, and will be under the direct command of the admiral.

WORK AT BAY RIDGE.—The new 46 is now in frame except the steel frames, which have been delayed by a strike in the shops where they are being bent. The lead keel is a fine casting, and the keel and frame generally show good work. The deck beams have been lightened in very ingenious manner. The transom and quarter numbers are of mahogany. The joinder work is well under way and will be ready by the time the deck is laid. The Harlequin has been launched, her alterations being completed. In the joinder shop a small catboat with lead keel, designed by Mr. Gardner, is in frame.

BUFFALO Y. C.—The annual meeting of the Buffalo Y. C. was held on March 11. The following officers were elected for the ensuing year: Com. Frank B. Hower, yacht *Merle*; Vice-Com. Alan S. Chisholm, yacht *Erchless*; Sec'y, H. L. Campbell; Treas., W. C. Cowles, yacht *Reatha*. Howells has been elected president. *Merle* from her former owners, and she will make a splendid addition to the Buffalo fleet. The club house will be remodeled, new approaches built, and a great many other improvements made. Everything points to a season of unusual prosperity and activity for the club.

SOUTH SIDE YACHTING ASSOCIATION.—The yacht clubs of the south shore of Long Island have lately organized an association for the management of inter-club racing. The following clubs are proposed: Hempstead Yacht Club July 18, Shinnecock Club July 25, Great South Bay Aug. 1, West Hampton Aug. 8, Moravia Aug. 15, West Hampton Aug. 22, and Great South Bay Aug. 29. The first annual regatta of the association will be sailed on Sept. 5.

"SEGLERS TASCHENBUCH."—We have received a copy of this compact, but comprehensive little volume, just issued by the publishers of the German yachting journal *Wassersport*. The book, which is written in German, contains a great deal of practical information about building, rigging and handling and is excellently illustrated.

HAVERHILL Y. C.—Officers 1891: Com., M. E. Priest; Vice-Com., H. Emerson; Sec'y., C. H. Stacy; Treas., E. Dwinells; Meas., G. F. Ellis; Fleet Captain, A. Jackson. Trustees, J. J. Dresser, W. Hicks, E. Dwinells. Reg. Com., A. Pettengill, A. Amberg, N. Hammill. Secretary's address, Box 234, Haverhill, Mass.

A "DARK HORSE."—The Boston *Globe* discovered a possible "dark horse" at Fife's yard at Fairlie, which it intimates is for Mr. Tweed or some other American owner. As the model of the yacht shows, she is not for a length class, but is building for a well known British yachtman, and will beyond doubt prove a second Dragon.

VOLUNTEER.—Gen. Palne and Mr. Burgess have prepared the plans for lengthening Volunteer from 88 to 90 ft., and converting her into a schooner; but it is not finally decided to undertake the work at present.

GRAYLING.—Capt. Terry has his crew at work on the schooner *Grayling* at Greenport, where she has laid all winter, and will have her in commission early.

THE HERRESHOFF 46-FOOTER.—The report of a 46-footer from the Herreshoff yard is confirmed, but the name of her owner is not yet known. It is probable, however, that she is for Mr. Arnold Thayer, late owner of the 46-footer *Choctaw*.

VARANDE.—On March 16, at Lawley's yard, the cutter *Varande*, designed and built by Lawleys for Mr. C. A. Welch. The new yacht is a cruiser like Mr. Welch's former yachts *Vashti*, *Vayu* and *Valhalla*. She is 34 ft. l.w.l.

GENONE, schr., will probably have some of her inside lead transferred to the keel this spring.

SAGAMORE, steamer, Mr. W. A. Slater, is fitting out at Tebo's for a southern cruise.

BEEBLE, cutter, has been sold by C. H. Guild to W. M. Jameson.

PRINCESS, schr., will have two tons of lead added to her keel at Lawley's.

VIVID, sloop, has been sold by W. A. Wolf to John Curtin.

Canoeing.

Secretaries of canoe clubs are requested to send to **FOREST AND STREAM** their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to **FOREST AND STREAM** their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1890-91.
COMMODORE: WAITER U. LAWSON, Boston, Mass.
SECRETARY-TREASURER: RALPH F. BRAZER, 47 Central street, Lowell, Mass.
REGATTA COMMITTEE: J. A. Gage, Lowell, Mass.; W. G. MacKendrick, Toronto; L. B. Palmer, Newark, N. J.

CENTRAL DIVISION. OFFICERS:
VICE-COM.: C. V. Winn, Albany, N. Y.
REAR-COM.: T. P. Gaddis, Dayton, O.
PURSER: Howard Brown, Albany, N. Y.
EX. COM.: J. K. Bakewell and H. M. Stewart.

NORTHERN DIVISION. OFFICERS:
VICE-COM.: W. H. Cotton, Kingston.
REAR-COM.: J. C. Edwards, Lindsay.
PURSER: C. E. L. Porteous, Kingston.
EX. COM.: Colin Fraser and F. H. Gisborne.

EASTERN DIVISION. OFFICERS:
VICE-COM.: J. W. Cartwright, Jr.
REAR-COM.: G. F. Palmer, Hartford.
PURSER: R. Apollonio, Winchester.
EX. COM.: Paul Butler, E. S. Towne and Sidney Bishop.

ATLANTIC DIVISION. OFFICERS:
VICE-COM.: I. V. Dorland, Arlington.
REAR-COM.: E. B. Anderson, Trenton.
PURSER: Rich'd Eohart, Newark N. J.
EX. COM.: H. L. Quick and H. M. Kreamer.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of \$2.00 for entrance fee and dues for current year. Every member attending the general A. C. camp shall pay \$1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division. Persons residing in any Division and wishing to become members of the A. C. will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—D. H. Crane, Chicago, Ill.
Vice-Commodore—N. B. Cook, Chicago, Ill.
Rear-Commodore—O. A. Woodruff, Dayton, O.
Secretary-Treasurer—J. H. Ware, 130 Rialto Building, Chicago, Ill.
Applications for membership should be made to the Sec. Treas. on blanks which may be obtained from him, and should be accompanied by \$2 as initiation fee and dues for the current year.

FIXTURES.

MAY.
16. Ianthie, Spring, Woodside.
JUNE.
6. Hoisting Sail Competition, 20. Marine & Field, Open, Bath Brooklyn.
6. Yonkers, Annual, Yonkers. 27. Brooklyn, Ann., Bay Ridge.
13. New York, Annual, S. I. 31. Ianthie, Spring, Passaic Riv.
20. New York, Sandy Hook Race.

7. Ianthie, Ann., Passaic Riv.

THE CRUISE OF THE SHENANDOAH C. C.

AS DETAILED BY THE COMMODORE.

PART IV.

"COMMODORE, let's find a place to camp, and go in," said George, breaking in upon my reverie as the rain ceased, "we can't make Bear Litchie to-night, it's eight miles off, and it's half past five, and Lacy is wet through and thoroughly chilled; that old rubber coat of his was no good."

"Ah! I told you so. Well, we'll find a good place down at the mill, half a mile below, and I suppose we had better stop for the night," I replied.

We finished the portage, shot down the rocky and difficult rapids below the dam, rendered the more difficult by the low stage of water, and rounded to at the little hamlet clustered around the mill just above the ferry. At pretty much the same spot where I had landed four years before, after my unfortunate attempt upon the dam, we stopped, and soon had the canoes in position for the night, resting one above the other on the side of the steep bank; there being no level ground close to the water. Supper was soon mercifully sizzling and steaming away on the little camp stove, while Lacy speedily invested himself in dry clothes procured from his water-proof clothes bag of oiled canvas.

Our arrival created the usual sensation in the little hamlet, and we were speedily surrounded by the usual knot of interested and kindly spectators, who showed us many attentions in the way of milk, tomatoes, canteloupes, etc., for which they would accept no payment except our thanks.

We had friends living in the neighborhood, and after supper George and I walked up the hill and spent the evening with them. We had every reason to expect more rain, so we went prepared, with a lantern and our rubber coats. Never were expectations more fully realized, for it rained furiously all the evening, the noise of the rain falling in the roof of the house being so great at times as to render conversation inaudible. Great concern was manifested by our host as to the shelter afforded by our frail quarters, and we were hospitably pressed to remain all night, but we declined (very fortunately, as it afterward proved), but accepted an invitation for all three of us to breakfast the next morning, and about half past nine, the rain showing no signs of abating, we went strolling down the road by the dim light of our lantern to our camp.

"Great Jupiter Pluvius! look at the river!" exclaimed George, who entered the camp with the lantern ahead of me. "Why, I walked right into it!"

He held up his light and its rays flashed out upon a swollen and muddy torrent. Great patches of foam gleamed ghostly white in the dim light of the lantern against the black spaces of the water, seen for a moment, then lost to sight; while logs, fence rails and other debris shot swiftly by like shadows, dimly seen through the darkness and the fast falling rain.

The top of the camp stove was just visible above the water, which rippled around the stakes supporting the mess table. As I hastily drew the mess chest out from under the table, where it lay half submerged, a water snake slid off the top of it and darted away in affright into the inky blackness of the river. A gleaming white object in the margin of the river a few yards below proved to be the lub oil can, stranded among the weeds and rolling aimlessly back and forth with the wash of the water against the bank; while the water lapped gently against the side of my canoe, which lay lowest of the three.

We usually in camping close to the water, made our up-stream painters fast to a tree or stump or some other fixed object; but on this particular evening this safe precaution had been neglected, and there is no telling where my canoe would have turned up in the morning if we had remained all night with our friends.

"It's a good thing I didn't stack all the paddles against that post the other when we went into camp, as I thought of doing," I remarked. We hurriedly removed the stove, mess chest, kitchen ware and table and covered them with a batch to keep the rain off.

The post stood 20ft. from shore in 3ft. of water. We hung the lantern on one of the standards supporting Lacy's tent, and carried my canoe up the bank above Lacy's, which lay highest of the three, and then removed George's to a higher and safer location, after which we carefully made all painters fast to a convenient tree.

"Hello! what's all this row about?" asked Lacy, as he thrust his head out of his tent while we were working away in the rain. He had been lying snugly in his berth all the evening reading, and knew nothing whatever of the sudden rise in the river.

Morning dawned bright and fair after a pretty steady all-night rain. The river was swift by us in a smooth, unbroken sheet of water, with not a rock or ledge in sight. The rise, which did not exceed four feet, had reached its maximum during the night, and the river had already begun to recede. We had contemplated spending a quiet Sunday in camp, as was our usual custom; but we had also set our minds on taking our Sunday dinner at Bear Lithia Springs. So, as a move of some kind was necessary—our present camp on the side of the steep high bank, without shelter from the rays of the sun, which bade fair to make things warm for us in the course of the day, being already untenable as an all-day camp, and as the eight miles to the Springs could be quickly and easily made on the present stage of water—we decided to go. After a bountiful breakfast with our hospitable friends, we returned to the river, took down the tents and packed and launched our canoes. The family and young people, the family who had accompanied us back to camp, saw our boats and tents, watching us with interest as we embarked.

The short cruise was a pleasant one. It was a beautiful, bright sunny morning after the rains. A few stray clouds floated high overhead and wreathed in fleecy folds about the tree-clothed summits of the majestic peaks and bold headlands of the Blue Ridge mountains. The water was calm, and the air was so clear and so pure, so refreshing, and so full of life, that it was a pleasure to breathe its reposeful majesty; facing each other in stately grandeur on either side of us across the narrow valley. The rain drops sparkled in myriad points of light from every leaf and twig. The air was filled with the joyous carolling of birds and the soft musical murmur of the river, to which the subdued, deep-toned drone of the frequent rapids supplied a pleasing undertone. The ugly, brick-red water of the river, which flows across from bank to bank, covering rocks, ledges and shoals, over which the white-capped waves broke angrily and lapped up among the trees and shrubs and grasses that bordered either bank, did not add to the beauty of the landscape; but it bore us along at a lively rate as we went bowling down the middle of the stream with a disregard of rapids, reefs, fish dams and everything under a seven-foot mill dam, that we were refreshing and refreshing. The trip was a most successful one. The eight miles between Riverbank and Bear Lithia were quickly accomplished, and we soon found ourselves lying above the old mill dam just opposite the Springs.

We noted a good camping place among the trees a little below the dam, but we decided to go up to dinner before going into camp, so we landed and tied up just above the dam and walked across the fields and along the country road to the hotel, which are in plain sight from the river bank, where we were speedily enjoying our Sunday dinner.

Our appearance at the Springs in our canoeing costumes created a little ripple of excitement at the quiet little resort; and as it was usual on the arrival of strangers the register was speedily surrounded by a curious little group, who were as much mystified by the names of the canoes as by our own names.

We found Bear Lithia very interesting and well worth visiting. The buildings are situated on an elevation in the midst of the narrow valley and command an extensive and beautiful mountain and pastoral prospect, while the spring itself, which is a great pool some 150ft. long by over half as wide and 4 or 5ft. deep, and from which flows a good-sized creek, greatly interested us as we walked out over the board walks built out into and across it, and watched the water, everywhere bubbling up through its crystal depths from the sandy bottom.

The fact that we were going to shoot the dam after dinner soon got out, and we were accompanied back to the canoes by quite a party of gentlemen, including Mr. Cloud, the manager, all anxious to see us go over.

"Where do you all get your eating along the trip?" asked a stylishly-dressed gentleman, who was evidently unaccustomed to any form of out-door recreation more vigorous than sitting on a chair on the veranda of some country hotel.

"We cook it ourselves," I replied.

"And the Commodore is a good cook," added Lacy.

"Well, I should hate to eat any kind of a mess you fellows would get up," he drawled in all sincerity.

"Why, we might eat well in camp," I replied laughing. "Suppose you come down and take supper with us and see for yourself; we shall be glad to have you."

"No, I thank you; the hotel is good enough for me," was the unappreciative reply.

"Where are you going over?" asked Mr. Cloud as we came out upon the bank overlooking the dam, which, as the mill had been burnt some years ago, was in a state of dilapidation and decay quite gratifying to the passing canoeists. There were several breaks in it, affording glimpses of the rapids below, but the stage of water; but about the middle it was rather more broken down than elsewhere, and a furious torrent of water rushed through the breach and went roaring and piling down the rapid below in a long line of huge foam-crested waves—an exceedingly rough shoot, but a safe one with careful management, and one that promised some excitement in the running.

"Well, I think we'll go right down the middle," I replied carelessly.

"What! You aren't going down that cataraict in those little cloth pumpkin-seeds!" exclaimed the young man who had doubted my culinary ability.

"Why not?" asked George.

"O, it's safe enough," added Mr. Cloud, "if you handle your boats carefully."

Unheeded and pushed out into the stream, while the spectators hurried down the bank to a point a little below the dam, where they could see us come over to better advantage. It was an exciting plunge over the dam, and a wild rush down the rapid below; the canoes swooped down the smooth, liquid slope, one at a time, with a dizzying swing, and were completely buried in the huge roller that curled up at the foot, then went flying down the rapids, the big waves below, which rolled over the top of the rapids and tightly closed hatches in solid sheets of water, while they were pitched and tossed up and down like corks, and the spray flew in clouds, high above our heads.

The party on the bank gave a wild yell of delight as we came plunging down, and hastened down the steep bank to meet us as we rounded in below the rough water some fifty or sixty yards from the dam.

"That's the way we do it!" I remarked, as I beached my canoe in the mouth of the old, disused mill race and stepped ashore, wiping the water from my face with my handkerchief, followed by George and Lacy.

"I declare, that was a fine sight!" exclaimed the delighted manager, clearing up the head of the canoe up on the bank, and more than worth the walk down here just to see. I want you fellows to come up and take breakfast with me in the morning."

We found a very favorable camping place, under the trees on the flat, sandy river bank, a few yards lower down, and soon had the canoes unpacked and drawn up on the bank, the blankets made up in them, and the little Mohican tents slung over them, and everything ready for the night. We were very comfortable, the commissary department, as we were by no means sure, judging from appearances, that we would not be favored with more rain before the day was done. Our new friends watched the process of unpacking the canoes and setting up the camp with great interest, and were favorably impressed with all they saw; albeit somewhat concerned as to how all that plunder could ever be gotten back into those small boats, and they were exhibiting their hearty misgivings as to the comfort of a canoe for sleeping purposes, or as to the reliability of the shelter furnished by the diminutive tents, in case of rain, he kept them to himself.

The Frankie had been leaking a little during the morning's cruise, so after getting all the cargo out and before preparing the bed and tent for the night, I turned the canoe up on one side against a convenient tree, where a careful examination revealed a deep scratch two or three inches long, just below the waterline, cut almost through the canoe, by that ugly snag I collided with, away back at the Port Republic dam two days before. I drew the edges tightly together with a needle and stout thread, and then padded the place thickly inside and out with asphaltum, a small piece of which was carried for such contingencies among the Ross's stores, extemporizing a brush for the purpose by cutting a small twig about the size of a lead pencil and then beating one end into small shivers, and the wound was effectually healed.

There was, as usual, a large melon patch close to our camp; indeed, the river bank seemed to be clothed with melon patches all the way down, and wherever we camped we were sure to find ourselves near one, and a nickel or a dime would purchase as many watermelons or cantaloupes as we could dispose of at a camp, and a bountiful supply was readily procured here for our evening meal from the watchmen stationed in the rude little box or shed overlooking the fields.

Our weather prognostications proved to be entirely correct, for

we had a wild, tempestuous night of it, and each man scuttled off into his tent as soon as possible after supper.

Snuggly lying in my berth, with my little tent tightly buttoned all around to the gunwales of my canoe, I lay and read by the light of a candle, set in a small block of wood, hooked over the cockpit coming by a strip of bent tin, so arranged as to come between the page and my eyes, while the wind howled and rushed through the treetops outside, which swayed and moaned complainingly in the storm, and the rain beat in driving gusts and sheets upon the top and sides of my tent, while above all the turmoil of the storm arose the deep, dominating roar of the river as it fell over the dam and rushed down the rapids above us.

An occasional draft would come in through the little ventilator windows in each end of the tent, high up under the projecting ends of the top, causing my candle flame to flicker and flare and the melted wax to run down in a transparent buttress on one side of the candle; or perchance a few fine drops of spray would come in with the air and sprinkle my face and my page, and sometimes an unusually severe blast and rush of rain would shake and sway my little tent from side to side with force enough to even make the canoe tremble in her bed of sand; but I lay and read undisturbed, secure in the knowledge that nothing short of a hurricane could tear my tent from its supports and fastenings.

Tired of reading I blew out my candle, drew my blankets snugly up over my shoulders and was lulled to sleep by that most soothing of all sounds to the tired, well-housed canoeist—the patter, patter of the rain.

Morning dawned as bright and sunny as if the weather clerk had been innocent of any thought of rain for a week. The rise had run off and the river—still as muddy as ever—was down to low water mark again, the storm being evidently merely local; at any rate, it did not extend far enough up the river to have any effect upon it.

When we arrived at the hotel for breakfast we found ourselves quite the center of interest, and a large party of ladies and children accompanied us back to our camp to inspect the canoes and camping outfit, of which they had evidently had a glowing account, and to see us start.

The party were quite delighted with everything they saw, and exclaimed at the snug appearance of the tents, which we had left so long in the rain, and which, in fact, had not been in for a full share of attention, and the children wondered how we could cook on such a funny little stove.

"Do canoeists ever jump over a perpendicular dam, like that place over there?" asked one of our fair visitors, indicating an unbroken section of the dam between two small islands, having a perpendicular face some 5 or 6 ft. high.

"If we did, it would be enough over the edge of the dam it can be done safely, and I have read of canoeists doing it, but I do not think it is generally done. We do not do it, unless the dam is a low one; say not over 2 or 3 ft. in height," I replied, modestly refraining from alluding to my unfortunate episode at the Riverbank Dam.

The Commodore tried it once—"began Lacy, innocently, but I warned him with a look and at once he was boat-tossing upon the peculiar merits of the canoes for a trip of this character, to such effect that his ill-timed remark excited no notice or comment.

Our visitors took a gratifying interest in the camp, the canoes and the cruise, and while we were finishing our packing they hurried down along the bank to a point 100 yds. below to see us go, and saw us pass along the rapids, the boatmen in the stream with smiles and pleasant words, and good wishes, and waving of handkerchiefs, and remained watching us as long as we were in sight.

Our stay at Bear Lithia was a pleasant little episode of the cruise and one that we greatly enjoyed, and the kind treatment received there from both guests and management (for our failing supplies were renewed there freely and abundantly and no pay accepted but our thanks) will long be remembered.

We found the five miles of river between our late camp and Milnes to be by far the roughest we had experienced on the trip, and after finally backing and filling around through the half mile of rapids in front of the long, straggling wooden town to secure a safe passage among the boulders, ledges and old dams with which the river bed was so profusely strewn, our terms fairly acted upon the shoulders, and we were glad to land in the stiller water below and go up into the town for mail and supplies (including a heavy rubber coat for Lacy) and give our tired muscles a chance to recuperate before resuming the cruise.

The village of Milnes did not present many attractions to us, so we did not tarry longer than to replenish our supplies and get our mail. It is in no sense a representative old Virginia town, being simply a railroad and mining village of a few hundred inhabitants, and it looks more like a new Western railroad town straggled high and dry upon the banks of the Shenandoah than a Virginia town. The classic old towns of Luray, Front Royal and Charles town are but a short distance from the river, and will well repay the canoeist in scenery in nearly every respect. The walk from the river and a stroll through the quaint old streets; while Staunton, with its female colleges and State institutions (which, while not on the river, is the point from which the cruiser will make his start), Strasburg and historic, battle-scarred Winchester, where the dead were piled up in the streets like cord-wood, and with its great cemeteries full of Confederate and Union dead, buried on the battle fields where they were slain, are easily accessible by rail; and storied old Harper's Ferry, with its ruined Government buildings, John Brown's fort and its lavish wealth of wonderful scenery, nestles under the towering heights at the point where the Shenandoah mingles its waters with those of the Potomac in a glad and smiling union.

GENESEE C. C.

THE Genesee C. C. is a paddling club, located in Genesee Park, at Rochester, N. Y., on the river of that name. Its membership of 31, with 9 applicants on the waiting list, includes 19 members of the Rochester C. C., the latter club, whose station is at Irondequoit Bay, on Lake Ontario, being devoted mainly to sailing. The officers of the Genesee C. C. are: Capt., Courtland Avery; Mate, A. B. Dodge; Purser, F. J. McCall; Executive Committee, C. A. Brad, M. E. Smith and G. H. Harris; Regatta Committee, J. B. McVean, J. F. Andrews and Henry King.

The committee has already arranged a series of races and appointed starter, clerk of course, etc., for the season. The dates are: Annual spring regatta, June 6; second race, June 27; third race, July 25; fourth race, Aug. 29; annual fall regatta, Sept. 19. In case a club trophy is provided to be raced for the regatta committee will report conditions for each race at a later date. All races will start at 10 a. m. by the signal of a gun.

Two novel races are proposed as follows: Tandem cruising race, single blade. The canoeists shall start at the regular home buoy, paddle to the State dam and either shoot or be carried over it, paddle down the rapids to a point on the east shore, to be marked by a white flag, there carry over into the feeder, paddle up the feeder to the State dam, and there carry into the river and paddle across finishing line between the home buoy and the club dock. Single cruising race, single blades. Canoeists to start at regular home buoy, paddle to and over the State dam, down the rapids to a point to be marked by a white flag, turn and return to finishing line, crossing it between the home buoy and the club dock.

THE NORTHERN DIVISION MEET.—Editor Forest and Stream: It has been proposed that the next meet of the Northern Division of the A. C. A. should take the form of a cruising meet, and the waters of Georgian Bay have been suggested as a suitable place for the trial. It is just possible, however, that it may not be so practical to carry out this year, as the weather has been the crippled state of the Division finances. If this should be the case, would it not be possible to arrange a cruise to the general meet in Lake Champlain? Starting from Kingston a week or ten days before the date of the general meet, cruising down through the Thousand Islands, taking the mail boat when passing through the rapids, and cruising on from Montreal or Saginaw. Members of the different clubs could join in wherever most convenient to them. This plan would swell the numbers at the general meet and give the cruising scheme a test.—NEMO.

A. C. A. MEMBERSHIP.—Central Division: E. B. Elliott, Jr., Geo. S. Morley, Newark, N. J.; Atlantic Division: John L. Reaton, Brooklyn, N. Y.; Central Division: W. N. Clarke, Brockville, C. E. Brantcomb, Picton, N. S.; R. H. Strickland, Lakeland, E. B. Muckleston, G. P. F. Osborn, J. A. Thoren, L. W. Shannon, Lindsay Russell, T. Y. Greet, J. M. Richmond, W. J. B. White, W. B. Skinner, R. E. Burns, F. H. Macne, H. W. Richardson, R. M. Hannaford, G. A. Walkem, W. A. Kent, Kingston, Ont.; W. E. Stewart, Ottawa.

THE HOISING SAIL COMPETITION.—Thus far but three entries have been received for the hoising sail competition for prizes given by Mr. Zerega. The date for closing the entries was set for April 1, but Mr. Zerega has decided to extend it until April 8.

PASSAIC RIVER CLUBS.—The delegates from the Associated Canoe Clubs of the Passaic River met at the Janie C. C. house on Nov. 11. Owing to the close proximity of the Atlantic Division meet, Decoration Day was not chosen for the meet, but it will be held in connection with the regatta of the Orange, Arlington and Janie canoe clubs, on Saturday, Sept. 3, and Labor Day, Sept. 7, at the several club houses. Officers elected for the year were: Wm. H. Hillier, Crescent C. C., Chairman; R. W. Strachan, Orange C. C., Sec.-Treas. The camp site committee appointed were C. V. Schuyler, H. S. Farmer and George Manley. Regatta committee, R. W. Peebles, Dr. Wm. H. Mitchell and W. J. Stewart.

ACCIDENT TO COL. NORTON.—Col. C. L. Norton, the well-known writer and veteran canoeist, who is now on an exploring expedition in Florida, was very severely injured by a fall from a tree last week. The full extent of his injuries is not known, but the brief reports indicate that they will not prove fatal, as was feared at first.

WINTER QUARTERS.—The rooms were well filled on March 20 by representatives of all the suburban clubs to hear Mr. Ward's description of "A Cruiser's Paradise," which proved to be Lake Champlain. Mr. Ward described the lake quite fully, using the four Government charts, and speaking in detail of the new camp site for '91. The evening closed with congregational singing of a high order. On April 3 Mr. W. P. Stephens will give a brief talk on designing.

WAR CANOES.—The St. Lawrence River Skiff, Canoe and Steam Launch Co., of Clayton, N. Y., have two war canoes on the stocks, viz., one 25ft. x 50in. for the Chicago C. C. and one 35ft. x 50in. for Brown University C. C., of Providence, R. I. Both canoes are the handsomely finished, and are after the model of the famous Ko-Ko-Ko-Ho, built last year by the same company.

PEORIA C. C.—A club by this name has just been formed in Peoria, Ill., with the following officers: Com., H. C. Morse; Vice-Com., A. G. Palmer; Purser, F. A. Willard; Executive Com., H. C. Morse, A. Bown, C. C. Green. Plans have been drawn for a floating boat house, which will be ready for occupancy April 1. Peoria Lake and the Illinois river offer most excellent waters for sailing, paddling and cruising, and therefore the members of the club look forward to many good times.

OTTAWA C. C.—Another club house has come to grief, this time that of the Ottawa C. C., the water running over the ice and flooding the house. Fortunately the trouble was discovered in time and the scows pumped out before the ice melted and allowed them to sink.

CARILLON C. C.—A club by this name was formed at Ticonderoga, N. Y., the officers being: Com., H. W. Twedney; Vice-Com., M. J. Wilcox; Sec'y, J. S. Carr; Purser, W. E. Donnell.

HARRISBURG C. C.—The members of the Harrisburg C. C. held their sixth annual dinner at the residence of Andrew A. Hook on March 19. The following officers were elected for 1891: E. B. Flickinger, Com.; J. E. Whitehouse, Vice-Com.; M. W. Fager, Sec'y; E. R. Dasher, Treas.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 25c. Canoe and Boat Building. By W. P. Stephens. Price \$2.00. The Canoe Aurora. By C. A. Neider. Price \$1.00. Handling. By C. B. Vaux. New Publications.

MINNEAPOLITANS ABROAD.*

A BOOK of travel may be the most stupid of volumes, or it may be most delightful. As a rule we are inclined to shun them, for the personal element is likely to crowd out matters of general interest; the book is apt to become the diary of a narrow-minded person. On the other hand it is oftentimes the very introduction of this personal element that gives its charm to the book. No one who has read "China and Thibet," "A Girl's Round the World," "Ten Days in the Desert," or "Mosses and Men," will believe that the same story could have been told with equal charm by any one else.

Mr. Reeve's book, just issued by the Putnams, is one of the delightful books of travel. It consists of a series of sketches in which the personality of the author lends an interest and a charm to many matters which might appear commonplace enough. If told in a different way and by an ordinary narrator. The author always looks at things from an original standpoint, and a genuine atmosphere of freshness mingled with a vein of quaint humor and hearty fun pervades the book.

The story is of a party of eleven residents of Minneapolis, who, having purchased their tickets from Cook & Son, set out to pass a winter in Egypt. But little time is wasted in starting them on their travels, and the first chapter takes them across the Atlantic to Havre, Paris and Brindisi, from which point they are to start for Alexandria. Of the trials of this voyage the author speaks with abundant feeling, and his description of the steamer is excellent. He says:

"The boat has a strange history. She was an ancient Carthaginian trireme, which, having escaped the destruction of the fleet by the Romans, was purchased by the Austrian Lloyds for one hundred sestertii, encumbered with an engine and some other machinery, and put on the line between Trieste and Alexandria."

"The captain, who was hortator on the ancient trireme, was retained by the management, and some of the former rowers, captured in the interior of Africa, now occupy different positions of trust about the craft. None of them, I learn, have the slightest idea of the uses of the barometer or compass, and the management of the engine is to them a sealed book. It seems strange enough in this nineteenth century to be ploughing the historic waves of the blue Mediterranean in a craft, upon the deck of which perchance Hannibal once stood, the sailors steering by the sun and stars, and the familiar landmarks of Corfu, Cephalonia and Crete, the only incongruities being the groaning of the machinery and the presence of the All-Minneapolis Eleven."

From Alexandria the party went to Cairo, ascended the Pyramids, went up the Nile as far as the first cataraict and saw many wonders on the way. From Cairo they went to Beyrout, Baalbec, and Damascus, and back to Beryout thence to Cyprus, Rhodes and the Aegean Islands, to Constantinople, Greece and back to Brindisi. The story of the whole trip is told in a most entertaining and often amusing way, and yet the book contains a great deal of information which is well worth reading, both for the traveler and for the stay-at-home.

Mr. Reeve's style is most agreeable. It is charmingly free from conventionalities, for he writes his story just as he would tell it, in a breezy, chat-like, thoroughly manly way. He is so much interested from the beginning, just as he would be if it were told him by word of mouth, and laughs or is serious, being in thorough sympathy with the narrator throughout.

The volume, which contains about 400 pages, is very handsomely gotten up, as the Putnams' books always are, and should have a ready and large sale.

* How We Went and What We Saw. A Flying Trip Through Egypt, Syria, and the Aegean Islands. By Charles McCormack Reeve. G. P. Putnam's Sons, New York, 1891.

A BOOK ABOUT INDIANS.—The Forest and Stream will mail free on application a descriptive circular of Mr. Grinnell's book, "Fawcett Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—Advs.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 250 pages, price \$2.50. For sale by FOREST AND STREAM.

FOREST AND STREAM, No. 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nant," "Glean," "Dick Swivel," "Sybilens" and other competent authorities to be the best treatise on the subject extant.

WARREN FIVE-CENT SAVINGS BANK, Peabody, Mass., Dec. 11, 1890.—Fred. H. Brown Mfg. Co., Detroit: Gentles: "Shoe Rest" purchased of you recently just fills the bill. It is neat, it is handy in appearance, takes up but little room and answers its purpose admirably. It is the most complete blacking arrangement I have ever seen. Yours truly, A. H. MERRILL, Treas.—Advs.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

G. W.—We have asked H. L. to reply to your query.

J. P. B., Meriden, Conn.—There is a letter here for you.

J. H. B.—We suggest your trying cynoline, it can be obtained at any of the gun stores that keep medicines.

Can you tell me anything of the pedigree of the English setters General Grubb's Jim and Col. Stetson's Nell? Ans. They are not registered.

DICK, Allegheny City, Pa.—You will find all information in Hammond's "Training vs. Breaking." Price \$1, published by Forest and Stream Publishing Co.

E. B. B., Whitinsville, Mass.—Can you inform me where I can buy wild rice seed? Ans. Chas. Gilchrist, Port Hope, Ont., or Richard Valentine, Janesville, Wis.

READER.—Please give the pedigree for three or four generations of the pointer bitch Beulah? Ans. Beulah, by Sam out of Vivian, Sam by Caper out of Kate, Vivian by Shot out of Fly.

J. F. S.—1. The Ballard is the better target rifle of the two. 2. Our pamphlet "Trajectories of Sporting Rifles," giving full report of our Creedmoor trajectory tests and their results, will be mailed on receipt of 50 cents.

UPRING, Savannah, Ga.—Which is the best in fly-fishing, to use reel on top or below handle, also when the seat is below hand grasp and above. Ans.—The reel should be placed underneath and below the hand grasp for a fly-rod.

R. L. S., Kansas.—Please inform me if a Gordon setter or an Irish setter is the most endurable dog? Ans. From what we have seen of the two breeds, we should say the Irish setter, though there is little to choose between them.

O. H. R., New York.—Could you give me the address of any hunting club near New York that I could join where there is all kinds of small game? 2. What kind of a place and where is Robins Island? Ans. 1. We know of no such club. 2. The Robins Island Club has quail shooting.

J. E. R., Buffalo, N. Y.—1. Do the Lorillards register their dogs? 2. Can you give me breeding of litter of pointers whelped May 2, 1885, belonging to Mr. Lorillard? 3. Give me Mr. Lorillard's or his kennel manager's address. Ans. 1. Yes, in the A. K. C. S. B. 2. No. 3. Pierre Lorillard, Jr., Tuxedo Park, N. J.

P. W. G., Boston, Mass.—Could you tell me through the columns of your paper the pedigree of pointer bitch Patti of Portland? She is four years old and was owned and registered by J. F. Richardson, of Portland, Me. I don't know whether she was registered in the A. K. R. or the A. K. C. S. B. Any information you could give me would be gratefully received. Ans. Can find no trace of her.

M. E. N., Hyde Park, Mass.—I inclose pedigree of my dog Grip Boudhu, 18mos. old. Will you please tell me how much, if any, the inbreeding shown would injure him in the estimation of dog men? Would it be advisable to have him registered under the circumstances? Ans. This will not hurt him, only avoid any more of it. There is no reason why you should not register him.

G. C. H., New York.—Will you kindly answer these questions? 1. Where can I procure a standard for Irish terriers? 2. Is there any book published on the breeding of Irish terriers, and where can I get it? I am desirous of breeding these dogs but know very little about them. Ans. You will find all the information you require, and much interesting reading on the breed, in Vero Shaw's "Book on the Dog." We can supply it.

G. R. B., Smethport, Pa.—I would like to hear from some of your correspondents in regard to the wild pigeons that used to frequent this section of Pennsylvania. McKean county was formerly one of their principal nesting grounds when there was a good crop of beech nuts and a great many were netted here and sent to the markets, but for the last ten or twelve years we have seen but a few birds. Are there any in the United States? Ans. There are said to be large flocks which migrate to the northwest.

R. H. B., Cambridge, Mass.—Can you answer the following questions for me: 1. What is the reason of the popular impression that nearly all pure white dogs are deaf? 2. Is it possible to get a pure white Irish setter? 3. What is the origin of the so-called round head bull-terrier? Ans. 1. The only reason we can assign is the fact that many white show bull-terriers have been found to be deaf. 2. You would have to seek some outcross. We do not see how it would be possible. 3. It is the original English bull and terrier, the first step toward the modern show bull-terrier.

D. B. K., Holyoke, Mass.—I have been trying to get the pedigree of my dog so I could have him registered. I must give it up unless you can tell the sire and dam of Buff and Lena, as the A. K. R. registered the Gordon setter Guy II. (A. K. R. 6,759) and furnished Buff and Lena as sire and dam of Dash II. Ans. We cannot find Buff's pedigree, perhaps the owner of Lena can help you. Lena's pedigree is as follows: Breeder, Hugh McIlvaine, 31th and Market streets, Philadelphia, Pa. Owner, J. B. Hiron, 1815 Park, Delaware county, Pa. Sire—Pilot, by Grouse out of Dixon's Maud, by Rudy out of Dixon's Merse. Dam—Creta II., by Grouse out of Dixon's Maud.

H. De B., Mount Morris, N. Y.—Can you give me regular number and pedigree of greyhound bitch Sybell, register receipt bears date of Dec. 29, 1886, to Geo. E. Peer, of Rochester, by Forest and Stream Pub. Co. Her sire, Spring (1992) was owned by J. J. Muldoon, of Toronto, Ont., imported from Blair Athol, Scotland. Her dam, Bluebell, was owned by Arthur Allen, Montreal, P. Q., imported Dec. 2, 1882, from England. Also please send me registry blank, as I have one of Sybell's offspring which I wish to have registered. Ans. Sybell (A. K. R. 4586), whelped Aug. 10, 1886, Sire, Spring, by Hodgkin (Cattimay—Eva) out of Lady Maud, by Barron out of Old Sis. Dam, Blue Bell, by Leo (Butcher—Annie Lyle) out of Clare Ann, by Jussups out of Susie. You must write to A. P. Vredenburg, 44 Broadway, New York city, for registry blanks for A. K. C. S. B. Fee to register \$1.

C. L. W., Detroit, Mich.—Please give me the names and numbers of the English mastiffs, sire and dam of Ashmont Venus (A. K. R. 2630) also pedigree for three generations of the mastiffs Prince Leo (A. K. R. 3211) and Fanny (A. K. S. B. 3005). Ans. Ashmont Venus, sire, Mike, by Austin's Jack out of Leo, by Leo out of Juno (Jack-Kelly's Dash—Austin's Juno). Dam, Juno by Lion (Jack—Tutu) out of imported Fannie. Prince Leo by Agrippa out of Pride. Agrippa by Gwallior out of Berenice. Gwallior by champion Rajah out of champion Princess, by champion Wolsey out of Banbury's Juno, by Turk out of Lucas's Juno. Rajah by Griffin out of Phyllis. Berenice by champion Beau out of Orenso, by Niger out of Devonshire Cleopatra. Fanny by Cesar II. out of Juno, by Sampson out of Fury, by Turk out of Juno. Sampson by Leo II. out of Dido. Cesar II. by Major out of Nell, by Pluto II. out of Lotia. Major by Leo out of Leona.

J. R. J., Ellicott City, Md.—Two friends and myself are breeders of beagles and our kennel is known as the Patapoco Beagle Kennel. We are desirous of joining the National Beagle Club. Can we join as a kennel or will we have to join individually? As you can enter dogs in shows in the name of your kennel I can't see why you can't join the club in like manner. Please inform me how to proceed. 2. My gun is very much pitted, how can I remove the same? Ans. 1. The best way is to make application in the name of the kennel. We see no reason why your kennel could not be a member as long as your dogs are entered at a show under the kennel name. 2. Rust spots in barrels may be smoothed out with emery paste, made from three parts cosmoline or oil and one part emery. Use on a soft swab which fits the barrels closely.

Then apply the wire scratch brush and finally wash out clean. —(From "611 Hints and Points for Sportsmen.")

H. K. D., Cleveland, O.—Is there any sort of yearly publication giving names and particulars regarding winning dogs on bench and in field, a regular summary of each year's performances or winnings. Something after the manner of "Wallace's Year Book" for horses. I have Mason's book, "Our Prize Dogs," but that is simply a very handsome and elaborate summary of one year. I am a beginner and seeking information, and having been an ardent admirer of horses all my life, realize that the quickest and surest way to familiarize oneself with the best strains of blood, winning strains, is to study a summary of each year's winners, with their winnings and defeats, and particulars regarding same. Ans. The A. K. C. Stud Book for the past year simply gives the winnings of each dog on the bench. Some such publication as that mentioned would be very useful, and that, we believe, is what the National Greyhound Club wishes to do in their separate stud book.

On the bill of fare of the Palace, Cincinnati, one day last week there appeared the rather unusual dainty "Joan elephant." It was in fact a part of Chief, the vicious elephant who was shot in the Cincinnati Zoological Garden, and was not bad eating, as some of the force of this office can testify. It was without exception the best roast elephant that any of us had ever tasted.—Hotel Mail.

Jim Candee, an old Lyme trapper, has caught an unprecedented number of muskrats this year. He sinks a half barrel near the runs of the rats to the level of the ground, half fills it with water, and then on floating pieces of boards in the tub places small pieces of carrots. When the muskrat jumps in after the bait he can't get out, and he leaves the trap set for another victim. Mr. Candee has caught as many as six rats in a single barrel in one night.—Hartford Times.

Here is a prodigiously tall story sent to us by a young subscriber: "A gentleman in Rosario was once attacked by Pampa Indians. There were seven of them and he had only his six-shooter, with five shots from which he succeeded in laying low an equal number of his assailants. He had then one charge left, and the remaining two men were advancing. Quick as thought he opened his pocket knife, held it up in front of the pistol barrel, with the sharp edge of the blade toward him, and fired. The knife split the bullet in halves, each half killing one of his foes, and the hero thus saved his scalp. This is his own account of the affair."

FLINT LOCKS are generally supposed to be entirely things of the past. How, then, are we to explain the fact that at Brandon, in Suffolk, at this moment no fewer than thirty-five men are still employed in fashioning gun flints, or "flint knapping," as it is generally called? No less a number than 30,000,000 of gun flints of various qualities and sizes are officially stated to have left the workshop of one Brandon man alone during the last ten years. What has become of them? Some light is thrown on this puzzling question by the information that their destination is the west coast of Africa, whence they are distributed among the savage tribes of the interior. Auctioned off many years ago as no longer of any use to us, our old flint guns and pistols have found their way to remote parts of the great African continent, where they are doubtless regarded as better than no weapons at all. Brandon, in brief, is working chiefly to keep our old friend "Brown Bess" in decent repair.—London Daily News.

NOTICE TO LIMIT CREDITORS.

To the Creditors of the F. L. Sheldon Company:
Notice is hereby given that on the tenth day of February, 1891, an order was made by the Chancellor of the State of New Jersey, that the creditors of the F. L. Sheldon Company present to the undersigned, the receiver thereof, and prove before him under oath, to his satisfaction, their several claims and demands against said corporation within two months from the tenth day of February, 1891, and that in default thereof, such creditors shall be excluded from the benefit of such dividends as may hereafter be made and declared by the court upon the proceeds of the effects of the said corporation, and notice is hereby given to all the creditors accordingly. FISHERMAN'S AUTOMATIC REEL.

When a sportsman finds anything which adds to his pleasure, with-
out increasing his labor, he wants all his brother hunters
and anglers to know of it and share with him
the newly discovered "helper."

WHAT WE CLAIM FOR The Automatic Reel.

FIRST—It will wind up the line a hundred
times as fast as any other reel in the world.
SECOND—It will wind up the line slowly if
the angler chooses.
THIRD—No fish can ever get slack line with it
FOURTH—It will save more fish than any
other reel.
FIFTH—It will prevent tugs, lines and snells
from being broken by large fish.
SIXTH—It enables the angler, and makes it
desirable, to use lighter tackle.
These claims have been substantiated by
the most skillful fishermen in America and
Europe.

This reel is manipulated
entirely by the hand that
holds the rod.

Y., and several of the best men from his old shop to superintend the construction thereof.

The ACME FOLDING BOAT CO.

MIAMISBURG, O.

The only portable boat that combines handsome model with compactness. No bagging; smooth, uniform surface. All parts of frame adjustable to compensate for stretching and shrinkage of canvas. Flooring forms the shipping case. The Acme is endorsed by prominent sportsmen everywhere. From J. Harrington Keene, author of "The Practical Fisherman," "Fishing Tackle, Its Material and Manufacture," "Fly-Fishing and Fly-Making for Trout, Bass, etc.," "The Angler's Complete Guide and Companion," etc., etc., "Greenwich, N. Y., July 12, 1890.—Gentlemen: I have just returned from a thorough trial of the 12ft. boat purchased of you, and am delighted with it. In Europe and this country I have used nearly all kinds of folding and portable boats, but I unhesitatingly accord you the palm of superiority. It is thoroughly well made, stable on the water and so convenient to pack and set up that its use is a real pleasure. Besides this its shape and exceedingly light weight when packed render it perfect itself as a boat to carry from place to place. We hardly realized we carried a boat for three. Respectfully, J. HARRINGTON KEENE, AGENTS: L. W. FREDLAND & CO., Boston. MERWIN, HULBERT & CO., New York.

The Expert's High Grade Trap Cartridge

Owing to the demand for a thoroughly reliable and strictly first class "Trap Cartridge," we have decided to put on the market a cartridge to be known as "The Expert's High Grade Trap Cartridge." These cartridges will be loaded with The Chamberlin Cartridge Co.'s "High Grade Trap Powder," which is made "exclusively and expressly" for these cartridges, and which we know to be the best trap powder made. The specifications and lists of these cartridges are as follows:

Load No. 30. 10-gauge Climax Shells, 3½ drs. High Grade Trap Powder, 1¼ oz. No. 8 shot. List \$30.00 per M.

Wadded two 9 and one 10-gauge Black Edge Wads on powder and card on shot.

Load No. 32. 12-Gauge Climax Shells, 3 drs. High Grade Trap Powder, 1¼ oz. No. 8 shot. List \$27.50 per M.

Wadded two 11 and one 12-gauge Black Edge Wads on powder and card on shot.

Chilled shot \$1.00 per M. net extra.

We solicit a trial of these cartridges and know that they will not fail to give the very best of satisfaction. We are also prepared to load these or any of our regular trap or nitro-powder cartridges in the new U. M. C. Co.'s "Trap" shell for which an extra charge of \$10.00 per M. net will be made.

Send stamp for our list and discount.

ANSWERS TO CORRESPONDENTS.

THE NEW YORK LAW.

WE are receiving numerous inquiries about the condition of the New York game law. Up to the time of going to press the codification bill had not been sent to the Governor. All provisions of the game and fish laws remain as they were last year; the trout season opened yesterday, except in the Forest Preserve, where the date is May 1. The wildfowl season under the present law will close May 1. The prevailing perplexity on these points illustrates and enforces what we said the other day of the effect of passing the codification in its present shape. The bill provides that the law shall take effect immediately on its signature by Governor Hill. This, if the measure shall be passed this month, will produce complications by a summary change of the trout fishing and duck shooting seasons. A man who catches trout legally in the morning of one day may be arrested for catching more of them illegally in the afternoon of the same day, or for having in possession those caught in the morning. The new law, if enacted, should take effect at some date sufficiently remote to afford every one an opportunity to become advised of the changes. No good is to be attained by any other course.

The Anglers' Association of the St. Lawrence River has sent out circulars asking sportsmen throughout the State to urge upon their representatives at Albany a speedy approval of the codification bill. It would be a decided pity if, after the intelligent action of the State in providing for a revision of these statutes, the bill should fail to become a law. We hope to see the measure enacted; but as has already been pointed out, there are numerous points which should be changed, and which can better be altered now than later. Certain of the sections relating to the Fish Commission are by no means satisfactory; there are numerous exceptions in favor of special classes and special localities which should have no place whatever in the law, but which have unwisely been adopted to allay feared opposition to the bill as a whole. In many respects the bill is better than when it first came

from the hands of the codification committee; but in many other particulars it has been tinkered for the worse.

Several bird lovers and students of ornithology, residents of Buffalo, have petitioned the Legislature to strike out the clause which provides that any person may kill birds destroying his fruit. Intelligence and common sense are against giving any such permission to destroy insectivorous birds. Every well-informed person knows that the birds which destroy a little fruit depend for existence almost wholly upon insects; that if it were not for the assistance of the birds in keeping the insect hordes in check, there would be no possibility of fruit growing. To shoot a robin because it is eating cherries does not differ in principle from shooting a horse which happens to break into the garden patch. Add to this that birds are nesting in the fruit season, and the destruction of the parents means the starvation of the young. There is nothing but folly in such an exemption as this clause provides. It should be stricken out, and stricken out now, before the codification bill shall become a law.

BEAR TIME IN THE ROCKIES.

IT is perhaps not generally known that this is the very best season of the year to go bear hunting in the Rocky Mountains. The natural close times which prevail for other game are not in force for bears, and it is in the spring when he first comes out after his protracted winter's sleep, when he is hungry after his long fast, and when his heavy coat is at its best, that the bear is to be killed.

When Ephraim or Bruin first comes out of the "den" in which he has spent the winter, he is fat and sleek, his coat is long and glossy, and he seems in superb condition. It is not long, however, before a change comes. First he loses his heavy coating of fat, and becomes very hungry. As a result of this, he is traveling about almost all the time, and in this respect his habits differ widely from what they are in the summer and early autumn, when he rarely shows himself—except on rainy days—until the dusk of the evening. In April and May, however, in the Rocky Mountains, the bear is moving about at any hour of the day. He turns over the rocks and tears open rotten logs in his hunt for insects, explores the streams for frogs with the earnestness of a coon, digs out mice or ground squirrels, and tears up the caches of pine nuts which the thrifty squirrels made the fall before. If he finds one of these caches the bear considers himself in great luck, and that they do find many is certain, for the shells are often seen in the droppings of the animal. At this time of the year, therefore, the bears being always hungry and always moving, may be successfully hunted.

In a country where they are plenty the hunter who posts himself on a commanding point, overlooking a valley in which he has found signs that the bear has been working recently, will be likely to see more than one during the day.

The fact that the bears are always moving makes the stalking of the animals at this season somewhat more difficult than it would otherwise be. You have to act with promptness and are not at liberty to take your time. Often a long run must be made to get within shot of the prey, and often just as you have come in sight of him, and, all winded by your hurry, are raising your rifle to shoot, he will disappear into a clump of brush and will not be seen again.

The restlessness on the part of the bears of the Rockies does not last very long, nor does their excellent condition of coat continue. The time of their shedding varies with altitude and latitude, but usually by the middle of May their skins are ragged, sunburnt and worthless.

SNAP SHOTS.

THE absolute necessity of restocking the depleted covers of the East has long been dwelt upon by FOREST AND STREAM, and within a year or two the ball has fairly been set in motion, and this work assumes constantly greater proportions. As is well known the importation and breeding of English pheasants has been undertaken at a number of points, quail have been brought from the South and turned out in many places, Massachusetts has taken steps to stock her sandy barrens with the allies of the "heathen," which was long ago exterminated everywhere except on Martha's Vineyard. A project is on foot for making an addition to the fauna of Long Island which will be very important from the sportsman's point of view, and about which we hope to give full details in the course of a few weeks.

Hereafter the sportsman who visits Maine will have the privilege of carrying home his venison without committing a technical violation of the law. Under the old statute, which was construed to forbid transportation companies from carrying more than one moose, two caribou and three deer in a season, visiting sportsmen did carry their game out of the State, but they did it because the authorities were pleased to wink at what was in effect illegal. The new statute is modeled on the law of New York, which has been found to work well. The text reads: "No person or corporation shall carry or transport from place to place any moose, caribou or deer, or part thereof, in close time, nor in open time unless open to view, tagged and plainly labeled with the name of the owner thereof and accompanied by him, under a penalty of forty dollars; and any person, not the actual owner of such game or part thereof, who, to aid another in such transportation falsely represents himself to be the owner, shall be liable to the penalties aforesaid."

Ex-Minister Phelps's recent paper in *Harper's Magazine* on the fur seal controversy has again blown into flames the almost dead embers of this discussion. The most diverse views are expressed by the newspapers of opposite political parties over the rights and the wrongs of this matter, and in much of the discussion a shameful degree of ignorance is manifested as to the ownership of *feræ nature*. Meantime we presume the destruction of the fur seal will go on, and in a few years this animal is likely to be classed with the sea elephant, the buffalo, the great auk, the Labrador duck, and other exterminated wild creatures.

Dr. David S. Jordan, the distinguished ichthyologist and college president, now at the head of the Indiana State University, at Bloomington, has accepted the presidency of the Leland Stanford, Jr., University, in California. We congratulate the University and the State of California upon the accession to its educational ranks of a man whose administrative ability has been so strikingly demonstrated. The science of ichthyology on the West Coast will gain a most able exponent.

Our long-time and popular correspondent "Von W." is an angler through and through. This was demonstrated the other night, when he woke up to find the house in a blaze. There was a scramble for dear life, and a saving of what effects might be rescued. After it was all over, the neighbors discovered that our angler had made sure of his gun, rods, fly-books and wading boots. When Barnum's Museum was burned Horace Greeley consoled the showman with the comforting thought that he now had time to go fishing, and advised him to do so.

All lovers of good dogs will sympathize with the misfortune of Mr. E. H. Moore, who within a few days has lost the two fine rough-coated St. Bernard dogs, Ben Lomond and Alton. It is not so very long since the same gentleman suffered a similar misfortune by the death of the mastiff Minting, a dog which was reputed to be nearly, if not quite, the best mastiff in the world.

We trust that if any of our readers overlooked the note of the "Helen Keller Fund" in our issue of March 19, they will turn to that number and read it. The enterprise is one which should appeal strongly to a much wider circle than those who are specially interested in our Kennel columns, where the note was published.

The New Jersey bill to repeal the charter of the West Jersey Game Protective Society has passed both houses and is now before the Governor. The probability is that it will have his signature, for numerous petitions have been sent in by the farmers and land owners, who are said to be bitterly opposed to the Philadelphia society and its ways.

Any subscriber may supply a friend with a copy of the current issue of the FOREST AND STREAM by sending us on a postal card the name of that friend.

Moose will be protected in Idaho for six years from date,

The Sportsman Tourist.

THE MYSTERY OF A PIECE OF PIE.

MY ADVENTURE AT PON QUOGUE.

PART I.

IT was very near midnight when I left the cosy reading room of the famous inn at Canoe Place, at Pon Quogue, Long Island, on my way through the woods to the Foster House, where I was stopping. It is a walk of only some three or four miles, by making a short cut through the pines and alder bushes, although much longer when following the sinuous shore of Shinnecock Bay; and although the night was intensely dark and rain threatened, I felt sure that I should not lose my way before reaching the ridge opposite the "Hills," when the Shinnecock light would be in plain sight and furnish a guiding beacon for the homeward journey.

But, as the French have it, *L'homme propose, et Dieu dispose*. So it was in my case, and I had made my reckoning without mine host. I have always flattered myself with the belief that I possessed considerable woodcraft, and ridiculed the idea of "getting lost" in a civilized country, for I have wandered through the lonely forests of Sweden and Norway, in the "Land of the Midnight Sun," all by myself, for days together, and by a sort of intuition, or instinct, always found my way through the tangles of birch and larch to some lumber camp or fishing cove. I have traveled through the dense solitudes of the Harz Gebirge and Thüringerwald, in Germany, without a guide, yet always brought up at some little hamlet, where I would strike a road leading to a railway station. The idea of losing my way on Long Island, therefore, and within a few miles from home, seemed preposterous, and I gave it never a thought.

I had hardly left the ruddy windows of Canoe Place Inn behind me, however, and fairly entered the jungle of alders and huckleberry bushes before I realized that the night was uncommonly dark, sure enough. Not a star, nor the glint of a star was to be seen; it was pitchy black all around. When my foot caught in the briars and I stumbled I would see for a moment a small white spot on the ground where I had scraped the thin soil so as to expose the white mica-glittering sand underneath; that was the only speck of color that could be discerned in that inky blackness. For a moment I felt as if I would like to return, but then they would make fun of me at the inn for coming back, and I resolved to push on.

Of all kinds of jungles in which I have had any experience, alder bushes, which are just high enough to reach a couple of feet above your head, are the worst. Even in the daytime they hem you in and obscure your vision. In an ordinary forest you can at least see between the trunks of the trees, and you can take your bearings from the moss-covered roots, the slant of the trunks and many other signs which are familiar to the experienced eye of the woodsman. But when you are in a thicket of dense bushes, too high for "underbrush" and too low and insignificant for "trees," it sometimes (in the absence of any sign of a path and with the sun obscured from sight) becomes a hard matter to navigate. That was precisely my position on that dark September night. It was warm and sultry, not a wind was stirring—but how black it was! I do not remember in all my travels ever to have seen anything like it above ground and under the canopy of heaven.

As I stumbled on through the brush with my rifle on the shoulder (I had of course drawn the cartridge), getting caught up and snared by the brambles at every second and third step, I peered ahead for a gleam of the big lantern at Shinnecock; but not a speck of light could be seen anywhere, except that of the match with which I lit a cigar to keep me company. Of course there was no danger, for if the worst came to the worst I could easily "camp out," as the night was warm and pleasant, but it was the mortification of losing my way at such a place and under such circumstances; and there were the jeers and jibes with which I would be greeted when I "showed up" next morning. It was the ridicule I was afraid of, for my friends at the Foster House had abundant wit and scepticism, and we knew how to "toast" one another to perfection. No "fish stories" would go down with that crowd.

Well, I stumbled on through the thicket, which seemed to become denser (it could not get darker) at every step, or every fall, for I had more falls than steps; until, by the light of a match, my watch showed me that it was half-past one in the morning—more than an hour and a half since I had left the cozy parlor at Canoe Place. I should have been home and in bed by this time; but still there was no sign of the lighthouse, although it is said that the light can be seen 40 miles at sea. Where the dickens was I, anyhow, and where was that blanketed lighthouse? It was too absurdly ridiculous that I could not find my way home—but it was a startling and full-grown fact, nevertheless. And facts (and alder bushes) are stubborn things.

Another half hour of weary stumbling, and at last I caught a glimpse of the light I had been peering for so anxiously and assiduously. It is true it was not in the direction in which I had been looking most of the time and where I expected to find it; quite the reverse, it seemed to have gone out of its way and be behind me. But there it was at all events, of that there could be no doubt, and by steering straight for it I should soon be home.

At least that was what I thought. But, as I remarked before, *L'homme propose et Dieu dispose*; it was easier thought than done. However, black as it still was, the bushes seemed to thin out, there were not so many brambles, and walking became decidedly easier. I steered straight for the light, which seemed to be only a short distance off, and was walking fast and blithely, when—what was that? It tore my pataloons and cut my left wrist. Ah! a barbed wire fence—I could feel it, though I could not see it. I tried to crawl through it between the wires, but it caught in everything, my hair, pantaloons, stockings, and pulled the watch by its chain out of my pocket. I tried to withdraw, but got only tangled up the more, cutting both hands and ankles into the bargain.

At last I extricated myself on the right side of the fence, minus my cap, one coat sleeve and the better part of the seat of my trousers. It began to feel chilly, for it was getting toward morning, and I hastened on—only to run into another fence of the same kind, only more

wicked. After paying toll with my other sleeve and what remained of the back part of my nether garments, I concluded I had had enough of this and had better take no more chances, and as just then I discovered a faint light about 200 yds. to the right, I decided to follow the line of fence rather than attempt to crawl through it. So, breaking off a small sapling, and holding it in my wounded left hand, I let it slide along the topmost coil and was thus guided nearer and nearer toward the light, which proved to be a lamp or candle shining through a small muslin-curtained window in a cottage, which, to the best of my knowledge, I had never seen before.

PART II.

As I lifted the gate-latch I was greeted by a low, vicious growling and had half a mind to draw back when I felt the cold and clammy nose of a large dog sniffing my hand with which I held the latch. The dog had evidently changed his mind, however, for instead of barking or manifesting other unfriendly demonstration he commenced to wag his big bushy tail, sniffing the while at my gun, cartridge-bag and boots, and behave quite friendly. As I entered the gate another smaller dog came up and I was again subjected to this sniffing operation, after which the two dogs seemed to have a sort of consultation, which must have resulted favorably to me, for they forthwith led the way along the narrow sandy path across the garden to the front door, where they stopped, one on each side of me and both wagging their tails furiously.

I knocked at the door and waited developments. No answer. I knocked again, the dogs meanwhile manifesting some impatience by a low whining, but no response came. A third time I knocked hard with my fist, the big dog at the same time scratching the lower door panel with his paw, but still no response. "Surely, they are sound sleepers!" I thought. "That comes of the salt air and a good digestion, but I guess I will make them hear!" With that I rapped the door with the butt of my gun and both dogs set up a dismal howling, which, it seemed to me, would suffice to arouse the seven sleepers. Again I waited patiently for the expected sound of muffled footsteps coming down the stairs and along the hall to open the door, but not a sound, except the pawing and whining of the dogs.

By this time I thought I had waited as long and patiently as ceremony and a proper regard for the "proprieties" required. I tried the lock and found the door unfastened. Opening it slowly, I saw a dark room before me, with a beam of light projecting slantingly into it from a keyhole in a door immediately opposite. Crossing the dark room, still followed by the dogs, I knocked at this other inner door, but receiving no reply, I opened it and entered. It was quite a large room, evidently answering both the purposes of kitchen and dining room, for at one end was a stove with a smouldering wood fire. A large table stood in the middle of the room, covered by a scrupulously clean white linen table cloth, and set with half a dozen plates, all white and clean, flanked by spoons, knives, forks and other appropriate belongings of a table set for supper. In the middle of the table were some large dishes covered with red and white checked and fringed napkins, so that I could not see what they contained. At one end was a tream jug, also covered with a folded red and white checked napkin, and, next to that, a waiter with a complete tea service of thick white stone china; but all scrupulously neat and clean, as, indeed, was everything about the room. But not a human soul was in it, except myself.

All this I comprehended at a single glance, and I also observed, immediately on entering, that there was a staircase on the left side of the room leading up stairs, and with a cupboard under it. I stepped to the foot of the stairway (it was only a single flight) and sang out: "Hello! Anybody here?" There was a faint echo in the casing of the stairs, which sounded hollow and ghost-like, but beyond that nothing. I heard a sputtering, gurgling sound behind me, and turned around quickly—it was only the lamp, which stood on a sideboard over by the window, and was about to go out for want of oil. As I walked across the room to see what was the matter I perceived a gallon oil can with a long spout on the floor next to the woodpile, so I quickly replenished the dying flame, lit a cigar over the lamp chimney, put a fresh stick of wood on the smouldering embers in the stove, and sat down in a big rocking chair with both the dogs lying at my feet, apparently asleep.

Presently, as the stick of wood took fire, a kettle on the stove commenced to sing, and a faint odor of Oolong seemed to pervade the room. From boyhood I have been fond of a good cup of tea of an evening, and especially Oolong. I sniffed the odor, there could be no doubt about it, it was the genuine article. I was both thirsty and hungry, a cup of hot tea would taste so good. So would something to eat. I wondered what was on those platters underneath the napkins. Eatables, doubtless. Thinking of that, and of the tea, made me more hungry still. I rose and walked on tiptoe to the table, as if afraid of awakening somebody (for, somehow, I had the feeling of a human presence in the room), and carefully lifted the corner of one of the napkins. Sliced ham. I examined another dish. Sliced tongue, garnished with parsley. Next to that, and similarly covered by a red and white checked napkin, was a pile of biscuits, and next to that the butter dish. It all looked very nice and tempting, especially to a hungry man.

I finished my cigar, looking askant at those dishes and waiting for somebody to arrive; but nobody came. Then I made up my mind what to do. I flung my cigar stump into the stove and deliberately proceeded to make myself at home, commencing by pulling off my coat. Next, I poured myself a cup of steaming tea, took a biscuit from the pile on the table, buttered it, and went on as if this whole arrangement had been made specially for my personal benefit.

It was a delicious, though rather quiet, meal. I tried the various dishes—ham, tongue, cold roast beef, and something that tasted like potato salad—but there was such an abundance of everything that my attacks did not leave any visible mark. Even the stack of nice brown biscuits seemed as high as at first. Indeed, I might have left the table then and no one would have been any the wiser from the appearance of these dishes.

But—are we not all the sons (and daughters) of mother Eve? I was tempted, as was my ancestor on my mother's side. Not by an apple, but by a pumpkin pie. Under one of the spread napkins I found a nice brown pumpkin pie,

cut into eight big triangular slices, fitting together to make a complete circular delicious-looking pie. Now, if there is anything the rural Long Islanders know how to make to perfection, it is pumpkin pie. It seemed to me that all my hunger returned at the sight of that pie, and that nothing would appease it but a slice. Should I? Well, why not? I had partaken of the other "refreshments," and why not the pie also? So whispered the serpent Epicurus in my ear, and like Eve I succumbed.

One slice—and another, for it tasted good. That left a big white triangular gap in the brown circle, and that gap there was no means of filling. Pies are constructed on a geometrical principle, viz.: Complete P.P. (stands for pumpkin pie)=8 sectors; 8 sectors=2=6. That was the solution to a mathematical certainty. There was no getting over the two missing sectors—the glaring white empty space in the pie spoke for itself to the tune of two missing slices.

Thinking that the least I could do was to give the people who had so kindly, though unwittingly, entertained me as little trouble as possible, I washed the cups, plates and other utensils I had used, carefully covered up and arranged all the dishes precisely as I had found them and prepared to take my leave, just as a faint glimmer in the eastern sky announced the approach of dawn. Both the dogs were fast asleep on a piece of rag carpet in front of the stove, in which the fire was again smouldering, just as I had found it when I came in; the odor of cigar smoke had vanished, and as I stood by the half open door looking back into the room there was not the faintest apparent trace of any one having been there since the legitimate occupants left. Everything was in apple-pie order, precisely as I had found it; and as I softly closed the inner door behind me (for I still had that strange feeling of somebody being in the room, which somebody I didn't wish to disturb) and stood alone in the dark outer room, I did not, strange to say, feel any qualms of conscience, but on the contrary was immensely refreshed and relieved after my rest and nocturnal banquet all by myself in that lonely house.

PART III.

As I reached the white sandy roadway a crimson line near the horizon heralded the approach of day, and at a considerable distance ahead of me, and a little to the right, shone the bright lantern of Shinnecock light. I knew that by following the road in that direction I should soon strike familiar landmarks, and I was not mistaken; after half an hour's walk I reached the cross-roads at the end of the woods, with its well remembered tall sycamore, blasted by lightning, and the rest of the way home was plain enough sailing. I reached the house and stepped softly on the veranda without making any noise, crept quietly up-stairs and was soon abed and asleep, none the worse for my night's adventure or my late supper.

A few days after this I was in a boat bound for Southampton. It was a large, roomy catboat and there must have been at least a dozen people aboard besides myself. It was evident that they were all laboring under some excitement. They came from Good Ground and Pon Quogue while I stepped on board at Canoe Place, where the party had touched for clams and other refreshments. It soon became clear to me that the exciting subject of conversation was the miraculous disappearance of a piece of "pumpkin-pie" from a covered dish at the house of one of the occupants of the boat, some evenings before. The spokesman was emphatic in declaring that "it was clear as nobody had been in the house, for nary thing was touched or disturbed in the least!"

"Well, I swan!" said the skipper, "it must 'a been spoons."

"Yes, yes," said another, "that's just what I say; o' course it was spoons—mebbe the same spook that bewitched old Cap'n Mumford's hogs, as is what they call a hog spook!"

This was not very complimentary to me, so I decided to keep mum and say nothing.

"It couldn't 'a been the dogs?" timidly suggested one of the party, a small man in store clothes and with blonde side whiskers; but his suggestion was met with the scorn and derision it deserved by all the rest, including the skipper.

"Dogs!" said the chief spokesman, at whose house the strange incident had happened, "d'you 'spose dogs could take off a napkin, or rake a pie from under a napkin, and it ne'er be seen? I've seen trained dogs at the circus, but I swan as I ne'er saw dogs as could do that!" That proposition was assented to all around, and it was settled that the house must have been visited by some kind of a spook or "fairy" (that sounded better than hog spook, at any rate)—"probably because the seeds from which the pumpkins had been grown, from which the pie was made, had not been steeped in salt water," was suggested by some one, and accepted as a very likely proposition.

I gathered from what I heard while we bounded merrily over the blue waters of the bay on our way to Southampton, than on the night of the adventure the folks at the house had all gone to the political meeting at Riverhead, intending to return before supper; and as they would be tired when they returned, everything was with forethought "fixed" and in readiness. By some accident, however, the train was missed, and, as there were ladies in the party and no team could be obtained, it was decided to remain with friends in Riverhead over night and take the early morning train to Good Ground, which is only a few miles from Pon Quogue. Early the following morning the owner of the house, with his family, returned to their home, to find, as they expected, everything (apparently) exactly as they had left it the night before, except that in some mysterious and inexplicable manner part of a pie had disappeared from a dish under a napkin, which had been carefully spread over it, as over all the other dishes on the table. Inquiries at the nearest neighbor showed that none of them had been at the house during the absence of the family; the dogs had not been heard to bark, as they invariably did on the approach of tramps and other strangers; nothing else in the house was missing; not a thing had been disturbed; in short, the whole affair of the pie was an inscrutable mystery!

And so it will remain, until Captain P— (for I afterward learned the name of the owner of the house) reads this confession, and with it I tender him and his household my sincere thanks for the hospitable refuge and repast I had at his home in my character of "hog spook," or "fairy," on the night when I was lost at Pon Quogue.

LOUIS BAGGER.

ANTOINE BISSETTE'S LETTERS.—VII.

M'sieu Fores' Strim:

One evclin we 'll eat by de stof-heart, a smokin' tabacca.
As fas' as de chimley was smokin' de spruce an' de balsam.
M'sieu Mumsin he 'll mos' mek me cry wid his readin' a story,
Was write, so he say, by great long American feller,
Baout a Frenchmans, he 'll lose of hees gal 'long go, in Acadie.
You 'll hear of it, probly, haow one gone on one sloop, one on
anodder,

One scratter dis way, one scratter dat way, never togedder,
Till hose of it, hol', an' de feller was ready for die off.

It mek me felt soble, for hear mah frien' read of it, softly,
For it saoun lak de vovce of mah mudder, w'en he sing to me,
"Dor' p'tite," dat tam Ah 'll was bebbly, an' lie half sleep on hees
bosom's,

One ear an' one heye hopen for lislin' an' see what be go on.
Two tudder shut saoun, fas' sleep on de breas' of mah mudder;
It bring it all back, as Ah 'll hear it an' see it, dem day tam.
De bump of de hin'leg an' foreleg of de chair, on de hard floor,
As she rock me, "Dor' p'tite, dor' p'tite," all de tam sing mah hol
mudder.

De bumbly bee bumblin' all over de marigol' posy.
De bobolink ringin' hees bells 'bove de meider where hayin'
De mans was, an' de wheat fiel' where hwomans dress all in blue
gown.

Was scoop daown for reap off de grain shinin' more yaller as gold
was.

On de river, a Hingin was paddle his can-noe more lazy
An' slow as de move of de water, an' over de fiel' an' de river
De blue sky scoop daown to de big hwood.

So it come back to mah rember' w'id de nowse of de readin',
An' mek me for feel kan' o' oncomfable happy,
Lak a feller dat heat up all of hees mud-turkey keep wishin'
He 'll have it for heat it, forever more some of it.

W'en he 'll finish hees read, Ah 'll t'ink while Ah 'll finish mah
smokin'.

Haow Ah 'll mek it come off' grea' deal more better for pleasant
F Ah was dat great long Ameri an' feller dat wrote it,
For Gabriel, Evangeline an' all dar was hear of de story,
Gabriel was dat kan' o' mans Solem Brigg was call it philosophy.
W'en de pos' hofice an' telegiab ant bring it no letter.
W'en de sloop an' de stimoat an' de railrol ant bring it hees
gal back,

Nor took heem to de place where Evangeline was be a stoppin',
An' he fan aout he can' fan aout where she was have been
gone to,

He 'll mek aout hees min' dat everyt'ing come to de feller dat
waitens.

He goin' do dat. An' bombye Evangeli' e goin' for come to heem,
So he 'll sharp off hees huxie an' bee'zin for chaup aout some
clearin'.

Every nowse of de win' dat he hear in de taup of de tree blow,
Every nowse of de tree dat he chaup an' come tomble hover,
Dey say, "Bombye, Evangeline comin', bombye she 'll comin',"
De bird from de sous come, de bird from de nort' come, dey tol'
heem de sem t'ing;

De wil' geese draggin' de sky wid hees harrer in sprin tam,
In de fall, de black string of crow pullin' de las' one to de sea
shore,

All tol' heem dat "Bombye, hees leetly gal comin'" from some-
where;

So he 'll buil' for it up dar a nice leetly lawg haouse, all smooze
off

De side, an' cover wid whitewash, an' notch all de aidge of de
shingle,

An' under de tree window, he sow some marigol' posy.
But bes' t'ing of all he feel plump of, was bed of beautiful onion,
All summer he cafly weed it, in fall it was beeg as tea sasser;
Den he pull it an' braid it in long string an' hang it on side of de
haouse up,

Where blow by de breeze of de evclin, de pref-fume was carry
long way off,

An' w'en he look of it, he 'll said, "Haow Ah 'll weesh dat leetly gal
comin',"

For help me of heat off dat onion, Prob'ly she 'll tink, Ah 'll free-
git it,

Ant rember for love, but Ah 'll love it dat gal, more as onion,
An' mah heart was grow lonesick for waitin', more as waitin' for
onion for supper."

All lone in de dark hwood, was poor Evangeline wander,
All de star an' de moon from de sky, de nort' win' was blow off,
An' haowl lak some wolf, an' bite her wid col' toof;

De black cloud spill hees rain drop daown on her an' mek her
more col'er,

De win' haowl more wolfy an' laoud an' bite her more harder,
An' someth'ing scareful creep toward her in every black shadder;
An' her heart was grow lonesick for all de scare t'ing araoun'
her,

Her heart dat was so lonesick afore for all her long lookin'.
Jus' w'en she was ready for give up, so scare', so tire', so honger,
She 'll feel of de smell of onion, an' rise up, riffesh, an' go on.

T'rough de snatch of de brier dat ketch her an' tear off her clo's off,
T'rough de switch of de bushes dat wheep her lak forty hol' school
mom,

'Gainst de bump of de tree dat was paoun her lak mau' drivin'
wedges,

She foller dat smell, lak haoun dat was chasin' de rabbeet;
An' bombye it brought her to clearin' where she 'll seen lit in de
winder,

F you 'll ever been hongry all day, an' come home for heat some
mud-turkey,

'F you 'll ever be dry all a hot day, den fan de col' sprim' a
bubblin',

Den you know haow she feel w'en she faint on de door an' it hopen,
An' she 'll fell on de harm of her Gabriel. If you 'll ant, Ah 'll
can' tol' you,

Wal, den, dey was marry, an' leeve very happy togedder,
But probly dey was tam w'en dey weesh dey ant fan one anodder!

ANTOINE BISSETTE.

AUGUST SCHOVERLING of this city died in Düsseldorf-
on-the-Rhine, Germany, Sunday. Mr. Schoverling went
abroad early in the month in search of relief from a bad
cold that threatened pneumonia, but by the time he
reached Düsseldorf he had grown so much worse that
the physicians gave up hope. He was born in Osnabrück,
Hanover, fifty years ago, and came to this city when fifteen
years old, finding employment at Herman Boker &
Co.'s gun store. Five years later he went into the gun
business with Charles Daly, as Schoverling & Daly, and
the firm continued under this name until 1879, when Mr.
Joseph Gales became a partner, and the firm name was
changed to Schoverling, Daly & Gales,

Natural History.

THE RACCOON AND HIS WAYS.

Editor Forest and Stream:

I would say to your correspondent, "B," and others of
his opinion, that it is a fact that raccoons do come out in
winter; and also a fact that they do catch, kill, and eat
rabbits. I would not be misunderstood. My knowledge
of the above extends to two States only, Maine and Mass-
achusetts. Further south I know nothing of the natural
history of the coon.

In Maine the coon often comes out in mid-winter, pro-
vided there is the usual January thaw, and I do know
that they kill and eat hares in that State.

My knowledge of the coon on Cape Ann dates back to
the fall of 1884. In the winter '84 and '85, I tracked a
rabbit (*Lepus sylvaticus*) to where a coon had killed it. I
did not see the rabbit killed, but the tragedy was litho-
graphed on an inch of light snow, and thus as easily read
as the printed page of FOREST AND STREAM. I tracked
that coon to his den and the next spring captured him
alive. He was in my possession nine months, and I find
that my note book is crowded with interesting items as
regards his habits and actions. He preferred food in the
order herein named: Insects, eggs, birds or poultry,
frogs, nuts, red squirrel, rabbit, gray squirrel and fish.
This, without doubt, was the bill of fare of his wild state.
He would not touch green corn or milk until I had
crushed the former into his mouth, and had dipped his
nose into the latter. Afterward he would leave every-
thing for milk.

The first rabbit I fed to him was about two thirds
grown. It was one which a mink had chased into my
dooryard and killed. It was evident from the first that
the coon was no stranger to this kind of food. He opened
the rabbit's mouth with his fore paws and ate out the
tongue, after which he skinned the head, turning the skin
back over the neck. He crushed the bones of the head
and lapped out the brains. On the third day he had
finished the rabbit, and the skin was turned inside out,
even to the ends of the toes. Squirrels were skinned in
the same manner.

This coon decided for me a disputed question. I refer
to the whimper or cry of the coon. Night after night, in
the rutting season, he would call to his comrades, and
they would answer from the surrounding woods.

It is no unusual thing for me to see signs of where rab-
bits, grouse or quail have been killed by the coons.

Perhaps it will be as well to explain to the uninitiated,
that the coon makes two kinds of tracks. Usually when
walking or running the back is humped or arched, and at
such times only the toes touch the ground, and a track is
made accordingly. When at rest, or moving about for
a few feet, the back is level and the whole foot comes
to the ground, making the plantigrade track. HERMIT.

THE BIRDS OF GREENLAND.

THERE has just been issued, by Little, Brown & Co.,
of Boston, a catalogue of the "Birds of Greenland,"
by Andreas T. Hagerup. Mr. Hagerup is a Danish mining
engineer, who spent two and a half years in southern
Greenland, and some of the results of his sojourn there
are known to readers of the *Auk*, in which appeared in
1889 a paper on the birds of Irgitut. The present work is
much more elaborate, and is the only complete catalogue
of the birds found in Greenland which has been published
since 1875. It is translated from the Danish by Mr.
Friman B. Arnglimson, and is edited by Mr. Montague
Chamberlain, who is sufficiently and well known to all
Americans who are interested in ornithology. The nomen-
clature and classification followed in this catalogue are
those adopted by the A. O. U.

The catalogue before us is divided into two parts: (1) a
list of the birds of Irgitut, which occupies 81 pages and
gives 39 species, and (2) a catalogue of the birds
of Greenland, in which 139 species are enumerated. In
this list there are given 10 species which were not men-
tioned in Newton's list of Greenland birds (1875), and there
are several additions to the bird life of that country.

Mr. Hagerup's notes—especially those in connection
with the birds of Irgitut—are extremely interesting, and
he tells us much that is new about the habits of several
little-known species, such as the gyrfalcon, redpoll, ptar-
migan and others. This material is very valuable, for his
long residence in Greenland has given Mr. Hagerup
opportunities for observing these northern forms such as
have not been had by other students of the birds of that
region.

The work of editing this list appears to be well done
and we may quote Mr. Chamberlain's concluding note,
in which he says, "Of the 139 species here enumerated 1
is extinct and 53 are merely accidental stragglers, while
24 others are so rare that they might be classed with the
accidentals, leaving but 61 species that should be recog-
nized as regular inhabitants of Greenland; and of these
several are of quite uncommon occurrence."

This catalogue shows the bird fauna of Greenland to be
more American than Old World, thus confirming previous
conclusions.

THE DEVIL'S HOLE.

FROM Mr. Walter Aiken, who is now at Hamilton,
Bermuda, we learn that the Islands are very lovely this
winter, and the mercury has averaged 72 degrees.
He writes also that the fishermen are bringing in fine red
snappers, groupers, rockfish, hogfish, amberfish, pom-
pano, yellowtails, senate fish, and many other beautiful
species.

These are caught on the reefs some miles distant,
where there is generally too much swell for a veteran
trout and black bass fisherman like Mr. Aiken.

Several handsome eel-like fishes, called morays, are
taken with the food fishes, but these are rather ugly to
handle.

One of the curiosities of Bermuda is the pool in which
live fishes are kept until needed for market. This is
known as the "Devil's Hole" and is thus referred to by
Mr. Aiken: "The 'Devil's Hole' is a natural hole of great
depth in the coral rock near the sea, and is fed with
water that comes through the rock. It is used as a pound
to keep fish in until they are wanted for use. There are
several hundred fish in it and it is great fun to break up
a loaf of bread and throw it to them. They make the water
fairly boil. The whole is inclosed with a fence and the
colored man who owns it makes a good thing out of it in
the winter by admitting visitors at one shilling each."

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Terri-
tories and British Provinces are given in the *Book of the
Game Laws*.

PRACTICAL TRAPPING.

II.—WATER TRAPPING.

WATER trapping is, to my mind, a much more diffi-
cult and intricate art than land trapping. The
work, though somewhat more diversified, is quite as hard,
and a far more thorough knowledge is needed of the
habits of the animals to be taken. As has been already
said, the three most important of these are the beaver,
the otter and the mink, and each one of these living in a
different situation and having its own habits, must be
carefully studied. The mink, the most abundant but
least valuable of the three species, is not difficult to trap,
but the beaver and the otter are animals of singular
acuteness, and no trapper will be successful who does not
meet their intelligence with a greater one.

Although beaver and otter are both water animals, their
habits are entirely unlike, and quite different methods
must be employed in trapping them. No trapper would
think of setting a trap with the notion that he might
catch either a beaver or an otter. For the one animal he
would put his trap in a particular place, bait it with a
particular substance and fasten it in a particular way,
while if setting for the other species, the place, the bait
and the mode of fastening would all be changed.

Constant pursuit extended over many years has made
beaver and otter extremely shy, and has made them also
well acquainted with the simpler devices of the trapper.
The green hand who nowadays wants to take up trap-
ping must either serve a long and profitless apprenticeship,
picking up a knowledge of the art through slow
experience, or else he must contrive to spend a season or
two with some old trapper who is familiar with the work,
and learn from him. The trappers of early days had an
easy time of it. All they had to do was to find where the
beaver lived and to set their traps for the animals to walk
into. Then trapping was only a trade, but nowadays I
call it an art.

So much has been written about the habits of the beaver
that almost every one knows something about the animal,
and everybody is acquainted with the fact that it builds
dams and houses to dwell in. Their dams are exceed-
ingly strong and durable, and they are prompt in repairing
any injury to them. A dam cut during the day will
usually be repaired the same night, and in the morning
will be as good as new. I remember an instance of this
sort which occurred on San Juan Island. An old Eng-
lishman named John Wootton, who was new to the coun-
try, wished to get rid of a colony of beaver that lived on
his place, and one day cut their dam. The next morning
he found it repaired and cut it again, and this time to
frighten away the animals when they should come to re-
build it, he set up a green cottonwood pole on the dam
and hung his overcoat on it. The following day on visit-
ing the place he not only found the dam in its usual good
condition, but the cottonwood pole and his overcoat had
gone to help stop the gap he had made and were now in
the dam.

Beaver houses are less common now than they used to
be, partly because beaver themselves are less abundant,
but mainly because the presence of a fresh beaver house
betrays even to the most unskilled eye the existence of
beaver in the neighborhood. In the older districts beaver
now generally live in holes in the banks of the streams
they inhabit, though in some parts of the Rocky Moun-
tains and in many places on this coast the sight of a
beaver house is not uncommon. The houses differ a good
deal in size, location and shape. Some are as large,
though of course less high, than a small haystack; others
are hardly more than six feet through at the base. They
may stand either wholly on land or partly in the water
and partly on the bank, or wholly in the water. They
are never placed in very deep water, for a base must be
built for the house to stand on reaching up to the surface,
since the chamber inhabited by the occupants must be
dry. The shape of those houses which I have seen on
shore approaches the conical. Those in the water are
more irregular, sometimes only rounded, at others long
and rather flat on top. Within each house, and con-
nected with the water by a concealed passage, through
which the beaver pass to and fro, is the chamber which
is the animals' dwelling place. It is large enough to con-
tain seven or eight of them, and high enough so that a
beaver can conveniently sit up on its haunches. It is
warm, dry and clean, for the beaver is extremely neat in
all its habits.

The food of the beaver consists chiefly of the green
bark of twigs and young limbs of various trees. Cotton-
wood bark is preferred, then comes willow, then alder,
but the bark of almost any tree may be eaten. I have
known them to eat pine and white cedar. The beaver
often cut down trees of very considerable size to get at
the smaller limbs, which they eat. I have seen cotton-
woods 20 in. in diameter so cut, and once on Vancouver
Island, near Johnston's Straits, found a cedar 2½ ft.
through which they had gnawed down. This work of
cutting down a large tree is done by a single animal. I
have seen the beaver engaged in the operation, which is
performed as follows: The beaver sits up on its haunches
facing the tree and with his fore-paws resting against it.
With his head turned on one side, he cuts a groove above
and then one below and bites out the chip, taking it off
in almost the same way an axman would. He thus saves
himself the trouble of gnawing all the wood up into fine
cuttings. When the tree is felled the whole community
attack and cut up the tender limbs, carrying them away
to the cache.

Unlike many of our gnawing animals, the beaver does
not sleep through the winter; he remains active, often
venturing abroad during the whole of the cold weather.
He must therefore have food, and a large part of the
summer and autumn is devoted to securing this food and
depositing it in caches. This food consists of the limbs
and twigs of the trees most preferred by the beaver. They
are cut from 1½ to 3 ft. long, stripped of their leaves and
smaller twigs, carried to the water and floated to the
cache where they are sunk. And here comes a very
curious point. These sticks are floated to the cache and
are sunk by the beaver to the bottom of the water, where

they remain without any apparent anchorage. They are not stuck in the mud of the bottom, nor held down by weights. If you lift one to the surface it will float, but you may move it about on the bottom without its rising. I have myself tried this with sticks from which the bark had been eaten, but have never done so with the green unpeeled limbs before the beaver has taken them into their houses. This matter to me is a very mysterious one, and I have never been able to get any hint as to how these sticks were sunk. All through the winter the beaver visit these caches, carry the sticks to their houses where they eat off the bark, returning the bare sticks to the water. Sometimes it may happen that, for some reason or other, the cache may not contain enough to last the whole colony through the winter. In this case the beaver, if possible, get on land through some air hole or piece of open water and then forage among the timber. Occasionally a combination of scarcity and severe weather may oblige the colony to emigrate during the winter to some more favorable spot.

No description of the beaver is needed, since his picture may be found in every child's book. The females are somewhat smaller than the males, and may be more certainly distinguished from them by their broader and more rounded tails. I have never seen the tail used in swimming, though it may be used as a rudder. The largest number of young that I have known of is seven. These I took from a female in April, and from their size and development I conclude that the young are born in May. The largest beaver I ever took I weighed and found that he turned the scale at 110 lbs. He was an old fellow and had lost three of his feet in traps.

Aside from man, the worst enemies of the beaver are wolves, lynxes and wildcats. These catch them to some extent in summer when they are working; but the number destroyed by these is probably not very great. Although beavers are supposed to be entirely confined to fresh water, yet I have on a few occasions, notably in Loughborough Inlet, on this coast, found them swimming in the salt water. In such situations they may easily be overtaken by a man in a canoe and shot, for a man can easily paddle a canoe fast enough to overtake a beaver.

The fur of the beaver as seen after being dressed and prepared for trimming clothing does not look very much like the coat of the beaver when freshly skinned. Then the soft under fur is concealed by a covering of long silky brown hairs, which are usually removed in the dressing. The castor, which is contained in two glands, one on each side of the vent, is the only other valuable product of the beaver. It is used by druggists, and was once, I believe, in great demand. It is a yellowish substance—very bitter—a sort of concentrated essence of cottonwood and willow bark.

While these remarks on the habits of the beaver will not help any one to learn how to trap him, they will serve to indicate that he is an animal of high intelligence and pretty well able to look out for himself under ordinary circumstances. In beaver trapping we use a No. 4 steel trap, and the bait is a strong-smelling mixture composed for the most part of the castor taken from the beaver itself. Almost every trapper has his own peculiar formula for preparing his "medicine," and each one thinks his preparation is the best thing in the world to trap beaver. It is a very unusual thing for a trapper to divulge the secret of his own preparation. Mine is a very simple one, consisting of castor, honey and alcohol, the purpose of the latter ingredient being merely to keep the castor sweet. Having mixed my "medicine," I bore a 2½-in. hole in a birch limb, lengthwise of the grain, fit a stout plug to it, and in this unbreakable bottle place and keep the mixture.

Many trappers set for beaver on the dam or near the house or on the slide or runway, where they go into or out of the water. I never do so. If you catch a beaver on the dam all the others see him there in the trap, and it makes them still more shy and difficult to catch. If you set close to the house you are almost sure to catch kittens, for the young are the first to come out in the evening and so the first to find their way into the traps. The skins of the kittens are worth but little, whereas if they are allowed to grow to full size they will bring full prices. I never set where the beaver himself goes, but try to put my trap close to where he passes. Having chosen my spot I take a lot of mud from the bed of the creek and make a little mound like the ones formed for sitting and rolling on by the animal himself. I then dig out a place large enough to hold the trap in the edge of the bank, splashing water over the digging to make it look natural and old. Just under water and on the bank above it I set up a little step on which are a few drops of the beaver medicine. This should be fastened to the trap either by a slender twig or a piece of black thread so that the animal, when he dives in the water, will carry it with him. This is to keep the other beaver from smelling it. The trap is set 6 to 9 in. below the water's surface, and the end of the set is 6 in. above water, and a foot or more to the landward side of the trap. The chain I carry out toward deep water as far as possible and make fast to it a good sized rock, as heavy as the beaver could well drag. Many people stake down their traps or fasten them in some way so that the animal, when caught, is held to the spot. The result of this is that the beaver, when he finds himself in the trap, works away until he has twisted off the imprisoned foot and escapes. The object of the trapper should be to drown his victim as soon as possible, and with the trap set in my way the beaver usually makes for deep water where the weight of the stone attached to the chain soon drowns him. A dry pole 10 or 12 ft. long will serve to mark the position of the trap in the water after the beaver has carried it off, and make it an easy matter to recover it.

This pole should be so small that the ring of the trap will slip over the butt. The branches which should be left on the pole will keep the ring from slipping toward the smaller end, while the butt may be split and wedged so that the ring will not slip back the way it came.

The spring of the trap should be bent around to one side—that to which the catch is fast, and the trap should be so set that the jaws when closed will stand parallel to the direction of the beaver's path. Thus the jaws in closing will grasp the beaver's foot without throwing it out of the trap. If they close at right angles to the beaver's line of approach, it might well happen that as they flew together they would strike the foot and knock it out of their reach.

Some trappers set a little deeper and make use of a

device to induce the beaver to put his foot to the bottom before he otherwise would. They plant in the bank a small stick sharpened at both ends. This stick is horizontal and about 2 in. under water, and its free end is just about over the landward side of the trap. When the beaver comes swimming along over the trap this sharp stick strikes him in the neck and stops him. He puts his foot to the bottom for support, and it touches the pan of the trap and he is caught.

It requires a great deal of patience to trap otter successfully. This is partly because they are such great travelers and are almost always moving about. You may find an otter slide to-day with fresh sign on it, and set your trap, and perhaps it will be ten days before the animal visits the slide again.

For otter I use a No. 4 trap, which I set either on the slide or somewhere near where the otter will pass. For "medicine" I use the glands, and scatter the mixture over the leaves and grass about the trap. When the trap is set on land I fasten the chain to a spring pole long and strong enough to raise the animal quite off the ground. The otter's struggles free the pole and he is lifted up so that he cannot twist or gnaw his foot off. If the trap is set in shoal water I tie the chain to a rock. He will not drag it far. When the trap is set in deep water, the ring is strung over a sliding pole. The otter skin is cased, but the tail must be split and tacked to a stretcher.

Mink are easily trapped, as they have but little cunning. To take them, build a little pen and set the small steel trap a little to one side of the middle of the entrance. Put the bait, which may be fish or bird's heads, on a stick a foot or two above the ground. Or a deadfall such as is used for martin or fisher, but smaller, may be used.

The days of successful trapping are now pretty much over, yet if a man has a taste in this direction it is always worth while for him to take a few traps with him when he goes into the mountains, for in this way he may bring back many specimens that he would not otherwise get.

TOAT COULA, Washington.

R. V. GRIFFIN.

SIX YEARS UNDER MAINE GAME LAWS.

II.—WHY THE FARMER COMPLAINS AND WHO HE IS.

THE Greek farmer, neither in character nor ability, represents the class of men who live on our hill-sides and forest clearings, but what he says is just what I have heard, and in much the same temper, from many of our farmers and back settlers.

That they should hold such views is natural, even unavoidable, under present conditions. Farmers, who are not guides nor hunters part of the year, are not very well acquainted with the game laws; many of them never saw the printed statutes and have no other means of judging the import of the law than by what they see done in its name. They have heard it said that the game laws were passed for the benefit of all; but what they have seen of the execution of these laws leads them to believe rather that the claim is a blind, and that the real object is preserving game for privileged classes who can pay for it, and keeping it from them, the poorer classes. If the suspicion at first sight seems absurd, consider whether any other view would be more likely to prevail among men who have had contrasts like the following thrust upon their notice.

A farmer on the Penobscot captures a caribou in close season intending to keep him alive, and an officer is straightway sent by orders from Bangor to force him to release the creature, under threat of prosecution. Prosecution, for having the animal in possession? No, for putting on snowshoes in order to catch the creature, because putting on snowshoes is *prima facie* evidence of an intent to hunt, whether one has a gun or not, and under the law the attempt is punishable. But while such wire-drawn logic is used against the farmer, two full-grown deer, which must have been taken in close season, are kept by the month and the year at the Bangor House, within a quarter of a mile of Mr. Stilwell's office. The immediate inference is that the rich and the poor are differently regarded by the laws. Again, a farmer who tries to sell eight or nine partridges in close time is fined, although he proves the birds were killed legally in December; but toge and trout are openly sold in close time in city markets. The poor man has no chance, they say; the rich man can do what he pleases.

Again, two farmers each killed a caribou a little before the open season began; neither was a hunter, neither knew what kind of a creature he was killing or that it was illegal; both were fined. But men from our own cities and others yearly violate the laws, knowing well what they are doing, and no wardens are sent into the country where they are known to have gone for this purpose. This injustice in the execution of the law is mistakenly but naturally laid to a partiality in the law itself. The law favors sportsmen, it is said, and is against our own people.

But the farmers see this difference between rich and poor made not only in capturing alive, in killing and in selling game, but even in transporting it. A hunter buys a ticket to Boston and checks his deer as personal baggage, just as sportsmen do daily, but he does not go on the same train with them. The deer are seized at Bangor on the ground that the owner must accompany them personally. The State law about non-transportation does not say this, by the way, but it is the interpretation at Bangor. The query comes, what is there wrong in it? Were not the railroad requirements met in having the deer checked as personal baggage and the ticket punched with the baggage check, so that nothing else could be afterward sent on that ticket? A sportsman's deer would not have been seized if the owner were detained by sickness or accident from going with them, is the comment, and the suspicion of unfairness is strengthened when this case is compared with another a few years back, when the non-transportation law was at its strictest. Then the orders issued at Bangor forbade any conveyance, public or private—railroad, stage or private team—to handle or convey more than one moose, two caribou or three deer under penalty of seizure of the whole load of game. The Maine Central R. R. issued the strictest orders on this point and refused to carry any game; seizures were frequent. But, nevertheless, this railroad at one time forwarded a load of deer—nine, it is said, including one white one tagged to a prominent railroad official, and all or a part of them killed with dogs by outside sportsmen. The load passed through Bangor, the officers there knew it, and yet no seizure was made. Comparing this with the foregoing, what inference could well be drawn except

that the laws had not been fairly executed? It is only a step to the assertion that the laws themselves are unjust, and the step is taken by those who know less of the law than of what is done by the officers of the law.

The cases given above are not fictitious. The information regarding the farmer who caught the live caribou, was given personally by Warden Eben F. Morse, of Ed-dington, who was sent to release the animal, and the ground for prosecution, absurd as it seems, is as he gave it. Warden A. J. Darling, of Enfield, gave the information regarding the farmer fined for having partridges in possession, and said that he tried to get the fine remitted because the man was too poor to pay it and the violation was unintentional. If the farmer had been able to go to law about it he could have won the case, as Benjamin Young of North Milford won his case on deer. Warden Alec McClain, of Mattawamkeag, said that he fined one of the farmers who killed a caribou, but should not have done so if the man had known enough not to sell the horns in close time to the station master at Mattawamkeag. The other, Milo Merriam, of Sherman (I believe), personally told my father of his case, and said that the caribou came out among his sheep at Benedicta, and he killed it not knowing what it was. The last case is the Walter McPheters case, soon to be tried in court.

Of the instances cited on the other side the first is too well known to need comment, the second will be referred to later, the third is notorious, and the last is based on information from various sources and the admission of the highest authorities here. These are not a tithe of the contrasts which might be cited; but these are enough to show how the present feeling could arise. I must not be understood to say that the laws are invariably or even half the time executed after this fashion: but to bring them into disrepute does not need that the majority of the grand total of indictments should have been of this sort; but only that the people, whose individual judgments make up the public opinion which I represent, should have seen three prosecutions of every five that have come to their notice conducted contrary to their ideas of fairness and justice, or if strictly legal in form, enforced against one class of law-breakers, while another class seems to have been scarcely noticed.

In what I say now, however, and in what I shall say, I am not speaking of the State at large, but only of the section included in Penobscot, Hancock, Arrostook, Piscataquis and the upper half of Somerset counties. Washington county might perhaps be added, but I do not know enough of the popular feeling there to speak with any certainty. Waldo, Knox and Lincoln, by their situation on the seaboard, have less interest in game than the other counties; and of the region west of the Kennebec I know nothing, though I judge a much better state of feeling prevails there than here. I speak of and for the country drained by the Penobscot, Union, and St. John rivers and their tributaries, and the territory about Moosehead Lake, which is always treated here as if it belonged to Penobscot instead of to Kennebec waters because most of the travel to and from it comes this way. These four counties and a half cover more area than the other eleven and a half—considerably more than the States of Massachusetts, Connecticut and Rhode Island combined. The population of these three States taken together, by the census of 1880 (the last not being at hand), was 200 to the square mile; that of Maine, 21. The proportion of native to foreign population in the three States was less than 70 per cent.; that of Maine, more than 90 per cent. But in the region of which I am writing the contrast is much greater. With half the area we have little more than one-fourth the population—not more than 12 to the square mile, by the census of 1880, and the ratio of native to foreign born must have been more than 95 per cent. In these four counties and a half there were only a dozen places of more than 2,000 inhabitants, and five of these—Bangor, Brewer, Hampden, Orono and Oldtown—lie almost adjoining each other. The significance of these facts in relation to what I propose to say is this: The absence of large towns shows that manufactures can occupy comparatively few of the inhabitants; the great preponderance of native over foreign born shows that under similar conditions they will be sure to think nearly alike; the scattered population shows that agriculture, under which lumbering may properly be included, must be almost exclusively followed. Since the population is practically homogeneous both in race and in occupation, I must either entirely mis-represent them or else represent what is known politically as an overwhelming majority.

Now this section contains by far the greater portion of the forest land of the State, including all the best of the deer country and nearly all the moose and caribou country in the State. The inhabitants of this section as a whole must therefore know more and care more about game matters than those of any other section. For another reason also they are better informed.

Bangor lies in this section and Bangor is the great lumbering and sporting center of the State. Whatever is done in the woods, in the course of time drifts down the river to Bangor, and there is caught by those who stand waiting for it. Things that the doers supposed were buried in the wilderness—what was done, what was seen, what was said, even, come to be talked over publicly on Bangor streets. As it is the center also of all the railroads leading to the great game country, most of the sportsmen who come to hunt must pass through it, while game seized in transportation is more often taken here than anywhere else. Then, one of the game commissioners lives here, so that it is headquarters for official news. Besides, Bangor and Ellsworth are the two principal county seats of the region described, so that most of the game cases that pass into the higher courts are tried in either one or the other of these places. While many of the people may not be able to tell a deer from a caribou, there is, nevertheless, no other place in the State or out of it where Maine game matters are so well understood and so much discussed as in Bangor; and a knowledge of what is said and done there is indispensable if one would speak on game matters.

This knowledge I may claim to have, from having lived so near as to be almost in the city and from peculiarly good facilities for obtaining information. Other circumstances have given me a considerable acquaintance with woodsmen, guides and hunters, both white and Indian, and opportunities of knowing about many more whom I never have seen, therefore I know definitely for whom I am speaking and what are their views. In addition, I have been through the game regions of which I speak in close time, for the express purpose of seeing what was

done and hearing what was said before the better class of visitors had arrived, so that I can speak from my own knowledge on some points where I speak most strongly. The information obtained from these sources, the fact also that the people of this section, for the reasons given above, must be practically of one mind upon game questions, and that I am heart and hand, by birth and education, one of them—lead me to suppose that I can represent their views. Do not misunderstand me as doing more than presenting these, explaining their origin and to what they will lead; as I have purposely shown you in the preceding series, I am too prejudiced to be able to sit in judgment on the laws, and I shall not attempt it. But by reason of this very prejudice I am able to get at facts which you could not, and I can reflect public opinion in a way that your critical and judicial power, which fits you for discussing what I am debarred from, could not arrive at. It will be done solely for the sake of producing a better understanding between you and those for whom I am speaking. When you reflect that the people here are the natural game wardens of this great forest region and that the very existence of the game depends on their good pleasure, the importance of your knowing how they think, feel and talk about these matters will be self evident—a sufficient reason for my saying what I have to tell you, a sufficient excuse for giving some good advice, which must be heeded if sportsmen would like to come here and enjoy the privileges they have had heretofore.

I have already told something about the commonest claim here—that the game laws are enforced so as to favor sportsmen—and that many say the laws themselves warrant this. On the former of these two points I have given some evidence, the other I will illustrate briefly in my next paper, with some other claims of a similar nature. It should be stated that the latter of these two opinions is more prevalent among farmers and those less likely to be well-informed on the subject, that the former is held by guides, hunters and others who have had better opportunities for studying the printed statutes. And here let me state unequivocally that whatever the individual opinions quoted hereafter may seem to claim, to my best knowledge and belief the people as a whole do not ask to have the game commission abolished, do not ask to have visitors excluded from the State, nor more rights given to residents than to non-residents, nor to have the laws changed. Some localities would like to have one change made and some another, but they are not agreed upon any unless it is the law regarding winter fishing. The laws, they say, are good enough; let them be enforced. Or, we have plenty of law on the statute books, we would like to see some of it in the woods. Or, give us good officers and we will see that the law is respected, for the law is good. FANNIE PEARSON HARDY.

BREWER, Maine.

HUNTING AND KILLING.

Editor Forest and Stream:

Mr. Geo. H. Wyman, in his interesting paper on the Virginia deer in your issue of March 19, brings up the old question of still-hunting vs. bounding, and expresses his opinion in favor of the latter method in very decided terms as least destructive and more sportsmanlike. This is largely a matter of opinion, of individual taste, and depends almost entirely on early impressions and education.

As it happens, I have killed only two deer ahead of hounds, while I have secured many by still-hunting; and my preference as to these two methods is altogether in favor of still-hunting as much the higher form of sport.

It is, I think, an axiom that the more skill there is required in any form of sport, the higher that sport is. Thus, by as much as it is more difficult to cast a fly for a salmon and successfully play and land the fish than it is to take and land a trout, by so much is it a nobler sport. So fly-fishing for trout is higher sport than catching bullheads in a mill pond. To kill the swift-winged quail or ruffed grouse on the wing is more difficult, and so finer sport, than to pot sparrows along a hedgerow.

It is, I believe, generally admitted that to kill a deer before dogs is easier work than to still-hunt. A correspondent of yours writing from St. Lawrence county a few weeks ago complained in substance that but few deer would be killed in his county if neither jacking nor hounding were permitted, thus admitting that still-hunting could not be successfully practiced by most hunters. It is a matter of common knowledge, I believe, that deer are often killed before hounds by men, women and children who have not the slightest knowledge of the habits of the animal, and are no more competent to practice still-hunting than they are to fly.

If I understand the methods pursued in hounding, all that is required of the hunter who is successful by this method is that he shall be able to stop a deer on the jump and shall have patience to remain quiet at his stand. The successful still-hunter, on the other hand, must know the habits of the deer, and must match his skill and caution against the acute and ever-alert senses of one of the most wary of animals.

Granting that there is a great charm in the mellow music of the hound, and a vast deal of excitement in the uncertainty as to whether the game will or will not come toward the hunter, I cannot help thinking that the difficulties of still-hunting raise it far above the sport of hounding.

It may be that still-hunting is more destructive than hounding, though I cannot think this is the case. Take the Adirondacks, for example; how many deer would be killed there annually by the visitors to the woods without the aid of dogs? Not many, I fancy.

There is one point on which I am thoroughly in accord with Mr. Wyman. That is, that it is not the killing that constitutes the sport of hunting. It is the meeting the wild animal on its own ground, finding it in its own home, and then proving that you are more watchful and wise than it is; that, notwithstanding the fact that it is always on the alert, that its eyes, ears and nose have been trained through centuries of inheritance and years of practice, your caution and your senses—though dull by comparison—yet enable you to circumvent it, and approach within the killing distance.

Many and many a time have I spent half an hour or half a day in watching, waiting and creeping to get up within easy range of deer, elk, antelope, buffalo or other game, and then when I have reached the point of vantage, have lain there with my loaded rifle and watched the actions of the graceful creatures, feeling that they were

in my power and yet with never a thought of killing what I did not need.

I think that among old hunters this feeling is quite general, and that very few of them care to kill merely for the sake of shedding blood. The triumph of their hunter's skill over the animal is the only satisfaction which they seek, and for them this triumph needs no visible, tangible proof, such as would be furnished by the carcass of the slaughtered game. The old hunter knows perfectly well whether he could have killed if he had wished to, and he has killed enough in the past to make the addition of another victim or two a matter of no moment to him.

It seems to me that those of us who have passed the stage where we kill simply for the sake of killing, can do a little good by explaining to those who are younger, or have had less experience than we, just how we look at this matter. Aside from its value as food, game is useful for the hunter to practice his hunter's skill on, not his shooting. It should not be killed unless required for camp use, or possibly when an unusually fine head is seen.

THE SILENT MAN.

REPLY TO "SPECIAL."

I WISH to thank "Special" for stating that he believes me to be honest. It is what I have always endeavored to be.

His statements as to who he is occasion no surprise, as I know far more about him than he supposes. It is on account of this knowledge, corroborated by the statements in his last, that I have written. I do not question his knowledge of Boston markets, or that he visits Maine occasionally, or that he sees many from there. I said he was a stay-at-home correspondent, and I still say so. I do not question his good intentions, but I do say that he gives statements as authoritative on many points of which he has a very limited knowledge. That he intends to state facts is no excuse for stating things to be so which are not so. I did not question the many correct statements; I challenged the incorrect ones regarding our land owners. By an official report to the Boston Journal, March 17, our wild lands are given as containing 9,260,336 acres, valued at over \$19,000,000, and the tax for 1891 is \$52,743. Is it wise to antagonize the owners of this property by making statements about them which cannot be proved? "Special" stated that they were "obstinate to pig-headedness" and would oppose a certain measure "with all the power they could bring to bear." In his article of March 19 he says truthfully, "There was not much opposition to the amendments," and his silence regarding land owners shows he was mistaken. I asked him to quote any article a land owner had ever written proposing to curtail the privileges of sportsmen. He has not done it. Instead of this he speaks of one who wished that hunters and fishermen could be kept off their lands for fear of fires. This, I think, is no unreasonable wish. If "Special" were a land owner he would wish the same.

He mentions a praiseworthy case where a gentleman tried to extinguish a fire which "some camper had left burning." If there had been no campers there, there would have been no fire. He complains of land owners because "they can see no difference between the real sportsman who would as deeply regret a forest fire as they would themselves and the worthless, thieving poacher of their own State." Now, the fact is that it is the guides, who belong to the class "Special" calls names, who really preserve our lands from fires. They choose the camping places, they build the fires for the sportsmen, whether real or sham, and they put them out on leaving; were it not for our guides the State would have been burned over long ago. A man may be a perfect gentleman and obey all laws, and yet be very careless with fire. I can give names of three Bangor men who set three separate fires in past years—all first-class men, but careless. To imply that a gentleman will not carelessly set a fire, and that those who do are poachers and thieves is absurd.

"Special" says that I object to "true sportsmen." That is his statement, not mine. I object to no man, white man or Indian, who kills no game and catches no fish to waste. A good many such come here to fish; a very few to hunt. All such men are welcome. What I do object to is having any one calling the men who leave our trout in piles to rot on the banks, as I have often seen them, and who kill our game in summer and waste it, "true sportsmen," and calling others as good men "thieves and poachers," if later they kill what they need to eat. I do not believe in calling any one hard names. It never does any good to the cause of the one who uses them; but I believe in fair play. "Special" says in the FOREST AND STREAM, Jan. 13, 1887, page 487:

"I have heard a gentleman say within a couple of days, and I know him to be a true gentleman, notwithstanding he has been in disgrace in Maine for shooting game out of season, for which shooting he has paid his fines—I have heard him say that if Maine changed her game laws so as to give September as part of the open season on her larger game, that he should do all in his power toward helping the Commission."

Now if he means to say that a man who has killed game in close time is a true gentleman because he has paid his fines, why is not Jonathan Darling, after he has settled his fine, as much a gentleman? Darling wants September opened for dogging deer, and this man wants it opened to kill them after his own fashion. Wherein is the difference? What I wish him to see is that by making class distinctions, by keeping silent about the rich who come to waste and berate those of our State who kill to eat, such a state of feeling has been made to exist as "Special" at his distance knows nothing about. He hears one side and gives that as he hears it; there is another side of which he knows little and which I feel would modify his tone were he more fully informed. My daughter is writing a series of papers on Maine game which may place some things in a different light from what they have been viewed. "Special" doubtless knows more of the Rangeley region where he visits than I do; I make no pretensions to knowledge of that country; but of the country east of the Kennebec from the sea to the boundary lines, I have a knowledge such as he will never have.

"Special" asks me to find a line he has written defending the killing of game out of season. I have never stated that he defended it; what I do say is that he condemns one class and keeps silence about the other. He will remember that our close time extends to Oct. 1. He knows that fully three-fourths of our hunting visitors

have finished their hunting before that; of the remainder I think a fair statement would be that at least half go to different points, where deer are dogged to hunt in this way. I think "Special" would be fair if he knew the facts, but our local papers rarely expose visitors, while they do give some cases of violations by our own people, and at his distance he repeats what he reads.

As to shooting cases, "Special" says: "Note where I say in substance that if anybody does this and gets shot, why, I am simply glad of it." I freely acquit him of partiality; but how any man can say he is glad when a man is killed or wounded and a home is left desolate, is beyond my comprehension; but that is his funeral, not mine.

A large part of his article is given to "submitting a proposition to my judgment," and to bring it down to my comprehension he has kindly restated it in simpler form. When I first read it over I thought it sounded familiar and at once turned to Mark Twain's first interview with Artemus Ward. I quote a part of it, as I think any one reading the two will at once see the similarity in directness of style:

"Now, what I want to get at is—is, well, the way deposits of ore are made, you know. For instance: Now, as I understand it, the vein which contains the silver is sandwiched in between casings of granite, and runs along the ground and sticks up like a curbstone. Well, take a vein 40ft. thick, for example, or 80 for that matter, or even a hundred—say you go down on it with a shaft, straight down, you know, or with what you call 'incline,' maybe you go down 500ft., or maybe you don't go down but 200—anyway you go down, and all the time this vein grows narrower, when the casings come nearer or approach each other, you may say—that is, when they do approach, which of course they do not always do, particularly in cases where the nature of the formation is such that they stand apart wider than they otherwise would, and which geology has failed to account for, although everything in that science goes to prove that, all things being equal, it would if it did not, or would not certainly if it did, and then of course they are. Do not you think it is?"

And then I said aloud: "I—I—that is—if you don't mind, would you—would you say that over again? I ought."

"Now, don't you be afraid. I'll put it so plain this time that you can't help but get the hang of it. We will begin at the very beginning. You know the vein, the ledge, the thing that contains the metal, whereby it constitutes the medium between all other forces, whether of present or remote agencies, so brought to bear in favor of the former against the latter, or the latter against the former or all, or both, or compromising the relative differences existing within the radius whence culminate the several degrees of similarity to which—"

I said, "Oh, hang my wooden head, it ain't any use—it ain't any use to try—I can't understand anything. The plainer you get it the more I can't get the hang of it."

"Special" sums up his proposition by asking me "squarely to tell the readers of FOREST AND STREAM whether if Maine people stood by their own game laws and refused to assist 'sportsmen' from other States in illegal killing of game, if the whole work would not be done." I answer squarely, no. Only the year before last a New York gentleman whose name I have, left here threatening to bring his guides and boats from the Adirondack county. I say that if our people all stood by the laws to a man, these men would come as long as they knew that by paying a fine, light to them, they would still be considered gentlemen in other States. They care no more for our laws or our State than the Boston liquor dealers do; what they want is the game. "Special" has unwittingly showed where his sympathies are. He has proposed for the whole people of a State to keep the laws and to keep any of their number from being hired by outsiders to help them break the laws, before he proposes to help us. Did he ever know any State, city or town, where no one could be hired to break laws? If that is the only condition on which he proposes to give us any moral support, we will "paddle our own canoe." To expect the people who own the game and the land it is on, to stand by year after year and see it wasted, with rewards offered by outsiders for their conviction if they break their own laws, and no rewards for non-resident violators, and no word of encouragement for those who do well, but only opprobrious epithets hurled at those who follow bad examples, is too much to expect even of Maine.

MANLY HARDY.

CHICAGO AND THE WEST.—Chicago, March 21.—John Gillespie is back from Florida, the better for the trip, it is hoped, though suffering from a very bad trouble with his eye, the lid of which seems temporarily paralyzed. March 23.—At the close of last week thousands of geese were reported, so Mr. Low tells me, at the Kankakee marshes at Cumberland Lodge, the most seen there in any late years. Ducks are said to be in all over the marshes now, as the thaw is well on. There seems little doubt that the flight of this spring is exceptionally heavy though no steady shooting has yet been had. A number of parties went out last Friday and Saturday, but at this writing no word is yet obtainable from them. They have doubtless met the birds this time.—E. HOUGH.

DUCK SHOOTING ON GREAT SOUTH BAY.—New York, March 16.—I rigged my decoys on the windward shore, but only secured four ducks. Then, determined to do better, I rigged on the following day on the leeward shore, where I bagged seventeen. After a stay of five days I took thirty ducks home with me, and bethought myself that leeward shooting is better than windward, when the wind blows a reef gale.—D. M. HARE.

SPRING IN THE ADIRONDACKS.—Northwood, N. Y., March 25.—Spring is certainly here. Robins, bluebirds, woodchucks, ducks, snakes, blackbirds, song sparrows, yellowhammers, and some of the smaller hawks have appeared. The snow has nearly gone, and the ice is out of the West Canada Creek at this point. The pheasants appear to have wintered well.—WOODCHUCK.

WHAT the harness manufacturers use and praise should certainly be just the thing for private and livery stables. Harness manufacturers consider the dressing produced by Frank Miller & Sons to be the best ever used on a harness, new or old, for it is not only a beautifier but a preserver to the leather, while giving it a perfect finish. It does not peel, crack or smut, nor will it harden the leather, and may be used on buggy tops, fly nets, traveling bags and trunks. It is a general favorite because it can be relied upon.—ADU.

Sea and River Fishing.

THE PIKE FAMILY.—I.

THIS family contains some of the best known and most widely distributed of all the fresh-water fishes. The name is derived from that of its commonest representative, the pike of the North Temperate and Arctic regions of the world. It includes some of the largest and most formidable inhabitants of inland waters, the pike and the mascalonge being exceeded in size by few of their associates except some members of the salmon family, the giant catfishes, the alligator gar and the sturgeons. The family contains, also, some diminutive representatives, as for example, the banded pickerel.

Abundant remains of the common pike (*Esox lucius*) are found in quaternary deposits, and members of the same genus have been found fossil in the fresh-water chalk of Oeningen and the Diluvian marl of Silesia.

The pikes are formidable in the number and wide distribution of their teeth. The roof of the mouth contains a middle row and two side rows, the tongue and pharynx are both well armed, and even the gill arches bristle with teeth in card-like plates, while the sides of the lower jaw have a row of long pointed teeth of unequal size. The capacity of these fishes for seizing and holding their prey is remarkable.

The pikes have a wide and plaited stomach, which passes insensibly into a slender intestine, the latter being without appendages where it joins the stomach. Digestion in these fish is extremely rapid and in keeping with their savage powers of grasping food.

We will now take a glance at the various members of this predaceous family, of which our own country has the lion's share.

THE PIKE (*Esox lucius*).

This fish is known in some localities as the pickerel. The name pickerel is in general use on Lake George, N. Y., and in Vermont and some other New England States. Herbert (Frank Forrester) calls it the great northern pickerel. The origin of the name pike is in doubt, opinions being divided as to whether it is derived from the resemblance of its snout to a pike or spear, or because of the swift and spear-like motion of its body through the water. In Great Britain the young pike is best known under the name of jack, although the name pickerel has also been applied to the early stage of this fish, while the term luce has been bestowed upon the adult form. To the French our pike is the *brochet*, while the Germans style it *hecht*, and the Italians *luccio*.

Distribution.—The pike is found in the North Temperate and Arctic regions of the world, being equally common in Europe, Asia and North America. In North America it occurs as far south as Pennsylvania, while to the northward it extends into the Arctic regions. Dr. George M. Dawson, Assistant Director of the Canadian Geological Survey, obtained the pike in Francis Lake, Northwest Territory. Dr. Dall and Mr. E. W. Nelson both found it to be one of the common inhabitants of the Yukon River, in Alaska, where it is known as the *chuk-whuk*. Mr. C. H. Townsend obtained a fine pike in the Kuvuk River, which falls into Hotham Inlet above the Arctic Circle. This fish does not appear to exist on the islands of the Arctic Ocean and in Greenland. A few years ago the writer announced the capture of this species on the island of Kadiak, in Alaska, by Mr. W. J. Fisher, but in the summer of 1889 he learned from Mr. Fisher that the specimens sent down by him from Kadiak were caught on the Alaska Peninsula.

The pikes, according to Thompson, Natural History of Vermont, 1842, is very common in Lake Champlain and all its larger tributaries. In this region and throughout Canada the name pike is bestowed because of the resemblance between our species and the common pike of England. Dr. Richardson, as early as 1836, published his belief in the identity of the pike of America and Europe, based upon a comparison of the two made by Baron Cuvier. In the report of the Fish Commissioners of Pennsylvania, for 1879 to 1880, an eminent American zoölogist claims to have been the first to show that the common pike of America is identical with the European

pike. The following quotation from Richardson, however, will show that this claim is untenable: "Our specimen, taken in Lake Huron, was submitted to Cuvier's inspection, and it has also been carefully compared with English pike without any specific differences having been detected."

Size.—The limit of size of this species is involved in some uncertainty. By reference to Goode's "American Fishes," we find that Continental Europe is credited by one author with an individual weighing 145 lbs., which was caught at Bregenty in 1862. A Scotch specimen weighing 72 lbs. and measuring over 7 ft., appears to be the largest of the monsters of Britain. No such mammoth specimens have been recorded from American waters. Thompson mentions individuals exceeding 30 in. in length and weighing 10 or 12 lbs. Herbert speaks of examples weighing 16 or 17 lbs.

One of the crowning glories of Lake George is its "pickerel." Thanks to the help of Dr. Presbrey, from

and darts upon its prey with unerring precision. Its disposition is wolf-like and its power of assimilating animal food is scarcely surpassed. The species are not gregarious and pair only during the breeding season. As an illustration of the voracity of these fish we may repeat the following account quoted by Dr. Jordan in the "Zoölogy of Ohio": "E. T. Sturtevant once put two pickerel, about 5 in. long, with a great quantity of little cyprinoids of about 1 in. in length. These two pickerel ate 122 minnows the first day, 130 the second day, and 150 the third day."

Reproduction and Growth.—The pike spawns in the winter and early spring. The eggs are about $\frac{1}{4}$ in. in diameter, and a female weighing 32 lbs., according to Buckland, contained 595,000, weighing 5 lbs. The eggs are deposited in shoal places or upon meadows which have been overflowed. The period of incubation ranges from fourteen days in southern Germany to thirty days in Sweden and other northern countries. The yolk sac of this species is remarkably large. According to Seely the pike breeds when three years old, and the female is the larger of the two sexes. The rate of growth, of course, depends upon the amount of food available. At the age of a year it may attain to a length of 1 ft. and its annual increase of weight is said to be from 2 to 3 lbs.

Food Qualities.—The flesh of the pike is fairly good, but the species does not rank among the choice game fishes in most localities.

Game Qualities.—From what has been stated about the shape and swiftness of this fish it would be inferred that its game qualities are superior. There are some writers who consider it equal in boldness and voracity to the mascalonge. It bites very freely and can be caught with any kind of bait by trolling or spinning, or on lines set under the ice. Favorite baits are live minnows and frogs. Dr. Henshall states that members of the pike family will rise to a large and gaudy fly. The best method of catching them in Lake George is by still-fishing in 35 to 40 ft. of water with live bait, for which purpose the white chub is a general favorite. T. H. B.

TWO FISH WITH ONE HOOK.—Allegheny City, Pa., March 26.—In your issue of July 10, 1890, I noticed an article headed, "Two Fish on One Hook," which reminds me of a similar tale, and I can vouch for its truthfulness. Some years ago my father while fishing in the Mahoning River, this State, set his rod in a skiff and went to a small stream near by in quest of bait. When he returned he found the line all run off the reel, and while taking it up was surprised to see a good sized black bass rise by the side of the boat with line attached; as it made no effort to escape he captured it by hand. In lifting it into the boat he noticed the line extended through the fish's gills and also felt a tug at the hook end. By hauling in the line he succeeded in landing the second bass, which was

somewhat smaller than the first. Upon examination he found that the first fish had allowed the bait, a live minnow, to pass through its gills, and consequently found itself strung on the line. In its effort to escape it had in some manner moved up the line 10 or 12 ft. from the hook and formed a loop which, when drawn taut over its head snugly held it. During this act, or after, the second bass took the minnow with the hook attached, and suffered capture for his rashness. If I remember correctly the first fish weighed $2\frac{1}{2}$ and the second 2 lbs. Father told us the story that evening as we picked the bones of the two black bass that he had taken in such a peculiar manner. I think they were large-mouthed.—O. H. P. R.

A CENSUS OF THE FISHERIES.—Early in the year 1890, the Superintendent of the Eleventh Census provided, *inter alia*, for a review of the fisheries, and placed in charge of this inquiry a person of reputed skill in figures and fishery details, Mr. Charles W. Smiley. After fifteen months of field and office work, involving an outlay of \$150,000, Mr. Smiley has been suspended from duty pending an investigation of charges preferred against him, one of which is that the statistics collected under his direction are entirely worthless. Yet he has found time to take an active part in the recent malicious attack on the Fish Commission, which resulted so disastrously to the reputation of those who brought the charges, and demonstrated the uniform disrespect of Smiley for his

LAKE GEORGE ' PICKEREL.

whom we have the best of an enormous specimen which he killed on a 12oz. rod in 1889, we were able to identify the "pickerel" of Lake George as the common pike of other waters (*Esox lucius*). Dr. Presbrey's fish weighed 10 lbs. 2 oz., and was the largest one taken in 1889. Major H. A. Hall, of Washington, D. C., was one of a party that took over thirty pike in 1889, averaging over 10 lbs. each. The illustration accompanying this sketch was made from a small photograph presented to us by Dr. Presbrey, and represents one of the famous catches of the year 1889 in Lake George. The largest was upward of 4 ft. long, but the average length of adults is little more than 2 ft.

Season.—Pike are caught during the summer and even into midwinter. The fishing season usually begins June 1 and ends in some States Dec. 1, but in many of the States continues through the winter. Pennsylvania has prohibited the catching of pike and pickerel between Dec. 1 and June 1, in order to prevent the destruction of the fish during their spawning season.

Food.—The pike is carnivorous and destroys all animals of suitable size within its reach, including waterfowl, aquatic mammals and especially its associates among the fishes.

Habits.—Notwithstanding the special adaptation of the pike for swift darting movements it inhabits still, cold waters, or those with a moderate current rather than rapid streams. It conceals itself like the tiger in its lair,

superior officers, and especially those who promoted his advancement. The Census Bureau may well hesitate to publish statistics obtained by methods which have already provoked widespread censure, and are tainted by motives which would be discreditable even among savages.

HUBBARD LAKE WHITEFISH.

ALPEA, Mich., Feb. 14.—*Editor Forest and Stream:* Noticing an article some time since in the *FOREST AND STREAM* in regard to catching whitefish with hook and line in Otsego Lake, N. Y., I have been thinking that perhaps we have the same fish in Hubbard Lake, Alcona county, Mich. I referred to what authorities I had at the time the article was written and they say that it is a different species of whitefish and commonly called Otsego bass. I have had this Hubbard Lake fish and a true whitefish from Lake Huron placed side by side, and there is quite a difference between them. A fish is caught also in Lake Huron which is the same as the Hubbard Lake fish, and is commonly called by the fishermen long-jaw or black-fin, to distinguish it from the true whitefish. The Hubbard Lake fish and the long-jaw are exactly alike, as far as I could distinguish; the long-jaw has a mouth more like a herring; the mouth is four times as large as that of a whitefish; the fins are dark; back dark, and they are very inferior in flavor and eating qualities to the true whitefish. Their habits in the spawning season are different also; the true whitefish spawns on gravel or rocky bottom, while the long-jaw spawns at least two weeks later and deposits its eggs on a thick growth of weeds. The average size is about 3lbs., but I have caught specimens of 7 and 8lbs. with a spear late in the fall. I have never heard of one caught with hook or line. Perhaps you may be able to inform me whether this fish is the same as the Otsego bass, as if they will take a hook I can have some sport with them, for the lake contains very many of them and is easily reached from here. H. B.

The Hubbard Lake whitefish, which is so well described above, is a variety of the black-fin and has recently received the name *Coregonus nigripinnis* var. *bisselli*, given in honor of the president of the Michigan Fish Commission. The whitefishes of North America are divided into two great groups, one of which contains species having the lower jaw shorter than the upper and included within it, while in the other group the species have larger mouths and a projecting lower jaw. The true whitefish and "Otsego bass" belong to the first of these divisions; the black-fin and Hubbard Lake whitefish come into the group with the lower jaw the longer. A figure of the whitefish or "Otsego bass" is published in our issue of March 19, a comparison of the Michigan fish with this cut will at once show that it may be distinguished by the structure of the jaw. The Lake Milona whitefish, of Minnesota, is a near relative of the Hubbard Lake species; as this fish sometimes takes the hook there is little doubt that the Michigan variety will do the same.

The figure in our issue of March 19 should have been credited to the "Fishery Industries," from which it was copied. Mr. Phinney writes of it: "It so chanced that just as my eye fell on the admirable engraving my son came in with 9 of the fish (recently taken and all within an hour) and there they were, side by side, copy and original. The likeness is perfect—a *fac-simile*."

ANGLING RETREATS OF MAINE.

V.—THE ELLIOTTSVILLE LAKES AND PONDS—CONTINUED.

THE fisher who locates for a few days or weeks at any of the Onaway camps is not confined entirely to the trout and salmon fishing there.

In this township and nestling among these forest-clad mountains are many smaller lakes and ponds. Two of the most noted for landlocked salmon are the two Benson ponds, the larger known as Big Benson. They are about one and one-half miles north of Onaway, and the salmon and trout fishing there is not excelled in that vicinity. From Onaway one can also go to Brown's Farm, thence to Long Pond and Hedgehog Pond before mentioned. Houston Pond, Houston Bog and Chairback Pond are also in that section. Chairback is in a northwesterly direction from Onaway on the south side of Chairback Mountain. The outlet of Onaway empties into Sebec Lake some three miles to the south. This is a lake twelve miles long. Several steamboats ply its waters, and some summer cottages have been erected on its shores. Landlocked salmon, pickerel, white perch and smelts are its principal fish. These salmon are natives of the Sebec, Onaway, Long Pond and the Benson waters. Trout and salmon fishing on the Onaway Stream is always good.

Among the attractions and natural scenery in Elliottsville which delight the tourist none is more delightful than the Little Wilson Falls on the Little Wilson Stream, which empties into the Wilson River a short distance above the bridge and the falls above referred to. They are about three-quarters of a mile from the wagon road in a southwesterly direction. The Little Wilson there flows through a deep gorge. A very steep and narrow ridge divides the stream from a tributary north of it. At the head of the gorge, some sixty rods from its mouth, is a waterfall sixty or more feet high. It is often visited by sportsmen, tourists and anglers, and is mentioned in several guide books.

A tour up the Wilson River is also a favorite one for anglers. There they find a labyrinth of streams and brooks and many small ponds seldom explored, where the trout are very abundant.

On the Elliottsville road, six miles from Monson Village, the angler may put up his team at the farm buildings of Mr. R. C. Davis, and after walking one-half mile in a northerly direction he arrives at Bear Pond, about one mile in area, in a spruce forest under some high hills, and where are found some of the finest specimens of spotted trout that are in this entire lake region. They are very numerous, although not of a large size. From June to October the fly-fisherman is always sure of a fair catch and quite often a very large one.

About one mile northward from Bear are three or four other ponds. Two of these, Juniper Knee and North Ponds, have a very fair reputation for trout fishing.

Although the highways of the world's commerce have penetrated this lake, forest and mountain country, and the clang and noise of the locomotive have already startled the deer and surprised the bear and the caribou

in their woody retreats, yet the rails are only on its very border, and the soil being better adapted to raising spruce trees than for anything else, there is no immediate prospect of any further marks of the vandalism which usually follows the "march of civilization." The great bulk of the tree growth is spruce, which is owned by parties interested only in its value for the winter operations of lumbering. As this is a successful business the owners have every motive for preserving it in its natural state. The spruce forestry of Maine is reproductive. So the continual cuttings by the lumbermen during the winter do not deplete it as is the case in some States.

In one of Victor Hugo's posthumous works appears the following: "It is a humble corner of earth and water which would be admired if it were in Switzerland, and famous if it were in Italy, and is unknown because it is in Guizpuzcoa." These words of the great artist are very applicable to this Monson and Elliottsville region in the judgment of the writer. J. F. S.

MONSON, Me.

NEW ENGLAND TROUT.

THE legal trout season will open in Massachusetts April 1, before these lines are perused by the readers of the *FOREST AND STREAM*. If possible, there is more interest than usual in this opening. Last year was a propitious one with the rod and line sportsmen of the State, in that the catches of trout were more abundant and contained individuals of larger size than for many years. This alone is sufficient to increase the interest and make the anglers more anxious to be on the ground early. It is a peculiar feature that Fast Day, in this State, is appointed for April 2, and this will give the sportsmen, many of whom are business men, a better chance to be out. Rods are being put in order for the day that the Governor has appointed for "a day of fasting and prayer." If some of the boys engage in devotions at all, it will be beside the running waters, and their fasting is likely to be continued only while wading the streams or fishing for luck. But the weather is not yet very comfortable for outing, though the streams near the sea coast and in the southern part of the State are all open, and the water is at about the right pitch for fishing. It is a common question for a friend to ask a friend of known fishing proclivities if he is "going to drown any worms" on Fast Day? But it will not be all worms that will be taken out.

The Monument Club will be well represented at their waters on the Cape on the opening day, and still better represented on Fast Day. This club includes some of the first merchants and professional men of Boston, among whom are the Shattucks, noted lawyers, and many others. They have their tackle ready for Fast Day. Mr. Foster, of Foster & Weeks, proposes to try the streams in the vicinity of Waltham; but the greatest movement of the fishermen will be toward the Cape. The expectation is that a goodly number of sea trout may be secured.

Mr. C. E. Leonard, well known in the dry goods trade here, but now a prosperous woolen manufacturer of Bennington, Vt., will try a private stream in Falmouth, Mass. He goes there by invitation of the Swift Brothers, who have bought the stream, once a mill stream, but they propose to improve it in the way of a summer farm. Mr. Leonard will take his little son with him, who, though a boy of only ten years, is as fond of the line and the rod as his father. When seven years of age he had a record of trout caught. Such are among the few who will try the streams on Fast Day. The number includes many of the first business and professional men of Boston and other cities in the State. You may laugh at the fisherman and all his luck if you please, but he will be there the next time all the same.

The opening of the Maine waters does not occur till a month later, and if a vast quantity of ice and snow have anything to do with the opening of the trout waters there, the opening will be very late this year. The snow is still deep in Maine. The rivers are generally open, however, from a very heavy fall of rain a week ago, which took out the ice, with a good deal of damage to dams and bridges. But the smaller streams are still locked in ice, or bordered with such a quantity of snow that it would be next to impossible to reach them, even if it were of the least use to fish in so much snow water, or if it were legal to fish for trout previous to the first day of May. It is suggested by old guides and others that the celebrated trout lakes and ponds will scarcely open in Maine previous to May 15, though the opening has taken place at the Rangeleys as early as April 20. The opening of the trout streams will be earlier, but there is yet a vast body of snow to run down them, and it is doubtful if there is really any fishing in these streams as early as May 1, the beginning of the legal open season.

Better than the usual annual display of live trout is promised this year by Geo. B. Appleton & Co., at their tackle shop on Washington street. They will have the usual tanks and fountain in the window, and they propose to show a 7lbs. English trout, California rainbow trout, hybrid trout, Loch Leven trout, besides a good showing of brook trout. Their supply will come from Plymouth, N. H., as usual, with some good specimens from Plymouth, Mass. It is curious to note the amount of interest there is taken each year in this display. There is always a crowd at the window, and at first extra policemen are required to keep order. Grown up men, with possibly but little knowledge of trout, will stand and watch the fish in the tank. There are many who would like to be trout fishermen, if they could. The desire is growing, and where shall the supply of trout come from? SPECIAL.

Angling Talks. By George Dawson. Price 50 cents. *Fly-Rods and Fly-Tackle.* By H. P. Wells. Price \$2.50. *Fly-Fishing and Fly-Making for Trout.* By J. H. Keene. Price \$1.50. *American Angler's Book.* By Thad. Norris. Price \$5.50.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

A BOOK ABOUT INDIANS.—The *FOREST AND STREAM* will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and splendid illustrations from the volume.—*Ado.*

NAMES AND PORTRAITS OF BIRDS, by Gordon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by *FOREST AND STREAM*.

Fishculture.

STOCKING PENNSYLVANIA WATERS.

WE give below a statement of the fishes distributed by the Pennsylvania Fish Commission in 1890. The increase of trout over the number sent out in 1889 was about 1,000,000. Owing to the loss of many breeding fish by overcrowding at Corry, the distribution of brook trout in 1891 will show a falling off, but from the present indications the season of 1892 will be more than ever successful. In 1890 only 435 large brown trout were planted, but the shipments now going on will place 115,000 fry into the streams. Applications for brook trout in 1890 numbered 550 at the Western Hatchery and 750 at the Eastern.

TABLE OF DISTRIBUTION.

Brook trout (Western Hatchery).....	1,020,900
Brook trout (Eastern Hatchery).....	1,590,900
	2,619,900
Rainbow trout (Western Hatchery)....	460,100
Rainbow trout (Eastern Hatchery)....	122,500
	482,600
Western Hatchery (large).....	1,583
Eastern Hatchery (large).....	900
	485,083
Lake trout, Loch Leven and hybrids.	217,525
Black bass and rock bass.....	3,535
Brown trout (large).....	425
Penobscot salmon.....	94,000
Carp.....	5,122
Wall-eyed pike fry.....	18,000,000
Whitefish fry.....	14,000,000
Shad fry.....	6,500,000
Total.....	41,423,590

NEVADA FISHCULTURE.

WE have received the report of Hon. George T. Mills, Fish Commissioner of Nevada, for the years 1889 and 1890.

The Commissioner states that on the date of his appointment, Feb. 23, 1889, he found about 600,000 eggs of the Eastern brook trout in the State hatchery. The new building was occupied April 1, 1889, and work is carried on in it during eight months of the year, or from the reception of the eggs until the distribution of the fish.

Regarding the Lake Tahoe trout the Commissioner says: "Ova from the Lake Tahoe trout are taken as early as April, and through June, July and August, while in Pyramid Lake the season commences in March, with but little difference as to dates in rivers and streams. In Marlette Lake, where I obtained the eggs of the Eastern or red spotted trout now in the hatchery, the season commences about Oct. 15 and continues until December, the best time being from Oct. 20 to Nov. 20. In 1889 the first eggs were placed in the hatching house Oct. 23, and the same date in 1890."

Breeding fish are collected in Marlette Lake by seining with a 100ft. seine, never more than 100ft. from the shore. The breeders are kept in a small reservoir near by, through which passes a stream of pure running water. The eggs taken at this place are carried in cans on spring wagons over fourteen miles of rough mountain roads to the hatchery. The temperature of the water at the hatchery ranges from 46 to 35 degrees during the eying period and continues nearly the same until the hatching is completed. The eyes are visible in about forty-five days and the first fry appear in ninety days, while some of them are delayed to one hundred and ten days. The yolk-sack is absorbed in about forty to forty-five days, after which the young are fed with boiled beef liver, finely grated, with an occasional allowance of sour milk. The young have been successfully shipped by wagon over rough roads when six weeks old, but Commissioner Mills prefers to keep them until they reach an age of three or four months.

The following interesting note on the Sacramento perch, which we suppose to be the *Archoplites interruptus* described and figured in our Black Bass Supplement of July 4, 1890, contains some additional information about that little-known member of the sunfish family: "Walker, Pyramid and Washoe lakes are now fully stocked with Sacramento River perch. They grow to about 4lbs. weight, rise to a fly, and during the months of April, May, June and July large numbers are caught. As yet but few have reached the weight named, but every year shows their increase in size and numbers. The flesh is white, flaky, of a most delicate flavor, and esteemed as among the most nutritious of our fresh-water food fish. They seem to be hardy and thrive well in muddy and saline waters, but are difficult to ship for transplanting, particularly where long distances and rough roads have to be traveled."

No returns have yet been reported of the black bass which were planted in Washoe Lake and Carson River during 1887 and 1888, but this may be owing to the small number of fish placed in a large water area.

The German carp has multiplied rapidly in some parts of the State. Mr. Taft, of Diamond Valley, White Pine county, has more than enough to supply his neighbors and the Eureka market. Mr. Thomas Oliver, of Carson City, had so many young carp in his ponds that he was able to fill orders addressed to the State Fish Commissioner until the earthquake of June 3, 1887, deprived him of his water supply. The Humboldt contains carp weighing 5lbs. and upward. In the Winnemucca markets they are considered an excellent food fish. In various reservoirs and ditches the increase of carp has been beyond all expectation.

The blue catfish of the Schuykill River, which was deposited in Washoe Lake, Carson and Humboldt rivers, beginning in August, 1887, has multiplied enormously and furnishes the basis of a very important and profitable industry. In the markets of Carson and Virginia City it finds a steady and extensive sale, and is esteemed a fish of great value.

The results of planting quinnat or McCloud River salmon are not very favorable, says the report, although some of the original plant have been captured and evidences of their reproduction are reported.

The introduction of landlocked salmon was begun in the spring of 1889 and it is too early to look for results as yet.

Commissioner Mills has the following to say about sportsmen's clubs: "The organization of sportsmen's clubs is most urgently recommended. The persons usually members of such organizations are doubly watchful of fish and game interests and strong upholders of the law. There are now several organizations in the State and to them is mainly due my ability to report so few infractions of the law. When we consider the amount frequently expended by these clubs in protecting fish and prosecuting violators of the law, and the time occupied by the membership in looking out for these interests, we find a body of men deserving the highest praise from the Commission as well as every law-abiding person in the State. Every encouragement should be given these organizations, as they are determined to see the abuses corrected and the letter of the law carried out."

The depositing of sawdust in Truckee River is still continued, and it is believed, with very serious damage to the trout in that stream. The law officers of Nevada county, California, have been urgently requested to enforce the law against the pollution of rivers. Indians have been guilty of taking fish by spearing and the use of grab hooks,

White men have also been engaged in using the latter implement. After convicting one Indian in Ormsby county of selling speared trout, and warning others through the several agents, these methods of taking fish have been largely abandoned. Wells, Fargo & Co., also, have advised their agents in Nevada to receive no speared or other illegally caught trout for shipment.

A McDonald fishway was placed in the Truckee River near Reno and has enabled spawning fish to surmount the dam at that place. Other dams in the State are to be supplied with necessary fishways very soon.

The Commissioner will submit a bill to the Legislature intended to remedy the defects of existing fish laws and secure harmony with the laws of California.

Among the enemies of young fish the report mentions the following: "There is a small white worm of less than an inch that is one of our greatest enemies. It spins a web in the water to catch the young fish, similar to the web of a spider. It is made quickly by fastening the thread at different points and going backward and forward until finished. The fry swimming about, the web catches the fins, gets into the gills and soon kills the fry. The webs are not visible until the sediment collects on them, when they are very plainly seen. In order to prevent this the troughs are feathered twice a day."

Mr. Ernest Harris, on account of his interest in fishculture and his acquaintance with the waters of the State, and his fame as a most zealous sportsman, was selected as Deputy Commissioner. Mr. Byron Close is the Superintendent of fish hatching, and his work has been extremely successful. The Commissioner has made a compilation of all existing fish laws and a sketch of all the kinds of fish artificially propagated and distributed within the State. The excellent results of fishculture work in Nevada are ascribed to even temperature of the waters, the abundance of food and the surroundings generally favorable to fish life.

NEW HATCHERIES FOR NEW YORK.—The Assembly committee on ways and means has reported Mr. Beake's bill appropriating \$5,000 for a fish hatchery in Sullivan county. Also Mr. Brundage's bill appropriating \$5,000 for establishing a fish hatchery at Urbana, Steuben county.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

March 31 to April 3.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Secretary.
April 8 to 11.—Third Annual Dog Show of the Mascot Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.
April 14 to 17.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Munhall, Secretary.

April 15 to 18.—Dog Show of the Southern California Kennel Club, at Los Angeles.

April 23 to May 2.—Dog Show of the California Kennel Club, at San Francisco, Cal. H. L. Miller, Sec'y.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

FIELD TRIALS.

Nov. 30.—Central Field Trial Club's Third Annual Trials, at High Point, N. C. C. H. Odell, Sec'y, 44 and 46 Wall street, New York city.

LYNN DOG SHOW.

"THERE'S nothing like leather" is an old saying, but none the less true, especially when one thinks of the success which the Massachusetts Kennel Club, of Lynn, attained in their second venture in the shoe town last week. Although the opening on March 24 was hardly an auspicious one, and the delay of the judges in getting to the hall was unavoidable, still all's well that ends well, and there is little doubt but that the club's finances must have been considerably strengthened when the show came to a close on Friday, the 27th. As I stated last week, the club was very much handicapped by not being able to secure a better hall. A theatre is hardly the place for a dog show, but whoever was responsible for the arrangement of Spratts benching could hardly have done better, considering the peculiar disadvantage under which he labored. A floor which every 4ft. or so is raised several inches higher than the other is hardly the place to set up a level bench, but it was done, and firmly too. The large stage was appropriated for the two rings, and on this part there was good light, but in some parts of the hall artificial light had to be used before a sight of the dogs could be obtained. Though there were only about 340 entries, it would have been better for the comfort of all had there been less. The members of the club's committee were enthusiastic in their efforts to please every one, and the superintendent, Mr. John F. Williams, considering his lack of experience in such matters, was an excellent selection and attended to his duties very efficiently, and some of the bench show committee, Messrs. "Bob" Leslie, D. A. Williams, E. B. Sears, W. H. Reede, Captain Hoitt, and others were always around to lend a helping hand.

Crowds of people poured into the Music Hall throughout the week, and "standing room only" was an appropriate cry after 8 o'clock every evening. Some of the breeds were very well represented, especially the sporting classes and some of the terriers, particularly the bull-terriers, black and tan and Yorkshire. The considerate care which the club manifested toward the visitors and exhibitors by tendering them such an excellent dinner the first day, was highly appreciated, and mine host of the Revere House quite surpassed himself in his efforts. There is only one thing to be regretted in this connection, that such "spreads" should be given in the middle of the day, for, besides being an event more appropriate for the evening when the hard work of the day is over, the judging is considerably delayed thereby, and another thing, the judge hardly feels like bending down very often, as he must do when going over his classes. When clubs go to this expense it would be better if they followed the custom in vogue at English shows in such matters. St. Bernard men felt rather depressed over the news of the serious illness of Alton and the palpable indisposition of Sir Bedivere, whose owner was running unwarranted risk in having the dog at the show at all, or at any rate after the first day. The judges, Messrs. Mortimer and Mayhew and Dr. Glover, performed their duties conscientiously, and little grumbling was to be heard, if we except some of the "Irishmen" and beagle men, but somehow this season pretty nearly every type of dog gets a look in at the money at one show or another, for the "reversals" have been many this year. The boys must have their little jokes, and of course the great shoe town comes in for its share. It was remarked on all sides the club had come to "last," and the inhabitants entered heart and "sole" into the fun, and the success of the show was drunk with full musical honors and no "heel taps."

There is little more to be said, so I may as well review the lucky winners.

MASTIFFS.—(JAMES MORTIMER).

The absence of the Flour City Kennels was in part made up by the presence of Cambrian Princess and one or two others of Mr. Moore's recent sales. Sears' Monarch made his first appearance since New York in the challenge and had no

competitor. In dogs, Duke II., bad in front and rather roach backed, but with nice depth of body and fairly good head, was placed over Don, who, if he does not actually best the other, only loses in muzzle and tail and is much better in other parts. Ranger's Rex, ears faulty and muzzle short but not deep enough, came third, and Lord Rochester, poor in muzzle but otherwise fairly formed, vhc. A poor class. Of course, Cambrian Princess, despite her wretched condition, was a good winner in the bitch class, and Lady Phyllis, who loses considerably in head, took the red ribbon; Madge Minting, better in body than Lady Beatrice but loses in head to her, came third, the latter getting the three letters. Meg Merrilies, hc., got all she deserved. No puppies were shown.

ST. BERNARDS.—(JAMES MORTIMER).

As Hesper was reserved for the specials only, this let Plinlimmon, Jr., in for the challenge prize, and his kennel mate, Lady Wellington, was alone in the class. The well put together son of old Valentine, Lothario, scored his first win in the next class for roughs. He is now well known. Nero, second, has a long and narrow head, is light in eye, and body has not depth enough. Prince Draco, also a bit too long in head, faulty in pasterns and a little slack in back took third prize. The others were poor. In bitches, the winner proved to be Plevna, already described. Lady Adelaide, spoken of at Washington, second, and Ellen Terry, plain faced, lacking blaze and too long, but excellent behind the head, though feet and pasterns could be improved, dropped into third place. The next class called was challenge bitches and Cleopatra scored again, though there was nothing against her. The open dog class had one entry, a poor one, and first and second prizes were rightly withheld. Empress of Contocock, however, made up for this in the next class, though she was treated to a walkover. Mr. Moore's dogs were taking a needed rest. No Newfoundlanders were entered.

GREYHOUNDS.—(R. F. MAYHEW).

In challenge class The Lady Belle, a fairly formed and well known Western winner, was alone. In open dogs Gem of the Season continued his victorious career and still keeps in good shape. Demon, given second, is a very coarse dog, flat-ribbed, short and thick in neck and far behind the winner. Nero, third, is also a plainish, flat-backed specimen. In bitches Spinaway, well known, though in poor show shape, having only just recovered from distemper, had a tussle with Spice, who though she loses in ribs and quarters, has an excellent front. Belle was lucky to get third; she has a poor front and was outclassed. In puppies a fairly well made one, Bruno, was alone.

DEERHOUNDS.—(R. F. MAYHEW).

Robber Chieftain's superior head, action, loin and coat placed him again ahead of Clansman, and in bitches Ramona rightly scored over Wanda, better in head, front and action. The winner at the greyhound show in New York, Douglas, was again to the front in the next class, and Hillside Warrior, though better on his feet, loses in bone and in front to the other, also in coat. Hillside Harold, hardly looking so well as at New York, was sent out with third, though his excellent head, bone and legs and feet should have commanded more attention. In bitches Hillside Ruth, better in head, loses to the other in body, legs and feet. Romola was absent. These were all from the Thayer kennels. Jack the Ripper I believe was sick and was not shown.

POINTERS.—(DR. H. CLAY GLOVER).

The Doctor did not begin his launcet till Wednesday. In the absence of Robert le Diable, Launcelot secured the heavy-weight challenge prize and Belle Randolph did the same in the corresponding class. In open dogs Pontiac, an old winner, though heavily shouldered and a bit out in front, was placed over a heavier built one in Glenmorgan; third went to Wizard, a poor mover and none too good in parts, a very coarse tail being his most noticeable fault. Ned C., reserve, is faulty in muzzle and front. Dan F., c., has a fair body, but legs and feet are not the best. Several noted dogs were absent in this class. In bitches, Cicely, who has been on the circuit, here scored first, followed by Bess, who had a litter; she loses in muzzle, nice body, fair legs and feet; Beauty, head could be much improved, third. In challenge light-weight dogs the fight lay between Duke of Hessen and Tribulation, and the catchy qualities of the latter had to succumb to the more sterling merit of Duke in head, bone and ribs. Sally Brass II. was alone in her class. In open dogs, that well-made one, Ossining, just beat Inspiration, who occupied his accustomed place. The quality of the others was not very high, when third was not given and vhc. only awarded to Mack II., who loses in head, body and feet, and Sancho Dash, hc., could be better in loin, head and front. Miss Meally's good head, well-ribbed body and good understandings carried her nicely to the front over Lady Graphic, who pushes her close in everything but head and front. Bloomer, third, is also a well-made one, and there is little to choose between the three. Mamzelle, reserve, loses in head and body. Nasso's Belle is weak in muzzle, though otherwise a good head. Patti of Portland, hc., faulty in front and quarters. Ino, c., is wrong in stop and forelegs and feet. A poor Graphic pup was given second in the next class, puppy dogs, first withheld; but in the bitch class an injustice was certainly done Cora Lynn, who was only given second, first withheld, when her excellent body, legs and feet, and fairly good head, could have put her ahead of many older mentioned ones.

ENGLISH SETTERS.—(DR. GLOVER).

Sir Tatton was alone in his glory. This dog is having a little better luck now and again. I may say all's well that ends well, for if he hasn't had his trials he has certainly had his disappointments. No challenge bitch. In dogs the Doctor soon put the only likely looking fielder to one side: this was Edgewood, and he got the blue ribbon; he was described at Washington. The others were of heavier type, and Glen Bolton, faulty in muzzle, legs and feet, came second, followed by Kent II., one of Mr. Davidson's favorites; though he moves a bit queer behind he has the best formed head and body in the class; reserve went to Royal Kent, another good one, but too heavily built for the new club, though he could have won nicely. Gus Bondhu, vhc., is coarse in skull and muzzle, good front and body; Prince L., rather heavy in head but boasting a well-shaped body, was given three letters too; Tony Gladstone might have had another letter. In bitches Albert's Nellie, who is built on the field type order and described in Pittsburgh report, beat Glen Ada, who is also faulty in muzzle, but wins in body, legs and feet might be better. Katie Howard, showing nothing of her sire's depth of muzzle, but of good body and shoulder formation, just lost to Jessie Noble II., whose faults are in front and muzzle. Lady Snowflake lacks stop development, but her nice body and legs took the three letters. No puppies.

IRISH SETTERS.—(DR. GLOVER).

In challenge dogs Kildare had to succumb to Max A., last week it was the other way, and this decision is about right, for what Kildare gains in head he loses behind it to the other. Ruby Glenmore also, in the next class, changed places with Winnie II., and this was right too. Open dogs saw a nice class, and the decision took some time to arrive at. Inchiquin, fairly good in head, but might be better ribbed, and in nice coat, was placed over Dan Myren, a bit bitch-headed, short in muzzle, but excellent in body and color; Bean Brummel after his long run of victories must have been surprised to get only third; another good one, Sunset took reserve, hindparts his worst fault; Duke, vhc., has a nice type of head, but coat is too wavy; Red Nat, hc., is faulty in pasterns; Huntington, hc., is just fair. Open bitches, an old

favorite, Jeannette, scored, and Mollie Glendyne, a bitch of excellent type, troubled with a bit of eczema, might have won otherwise; Hammerless, third, has a fair head, could be better in body, legs and feet nice; Daisy, hc., needs color and head is faulty to type; Gypsy Belle, hc., has good color, muzzle wants depth. In puppies several fair ones were shown, but the judge again withheld first, though this is wrong in the case of puppies of fair merit in a show of this dimension; New York and Lynn must be judged on a different basis.

GORDON SETTERS.—(DR. GLOVER).

King Item and Becky Sharp, both old rounds, were alone in their respective challenge classes. In dogs Tyrus, a dog of good shape with a nice head, well marked and possessing rich tan, scored easily over Don, who loses in muzzle, tan and front. Third was withheld, and very rightly; the other entry was a weed. In bitches Flomont won easily over Fannie, who loses in bone and body. No puppies. These classes were poorly filled.

GREAT DANES.—(R. F. MAYHEW).

Irene was alone in challenge class; she is not wearing very well. In dogs Pascha, the New York winner, had little trouble in getting away from Nero on the same kennel, better in head, front and body. In bitches Flora Florida's better movement, loin, front and head put her well ahead of Flora, who is a bit slack in loin. Fitz, third, is a plain, uncropped specimen; her body is her best point.

SPANIELS.—(DR. GLOVER).

Irish water spaniels were taken care of by the inevitable Patsy O'Connor, who was looking in anything but fine feather. In challenge fields Lady was alone, and so was Beverley Negus in open dogs; both are well known. Dolly, spoken of at Washington, had the bitch class to herself. In challenge cockers Rabbi downed Jersey for a change; the latter can beat him in head, front and coat. Bessie W. was alone in her challenge class. Jersey Boy, from Mr. Willey's kennels, is hardly straight in front and a bit too round and full in skull yet, but has excellent coat, beat Olean, who is a bit undershot, a trifle coarse, described at New York. Black Duchess in open bitches won nicely over her kennel mate, Little Nell, who has not fulfilled her Boston promise, loses in head and body, though better in coat than the winner. Lala, third, is too long in head, nice body. Merlin, reserve, is out at elbows, but has a nice head and body. Bonnie Obo, hc., faulty in muzzle, front and coat. In puppies Obo was the winner, having it all to himself. In any other color dogs Cherry Boy, good body and legs, won over Rollo W., a little too much out before the eyes, skull could be better, but body and legs good. An old winner, Lady of Learning, walked away with the ribbon in bitches; she was as usual heavy in whelp. Boss III. had things to himself in the Clumber challenge class, and Lady Bell and Johnny, Jr., occupied their accustomed places in the order named, another Belle having a better head than either, though hardly square enough in muzzle, good body, came next. Meteor, vhc., loses in muzzle and legs.

FOXHOUNDS.—(DR. GLOVER).

There were not many present, but the three shown looked like workmen. In challenge dogs Roseville Rover, a noted winner, though a little heavy throughout, is a well-made bound, he seems to be going a little in front, the hard country round Newport evidently telling on him a bit, but his straight limbs and excellent loin are still noticeable. Deacon was the winner in dogs, there is little between this one and Waltham Jewel. Deacon is not as good in feet and pasterns as the other, but is better in body, especially ribs.

DACHSHUNDE.—(R. F. MAYHEW).

Feldman K. was again returned a winner, his points are now well known. Joan of Arc, first in the puppy class at New York, is not let down enough in front, and ears could be hung better. Waldman I., third, loses in head and body length. Bassets had old Bertrand the winner of another first.

BEAGLES.—(R. F. MAYHEW).

These classes were fairly well filled, of course, as this is the heart of the N. B. C. district, there was found to be a satisfactory showing. Frank Forrest turned the tables on Little Duke, though better in muzzle he loses so much in front and is so out at elbow and a bit gone behind that Little Duke was fairly entitled to the honor. Lou, heavy in whelp, made her last win this season in her class. Open dogs saw the winner in the nice-headed, good-bodied and nicely-actioned Rambler, who beats Sunday, second, especially in those points. Restless, third, was decidedly under the weather, he was at Washington. In bitches Topsy S., though hardly straight in front, is of excellent type. Forest Queen, a bit slack in loin, nice coat, not ribbed up enough, and narrow-headed, came second. Twintwo, who beats them all in body and legs, third. Lady, reserve, is faulty in front and head. Lonesome, hc., is throaty. Clyde, filling out a bit, won in under 12in., he is light in loin and feet and quarters could be better. Bannerqueen, much improved lately, came second. Forest Prince, first in puppies, is a trifle long in head and not straight enough in front. Daisy II. is a nicely put together youngster.

COLLIES.—(JAMES MORTIMER).

Roslyn Wilkes was the only representative from the Chestnut Hill Kennels, and he took care of the challenge dogs. Flurry III. was absent from her division. In dogs, Renown, a dog showing nice quality, good head and coat, was placed over Hempstead Zulu, who has been doing all the shows. Kilmarnock Chief, third, is coarse and heavy but had a good shaped head. Kilmarnock Gibbie, faulty in head and coat, vhc. The others from this kennel were mentioned, but would not be in good company. In bitches, Zulu Princess II. won nicely over Kilmarnock Stella in coat and front. Kilmarnock Winnie, third, is too cloddy. Miss Nancy, reserve, is faulty in head and legs, coat fair. Puppy prizes were withheld, Roslyn Dolly being at home. In the open classes there was little quality outside of the two winners.

BULLDOGS.—(JAMES MORTIMER).

Harper as usual in the challenge dog class, and Bathos in the open dogs had little trouble in accounting for the plain-faced and faulty-fronted Carisbrooke. The Graven Image was well ahead of Dolly Tester in quality, shoulder, chops and lay back. The other two were more like business dogs.

BULL-TERRIERS.—(JAMES MORTIMER).

This show brought together the best classes of these dogs in the circuit. Starlight, on account of absences, was alone in the challenge class. An excellent lot of heavy weight dogs came together in the next division, but Dick Whittington again held his own nicely. Prince Bendigo losing in neck and shoulders, and Greenhill General, third, is too leggy and falls away in quarters too much. Dufferin could do no better than vhc. in this company. King of Hearts, a bit out in front, got hc. He is well known. In bitches White Violet, an excellent specimen, but hardly long enough in muzzle, was selected for first over May Queen, well known, beating her in cheek and body. Count's Nell, third, is light in eye and feet too open. A nicely made youngster, liable to get cheeky. Little Donovan won in under 23lbs. class, second going to Silver Nugget, who loses in ears, tail, loin and head to the other, besides being a little wide in front. Top Sparkle, a good stamp of terrier, was sent out in the open dogs (heavy weights) on account of tail looking hardly *au naturel*. Stanly Belle, a promising youngster by White Wonder, took the bitch prize without competition. Mr. Harris, with Little Donovan, Stanley Belle and Stanley Bill, who was also shown in open dogs and should have been mentioned, were first, second and vhc, respectively.

PUGS—(R. F. MAYHEW).

All things come to she who waits, in this case, and Nellie Bly at last met with no competitor and won in the challenge class. Little Jewel had also somewhat of a walkover in the dog class, beating Budge in cleanness of neck and shoulders; the latter has excellent wrinkle and a well-formed head, but is shown too fat. Lena took the blue ribbon in bitches, her nice skull counteracting her pinched muzzle, ears good. Nellie M., second, loses in ear and color. One entry in Chesapeake, Mrs. Walker's Duke.

FOX-TERRIERS—(JAMES MORTIMER).

Raby Mixer again won handily over Dusky Trap, reserve going to Blenton Volunteer, who was looking a little better. Lucifer absent. In bitches Blenton. Consequence was first, though she cannot beat Richmond Dazzle, especially in head. Blenton Brilliant took the reserve. In open dogs Starden's Jack beat Russley Joker in all but head, third going to Warren Vexer, clumsy in skull and weak in muzzle. LeLogos and Eudellif Spice were given vhc.; they are now old faces. There were several absentees in this class. In bitches Mr. Logan, by the aid of his well known Dono, won again, followed by his Dominica, third going to our last year's Canadian friend, Rbor Nettle, who is hardly enough of the terrier about her. Verdict and Rosa Canina, vhc.; the latter is soft in coat and heavy in shoulders now. Puppies had Dominica again the winner, followed by Hillside Rachel, faulty in muzzle and stop and feet turn out a bit. Other entries absent.

BLACK AND TAN TERRIERS—(R. F. MAYHEW).

The Rochelle Kennels not having an entry, very likely taking a much needed rest, let the Park Kennels in without much competition. This was the first appearance of this recent importation, and they certainly are to be commended in keeping their dogs back till they could be shown in that excellent condition a black and tan should be, full of fire and vigor. In open dogs Salisbury easily accounted for Prinz, who is small, faulty in head, but has nice markings. Salisbury has good tan, a well shaped head, excellent front and clean cut, short body, tail long and coarse and looks as if a piece was off the tip, but it only had the hair rubbed, thumb marks are not distinct enough. In bitches a neat terrier, and a terrier all over in Queen beat Louie, her kennel mate, in head, front and body; her neck is hardly clean enough, but her excellent head, rich bright tan and truly formed body will always keep her if not at the top, very near it; her tail is also very good; eyes in both dog and bitch are rather light and full. Nadjy was outclassed, though her markings are very good.

Sir Stafford was alone in Skyes, and so Mr. Shinn had no grievance this time.

YORKSHIRE TERRIERS, ETC.—(R. F. MAYHEW).

Toon's Royal, looking well, was alone in challenge class, and Fishpout Gem had little difficulty in scoring over Prince A. I., who is a little smutty, is too high on legs, and short of coat just now. Venus and Minnie York were placed as at Washington. In Scotch terriers Kilstor again beat Kilboard, and in Bedlington's Tick Tack was alone.

IRISH TERRIERS—(R. F. MAYHEW).

A good show, though only a few present. Mars took care of the dog class, and in bitches Duamurrey had little difficulty in beating Nora S., who is faulty in front, coat only fair; Sissy taking third.

TOY SPANIELS, POODLES, ETC.—(R. F. MAYHEW).

Nanki Poo, that good little Jap, was alone in a mixed class, and Sprite had the burden of the Italian Greyhound class on her shoulders. Dexter won the challenge prize in poodles, he needs attention, is losing flesh. This let Beri up for a first in open dogs, and Nell easily beats her kennel mate Volga in head and coat. Cockney Charley, faulty in tan, but good legs, beats Belle in skull, muzzle, body and tan. In the miscellaneous open 25lbs., Mr. Plant's two entries, Nellie and Stubbs, were placed as named, they have round heads. In the small class first went to the Mexican hairless. Jumbo; and Smasher, second, is a small, round-headed terrier, and so is Topsy, third. Mr. Connolly showed his Schipperkes, Prince, Jr., and Dorothy Stanley.

SPECIAL PRIZE LIST.

Best dog in show, Mr. Sears' Sir Bedivere; best mastiff in show, Sears' Moorah; best mastiff bitch, W. C. Sarnhorn's Cambrina Princess; best St. Bernard in the show, Sir Bedivere; best smooth-coated St. Bernard bitch, Empress of Contocook; best American-bred St. Bernard in show, A. Bernard's Nero; best kennel of St. Bernards, Wyoming Kennel; best collie dog, Roslin Wilkes; best collie bitch, Hempstead Kennels' Zulu Princess II.; best kennel of collies, Kilmarock Kennels; best bulldog or bitch, Mr. Sack's Harp; best American-bred bulldog, Carabrooke; best bulldog, Dick Whittington; best bull-terrier dog or bitch, White Violet; best fox-terrier dog or bitch in show, Starden's Jack; best fox-terrier bitch, Donra; best kennel of fox-terriers, John E. Thayer; best foxhound in the show, Roseville Rover; best greyhound dog, G. M. of the Season; best pointer in open dog class, Mr. Barker; best pointer in open bitch class, Miss Meally; best pointer in bitch challenge class, C. Heath's Sally Brass II.; best pointer puppy in show, R. Leslie's Cora Lynn; best pointer owned in Lynn, H. Torber's Wizard; best kennel of pointers, Charles H. Hall; best American-bred pointer in the show, Sally Brass II.; best pointer in open class owned in Lynn, Bess B. Auty; best English sett-r bitch, Albert's Nellie; best English setter dog, Edgefield's Harper; best American-bred English setter, Edgemark; best Irish setter dog in show, Max A.; best Irish setter bitch in the show, Kildare Kennels' Ruby; G. M. of the Season; best Gordon setter in show, H. F. Smith's Klug Item; best red cocker in open class, C. G. Brown's Cherry Boy; best King Charles spaniel, T. Plant's Cockney Charley; best greyhound bitch, the Lady Belle; best greyhound dog, G. M. of the Season; best Great Dane bitch in show, Irene; best Great Dane dog, Puscher; best kennel of beagles, Forest Beagle Club; best beagle in show, Forest Kennels' Frank Forrest; best beagle bitch, Topsy S.; best Irish terrier, Park Kennels' Duamurrey; best poodle dog, Dexter; best poodle bitch, Nell; best pug in show, Associated fanciers' Little Jewel; best Skye terrier in show, Sir Stafford; best Italian greyhound, Sprite; best Yorkshire terrier in show, Fishpout Gem; best deerhound in show, J. E. Thayer's Rubber; best cat in show, in miscellaneous over 25lbs., Nellie; best in miscellaneous under 25lbs., Jumbo; best spaniel bitch from Lynn, Belle; best kennel of Irish setters, Kildare Kennels; best Irish setter owned in Lynn, F. Gaffney's Hammerless.

The following awards were made after we had gone to press last week:

IRISH WATER SPANIELS.—1st, B. F. Lewis's Patsy O'Connor. FIELD SPANIELS.—CHALLENGE—1st, R. P. Keashey's Lady.—OPEN—Dogs: 1st, R. P. Keashey's Revelry Nymph. Bitches: R. C. K. a-b-y's Dolly.

COCKER SPANIELS.—BLACK OR LIVER.—CHALLENGE—Dogs: 1st, Andrew Laidlaw's Ruby; 2d, J. P. Willey's Jersey. Bitches: 1st, J. P. Willey's Bessie W.; OPEN—Dogs: 1st, J. P. Willey's J. P. Boy; 2d, Andrew Laidlaw's Olan. Bitches: 1st and 2d, J. P. Willey's Black Duchess and Little Nell; 3d, Park Kennels' Lala. Reserve, High Rock Cocker Kennels' Merlie. Very high com., A. J. Purington's Trot. High com., A. S. Aborn's Bonnie Oon. Puppies: 1st, Andrew Laidlaw's Olan.—ANY OTHER COLOR.—Dogs: 1st, C. G. Brown's Cherry Boy; 2d, J. P. Willey's Rolio W.; 3d, Dr. C. H. Harwood's Flash H. Bitches: 1st, J. P. Willey's Lady of Leithnaik.

CLUMBER SPANIELS.—CHALLENGE—1st, Clumber Kennels' Boss II.—OPEN—1st and 2d, Clumber Kennels' Lady Bell and Johnny, Jr.; 3d, J. G. Chandler's Belle. Reserve, G. J. Chandler's Bess. Very high com., J. M. Mcaney's Meteor.

FOXHOUNDS.—CHALLENGE—1st, Newport County Hunt's Roseville Rover.—OPEN—1st, Dr. H. T. Thurber's Deacon; 2d, W. A. Small's Waltham Jewel.

Canine World has this week an excellent portrait of Mrs. Foster, world-renowned as the principal breeder of Yorkshire terriers, pugs and other pet dogs. She commenced her show career in 1864, and she is one of the very few who can say with truth that she has had an experience of nearly "twenty" years in the show ring.

A HOMILY ON JUDGES.

Editor Forest and Stream:

In a recent issue of your Journal an eminent authority on matters canine, writing in connection with cocker spaniels, suggests the advisability of the judge adhering to the standard and deciding on the merits of the specimen brought before him for adjudication solely on its merits, regardless of whether it is the property of prince or pauper. This, gentlemen, is not the plaint of a disgruntled exhibitor, nor is it the vapourings of one who knows nothing of the subject of which he chooses to treat, on the contrary, it emanates from no less an authority than Chas. H. Mason, whose long experience in the capacity of judge and writer in relation to man's best friend, entitles his opinions to the most respectful consideration. Although Mr. M. does not make any specific charges, his reference is so plain that he who runs may read, and as it is not at all likely that that gentleman would cry wolf when no sheep destroyer is in sight, it is well that we profit by his advice. Mr. Mason's suggestions in relation to cocker spaniels will apply equally well to other breeds. The time has gone by when a judge can award the palm to specimens not entitled to receive it, without leaving his motive open to criticism. True, on general principles, it is good to foster the feeling that leads to the expression, "With me the judge's decision goes," yet it is well for the judge to bear in mind that while engaged in selecting the best specimens brought before him, there are those clustered about the ringside who can tell a good from a bad specimen, nearly if not quite as well as the judge; thanks to the spread of knowledge connected with matters canine. By all means let it be strictly understood that the judge, who ever he or she may be, must accept the standard as a criterion upon which to render a verdict. If the standard is a faulty one then let us change the standard. Let us not forget that it is the judge's duty to define the law, not to make it, and we will have less upsetting of decisions, and the tyro looking forward to a type to breed to will not flud himself so often at sea without chart or compass. It goes without saying that one selected to adjudicate upon the merits of any particular breed at one of our dog shows is less hampered and allowed more latitude than a judge in any other capacity, and as far as the particular show in question is concerned his verdict is as fixed and unalterable as the laws of the Medes and Persians, hence the greater the necessity that his flat should not be open to criticism on the grounds of favoritism, partiality or undue departure from the standard established, and that his judgment is confined to the attachment on the end of the chain nearest the collar.

JOHN KEEVAN.

BROOKLYN, N. Y., March 2.

WHEN IS A DOG IN BENCH SHOW CONDITION?

Editor Forest and Stream:

As this is an important subject for both the general public and the exhibitors I crave space in your columns to discuss it; the more so as I am unable to see that the views in regard to it, so far as I can learn them from the press reports in the sporting journals and from the decisions of judges, are in harmony with sound sense or science. I hope I may not be charged with ventilating a private grievance if I illustrate my meaning by some show experiences of my own within the past few months, for after all, one knows the facts in his own case best.

I sent a well known pointer bitch to one of the winter shows. She won first, but when the press report appeared it read to the effect that the bitch, owned by me, was the best, but "shown in poor condition." In a few days after this show the bitch came under the observation of Jas. L. Anthony. His estimate was that she was in good condition—better than he had ever seen her since she was first shown, years ago. As Mr. Anthony has perhaps shown more good pointers, and in the best condition, than any other exhibitor of this breed, his opinion should count for a good deal. Usually the reporters do not say wherein a dog falls in condition. I should say a dog was in bench show condition when he has the appearance of health, vigor and intelligence; and when in addition the dog's present make-up suggests the sort of work he is intended for, and his coat calls up the idea of full (canine) dress. So then, for example a setter or pointer would be in condition when he is bright, active, spirited, free from all obvious disease and in such flesh as to be fit to do a moderate amount of work. Now, the bitch above referred to met these conditions. Her muscles stood out well and were moderately hard, and her ribs were somewhat visible when she was in motion—Stonehenge's criterion, and he generally knew whereof he affirmed. Yet the press report says "in poor condition." I presume the reporter confounded a muscular condition with an unthrifty one. Another instance. The writer exhibited a young Irish setter bitch at the last New York show. She got bc. The only reporter that notices her at all had the penetration to see that "she showed much merit, and was well deserving of vhc." But he also remarks, "Elfreda was not in good condition." The judge's verdict was "A good little bitch but out of condition." He learned this entirely with his eye, having never laid his hand on her, except to rapidly pass it over a small part of her shoulder. Had he really felt the bitch, he, as well as the reporter, might have learned that she was the hardest and best muscled bitch in the class. Her coat was poor (since distemper), but coat counts only 8 in 100 according to the standard, and she was a shade thin, having lost flesh on the journey, being a very nervous creature. A correct criticism might have read about like thus: "Shown rather thin and out of coat, but is well muscled and hard; combines strength, symmetry, character and quality; should have stood much higher in any case."

Be it understood I am not impugning the ability or motives of the judge, as I regret to see some of the reports have done. I believe he meant to do what was strictly right and that he acted up to the light he had; but when he placed a bitch like the first prize winner, that is almost deformed from the shoulder down, over such specimens as Endora, Elfreda and others, and sent former winners in good company out of the ring without a letter, I cannot but think his light was darkness.

But his mistakes and those of others are to be set down to faulty methods of judging, by which neither the points nor the condition can be adequately learned. Dogs must have an opportunity to show themselves naturally. How then would I improve on the methods in vogue, say at New York? In this way. Taking that very class of Irish setters referred to, about 20 in all, after having them walked about together and divided into groups of about equal merit, they might be all sent to wait outside the ring except one group of four. These should be led about on chain and afterward set free to scamper in the ring; then brought together and carefully compared, the judge either taking notes or dictating notes to an assistant, while he handles the dogs all over and learns not only their shape but their real condition. Finally let the best be brought together for more careful comparison. After such an examination the judge would be prepared to rate every dog with accuracy, and could not make gross errors, if a man of discrimination and experience. This method applies to all breeds but especially to hunting dogs. It would take a little more time but would be infinitely more satisfactory. The reporter should see the dogs off the benches and have them moved and handle them. To illustrate this question of condition further, by dogs in which I am in no way personally interested, I will compare two well-known pointers, Revel III., as grand a bitch as ever was hatched, was shown so fat at the last New York

show that her appearance did not in the least suggest the work for which this breed is intended or, in fact, fitness for any kind of work. On the other hand Tribulation showed his muscling admirably and was every inch a pointer, though a far inferior specimen to Revel III. He was a shade too thin, but such a condition is infinitely preferable to that of fatness for both health and work. How many of either the setters or pointers at New York met Stonehenge's test of condition of showing the ribs somewhat when in motion?

It is a notorious fact that the larger breeds of dogs of the present day, such as mastiffs, St. Bernards, etc., are short lived, liable to disease, defective in stamina, and so apt to succumb when any serious malady overtakes them, and, as I think, for these reasons: Breeding too much for size; breeding from stud dogs weakened by excessive use; the forced feeding, with inadequate exercise, of growing puppies, and last, but not least, showing these breeds of dogs so loaded with fat that the internal organs are hampered and the vitality of the animals lowered. Yet this is what is, in the language of the bench show reporter, "good condition." As I understand nature, such is very bad condition, and the sooner this whole subject is considered afresh, and sense and science rule and not capricious fashion, the better for our canine interests. The writer has been a student of physiology and medicine, and has bred dogs, and studied dogs as well as men and other animals, in health and disease, for more than twenty years, and hopes, therefore, that he is not impertinent in presenting his views to exhibitors, judges and critics. He is, however, willing to learn from any one who has reasons for his opinions. He thinks, further, that in Canada, at least, no one has urged this question of presenting dogs at shows in healthy and beautiful form more persistently than himself.

WESLEY MILLS, M.D.

MONTREAL, Canada.

WATCHDOGS.

Editor Forest and Stream:

You ask "What breed is best as watchdogs?" Nearly every dog man will be apt to answer succinctly, "Mine," going on the principle stated by Mr. Jas. B. Blossom, "The difference between Mr. A. and sane men is, that the latter recognize that (well say chipmunks) have not so far demonstrated their superiority to all other breeds, and Mr. A. thinks the world will accept it that they have proved this, on his bare assertion." Now this so well formulates the frequent doggy way of considering any question that it is well to dismiss all prejudices from a discussion, and even feats and instances hardly have any great force, for like all expert evidence, they are easily rebutted by instances of the other side; so unless we can show some reason why a certain breed should be the best watchdog, no very strong case can be made out.

Now a watchdog is not a mere terror, a savage to attack all strangers who may trespass on the ground he watches. These are attributes of ferocity alone and by no means guardianship. As well might Mr. Sullivan be set up as an exemplar of a peace officer. The watchdog must have the home instinct deeply rooted in him, and must consider the protection of home his aim in life, and he must exercise that discrimination between right and wrong in conduct that the efficient policeman does in his work; he must warn and repress, not attack or revenge. Now for these qualities to become rooted in a breed, it is evident that the breed must be kept as house dogs, they must learn to attach themselves to home and to feel they are part and parcel of it. What breed has longest been thus used, and which the most exclusively so? Certainly the mastiff. Dr. Caius, or some equally remote dryasdust, writes of "the mastie that keepeth the house." The very careful Bingley, in 1809, writes of the mastiff, describing his especial trait of watching visitors without molestation, as long as they refrain from touching things he (the mastiff) considers under his charge, but if the visitor transgresses, the mastiff interferences, but still with discretion; and I may ask of what other breed can so long a history as guardians be given?

As confirming my view as to mastiffs I may point to the differences in sheepdogs as to this characteristic, connecting it with their environments. The bobtail is certainly much superior to the collie as a guardian, he has been used as a dog of general utility, much of his stock work being with the drover, not so largely with the shepherd as the collie's has been; thus he has been more accustomed to home, has associated more with home folks than the collie, kept much of his life on pastures remote from his owner's home, and this difference in the environments of the two breeds, I think the superior courage of the bobtail is due. He has been forced to fight his way through life and has had all kinds of animals much more courageous than sheep to deal with, and he has risen to the situation. Although I hold bobtails to be unexcelled by any breed as companions, I do not say that they are as valuable for watchdogs as the mastiff, for even if their dispositions were fully as good for the work, they lack the size and appearance that enables the mastiff to deter evil doers by mere fear.

In claiming this pre-eminence for the mastiff as a watch and house dog, I by no means deny that other breeds possess, to some extent, the same qualities. I know that the St. Bernard Barry was the equal of any mastiff that ever lived, as a watchdog, and I am prepared to believe very much the same of Duke of Leeds, Lella and Bonivard, and I remember that fifty years since such mastiff men as the then Capt. Garner, Mr. Lukey and others could see no difference between the English and Alpine mastiffs except in the greater size of the latter, and the life of the dog of the Hospice has been such as to develop the very qualities that make the watchdog. I have known of black and tan setters (I purposely eschew Gordons, being something no feller can find out) that were excellent watchdogs. So of many other breeds, and not a few mongrels, but I do claim that, as a whole, no other breed averages as high as the mastiff as a watchdog, and on this very point I once differed with so experienced a hand as "Billy" Graham, and to settle it, we referred it to Mr. Edwin Nichols, equally eminent as a breeder of bloodhounds, Newfoundland and mastiffs, who unhesitatingly decided, from his experience through so many years, that no breed averaged as high as the mastiff for this purpose.

The Newfoundland seems to have retrograded in public estimation for wisdom, faithfulness and docility, and I cannot but think that this impression, well or ill founded as it may be, is due to crosses of that vile beast the "big black dog" and to this abomination being taken as the true breed. It often looks to me as though the brute classed as a "Newfoundland" was the product of a black setter and black boarhound.

A good deal of nonsense has been perpetrated about "pure" mastiffs being good tempered and that it was only the snipy, fiddle-headed ones that were ever crusty, and from my experience, observation and inquiry this is the most complete and utter rot and humbug. The best watch dogs among mastiffs of history that I can collect instances of were the "bully" Lukey's Countess, her long-faced son Governor, the "lurcher" Turk, Colonel the long faced, champion Briton, a dog of medium type, and the "houndy" Miss Hales's Lion; while among the savages were the "grand-headed" Bill George's Tiger and many of his get, Scawfell, a dog of medium type, and, from accounts, the excessively bully-headed Hotspur. Of course many of the long-headed, long-legged, lanky, snipy, miserable brutes, savoring of a greyhound having interviewed a mastiff, are savages, but so is any other mongrel likely to be, but that any particular type of mastiff is better or worse tempered than another is all bosh.

HUTCHINSON, Pa.

BOSTON DOG SHOW.

THE seventh annual bench show of the New England Kennel Club opened this morning with an excellent attendance in the Mechanics' Hall. It was an agreeable change to enter this well regulated show, especially when it is held in a building than which no better could be found, after the somewhat go-as-you-please method of some of the shows just past. With such able men as the members of the N. E. K. C., who by this time have the running of a dog show down to a fine point, and on the look-out for every one's comfort, and with such experienced managers as John Reed and Alf. Burgess to steer everything into its proper place, no wonder the remark was made that somehow one always felt at home at a Boston show. Though the entries are not as large as in former years, there is no falling off in quality, but it is essentially an Eastern show. Owing to the sickness of several dogs entered in the St. Bernard classes, those did not show up so well as in the past. Deerhounds and greyhounds are very good, while pointers and setters are just about as usual. Spaniels and collies are just fair, but beagles are particularly strong, especially the open bitch class, and certainly the show of the year so far.

Bulldogs, strange to say, are few in numbers compared to last year, but the open dog class in bull-terriers gave the judge some work to do. The "round heads," of course, are strong and all the cracks are present in the fox-terrier division, and previous decisions have been reversed to some extent. The other terrier classes are nicely filled and especially the black and tans. Pugs make a poor showing and so do the toy spaniels. Mastiffs are not up to the usual high standard of previous shows, for to withhold the prizes in the open dog class is something unheard of in the New England Kennel Club show before. There are numerous out-of-town dog men present and the presence of Messrs. Sidney V. Smith and J. Green lend somewhat of an international aspect to the gathering. A well-served luncheon was spread in the press room at noon for visiting exhibitors, judges, members of the press, etc., which was much enjoyed. Owing to press of time I must postpone further chronicles till next week, but below will be found a full list of awards, judging being completed in good time with the exception of a few specials in the sporting classes. H. W. L.

TUESDAY, March 31, 10 P. M.

PRIZE LIST.

MASTIFFS.—CHALLENGE—Dogs: 1st, Flour City Kennels' Iford Chancellor. Bitches: 1st, Flour City Kennels' Lady Coleus. —OPEN—Dogs: Reserve, A. Harrison's Numa Pompilius. High com. E. K. Baldwin's Nicholas. Other prizes withheld. Bitches: 1st and 2d, Flour City Kennels' Canton. Own Daughter and Miss Caution. 3d, G. W. Glazier's Madge Minding. Reserve, W. O. Sarn's Lady Phyllis. Very high com. W. C. Sarn's Lady Beatrice. High com. C. E. Greenman's Ingleside Cambrian Princess. Puppies: 1st, G. P. Duxton's Monadnock; 2d, Flour City Kennels' Beaufort. Jr. Reserve, C. E. Greenman's Ingleside Cambrian Princess. Very high com. C. Kammerer's Duke II. Best kennel, Flour City Kennels.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—Bitches: 1st and 3d, E. H. Moore's Lady Livingston and d. Miranda; 2d, A. J. Gosling's Manon. —OPEN—Dogs: 1st, E. H. Moore's Lord Melrose; 2d, C. W. Wheelock's Scotch Bani. Bitches: 1st, A. G. Gorham's White Cloud. Reserve, A. Gorham's Bruce. Very high com. E. J. Hobbs's Hesper. Jr. Bitches: 1st and 2d, E. H. Moore's Lady Sweetwell and Mrs. E. H. Moore's Lady Melrose. Very high com. Moorfield Hillside Kennels' Princess Saffron. High com. Mrs. J. M. Nicholson's Gundry. Puppies: 1st, J. M. Nicholson's Mount Zion Guy; 2d, R. Barry's Countess Bedivere. Reserve, E. Brown's Rex Bonny. Very high com. Mrs. J. M. Nicholson's Noble, Medford Hillside Kennels' Prince Draco.

ST. BERNARDS.—SMOOTH-COATED—CHALLENGE—Dogs: 1st, Elmwood Kennels' Pauline. Bitches: 1st, D. H. H. DeLong's. —OPEN—Dogs: 1st, Elmwood Kennels' Bellarius; 2d, T. H. Duke of Sparta; 3d, E. H. Moore's Viscount Ebrington. Very high com. J. Keegan's Patrol. Bitches: 1st, Col. Jacob Ruppert, Jr.'s Empress of Contoocook; 2d and 3d, Contoocook Kennels' Burton Belle and Nora. Very high com. Elmwood Kennels' Nun Nicer. Puppies: 1st, E. H. Moore's Viscount Ebrington; 2d, Contoocook Kennels' Nels and high com. and high com. Elmwood Kennels' Fanny and Belmont III. St. Bernard Club prizes for best American-bred dogs: Smooth dog, Burke's Duke of Sparta; bitch, Empress of Contoocook; dog puppy, Moore's Viscount Ebrington; bitch puppy, Contoocook Kennels' Nora. Rough dog, Moore's Lord Melrose; bitch, Moore's Lady Livingston.

GREAT DANES.—Dogs: 1st and 2d, G. Leihbacher's Pascha and Nero. Very high com. C. Kammerer's Roland III. Bitches: 1st and 2d, G. Leihbacher's Flora Florida and Flora. Very high com. H. H. Lawson's Fitz.

DERHOUNDS.—CHALLENGE—Dogs: 1st and reserve, J. E. Thayer's Robber Chieftain and Chieftain. Bitches: 1st and reserve, J. E. Thayer's Ramona and Wanda. Very high com. G. S. Page's Olga. —OPEN—Dogs: 1st, 2d and very high com. J. E. Thayer's Hillside Harlow, Hillside Kennels' Hillside Warrior. Reserve, E. M. McDougall's Alan Brock. High com. G. S. Page's Duncan. Bitches: 1st, 2d and very high com. J. E. Thayer's Hillside Sylvia, Hillside Ruth and Lorna Secunda. Puppies: 1st, J. E. Thayer's Hillside Robber.

GREYHOUNDS.—CHALLENGE—1st, A. W. Purbeck's Gem of the Season. Reserve, A. L. Page's Maud Torrington. —OPEN—Dogs: 1st, A. L. Page's Charles Davis; 2d, E. Hopkins's Scudding Cloud. Very high com. Miss T. A. Ruggles's Glaucus. High com. W. J. M. Dwyer's Diana. Bitches: 1st, Knight Greyhound Kennels' Lady Clara; 2d, Woodhaven Kennels' Spinaway. Very high com. W. J. Middleton's Splice.

POINTERS.—CHALLENGE—Dogs (50lbs. and over): 1st, Charles Heath's Champion Graphic. Bitches (50lbs. and over): Charles Heath's Champion Revel III. —OPEN—Dogs (50lbs. and over): 1st, Chas. Heath's Pontiac; 2d, Tell Kennels' Dora-zo; 3d, T. H. Harris's Mikado. Very high com. H. F. Amsten's Schuyler. High com. Mrs. Geo. V. Neal's Duke of Beaufort. Com. E. T. Cowell's Dandy. Reserve, R. E. Harris's Music. Bitches (50lbs. and over): 1st, Chas. Heath's Miss Mealy; 2d, Henry D. Kendall's Cavalier's Lady. Very high com. Trojan Kennels' Fama. High com. John L. Moine's Freeze Bang Bang, Trojan Kennels' Fedora, F. H. Harris's Maggie Klippen. Reserve, Louis A. Biddle's Cicely. —CHALLENGE—Dogs (under 50lbs.): 1st, B. F. Stephenson's Trilulation. Reserve, Chas. Heath's Laureollet. Bitches (under 50lbs.): 1st, Chas. Heath's Gaily Brava II. Reserve, Westchester Kennels' Glaucus. —OPEN—Dogs (under 50lbs.): 1st, Francis G. Taylor's Inspiration, Louis A. Biddle's Glenmogran; 2d, Wm. Hyland's Ossining. High com. A. W. Rourke's Nimrod. Reserve, J. R. Purcell's Nicodemus of Ion. Bitches (under 50lbs.): 1st, Geo. V. Neal's Mam'zelle; 2d, H. L. Rice's Nels's Belle; 3d, C. E. Connelley's Fan. Very high com. Charles Heath's Bloom, D. W. Gorton's Bloodhound II. High com. Wm. Hyland's Lady Grace. E. H. Richards' Lassie Jean Beaufort, High Kennels' Westchester Girl, Westminster Kennels' Westminster Gladys, Westminster Kennels' Westminster Nan. Reserve, Tell Kennels' Mango. —PUPPIES—Dogs: 1st, High Kennels' Swiftaway; 2d, George W. Lovell's Bob B. Very high com. Fred E. Harris's Dictator. High com. H. A. Harris's Staniel Clover. Reserve, William C. Henry's Joe Jefferson. Bitches: 1st, C. W. Hodgkins's Gail; 2d, H. A. Harris's Stanley Daisy.

ENGLISH SETTERS.—CHALLENGE—No entries. —OPEN—Dogs: 1st, Coburnet Kennels' Kent II; 2d, E. E. Haines's Gus Bondu; 3d, A. J. Lewis's Prince L. Reserve, Wm. Meggart's Ranger. Very high com. Wild Crow Kennels' Canadian Locksley, Joe Lewis's Tony Gladstone and F. S. Brown's Edge Mark. High com. E. H. Lathrop's Flush and G. W. Lovell's Glen Belton. Com. A. H. Broughton's Young Gath. Bitches: 1st, E. E. Haines's Lady Grace. E. H. Harris's Forest Tanager. Bitches: 1st, J. W. Lawson's Blue Nell; 2d, Dr. J. A. Hartman's Albert's Nellie; 3d, N. McIntosh's Blue Jennie. Reserve, F. H. Clark's Jessie Noble II. Very high com. G. E. Anthony's Flirt. C. H. Leonard's Maud Noble and R. R. Moore's Katie Howard. High com. J. W. Lawson's Princess Novel. Com. G. W. Lovell's Lady Snowflake. Puppies: 1st, N. McIntosh's Lady Monarch; 2d, L. Hapgood's Joker.

IRISH SETTERS.—CHALLENGE—Dogs: 1st, A. V. Armour's Max A.; 2d, W. L. Washington's Kikare. Bitches: 1st, W. L. Washington's Wintie II. —OPEN—Dogs: 1st, J. J. Scanlan's Inghin; 2d, G. Ehrhart & Tucker's Dan Myre; 3d, W. L. Washington's Beau Brummel. Reserve, F. H. Gaffney's Jacqueminet. Very high com. C. M. Harris's Bluff. J. W. Gale's Blaze. High com. Nath'l Brewer, Jr.'s Huntington, Gladney Kennels' Glen Jarvis, St. Louis Kennels' Master. Com. J. A. Garland, Jr.'s Duke, R.

McGowan's Glen. Bitches: 1st, J. J. Scanlan's Hazelnut II; equal 2d, Mount Royal Kennels' Elfrida C. K. C. and F. H. Gaffney's Hammerless; 3d, St. Cloud Kennels' Endora. Reserve, A. L. Finley's Belle. High com. R. H. Burr's Onota Belle, E. J. Kenney's Fanny Hazelnut. Com. W. H. Gannon's Daisy, Denis Meade's Loo M. Puppies: 1st, J. B. Blossom's Duchess; 2d, W. McCarthy's Kildare Elcho. Reserve, J. A. Garland, Jr.'s Duke.

GORDON SETTERS.—CHALLENGE—Dogs: 1st and reserve, S. G. Dixon's Ivanhoe and Leo B. Bitches: 1st, John L. Campbell's Becky Sharp. Reserve, Samuel G. Dixon's Duchess of Waverly. —OPEN—Dogs: 1st, C. F. Brownell's Grouse; 2d, Charles H. Leonard's Dash L.; 3d, Frank R. Pease's Tyrus. Reserve, Mont Gordon Setter Kennels' Resmont. Very high com. C. E. Comer's Nero. High com. George W. Langdon's Rab II. Com. E. E. Dupee's Yip and Wm. Buchanan's Ranger. Bitches: 2d, George E. Brown's Jessica; 3d, W. Buchanan's Neva. Reserve, M. W. Murray's Ven. High com. S. G. Dixon's Crete II. Com. H. H. Douglas's Lady Fanny. Puppies: 1st, Obas H. Gerry's Bess B.; 2d, D. S. Bennett's Juliette. Reserve, very high com. and high com. H. H. Douglas's Donald Beaumont, Rupert Beaumont and Belle Beaumont.

SPANIELS.—ALL BREEDS, OVER 25LBS.—CHALLENGE—1st, R. P. Keasbey's Lady. Reserve, G. W. Folsom's Bawn. Best kennel, R. P. Keasbey's. Best field spaniel, R. P. Keasbey's Lady.

FIELD SPANIELS.—BLACK (over 28lbs.)—OPEN—Dogs: 1st, R. P. Keasbey's Beverly Negus. Bitches: 1st, R. P. Keasbey's Saybrook Lass. —OTHER THAN BLACK—1st, R. P. Keasbey's Saybrook Dolly; 2d, J. P. Willey's Black Night.

COCKER SPANIELS.—ANY COLOR (not over 28lbs.)—CHALLENGE—1st, J. P. Willey's Jersey. Reserve, J. P. Willey's Bessie W. —OPEN—BLACK—Dogs: 1st, Andrew Laidlaw's Oban; 2d, W. B. Burt's Bessie. Bitches: 1st and 2d, J. P. Willey's Bessie W. Duchess and Little Nell. Reserve, The Park Kennels' Lala. High com. Miss M. Minna Morse's Shasta and F. B. Cotton's Ilva. Com. S. H. Barker's Black Daisy. —OTHER THAN BLACK—1st, C. G. Browning's Cherry Boy; 2d, J. P. Willey's Rolio.

CLUMBER SPANIELS.—1st, withheld; 2d, J. L. Little's Tyne.

IRISH WATER SPANIELS.—Prize withheld.

BEAGLES.—CHALLENGE—1st, Forest Beagle Kennels' Frank Forest. Reserve, H. Bennett's Little Duke. —OPEN—Dogs: 1st and very high com. W. F. Rutter's Brule and Don; 2d, W. d. Child's Tony Weller; 3d, High Kennels' The Rambler. Bitches: 1st, W. A. Small's Topsy S.; 2d, very high com. high com. and com. Glenrose Beagle Kennels' Bessie. Reserve, Glenrose Topsy. Glenrose Molly and Tone. Very high com. Waldringfield Kennels' Louerome, Moses L. Brown's Fanny, W. H. Child's Oakview Juliet, High Kennels' Dixie L. and Lady Vic. High com. Forest Beagle Kennels' Gypsy Forest, June Rose, Forest Queen F. Kimball's Bess K. and W. F. Rutter's Mollie. Com. H. Gardner's Torie II. 12mos. and under—1st, 2d, very high com. and high com. Glenrose Beagle Kennels' Bessie. Bitches: 1st, W. F. Rutter's Fanny Lee. High com. G. A. Abbott's Midget. Reserve, High Kennels' Jude.

FOXHOUNDS.—Dogs: 1st, W. A. Small's Waltham Jewel; 2d, Dr. H. T. Turber's Deacon. Reserve, J. W. Braithwaite's Jumi. Very high com. C. A. Scofield's Andy. High com. and com. F. M. Sullivan's Prince and Hunter B. Bitches: 1st, J. W. Braithwaite's Bess; 2d, C. H. Foss's Nell. Reserve, C. S. Brodrick's Dixie.

COLLIES.—CHALLENGE—Dogs: 1st, Chestnut Hill Kennels' Roslin Wilkes. Bitches: 1st, Chestnut Hill Kennels' Flurry II. —OPEN—Dogs: 1st and 2d, Chestnut Hill Kennels' Janey Trifol and Roslyn Conway; 3d, G. A. Fletcher's Robley. Reserve, F. R. Carswell's Duke. High com. A. V. White's Fordhook Climax, H. R. Sack's Scot II. and Wm. Werl's Orphan Boy. Bitches: 1st and 2d, Chestnut Hill Kennels' Roslyn Dolly and Lady Lorraine; 3d, H. R. Sack's Flurry IV. Reserve, G. A. Fletcher's Lucy Lock. Puppies: 1st, Chestnut Hill Kennels' Roslyn Dolly; 2d, C. O. Abbe's Gildero's Buttercup. Reserve, G. A. Fletcher's Lucy Locket. High com. J. H. Davidson's Glendenning and G. A. Fletcher's Lochhart. Best exhibit, Chestnut Hill Kennels' President's cup, Chestnut Hill Kennels' Manly Trifol; stud dog prize, Chestnut Hill Kennels' Bessie. Best collie not over 2 yrs. old, Roslyn Dolly; second best, Roslyn Conway.

POODLES.—1st, L. A. Biddle's Berri; 2d, A. W. Purbeck's Nell. Reserve, Geo. D. Braman's Moné. Very high com. E. J. Evans's Alda.

BULLDOGS.—CHALLENGE—1st, F. W. Sackett's Harper. —OPEN—Dogs: 1st, John Coles's Carlsbrooke; 2d, J. A. Nesmith's Zip. Bitches: 1st, F. W. Sackett's The Graven Image; 2d, Beacon Kennels' Psyche. Puppies: Withheld.

BULL-TERRIERS.—CHALLENGE—1st, W. Murriner's Attraction; 2d, H. A. Harris's Oh Jubilee. —OPEN—Dogs: 1st, H. Fred Church's Prince Bedouin. Reserve, W. J. Bryson's Dufferin. Very high com. North End Yorkshires Kennels' King of Hearts. High com. H. R. Sack's Dole's Toppick and G. A. Fletcher's Lucy Lock. Bitches: 1st and 2d, H. A. Harris's White Violet and My Queen. Puppies: 1st, 2d and Reserve, H. A. Harris's Little Donovan, Stanley Bill and Stanley Belle. —20LBS. and UNDER—1st, E. D. Hays's Sador.

ROUND-HEADED BULL AND TERRIER.—ANY COLOR (over 20lbs.)—Dogs: 1st, Gen. C. H. Taylor's Tumbler; 2d, very high com. and high com. W. C. Hook's Doctor, Jack and Sir Roger. Reserve, E. H. Harris's Cupid. Com. Trumont Kennels' Gypsy-brook. Bitches: 1st and com. H. Young's Daisy and Nellie; 2d, Beacon Kennels' Topsy. Reserve, M. R. G. Kettell's Molte. Very high com. high com. (2) and com. Trumont Kennels' Weasel. Volante Judy and Laurie. High com. D. J. Colburn's May. Puppies: 1st, D. J. Colburn's Noble; 2d, W. C. Hook's Joeko. Reserve, Trumont Kennels' Thor. Very high com. M. S. A. M. Daniels's Flirt. High com. E. H. Sack's Snow's Poodle and H. A. Harris's Flirt. 1st, Mrs. W. C. Hook's Evadne; 2d, E. J. L. Motley's Bully. Reserve, W. A. Mosman's Jerry. Very high com. Miss A. M. Daniels's Dorris.

FOX-TERRIERS.—CHALLENGE—Dogs: 1st, L. & W. Rutherford's Raffle. Reserve, Blemont Kennels' Lucifer. Bitches: 1st, Blemont Kennels' Rachel. Reserve, John A. Logan, Jr.'s, Blemont Brilliant. —OPEN—Dogs: 1st, J. E. Thayer's Russley Joker; 2d, Foodale Kennels' Blanton's Jack; 3d, Blemont Kennels' Blemont Victor. Reserve, Blemont Kennels' Blemont Victor. Very high com. C. D. Bernheimer's Baby Trigger, L. & W. Rutherford's Warren Laird. High com. Tunlaw Kennels' Brokenhurst Quick, H. A. Harris's Blemont Match. Com. A. H. Warren's Tramp. Bitches: 1st, 2d and 3d, John A. Logan, Jr.'s, Dona, Dominica and Verdict. Reserve and high com. J. E. Thayer's Princess and Rosa. Very high com. Woodale Kennels' Bhor Nellie. Com. Tunlaw Kennels' Tunlaw Vaseline. —PUPPIES—Dogs: 1st, James Mortimer's Crack; 2d, J. E. Thayer's Hillside Joker. Reserve, L. & W. Rutherford's Warren Dare. High com. C. Rathbone's Beverwyck Star, Jas. Mortimer's Vero. Bitches: 1st, John A. Logan, Jr.'s, Dominica; 2d, Woodale Kennels' Woodale Kennels' Wordle Refusal. Reserve, Jas. Mortimer's Riot. High com. C. Rathbone's Blemont's Nora. S. 1st, 2d and 3d, John A. Logan, Jr.'s, Wire-Haired. —1st and 2d, Jas. Mortimer's Suffolk Toby and Suffolk Settler; 3d, reserve and high com. J. A. Poole's Tic-Tac, Terigan and Lull Foller.

DANDIE DINMONT TERRIERS.—1st and 2d, Frederick Brooks's Laddie and Solway Queen. Very high com. Edward Brooks's Gypsy V.

SCOTCH TERRIERS.—1st, North Field Yorkshires Kennels' Kilro; 2d, Robert G. Shaw's Gypsy.

IRISH TERRIERS.—CHALLENGE—1st, Chestnut Hill Kennels' Breda Bill. —OPEN—Dogs: 1st, The Park Kennels' Mars; 2d, Peter F. Clancy's Shaun Boy. Bitches: 1st, The Park Kennels' Dunmore; 2d, Trumont Kennels' Nora. S. 1st, very high com. Patrick Clancy's Nane. High com. Chester Park Kennels' Eliza Alamo. Puppies: 1st, William A. Dupee's Breda Choice; 2d, Chester Parker's Mickey Free. Com. Endicot P. Saltontall's Shaun More.

BLACK AND TAN TERRIERS.—CHALLENGE—1st, Rochelle Kennels' Meersbrook Maiden. Reserve, J. E. Campbell's Kniser. —OPEN—Dogs: 1st and very high com. North Field Yorkshires Kennels' Beaconsfield and Prince Regent; 2d, The Park Kennels' Selhurst. Bitches: 1st and 2d, The Park Kennels' Queen III. and Louie. Very high com. J. F. Campbell's Dondemon.

SKYE TERRIERS.—1st, C. A. Shinn's Sir Stafford.

YORKSHIRE TERRIERS.—5LBS. and over—Dogs: 1st, North Field Yorkshires Kennels' Royal. Bitches: 1st, P. H. Coomb's Bradford Leah; 2d, North Field Yorkshires Kennels' Venus. —5LBS. and UNDER—1st, North Field Yorkshires Kennels' Fishpool Gem.

FUGS.—CHALLENGE—1st, Dr. M. H. Cryer's Vesta. —OPEN—Dogs: 1st, Miss Bishig's Prince II; 2d, Dr. M. H. Cryer's Fritz Emmett. Very high com. Mrs. J. Smith's Budge. Bitches: 1st, Dr. H. M. Cryer's Cassini; 2d, R. T. Harrison's Nellie M. Com. W. Buchanan's Fanny.

TOY SPANIELS.—CHALLENGE—ANY VARIETY—1st, The Park Kennels' Nanki Poo. Keno CHALLENGE—Prize withheld. Bitches: 1st, The Park Kennels' Nanki Poo.

HEIM, PRINCE CHARLES, RUBY AND JAPANESE.—1st, R. Russell's Ching II.; 2d, Miss S. S. Kimball's Victoria. Very high com. Mrs. S. Colby's Rebie.

SCHIPPERKES.—1st and very high com. The Park Kennels' Kaiser and Sylvie; 2d and high com., F. W. Connolly's Prince, Jr., and Cople Sophia.

MISCELLANEOUS.—OVER 25LBS.—1st, C. R. Gilbert's Bert-tran; 2d, H. A. Lawson's Jumbo. —UNDER 25LBS.—1st, Miss M. McCauley's Floss; 2d, R. H. Smith's Bluebell.

DOG CHAT.

THE Mascoutah Kennel Club desires to inform exhibitors and visitors to their bench show, that they have secured a reduction of railroad fare of 1½ for the round trip between Chicago and all points in Illinois, Wisconsin, Iowa, Missouri and Minnesota, including Atchison, Kansas, and Omaha and Nebraska, upon the certificate plan, that is; each person must purchase a first class single trip ticket to Chicago, at the same time, before starting, obtain a certificate receipt from the ticket agent, duly signed and stamped by him; this will be countersigned by one of their officers upon presentation at the show and will enable you to procure from the ticket agent at Chicago of the line upon which you return, a ticket at one-third the regular fare. These certificates are good for only three days after the closing of the show, and are not transferable. Most of the railroads centering in Chicago will carry from one to three dogs free at owner's risk, when accompanied by keeper. Appended is a list of the number of entries in the different breeds at their coming show, and as will be seen it is a good advance on last year's total. The Western dogs have been to few shows on the circuit and Boston coming just before no doubt feels the effect of the Western show, as the exhibits there will be chiefly Eastern: Bloodhounds 5, bulldogs 13, bull-terriers 21, beagles 25, Bedlington terriers 3, black and tan terriers 10, Blemont spaniels 4, Chesapeake Bay dogs 8, Clumber spaniels 4, cocker spaniels 19, collies 57, deerhounds 13, dachshunds 14, Dandie Dimont terriers 2, Dalmatian or coon dogs 3, English setters 63, foxhounds 15, field spaniels 11, fox-terriers 66, gre t Danes 31, greyhounds 16, Gordon setters 17, Irish setters 61, Irish water spaniels 17, Irish terriers 15, Italian greyhounds 5, King Charles spaniels 8, mastiffs 49, miscellaneous 4, Newfoundland 4, pointers 82, poodles 10, pugs 34, Russian wolfhounds 2, St. Bernard 81, Scotch terriers 6, Skye terriers 6, toy terriers 7, whippets 4, Yorkshire terriers 11; total 825.

The Collie Club, through their secretary, sends us a very neat little leaflet containing the list of officers of the club on the outside, and particulars of the different trophies, sweepstakes and prizes which will be offered by the club in 1892. First there is the Collie Club trophy, value \$500, for the best American-bred collie, competed for annually. Then the President's Cup, value \$300, for the best collie exhibited by a member. There is also the Collie Club Sweepstakes, open to all, for collies whelped in America on or after July 1, 1890. The Special Stud Dog Prize is also open to all. This is a club medal, value \$20, for the best stud dog, to be judged by two of his get out of different litters, and is under the usual conditions. The competition for Produce and Futurity Stakes having become restricted to two or three breeders, the club has decided to discontinue them. Specials at different shows will be instituted instead. In one corner of the leaflet is an excellent reproduction of the club's silver medal. We draw particular attention to the letter signed by Mr. Sutwell in another column, and we trust that the liberality of the Chestnut Hill Kennels will be appreciated in the proper manner, and that next February the result will be distinctly apparent in a better class of dogs at the New York show and elsewhere.

On Wednesday afternoon during the Lynn show, receiving a telegram that Hepsey, the crack St. Bernard bitch which Mr. Duffenderfer has just imported, had at last been landed in Boston, after a wearisome wait out in the Bay, owing to rough and foggy weather, it did not take us long to get down to the Cunard wharf and take a look at her. Mr. Duffenderfer may well feel enthusiastic about her, for she has a beautiful head, good depth and breadth, excellent front and coat, but as she was very heavy in whelp to Scottish Prince we cannot say much as to her body. Her markings are almost, if not quite, perfect, and that her new owner is pleased one may judge when he writes us he would not take \$1,000 for his bargain. She will, if lucky enough to get through her trip all right, make the best of the females hustle.

Now that toy spaniels and especially the King Charles are seemingly coming rapidly to the front in this country, and the question of a few white hairs has always been more or less a subject for argument, we think it appropriate to publish the last resolution made at a meeting of the Toy Spaniel Club of England. It was resolved after much discussion that: "The King Charles is a rich glossy black and deep tan; tan spots over the eyes and on the cheeks, and the usual tan markings on the legs are also required. The ruby spaniel is a rich chestnut red. The presence of a few white hairs, intermixed with the black on the chest of a King Charles spaniel or with the red on the chest of a ruby spaniel, shall carry great weight against a dog, but shall not in itself be an absolute disqualification; but a white patch on the chest, or white hairs on any other part of a King Charles or ruby spaniel, shall be a disqualification." This rescinds the previous rule bearing on this subject.

The Manchester (England) show, which is counted one of the two-point shows, is again numbered among the events of the past. Though in some of the breeds the quality was not up to the form of previous years, the exhibition was a great success. The pointer Saddleback (Mr. Norris's) took the special for the best in the sporting classes, and the collie Mons Meg that for the non-sporting division, though the decision was hardly a fair one, we are told, when the St. Bernard Princess Florence was also in the ring.

Mr. Millais is the moving spirit in an endeavor to down the dread demon of distemper arising from imperfectly infected shows and the carelessness in exhibitors showing sick dogs or those just recovering. He has had the provisions of an act drawn up which will shortly be introduced into Parliament making it a misdemeanor punishable by fines not exceeding \$100 for the first offense and \$250 for the second. The principal points are: Any person sending a dog to a show which is suffering or for five weeks previously has suffered, from distemper, shall be guilty of offense under the Act, also if he sends a dog to a show that has been kept in a kennel where any dog has been suffering from distemper, unless he can prove he has taken every precaution by disinfecting dog lampers, etc. All benching should be thoroughly disinfected before it can be put up at a show unless a period of twelve months has elapsed since the benching was used, the show people, as well as the person supplying the benching are also made liable for the offense. With the power of the law behind them something can surely be done to mitigate the great evil from which the canine family suffers.

Yes, "Cheerful Horn," Sir Bedivere has "to be kidded to a bit," and a few weeks on one of our bench-show circuits will make any dog, unless he has the very best experienced care, look rather careworn, to say the least. Poor Sir Bedivere looked only a shadow of his handsome self at Lynn, and his owner deserves all the trouble it will take to get him right again. Such valuable stools should not have been shown

MRS. E. CLARKE'S JAPANESE SPANIEL "KIOTO."
Winner of first, New York Show.

C. G. BROWNING'S SPANIEL "CHERRY BOY."
Winner of first in open class, New York Show.

A. W. PURBECK'S GREYHOUND "GEM OF THE SEASON."
Winner of first in open class, New York Show.

more than three times this spring. Had his late owner shown him here, there and everywhere, he would not have made up into the dog he is.

Poor Ben Lomond! and unfortunate Mr. Moore. On Thursday night last Ben Lomond was taken sick with colic at the kennels at Melrose after returning from Washington show, and at 12 o'clock he died. This is a heavy loss to Mr. Moore, as Ben's services have been in great demand. At a show he was always admired for his good temper and handsome appearance. He was by champion Barry out of Thetis, and his breeder was Mr. W. E. Shepard. He was just about six years and four months old. His winnings embrace first at all the principal shows since his importation in the summer of 1888. Lacking the black shadings, he did not appear so massive in head as he really was, and this was made apparent when, last year, we painted his head, putting on the black on muzzle and ears, when it was difficult to recognize the dog he looked so improved. The death of this dog rather cripples Mr. Moore's team, but in a letter telling us of Ben's death, he shows that he is still in the swim in spite of the worst luck.

Talking of St. Bernards reminds us of Mr. Hopf, who is so soon to leave us. Our absence at Lynn last week prevented our seeing his letter before it was printed, or we should have had something to say then. The president of the St. Bernard Club has for many years been an important figure in St. Bernarddom, and no man in the fancy commands more respect as a breeder and an exhibitor. Honest to a fault in all his dealings he somehow has hardly had the good luck that should go with it. Champions Otho and Hector are the dogs with which his name is inseparably connected. As a prime mover of the St. Bernard Club, its president, and a hard worker in its behalf since its inception, his counsel and help will be sorely missed, but we are sure that all St. Bernard men and fanciers at large will wish him, with us, every prosperity for himself and family in his new home, and that on the other side of the Rockies he may succeed in breeding a St. Bernard that may come nearest to his idea of perfection.

Mr. Mercer's bad luck still pursues him, for he writes us that a litter of puppies out of Bromine, sired by champion Johnny, on which his hopes had centered, have become victims to the mother's unnaturalness, she having eaten them all. This is hard luck indeed. The Ottawa Club has decided to abolish puppy classes altogether at their shows, and therefore are they greatly to be praised. Sometime in the distant future our own clubs may see fit to follow the same lead. There is no reason why they should not. The classes are very seldom well filled, but at the same time one puppy in a show can do the damage which we wish to see lessened to some extent at least, and abolishing puppy classes would be a great step toward it.

We are told that there are over 500 cocker spaniels in the hamlet of Woodstock, Canada. Friend Laidlaw must answer for this state of things.

The Philadelphia Kennel Club has come to life again and the boom in dog shows this season has made them think that after all they can hold a show with a reasonable chance of coming out at the right end. They claim the dates March 1 to 4.

We hear that Mr. James Green, who had full charge of Sir Bedivere in England, is on his way over, if he is not already in this country. He will understand take hold of Mr. Sears' kennel and he comes in the nick of time to put the crack in good shape again.

Mr. Percy Ohl has purchased from Mr. Muss-Arnolt the pointer Bracket.

On the third day of the Chicago show an important meeting of the United States Field Trials Club will be held. Every member is earnestly requested to be present.

We trust Mr. Harris will reconsider his determination to go out of the bull-terrier fancy, especially when he has got together such a good string. A catalogue of his terriers which we have received shows that in the dispersal of this kennel some excellent terriers can be picked up at a moderate sum.

Mr. C. S. Wixom has purchased the beagle dog Tricotrin, which he speaks very highly of. He is a litter brother to Ava W., and will be shown with the others at Chicago and Cleveland.

The many friends of Secretary Odell, of the Central Field Trials, will be glad to learn of his recovery after a long illness.

Mr. Mortimer writes us that the actual price paid for the pointer King of Kent by the W. K. C. was \$1,250. This dog ought to do well in this kennel, having been the sire of such noted field dogs as Rip Rap, Zig-Zag, Maid of Kent, Tapster, etc., besides being himself a noted bench show winner. He also wishes us to say to owners of bitches that have missed to him, if there be any, that these bitches can be sent to him free, although this is in no way binding on the club.

Mr. Hersey, of Utica, N. Y., writes us that the old blue belton setter bitch Donna died of old age March 4. She was by Royal Blue out of Dryad.

The Vredenburgh vs. Peshall libel suit was set for last Tuesday, but as on former occasions Mr. Peshall was unable to have it tried. This time it was because Mr. Vredenburgh did not put in an appearance. In addressing Judge Fitzgerald, urging him to insist upon the case being put through, Mr. Peshall asserted that it had never been the intention of the other side to try it, but that the case was being carried along in the court as a barrier to suits which he himself was preparing to bring. Judge Fitzgerald said that the case had now been on the calendar several months, and he recognized that in his failure to secure a trial Mr. Peshall had a grievance; it was due to Mr. Peshall that the case should be tried or dismissed. Mr. Peshall said he did not move to have it dismissed; his effort from the beginning had been to get it to trial. Finally, the District Attorney promised to try it next Wednesday, "if he could secure the attendance of the complainant." Mr. Peshall gave notice that unless Mr. Vredenburgh should then be present and the case be tried he should move for its dismissal.

The National Beagle Club held their first annual banquet at Young's Hotel on Tuesday evening, and about twenty members sat down to an excellent dinner. When cigars and coffee came on, speeches were the order of the evening, and several of the members showed they were not far behind their pets in giving tongue when the trail is once found. The party broke up at about 11:30, and all look forward to a repetition in 1892.

Mr. Moore's prospect of a pleasant week among fanciers at the show were marred by news of the death of Alton, at Washington, Sunday night. Mr. Moore's luck seems to run in couples, for Ben Lomond's death has only just been recorded, and now this last blow is a greater one still, both to him and the breeders of the country. Experience is dearly bought sometimes, but at any rate Mr. Moore has our sincere sympathy and that of every St. Bernard lover.

Hepsey is reported as being very low. She whelped, but only five pups are living. The last message to-night (Tuesday) says she is a trifle better.

Mr. Watson and Mr. Sidney Smith arrived all safe from England last Saturday, and both are taking in the Boston show. Mr. Smith will, after Boston show, go on to Chicago and take in the Mascoutah Kennel Club's show. Mr. Green is here and will take charge of Mr. Sears' kennel and Sir Bedivere, his old protégé. Mr. Lovel, who had the dogs round the circuit, has left the Wyoming Kennels. We were surprised, as we always thought him very attentive to his charges and seemed quite wrapt up in them.

Mr. F. W. Chapman has lost his young beagle Restless, that won second down at Washington. Pneumonia took him off, and he has lost from similar causes fifteen dogs in the last fortnight. What a spring this is for canine mortality. The grip must attack the dogs as well as their masters.

Our spaniel friend, George Bell, has been acting in a new rôle, that of coursing judge at a little meeting up at Toronto. Some "artificial" rabbits, that is, rabbits kept for the occasion, had been provided, and several greyhounds, known more or less to fame, took part in the fun. They were the dogs Why Not, Lady Langtry, Wire, Second Sight, a noted bench performer, Milo, also a winner at shows, Jolly Ranger and Why Not. In the first round Second Sight succumbed to Why Not. The contest seems to have been rather on the go-as-you-please order; for when Milo should have come against Why Not in the second, he was withdrawn, and Second Sight was given another opportunity to show her mettle. This she did to good purpose, defeating the dog after some very clever work. Then she met Jolly Ranger, who

led her three lengths to the hare, wrenched twice and served to Second Sight, who immediately picked up bunny, and so lost the course. Jolly Ranger and Why Not then came to the slips, and the hare was allowed 500 yds. Why Not killed too soon and let Jolly Ranger in for first prize, Why Not second and Second Sight third. After this there were two races, one 220 yds. and the other 440 yds., between Jolly Ranger and Why Not. At the finish Why Not was in front about half a length in both races. No doubt this will serve to create an interest in coursing round Toronto which will be appreciated by the many greyhound owners in that city. Unfortunately, we hear that in returning home the owner of Why Not lost his dog, and he has not yet turned up.

We have repeatedly urged the Collie Club to inaugurate sheepdog trials, and now we are pleased to announce that the club intends holding their first ones in the fall of 1892 at some place convenient to New York city, very likely at Huntington, L. I. The first prize will be \$250; second, \$100; third, \$50, and fourth, a silver medal. The competition will be open to all. This is a good move, and as they are set far enough ahead there is no excuse why the dogs should not be properly trained, and the trials in place of being a farce, as heretofore, be a credit both to the club and the dogs.

Mr. Charles P. Barry's bloodhound Malmesbury has gone the way of all flesh, though rather suddenly. He died last week at Rochester, N. Y. It is supposed that poison was the cause, as a whole sparrow was found in his stomach after death.

At the last meeting of the Toronto Kennel Club, on Thursday evening last, the following additional officers were elected: Patron, J. Beverley Robinson; Committee, H. B. Donovan, J. Wilson and W. P. Fraser; Club Veterinary Surgeon, Dr. Campbell, who is considered among the dog men of Toronto to be quite an expert in canine ailments.

We took a trip over to Mr. Symonds's kennels at Salem, Mass., during the Lynn show. The home of his famous Yorkshires and other terriers is quite elegantly fitted up, and though cramped for space, the kennels are exceedingly well arranged and in such style as befits these dainty morsels of dog flesh.

Mr. Purbeck expects the noted greyhound Pious Pembroke over very soon, he is said to be a big winner on the other side.

The prices realized at the Tattersall sale at Philadelphia last week can hardly be called very encouraging. Marquis of Stafford, the white St. Bernard, brought \$250, Jim Limmon \$240, the bulldog Quasimodo \$80, Maney Trefoil, a crack collie at one time, \$300, Wellesbourne Flurry \$45, Wellesbourne Hero, who has been doing some winning at the shows lately, went for \$90. A large number of different breeds did not realize \$25 apiece.

Mr. George Bell has succeeded in having the Spaniel Club's \$100 challenge cup for cockers put up at the next Toronto show, and the club will also give several cash prizes.

We are sorry we cannot devote enough space to give the menu of the Massachusetts Kennel Club's, of Lynn, dinner to their visitors on the 24th, as it was really a very enticing one. At the tables we noticed: Robert Leslie, James Mortimer, Dr. H. Clay Glover, R. F. Mayhew, E. B. Sears, Capt. Hoitt, T. C. Faxon, A. E. Lincoln, D. A. Williams, Rudolph Weimer, Mr. and Mrs. W. C. Sanborn, Miss Dearborn, Mrs. Smith, C. A. Bramble, of the Boston Herald, W. A. Power, Major J. M. Taylor, F. W. Chapman, W. F. Rutter, Jr., O. W. Crook, H. V. Jamieson, A. Parry, Bradford S. Turpin, W. S. Clark, A. J. Purinton, A. S. Aborn, Geo. Thomas, W. E. Jones, George W. Lovell, C. E. Gilchrist, E. E. Haines, and many others. Mr. Leslie, the president of the club, bid us all welcome in a neat speech; but as time was pressing there was little speechmaking, and every one settled down to business at once.

Mr. William Stephenson, who will be remembered as a familiar figure at shows two or three years ago as the owner of the Winlaw Kennels of mastiffs, met with a serious accident last week while driving in Rahway, N. J., with his little daughter. The horse ran away, and dashing against a tree flung Mr. Stephenson with such force against it that he now lies at the Sheridan House suffering from concussion of the brain. We trust he may recover, though it is said to be doubtful. His daughter, strange to say, was unhurt.

In a friendly letter from Mr. Isgrigg, of Carthage, Mo., he

writes: "We have some fine dogs down in this neck of the woods, not only in breeding but as fine fielders. There are owned here sons and daughters of the following sires and dams: The pointers—Champion Graphic, Trinket's Bang, Croxteth, Fowler and Meteor. In setters—Champion Gladstone, Bessie A., Gath's Mark and Count Noble. I have just purchased a young dog which can show 47½ per cent. Duke-Rhobe blood. In Irish setters we have a brace by Dick Swiveller and Elcho, Jr. The Gordons are represented by a daughter of Beaumont and a son out of Becky Sharp. We might at almost any time bring together enough to form quite a bench show, or get up a field trial at three hours' notice. There is owned here a dog—a grandson of old Gladstone—who can beat anything or everything in the dog line west of the Mississippi. Your readers will laugh when they peruse this, and I can hear them say, "If that is so, why don't you run him in the field trials and stop blowing?" "Bring him out if he is such a great dog." "Why haven't you done so before this, etc." I'll tell you why. He belongs to a market-hunter, who puts in every day while the season is on killing quails for the market. We have seen him hunt, and for the first time during Christmas and New Years, and if this meets the eye of any one who thinks he has a better one he can be accommodated by running a three days' race for a purse of \$500. Money and dog ready at any time, field trial rules to govern. We will either give or take expenses and run on neutral grounds. Of course I understand that the close season is now on, but we can have the race just the same, we need not kill any birds, which would necessarily bar retrieving, and the dog we refer to is a very tender retriever too. We would be glad to hear from any one who would like to make this \$500. We will not draw the line at the Mississippi either, but will make it free for all. We prefer the owners of Prince Lucier, Gath's Mark, Rowdy Rod, Lillie Burgess, Spotted Boy and Ossian to show their hands, and any of the above can be accommodated for the amount named." Now a gentleman well known in pointer circles while chatting in our office lately spoke very feelingly on the merits of a certain dog he owned, and wished to make a match. He refrained from issuing a challenge because the field trials were over, but as the above looks genuine we really think he has the opportunity now.

The last day of a dog show is generally a dull one, and many schemes are devised to attract the public. At Pittsburgh Sir Bedivere was paraded on the stage during the afternoon. Would it not be a good idea, when circumstances will allow of a good view of the proceedings, to have the specials, such as cups, medals, etc., arranged on a table and then coax some lady, or in default of that, the president of the club, to donate them to the lucky winners. The dogs which have won them to be, of course, brought up to the table at the same time.

GORDON SETTER CLUB MEETING.

At a meeting of the executive committee of the Gordon Setter Club of America, held March 23, at Dr. Glover's office, the following business was transacted, a quorum being present: Communications from Grot Collins were received and acted upon, and the telegram from Mr. H. Malcolm to the secretary, appealing to the club from the decision of the committee, was moved to be accepted as such. Dr. Meyer read the following communication signed by ten members: To the president of the Gordon Setter Club of America: Inasmuch as Mr. Harry Malcolm has appealed to the club from the decision of the committee, although not in strict accordance with the constitution, the undersigned members desire that said appeal be duly recognized according to Sec. 11 of our by-laws. We therefore respectfully request you to issue a call for a general meeting of the club, in accordance with Sec. 8 of our by-laws, to vote as to the action of the committee. The president therefore ordered the meeting to be called for Monday, May 4, at 7 P. M. It was then resolved that H. Malcolm be notified at once by the secretary to appear in person at the general meeting of this club to be held at the office of the president, at 1293 Broadway, on that day, to state his exceptions to the action of the committee in this case. On motion the secretary was instructed to draft a letter to the Stud Book committee in relation to the 42½ per cent in Gordon pedigrees and the term black and tan setters, as per their request. The secretary was also instructed to communicate with the Cleveland Kennel Club, stating that the club's finances do not warrant any further money specials being offered this spring. It was resolved, on motion of Dr. Meyer, that the club should follow the lead of the Pointer and Setter Club, and suspend the list of judges, allowing bench show committees to choose their own. Mr. Blossom was elected a delegate to the A. K. C., and Dr. Meyer was elected a Stud Book committee of one. The old committee on bench shows and field trials, consisting of J. B. Blossom, Dr. Glover and L. A. VanZandt, was re-elected. The following committee was also elected to draft a new constitution and by-laws: J. B. Blossom, Dr. Meyer and Dr. Lordly. Seven new members were elected. The meeting then adjourned.

CALIFORNIA NOTES.—The Occidental Coursing Club finished its fourth year on the 10th inst. The club has a neat balance in the bank and will soon own its own coursing park. The treasurer, S. L. Abbott, Jr., stated that during the club's existence he had expended \$2,000 for fair sport. The railroad company has agreed to give the club reduced rates and to issue coupon tickets, good for admission to the park. By a unanimous vote of the club, it was decided to strike out from the constitution the section which has hitherto prevented pool selling and bookmaking at the club's coursing meetings. After a vote of thanks was tendered the retiring secretary and treasurer, Messrs. Carroll and Abbott, the following officers were elected: President, J. F. Carroll; Vice-Presidents, T. J. O'Keefe, T. J. Cooney, E. J. Healey of Petaluma, and Thos. Hind, of Redwood City. Treasurer, S. L. Abbott, Jr. Secretary, J. R. Dickinson. Executive Committee, Col. S. O. Gregory, John Grace, T. J. Cronin, J. B. Lincoln, and Henry Wormington.

CENTRAL FIELD TRIALS.—*Editor Forest and Stream:* The Central Field Trials Club will hold its third annual meeting at Lexington, N. C., beginning with the Setter Derby on Monday, Nov. 30. This will be followed by the Pointer Derby, which, in turn, will be followed by the All-Age Setter Stake, All-Age Pointer Stake and free for all four hour heat race, in order named. Entries for Derby will open April 15 and close May 15. Entries for All-Age Stakes will close Oct. 15, and for the four hour heat race on Nov. 1. The prizes in each stake will be the same as heretofore given. Our running rules are being revised and we hope to have the same ready for distribution by April 10. For entry blanks and other information, please address the secretary.—E. R. COLEMAN, Chairman, C. H. ODELL, Sec'y and Treas., 44 and 46 Wall street, New York city.

COLLIES NOT IMPROVING.—Orange, N. Y.—*Editor Forest and Stream:* The exhibit of collies at the late bench show at Madison Square Garden, with a few exceptions, was not equal in quality to last year. It was evident that breeders were not patronizing the best dogs, so the Chestnut Hill Kennels have kindly consented to make a reduction of thirty per cent from their regular stud dog fees to members of the Collie Club. The object of this is twofold; to improve the breed and to increase the membership of the club. It ought to have the desired effect.—J. D. SHOTWELL, Sec'y.

A DOG PROTECTIVE UNION.—*Editor Forest and Stream:* In your issue of Feb. 19 I notice a communication from W. W. Bradley concerning a Dog Protective Union, and would like to hear from him in regard to what move has been made in this direction. I can add my testimony to his regarding methods of the Associated Fanciers. I wrote them inquiring for a pair of thoroughbred trained beagles last June, and received a prompt reply describing just such a pair as they thought I would want. They were recommended as being fine hunters, the bitch particularly being described as "hard to beat on rabbits." I sent them their price, \$45 for the pair, and in due course of time they came. The dog I found to measure 17in. in height. He was stiff in the hindquarters, which from careful examination proved to be due to a bad case of fistula in ano. I tried them on rabbits, putting the dog on a hot scent which he followed perhaps two minutes and then gave it up. The bitch stayed closely to heel and showed no desire to hunt. I wrote at once to the Associated Fanciers, telling them the dogs were not as represented, and received a reply telling to try them again, and if they would not work they would make everything satisfactory. Several trials convinced me it was useless to continue, and I wrote them for satisfaction, receiving an offer of another pair, express prepaid, which I considered fair and accepted. They answered that they would ship another pair soon. This was in November or December of last year. I have not yet seen the other pair or heard from the Associated Fanciers since. Mr. Bradley's experience has convinced me that I shall never receive the consideration from them that is my due. The dog has recently disappeared, and as I had another dog poisoned from a wolf bait about the same time, I presume he has met the same fate. The bitch I have now commenced to train, but it is uphill work without a pack. She is doing well, and I think by next season she will make an excellent trailer. A dog protective union or some similar organization is certainly needed to protect the public from such sharp, yes, criminal, practice. I for one shall be glad to subscribe toward such an organization.—C. P. HUBBARD.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Prepared Blanks sent free on application.
Clover Hill Kennels. By J. G. Fisher and H. A. Bridge, Columbus, O., for their kennels of English setters.

BRED.

Prepared Blanks sent free on application.
Eva—Jerry K. W. S. Gates's (Chagrins Falls, O.) dachshund bitch Eva (Waldman K.—Fraulien Waldeck) to J. Kresh's Jerry K., March 1.

Moorefield's Cad's Pet—Paxtang. Moorefield Kennels' (Chula, Va.) English setter bitch Moorefield's Cad's Pet (Moorefield—Cadie) to their Paxtang (Count Noble—Fate Gladstone), Feb. 26.

Countess of Richmond—Little Boy. Dr. S. G. Dixon's (Philadelphia, Pa.) Gordon setter bitch Countess of Richmond to his champion Little Boy.

Beauty II—Sir Herbert. F. G. Street's (Lexington, O.) St. Bernard bitch Beauty II (imported Caesar—Guenn) to Miss Whitney's imported Sir Herbert (champion Phylimmon—champion Queen Jura), Feb. 10.

Black Dufferin. J. G. Bewley's (Tilsonburg, Ont.) cocker spaniel bitch Black Dufferin (Woodland Kennels' Black Dufferin (champion Brant—Bonita), Jan. 6.

Marguerite—Black Dufferin. J. G. Jorgensen's (Woodstock, Ont.) cocker spaniel bitch Marguerite (Black Duke—Lady Nell) to Woodland Kennels' Black Dufferin (champion Brant—Bonita), Jan. 16.

Myth—Black Dufferin. John Allan's (Woodstock, Ont.) cocker spaniel bitch Myth to Woodland Kennels' Black Dufferin (champion Brant—Bonita), Jan. 21.

Countess—Black Dufferin. D. Bashner's (London, Ont.) cocker spaniel bitch Countess (King of Oboes—Vermilion) to Woodland Kennels' Black Dufferin (champion Brant—Bonita), Feb. 6.

Woodland Queen—Obo II. Woodland Kennels' (Woodstock, Ont.) cocker spaniel bitch Woodland Queen (Killey's Tippo—Woodstock Champion Choe), Jan. 30.

Topsey—Black Dufferin. Chas. Banting's (Woodstock, Ont.) cocker spaniel bitch Topsey (Burmah—Fratyie) to Woodland Kennels' Black Dufferin (champion Brant—Bonita), Feb. 11.

Jealousy—Black Dufferin. Woodland Kennels' (Woodstock, Ont.) cocker spaniel bitch Jealousy (Obo, Jr.—Woodland Queen) to their Black Dufferin (champion Brant—Bonita), March 3.

Lady Nell—Black Dufferin. J. G. Jorgensen's (Woodstock, Ont.) cocker spaniel bitch Lady Nell (Burmah—Fratyie) to Woodland Kennels' Black Dufferin (champion Brant—Bonita), March 2.

Rosedale Belle—Black Dufferin. J. E. Kirk's (Toronto, Ont.) cocker spaniel bitch Rosedale Belle (Beau—Shadow) to Woodland Kennels' Black Dufferin (champion Brant—Bonita), March 6.

Merry Duchess—Bradford Harry. P. H. Coombs's (Bangor, Me.) Yorkshire terrier bitch Merry Duchess (Young Royal—Juno) to his champion Bradford Harry (Crawshaw's Bruce—Beal's Lady), March 24.

WHELPS.

Prepared Blanks sent free on application.
May. W. S. Gates's (Chagrins Falls, O.) beagle bitch May (champion Bannerman—Blossom), March 11, five (three dogs), by his champion Rattler II, (champion Rattler—champion Music II).

English Lady. Rochelle Kennels' (New Rochelle, N. Y.) black and tan terrier bitch English Lady (Jackson's Gordon—McMee's Bess), Feb. 25, two (one dog), by their The Senator (Jackson's Patrick—Cosgrove's Pink).

SALES.

Prepared Blanks sent free on application.

Charlotte. Brindle, white markings, St. Bernard bitch, age not given, by Duke of Leeds out of Alma II, by Ravenswood Kennels, Long Island City, N. Y., to Fred Schmitt, New York city.

Beat II. Orange tawny, white markings, St. Bernard bitch, whelped Oct. 2, 1885, by imported Caesar out of Guenn, by Miss Anna H. Whitney, Lancaster, Mass., to Fred G. Street, Lexington, O.

Countess of Richmond. Gordon setter bitch, age and pedigree not given, by S. E. Davis to Dr. S. G. Dixon, Philadelphia, Pa.

Daisy Gates. White and tan beagle bitch, whelped March, 1888, by Bannerman out of Maggie, by W. S. Gates, Chagrins Falls, O., to Geo. N. Leavens, Ontario, Can.

Lady Bassett. Black and white English setter bitch, whelped July 11, 1890, by Dick Fate out of Model Bonduh, by A. H. Bassett, Somerville, Mass., to H. A. Bridge, Columbus, O.

PRESENTATION.

Bonnie Lassie. Gordon setter bitch, age not given, by Pilot out of Oreta II, by Hugh McIlvray to Dr. S. G. Dixon, Philadelphia, Pa.

KENNEL MANAGEMENT.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

B. D. T., Fairfield, Maine.—I have a hound bitch that had a litter of pups on Dec. 23. Will you please tell me through your correspondence column when she will probably be in heat again? Ans. About the beginning of next June.

T. W. G. J., Sorel.—My setter bitch after weaning pups had teats considerably enlarged, and although reduced by local veterinary surgeons have reduced inflammation, two teats still remain distended beyond the usual size and do not appear to get appreciably smaller. The bitch otherwise appears in good health. Pups have been weaned nine days. Kindly advise. Ans. Rub the teats well two or three times a day with camphorated oil. A preparation of burnt leather and vinegar is also a good thing. Char the leather, pound into a powder and mix with the vinegar. Try the oil first.

D. D. B., Bloomington, Ind.—My dog, prior to this trouble, had eight or ten fits. His appetite is somewhat impaired, bowels con-

stipated, temperature and pulse about normal. He lays about and has no energy at all, his back is arched and he is poor in flesh. Apparently his urine is all right. At present and for thirty days there has been a tumor forming outside of the rectum along the per rectum and also seen and felt through said muscle and the lymphatic gland just above the neck in the region of the gastric-nemus, where it forms the flexor-pedis perforans tendon, is about the size of a hen's egg. One day I noticed him pass a little blood. Ans. It is not safe to prescribe for your dog without seeing him. The tumor is probably an abscess, "ischio-rectal abscess," and the dog suffers from blood poisoning. The enlargement of lymphatic glands would seem to bear this guess out.

J. W. H., Beverley, N. J.—My six months old setter puppy, apparently in good health, is constantly swallowing cinders, coal, stones, rags, etc. I have seen similar cases before, but none so bad as this. I cannot now find in my books any remedy suggested, though I think I have read something on the subject. The dog is active, always hungry, and so far as I can see in perfect condition. He consumes so much that it is indigestible that I fear the result. Kindly suggest a remedy. Ans. Your pup has worms. Have your chemist make up two half-drachm doses of areca nut freshly ground. Fast the dog 24 hours after giving a spoonful of castor oil, and then give one powder in pill form mixed with lard, and in an hour after give the other half drachm. If in half an hour there is nothing passed, give a large spoonful of castor oil and watch results. For a week or so afterward feed soft foods, such as soups, etc.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE REVOLVER CHAMPIONSHIP.

IN our next issue we shall probably announce definitely the simple broad conditions which will govern the contests for the Amateur Revolver Championship of America, and the competition for the Winans trophy emblematic of that championship. The comments from various parts of the country all go to convince us that the conditions, as originally outlined, will give the widest satisfaction, and they will form the basis of the requirements.

There is a fear that with the whole country for a shooting ground, possibly some irregularity in scores may result. The large facilities of FOREST AND STREAM will be amply sufficient to prevent any such outcome. When the match was suggested by Mr. Winans we did not decline to conduct it, fearing the trifling outlay which it would involve on our part. Where a point of advantage to sportsmen is to be met we consider it our duty not to hold back and carp, but to step forward and carry the project through. Several years ago there was much discussion as to rifle trajectories, but an expenditure of over a thousand dollars enabled us to gather a set of data which are now standard on that point. All manner of talk prevailed about the shotgun patterns of to-day, but the establishment of our testing ground at an expense of hundreds of dollars now enables the test of an arm to be made promptly and with scientific accuracy. So it happens that when the open question of a revolver championship is to be answered by the revolver shots of America, it is only natural and in accord with precedent that FOREST AND STREAM should act as the reliable representative of the sportsmen of America.

SAN FRANCISCO, March 22.—The first regiment turned out strong to-day to compete for the Tobin trophy. Every company in the regiment sent over a full complement of 20 men each, and honor to the trophy presented to the regiment. The day was a windy and blustery one at the range, and the guardsmen had their hands full in endeavoring to hold their rifles on the bullseye. Although it was conceded that Company C, who carried off the trophy last year, would again be winners, every company in the regiment did their utmost to come in second. Company G won the honor of second place, and in addition made the highest individual score of the day. The honor of scoring the highest record of the day belongs to F. O. Young, who made the excellent score of 43 out of a possible 50. The shooting was under the supervision and direction of the Inspector of Rifle Practice, Springfield rifles, having blue pull, 300's. Teams to consist of twenty men from each company. The Tobin trophy was presented to the First Regiment by the family of the late Col. Robert Tobin of the Third Regiment as a mark of gratitude to that regiment for the friendship they had shown Col. Tobin. A trophy was also presented by the family to the Third Regiment, which was won by Co. B last month. These trophies are contested for every year. The company in each of these two regiments making the highest score at the butts are declared the winners of the year.

Co. C, Capt. H. H. Woodruff.....818 Co. F, Capt. A. Margo.....671

Co. A, Capt. R. A. Marshall.....672 Co. G, Capt. O. L. Tish.....740

Co. B, Capt. I. B. Cook.....707 Co. H, Capt. H. P. Bush.....643

Co. D, Capt. Chas. Jansen.....449

The winning company beat its good record of last year by 7 points.

REVOLVER SHOOTING.—It is a peculiar fact that very few men, even accomplished shots, know how a revolver ought to be aimed. Nearly all are taught to aim a revolver as if it were a rifle, that is, by bringing the object aimed at and the fore and hind sights into line. This is all well enough for shooting gallery practice, but should never be followed in the field. In training troops to use the revolver they are taught, in aiming, never to look at the weapon at all, but to keep their eyes on the object which is to be struck. In quick firing, and especially in shooting from horseback, much better results are obtained in this way. A man throwing a stone does not look at his hand, neither does a billiard player sight along his cue. The same rules apply to the use of short weapons. I have seen men trained to shoot excellently at a mark when they could not see their pistol sights at all. Pieces of pasteboard were fastened just in front of the cylinder, which effect increased the rapidity, as well as the accuracy of their fire. Nearly any one can sight a pistol correctly, the inaccuracy of the aim being due to trembling of the hands before the trigger is pressed. By hiding the sight the temptation to hold too long is removed, and the first aim, generally the most accurate, is preserved.—St. Louis Globe-Democrat.

BELLEVILLE, March 23.—Appended is a brief account of the windup of a very interesting series of rifle matches which were shot in this city during the winter. The long series of rifle matches in the Forest and Stream Club's gallery, commenced in December last, was concluded on the 17th, and finished an exciting finish. The conditions, which governed 27 matches, were in the main these: Distance, 275 ds.; target, American field, reduced for distance; position, off-hand; number of shots, 10; highest possible score, 100; rifle, Remington and a Stevens, with open sights; best 10 scores to be counted; 24 entries and 7 prizes. For first prize the contestant was to receive the best possible description—between V. P. Clarke and Geo. A. Frost. The former, up to the last match, was 5 points ahead, and each had 70 as his lowest score. If, therefore, Frost failed to make 73, he was beaten. He made 77, however, and Clarke had to make 74 to tie or 75 to win. He stood the test well, making 39 in his first five shots, but then he dropped to a 4 and 6, lessening his average materially. But he came again with an 8 and a 10, making 57 for his last two shots, and was well within the reach of a marksman so skillful and steady. All depended on the last shot—7 to tie and 8 to win. Only 6, however, rewarded his aim, and he was, with a score of 73, beaten by 1 point in one of the finest contests possible. The seven prizes were Geo. A. Frost 743, W. P. Clarke 742, R. A. Davis 678, S. W. Vermilya 665, L. G. Smith 660, R. S. Bell 651, J. H. Mills 601. The best single score was 88, by Geo. A. Frost. All matches were shot at night, and the light was poor. A copy of the target (enclosed) will enable you to judge of the merit of the scores made under the conditions stated.—R. S. B.

HARRISBURG, Pa.—A movement is now in progress to form a Central State Shooting League. Four clubs have already expressed themselves as willing and desirous to enter, and it is expected nearly all will do so. The proposed ground will be east as far as Lancaster, Mountville and Lemman place, north to Catawissa and Williamsport and west to Altoona, Pa. Address for all particulars, H. M. F. Worden, Secretary Harrisburg Shooting Association.

To day both our friends, the expertis, improved, and Charlie Budd got the hang of the game enough to shoot into some toppish trees, where he stood in, too. He won enough to clear all his enemies and make a very big day. He says that both he and Rolla Heikes got in and shot a day or two, but not much. They have both been cheerful and pleasant under their hard conditions, have done no "kicking," and have given their friends reason to be proud of them. They will not be losers on this week's work. Financially, their time may come later, when the expertis are better, which they can shoot out, they are getting valuable practice to-day. So far, they have interest to a spectator is concerned, this shooting at the unknown angles makes the only feature of marksmanship worth noticing here. The monotony of the old system goes on and on, but when experts step to the score the crowd all comes to watch them. Why? Because they are the only ones that are smug.

Another tent was added to the semi-circle to the spacious and high wall canopy of Henry C. Squires. This is the showiest of tents now on the grounds. In color it is a dark green and in shape unique. The top and sides are covered with inscriptions and the ground is a green and the Squires specialty, and they tell me that all this is from the ground. The tent is a generous and able framer of Mr. Squires' meritorious newspaper advertisements. The ground was in a trifle better shape to-day, and the tents were better patronized. The idea of having up these tents is a good one, and in suitable localities they will make a good use of the ground. The ground is a good one, and the State Association are now all thus represented on the grounds. The reception of three, the U. S. Cartridge Co. the American Wood

The next tournament of the Inter-State Manufacturers' and Dealers' Association will be held at New Haven, Conn., April 28, 29 and 30. Everything will then be in perfect running order, the weather milder, and all in trim to insure a very notable event in shooting and target practice. The project of the Association may even now be being put into practical effect, and the first target shoot was a very pleasant success, and the following ones should be no more so. The history of this circuit should be very interesting reading, and it seems probable that no pleasanter, fresher and more entertaining meets will be offered anywhere. We need fresh life and novelty of feature in this artificial target shooting, in order that it shall not grow stale, but still retain its potency to interest and amuse. The shooting part of the Inter-State game, it is thought, will provide a very pleasant time at each of the shows of the Interstate.

E. H. HOGAN.

THE NIGHT SKY FROM THE DECK OF A YACHT AND HOW TO SEE IT.

[Copyright, by Forest and Stream, Pub. Co., 1891.]

THROUGH the kindness of Mr. Chas. A. Post, of the Seawanhaka Corinthian Y. C. we are enabled to publish the following lecture delivered by him before that club on March 10. The lecture was prepared by Mr. Post at the request of the Lecture Committee, as it was considered that from his own experience he would be able to treat the subject in the best possible manner to interest and instruct an audience of yachtsmen. Mr. Post is a member of the navigation class of the club two years since, and his work in this direction led him to a closer study of astronomy, with a degree of success that is fully evident from his lecture. Having so recently been over the same ground himself, he has been able to condense into a short evening talk just the information which is needed by the yachtsman who has not the time, and probably not the disposition to go deeply into the whole subject of astronomy, and who usually remains in ignorance because he does not know where to look for the desired knowledge in a compact and accessible form. Unfortunately we are unable to reproduce the numerous diagrams shown by means of a stereoscope, with which the lecture was very fully illustrated; but they are by no means indispensable, and with only Mr. Post's description of them as a guide, the reader need have no trouble in locating the stars easily seen but too often unknown. We must mention in particular among the pictures shown the very fine views of the moon taken by means of the Lick telescope, and the one taken by Mr. Rutherford.

In attempting, as a yachtsman, not as an astronomer, to collate and bring to notice a few facts in relation to the best method of finding the principal stars, and with only Mr. Post's description of the intricacies of nautical astronomy, which is, at best, for the racing yachtsman, only an accomplishment.

As a rule there is so little cruising out of sight of land that a few fundamental principles in regard to charts, the compass and dead reckoning are about all that we really require. If, added to this, we can by rule of thumb take our meridian observation of the sun for our position, and our work out on the water for the morning sights, we may certainly congratulate ourselves on attainments far beyond the average requirements. Therefore all of the problems involving the use of the stars as aids to navigation may well be dismissed by us as useless refinements.

While it is true then that we do not absolutely need a knowledge of the stars for safe navigation, we see them so constantly at night from the deck of our vessel that they naturally come to our minds as they come to the names, relative positions and peculiar characteristics. We would like to know what stars we are looking at—we ask each other questions on the subject and generally get rather confused and unsatisfactory replies. I once knew a yacht's company, which passed a whole summer trying to locate Arcturus, Bootis and when he was once found, "Boots," as he was familiarly called, became a very dear friend, and was every night regarded with a peculiar and tender interest. It is with the attempt to satisfy this laudable curiosity that I am going to talk to you to-night. I make no pretensions to originality of astronomical research, but I have had occasion to pick out the principal stars and constellations myself, and remember people who asked the only question that I could not answer it is to get a start in the business, and how the difficulties melt away after you have become familiar with a few of the more important constellations. With this end in view I have not hesitated to quote, in some instances nearly verbally, from standard authorities.

The stars are called fixed, as opposed to the planets or wanderers through the sky. These stars, on all the practical purposes of this evening's talk remain permanently fixed in the celestial concave, that is to say, as if they were glued fast to the inside of a hollow sphere surrounding us. It may be interesting to state here that from an astronomical point of view this statement is not absolutely true. Delicate observations extending over more than a century show that they are really flying through space as fast as the planets, and it is only their inconceivable distance, which makes their apparent change of place, or proper motion, as it is called, appear so small. These motions vary from about 7 seconds to $\frac{1}{25}$ of a second a year, and are due partly to their own motion and partly to the motion of the Sun, which, like the other stars, is traveling through space, taking the Earth and the planets with him. The best modern opinion is that the Sun himself moves at the rate of about 16 miles a second toward a point in the constellation of Hercules, and that we and the other planets are on the same express train with him. This last station or jumping off place is called the "Apex of the Sun's Way." During the past year a strong movement has been made to place this last station in the adjoining constellation of Lyra; which constellation will finally win it is at present impossible to say. However, all this is foreign to what I started to talk about. I will try not to yaw again, but stick to the plain course marked out for us on the chart when we started. We will therefore assume that the stars are fixed in the celestial concave which appears to revolve around us, once in twenty-four hours, owing to the rotation of the Earth upon its axis.

A fixed star is generally distinguished from a planet visible to the naked eye by its inferior size and by the fact that it twinkles, while the planets, as a rule, do not. This twinkling, as far as we know, arises from the fact that the star is optically a luminous point, without apparent size, while all of the larger planets have discs which can be measured; hence there is an interference of the waves of light in the case of a star which does not take place with a planet. The only fixed star which, from its size and brilliancy, is likely to be mistaken by a novice for a planet, is Sirius; but he is so easily distinguished by his close proximity to the well-known constellation of Orion, that he is not likely to give much trouble.

In the study of the geography of the sky, or Uranography, as it is more correctly called, it is a good plan to begin with the circumpolar stars, for they are always above the horizon, and thus form a convenient point of reference in picking out the other constellations. As you know, a circumpolar star is one whose distance from the pole is less than the latitude of the observer. As the elevation of the pole above the horizon is equal to the latitude of the observer, a star whose distance from the pole is less than the elevation, or altitude of the pole, must always remain above the horizon. As the Earth revolves from west to east, the motion of a circumpolar star around the pole is from east to west, or contrary to the hands of a watch. This figure, known as the Wain, the Dipper, the Plow, and sometimes simply as Ursa Major, is far from comprising all the stars of the constellation of that name. The remainder are spread out to a distance of about 15° to the right of the figure as shown on the screen.

Speaking of degrees we are often told, in descriptions of the location of stars, that the polar star is about so many degrees from another star and it is convenient to have some scale to be guided by.

The Dipper is often used for this purpose. From Alpha to Beta is 5°, from Alpha to Delta is 10°, from Beta to Gamma is 8°, from Alpha to E is 26°. So here is a measure or scale in the sky, always ready for use, very good, very good. To take a walking stick or staff, rule and hold it at arm's length between yourself and the Dipper. Note the distance on the rule between two stars, say Alpha and Delta. Turn now to the part of the sky which you wish to measure and this distance on the rule will give you a rough idea of how far 10° extends. The star Zeta, the one next to the last in the handle, is known as Mizar. Persons with good eyesight can generally see a small star, called Alcor, very close to the handle, and it is very clear that this star Alcor must have lately increased in brilliancy, as among the Arabians it was considered an evidence of remarkable vision to be able to detect it at all; now almost every one can see it, even in moonlight.

The stars Alpha and Beta point to the North Star, which is at present about 14° from the celestial pole, around which, like the other circumpolar stars, revolve the stars of the northern sky, owing to the precession of the Equinoxes, it is slowly but constantly approaching. In 200 years it will arrive at a distance of only 26°. After this it will again recede and finally attain such a distance that its usefulness as a pole star will cease. Four thousand years ago this star, Alpha Draconis, situated about midway between Mizar and the guards of the pole, as these two stars, Beta and Gamma, were within arm's length, and was called the pole star, and was used as the Pole Star of that day, a fact which is plainly shown by shafts in the Pyramids, which were evidently intended to point at it at the moment when it was on the meridian below the pole.

Twelve thousand years hence this star, Vega, Alpha Lyre, will be within 5° of the pole, and make a pole star before which the present Polaris will shrink into a mere speck. Decidedly the Seawanhaka Club commenced its navigation too soon. It should have waited for Vega. As Polaris is not exactly at the pole, it follows that it each day describes a small circle around it. Of course it bears due north twice, once when it is directly above the pole and once when it is below it. In the familiar figure of the Star of David, as you know, a correction depends upon the position of the star in its circle, is applied, before we can get the true altitude of the pole. This is approximately arrived at by roughly working out the right ascension of the meridian.

In the absence of tables, a very fair approximation can be made by a simple inspection of the stars. When Polaris is directly above Mizar, it is on the meridian above the pole, when it is below, it is on the meridian below the pole. When the line is horizontal, the altitude of Polaris is that of the pole, without correction. Early in the century this star, Alch Epsilon Urse Majoris, was used for this purpose, and in most of the books it still given, but as the time is now about 28 minutes out, while the interval of Mizar is scarcely half a minute, the propriety of making the substitution will be apparent.

If a line be now drawn from Delta, in the Great Bear, to the Pole Star, and carried out about the same distance on the other side, it will strike the constellation of Cassiopea, which is easily recognized; forming as it does a sort of irregular W in the sky, which also revolves around the pole once in 24 hours. It will be noticed that this W when above the pole is upside down; when below the pole it is right side up—at other times it is somewhat on its ear, as you see.

The first star, Capri, or Beta Cassiopea, performs an important function, as it very nearly coincides with the equinoctial colure, it fulfills the purpose of the hand of a celestial clock, and by it the sidereal time may be told with a fair amount of accuracy. Knowing the sidereal time, the mean time follows from a very easy sum in mental arithmetic.

Let us take an example. You have the mid-watch on deck. It is the 4th of July. You have proposed to wind your watch. Your crew consists of three persons. The watchman, however, and his watch is wound too much; the bells, therefore, are not being struck with any remarkable accuracy. You and your friend have divided the watches. You don't want to call him too soon, but when four o'clock comes you would like to turn in. The condition of your crew makes it wise for you not to leave the deck. You glance at the celestial clock, being in mind that it is sidereal noon when Capri is vertically above the pole, that is 6 hours when it bears west, 12 hours when it is vertically below, 18 hours when it is east. You can make up your mind that Capri is a little less than $\frac{1}{2}$ of the way from 18 hours to 24 hours. You therefore call the sidereal time 22 hours 50 minutes. You know that at about noon on March 21 it was sidereal noon or 0 hours. As sidereal time gains on mean time 2 minutes 30 seconds every day, it is now 22 hours 50 minutes, it had gained 6 hours. So noon of July it was 12 days, at 4 minutes a day—48 minutes. It was half another day to the time you came on deck at 12 o'clock, so that it is 2 minutes more. There is therefore a correction of 6 hours, 48 minutes and 2 minutes, making 6 hours and 50 minutes. Capri must then indicate a time which is 6 hours and 50 minutes past mean time. So, you mentally make a note of the time indicated by the stars, 22 hours 50 minutes, and subtract 6 hours 50 minutes and get July 3, 16 hours, or 4 o'clock A. M. July 4.

You hope you are not 15 minutes out. So you give yourself the benefit of the doubt, call the other man, and drop off to sleep with that calm complacency which the possession of superior science always gives.

It may be well to explain why sidereal time is ahead of mean time; the reason is this: The interval between two successive transits of a star across the meridian of an observer shows the true period of the Earth's rotation.

The interval between two successive transits of the mean Sun, which is the standard of our time, is four minutes longer than this true period of rotation. This results from the fact that the Earth revolves around the Sun, while it is not revolving around the stars. A glance at the diagram will show what I mean. In the figure S is the Sun; E, the Earth; E', C, D, F, the Earth's orbit; A, B, the plane of the meridian produced toward the mean Sun which is on the meridian at noon. Let us suppose a star to be on the meridian, at the same time, but outside of the Earth's orbit and at a practically infinite distance. Now the Earth revolves around the Sun, in 365 days, or about 365 days; consequently, moves, in one day somewhat less than a degree. In one day it would go, say from E to E'. It is, therefore, obvious that when the plane of the meridian A' B' is parallel with A B—that is to say when it has got back where it started from—the star will again be on the meridian, but the Sun will not, it having apparently moved to the eastward of the meridian. The Earth, however, moves, in one day somewhat less than a degree, in one day it would go, say from E to E'. It is, therefore, obvious that when the plane of the meridian A' B' is parallel with A B—that is to say when it has got back where it started from—the star will again be on the meridian, but the Sun will not, it having apparently moved to the eastward of the meridian. The Earth, however, moves, in one day somewhat less than a degree, in one day it would go, say from E to E'. It is, therefore, obvious that when the plane of the meridian A' B' is parallel with A B—that is to say when it has got back where it started from—the star will again be on the meridian, but the Sun will not, it having apparently moved to the eastward of the meridian. The Earth, however, moves, in one day somewhat less than a degree, in one day it would go, say from E to E'. It is, therefore, obvious that when the plane of the meridian A' B' is parallel with A B—that is to say when it has got back where it started from—the star will again be on the meridian, but the Sun will not, it having apparently moved to the eastward of the meridian. The Earth, however, moves, in one day somewhat less than a degree, in one day it would go, say from E to E'. It is, therefore, obvious that when the plane of the meridian A' B' is parallel with A B—that is to say when it has got back where it started from—the star will again be on the meridian, but the Sun will not, it having apparently moved to the eastward of the meridian. The Earth, however, moves, in one day somewhat less than a degree, in one day it would go, say from E to E'. It is, therefore, obvious that when the plane of the meridian A' B' is parallel with A B—that is to say when it has got back where it started from—the star will again be on the meridian, but the Sun will not, it having apparently moved to the eastward of the meridian. The Earth, however, moves, in one day somewhat less than a degree, in one day it would go, say from E to E'. It is, therefore, obvious that when the plane of the meridian A' B' is parallel with A B—that is to say when it has got back where it started from—the star will again be on the meridian, but the Sun will not, it having apparently moved to the eastward of the meridian. The Earth, however, moves, in one day somewhat less than a degree, in one day it would go, say from E to E'. It is, therefore, obvious that when the plane of the meridian A' B' is parallel with A B—that is to say when it has got back where it started from—the star will again be on the meridian, but the Sun will not, it having apparently moved to the eastward of the meridian. The Earth, however, moves, in one day somewhat less than a degree, in one day it would go, say from E to E'. It is, therefore, obvious that when the plane of the meridian A' B' is parallel with A B—that is to say when it has got back where it started from—the star will again be on the meridian, but the Sun will not, it having apparently moved to the eastward of the meridian. The Earth, however, moves, in one day somewhat less than a degree, in one day it would go, say from E to E'. It is, therefore, obvious that when the plane of the meridian A' B' is parallel with A B—that is to say when it has got back where it started from—the star will again be on the meridian, but the Sun will not, it having apparently moved to the eastward of the meridian. The Earth, however, moves, in one day somewhat less than a degree, in one day it would go, say from E to E'. It is, therefore, obvious that when the plane of the meridian A' B' is parallel with A B—that is to say when it has got back where it started from—the star will again be on the meridian, but the Sun will not, it having apparently moved to the eastward of the meridian. The Earth, however, moves, in one day somewhat less than a degree, in one day it would go, say from E to E'. It is, therefore, obvious that when the plane of the meridian A' B' is parallel with A B—that is to say when it has got back where it started from—the star will again be on the meridian, but the Sun will not, it having apparently moved to the eastward of the meridian. The Earth, however, moves, in one day somewhat less than a degree, in one day it would go, say from E to E'. It is, therefore, obvious that when the plane of the meridian A' B' is parallel with A B—that is to say when it has got back where it started from—the star will again be on the meridian, but the Sun will not, it having apparently moved to the eastward of the meridian. The Earth, however, moves, in one day somewhat less than a degree, in one day it would go, say from E to E'. AMERICAN CANOE ASSOCIATION.

OFFICERS, 1890-91.

COMMODORE: WALTER U. LAWSON, Boston, Mass.
 SECRETARY-TREASURER: RALPH E. BROWN, 47 Central street, Lowell, Mass.
 REGATTA COMMITTEE: J. A. GAGE, Lowell, Mass.; W. G. MacKendrick, Toronto; L. B. Palmer, Newark, N. J.

CENTRAL DIVISION.

Officers:

VIC-Com: C. V. Winne, Albany, N. Y.
 REAR-Com: T. P. Gaddis, Dayton, O.
 PURSER: Howard Brown, Albany, N. Y.
 EX. Com: J. K. Bakewell and H. M. Stewart.

EASTERN DIVISION.

Officers:

VIC-Com: J. V. Cartwright, Jr., New York, N. Y.
 REAR-Com: G. L. Parmelee, Hartford, Conn.
 PURSER: H. A. Colton, Winchester, Mass.
 EX. Com: Paul Butler, E. S. Towne and Sidney Bishop.

NORTHERN DIVISION.

Officers:

VIC-Com: W. H. Cotton, Kingston, N. Y.
 REAR-Com: J. C. Edwards, Lindsay, N. Y.
 PURSER: C. E. L. Porteous, Kingston, N. Y.
 EX. Com: Colin Fraser and F. H. Gisborne.

ATLANTIC DIVISION.

Officers:

VIC-Com: I. V. Dorland, Arlington, Va.
 REAR-Com: E. D. Anderson, Trenton, N. J.
 PURSER: Richd. Hobart, Newark, N. J.
 EX. Com: H. L. Quick and H. M. Kreamer.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of \$2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay \$1.00 for camp expense. Application sent to the Sec. Treas. will be forwarded by him to the proper Division. Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

COMMODORE—D. H. Crane, Chicago, Ill.
 SECRETARY—N. B. Cook, Chicago, Ill.
 REAR-COMMODORE—C. A. Woodruff, Dayton, O.
 SECRETARY-TREASURER—J. H. Ware, 130 Rialto Building, Chicago, Ill.
 Applications for membership should be made to the Sec. Treas., on blanks which will be furnished by him, and should be accompanied by \$2 as initiation fee and dues for the current year.

FIXTURES.

MAY.

16. Ianthie, Spring, Woodside.

JUNE.

6. Hoisting Sail Competition, 20. Marine & Field, Open, Bath Brooklyn.
 5. Yankers, Annual, S. L. 27. Brooklyn, Ann., Bay Ridge.
 13. New York, Annual, S. L. 1. Ianthie, Spring, Passaic Riv.
 20. New York, Sandy Hook Race.

JULY.

11-26. W. C. A. Meet, Ballast Island.

AUGUST.

6-27. A. C. A. Meet, Lake Champlain.

SEPTEMBER.

5. Orange, Ann., Passaic River. 7. Ianthie, Annual, Woodside.

7. Ianthie, Ann., Passaic River.

THE CRUISE OF THE SHENANDOAH C. C.

AS DETAILLED BY THE COMMODORE.

PART VI.

WE had a pleasant all-afternoon's cruise through varying lights and shades, down rapids and over fish dams, with an occasional mill dam to portage. By this time we had grown so accustomed to the number of fish dams that we plumped down right over them, wherever an opening appeared that was at all promising; safely taking shots that a week ago, and fifty miles further up the river, we would have portaged around rather than have attempted.

The river finally left the base of the Blue Ridge, with the conglomeration of spidery railroad trestle bridges, and ran, ugly and bankments or "hills," and deep cuts showing like red seats upon the faces of the green mountain spurs, to the right; and wound off to the left across the narrow valley in a succession of serpentine curves; approaching the base of the Massanutten Mountains. The banks grew wild and rugged, and lines of cliffs appeared here and there, with gray stone faces softened and torn down with mosses and lichens and trailing vines; with bright scarlet berries showing out vividly from among the dark green triangular leaves.

A sharp turn to the right presented itself, with a high wall of rugged cliffs along the concave left bank. A peculiar black hole in the face of the wall, like the possible entrance to a cavern, attracted our attention; and we gazed at it curiously as we approached, with a view of surmounting it, but one of the roughest and rockiest little falls we had encountered in the entire cruise so engrossed our attention for the next quarter of a mile, that we had neither time nor opportunity for the inspection or study of holes or caves or anything else than the business in hand of getting those canoes down that rocky rip without mishap. This is the place you took for Kemple's Falls, Commodore, exclaimed George, as we drifted along on the still, deep water below; glad of a little breathing spell after the rush and tussle with the falls above.

"Well I'm sure it's rough enough for Kemple's or anybody else's falls!" said Lacy.

"Well!" was the sententious reply. The river wound around to the left again. A massive wall of stone towered upward for a couple of hundred feet along the right bank, while the water flowed ominously still and black at its base. We skirted the cliffs and passed steadily on around the low, heavily-wooded point on the left, and a new vista opened up with another imposing line of lofty cliffs on the opposite, or left side, crowned with a dense mat of evergreens, whose sombre plumes looked gloomy and forbidding in the fading light.

The still, black river brought up against the base of the cliffs on the left, turned sharply to the right and disappeared from sight down the declivity.

"That's Kemple's Falls!" said George. We beached the canoes on the crest of the big fish dam which stretched across the river at the head of the falls and took a survey of the river ahead of us.

We saw a long line of gloomy, perpendicular cliffs stretching straight away down hill along the left side of the river for over a mile. The river, at the base of the cliffs, spread out to a great breadth, the watery vista finally becoming entirely lost to sight in the confused mass of boulders, ledges and bush-grown islets which seemed to terminate the river bed at the distance of half a mile.

What water we could see was entirely still, with the exception of a few hundred yards immediately below the fish dam, which was lashed into foam by the reefs and rocks with which the river bed was profusely studded, while the down hill grade of the entire vista of cliffs, water and rocks was very marked. The sun had dipped below the horizon, and the hills of Massanutten, and this always sunless gorge looked fascinatingly repellent, gloomy and impressive to our awed eyes.

The cliffs frowned down in stern defiance upon the water and the still black water looked sullenly up at the cliffs, reflecting the gray, lichen-covered precipice, with its frowny mat of trees and bushes, from its depths, while the bubbles scattered in profusion over its surface stood out startlingly white and distinct against the black surface upon which they floated. The dull, heavy, ominous roar that pervaded the entire gorge added to the sombre impressiveness of the place.

"What a magnificent place for bass fishing!" said George in awe-struck tones.

"Oh, get out with your bass fishing!" exclaimed Lacy. "We'll have all we can do to get our canoes through this hole alive without fouling with fishing tackle! Can we make it, Commodore, do you think?"

"We're going to try," said I as I pushed the nose of my canoe off from the fish dam, closed my hatches and prepared for action.

We slipped easily and skillfully over a little gap in the end of the fish dam, next to the wall, and down its steeply sloping face into the foaming water below, and threaded our way slowly and with great care through the mazes of the reefs for the next quarter of a mile, back paddling steadily against the swift current.

"I don't recollect this still water at all," said George, as we paddled cautiously through the wide, still reach below. "Well," I replied, "My recollection is that we were hustled down the entire fall with more speed than caution. My impression was also that the river was narrow through here, while instead it is unusually wide."

"Perhaps this isn't the place," suggested Lacy. "I don't see anything the water with this kind of navigation." "Oh, yes! I see it all right," I replied. "I'll tell you how you want to get before you get out of it!" I answered, as we approached the vast conglomeration of reefs and rocks, which from a little distance appeared to block up the entire river, but which upon our approach revealed numerous passages and canals, down which the water surged and roared, while the huge foam-capped waves everywhere reared their white crests among the rocks, and the foam from their backs and their weary wreaths toward the tree-crowned summits of the cliffs.

A narrow little canal but a few feet in width led close along the base of the cliff, past all these rocks and reefs, down along which the water ran in a narrow, swift, arrow-like, occasional sharp, white-crested curl or break in the otherwise smooth surface showing the presence of a rock here and there, while at the end of the chute, a quarter of a mile away, the big waves could be seen gamboling and tumbling about and tossing their gleaming foam-crests high in air as though in delight at the approach of two or three callow youths in small boats.

"This is the Devil's Race-path!" said I as I entered the chute, followed by the others. Look sharp for the rocks! There are a few left in the channel!"

It was a wild, exciting rush down the Race-path—more like coasting a hill on a hand-sled than running a river in a canoe. Cliffs, bushes, trees and rocks shot swiftly by up stream in a dizzying whirl as we flew along, and the big waves at the bottom gave in their work to good advantage before we were out of their clutches.

"Whew!" exclaimed Lacy, paddling alongside and wiping the spray from his face, as we reached a breathing place in a quieter, though still swift, stretch of water below. "That was a hard one; my canoe's half full of water! Any more such places?"

"Yes! wait till we reach the bottom of the falls!" said George, raising his head and looking up at the rocky ceiling overhead, and a bucketful of water which was calmly reposing in his lap.

"How about that full, high bow now, Lacy? I didn't ship a drop of water, and my decks and hatches are barely splashed!" said I.

"Here's where we veer over to the right, Commodore. There's the Navigation dam that you jumped last trip," said George, as we approached a long line of reefs and rocks, coming out from the cliff, with most rough water, with long, low stone dam jutting out from the cliff just above, throwing most of the water around the open, right hand end.

"Yes," I replied. "I recollect the place well."

"I wonder we ever got through over there at all without shipwreck," said George, as we shot swiftly along in the open water on the right side, and took a good look at the labyrinth of rocks and reefs that filled the channel of the river below the dam, over along the base of the cliffs.

"So do I," I replied. "But the water was higher then, which facilitates matters somewhat."

Swifter and rougher grew the river until we fairly flew along. Fish-dams and ledges occurred in rapid succession, all of which we were compelled to take flying, as the swift rush of the water gave us but scant time to look for a reasonable escape. Our paddles were plied with lightning-like rapidity. Now a strong backward stroke here, or a forward stroke to avoid a rock, whose sudden proximity was startling. Now pausing under the protecting lee of a big rock to survey the course ahead. Anon back-paddling gently and cautiously across from one furious current to another, or swiftly ahead, or across to take advantage of some opportune opening among the rocks, or to plunge headlong over a fall. The old stone promontory at the lower end of the falls appeared in view around a little turn to the right and we bore rapidly down upon it; while the still, calm waters of the Newport mill pool appeared invitingly and restfully at the foot of the watery slope down which we were rushing.

A small half-log cabin near the right bank, with a rickety fence of poles surrounding the small, steep, rocky clearing around the house. A cow in company with a good-sized calf stood calmly near one corner of the house; a number of chickens were already roosting on the back fence. An old dog barked lazily at us from the front yard, and a couple of men were watering four or five harnessed horses, evidently fresh from the field, in the still water in front of the house. The whole scene below looking invitingly pastoral and restful to us in our harassed, nervous, excited state.

With a mighty roar and plunge the river fell over a massive boulder-studded ledge in a series of irregular cascades, several feet in height, and the falls were ended. A big Navigation dam extended out from the cliffs a short distance above the fall, around the right hand end of which the water flowed clear of obstructions, and then descended over a shallow gravelly bar or reef. It did not look deep enough to float a canoe, but George, who was in the lead along here, at once declined the dam and the fall and took this short, and promptly stuck hard and fast on the gravel bar. After a few vigorous but fruitless shoves with his paddle in the endeavor to force his canoe over, he disembarked and waded down the shallow slope, with his canoe, and with his weight, drifting before him at the end of her stern painter.

While I hesitated to observe the success of his venture, undecided whether to follow him or take the fall, the relentless current carried me so close on to the dam that I had no alternative but to take it. It was an unusually high dam and there was no promising shoot or opening in its crest within reach, and I had no time to wait, and so I drove my canoe over the dam, and over the dam—over the broken, rocky crest of which the water flowed freely—with all the power I assessed, hoping by the impetus to drive her over. Her bow slid well over the crest of the dam when she struck upon a rock nearly amidskip upon her starboard side, with a crash that I felt certain had smashed in her entire side, then hung trembling for a moment upon the verge of the dam, while her stern painter caught on upon the rocks alongside, narrowly escaping a disastrous capsize.

"Is she sma-hed?" asked Lacy, as he shot by me, prudently following George down the gravel slope. "I don't know," said I, as I held the Frankie carefully up on the edge of the dam and made a hasty examination to see if there was enough left of her to carry her over in some way, for I was pretty well out in mid-water, with about as swift and rough a piece of river ahead of me and around me as the average canoeist would care to see; and to my great relief I found she was entirely uninjured by the terrific blow she had sustained.

I slid my canoe down over the dam into the swift water below, where she lay pointing directly down stream. It was impossible to turn her in any way, for I was pretty well out in mid-water, with about as swift and rough a piece of river ahead of me and around me as the average canoeist would care to see; and to my great relief I found she was entirely uninjured by the terrific blow she had sustained.

and had a depressing effect upon our already depressed spirits. We were in no hurry for the inevitable wrestle with the Columbian Falls, which was only a few miles away, and we fully expected to rough as Kemple's Falls, and a mile and a half longer, to the outlet of our day's cruise, just around the bend a mile away. As the sun put in an appearance and dispelled the mist, and the river threw off its black, frowning aspect and smiled brightly in his caressing beams, and as the menacing, too-suggestive roar of the fog-veiled dam took upon itself the ordinary common-place drone of the fall, revealed in the dam but a couple of hundred yards away, and the rapid rippled and murmured musically as its waves sparkled in the sun, flashing back his rays in countless points of light, our usual buoyancy and careless love of adventure speedily returned to us; and the further encouraging stimulus of a good breakfast of fried fish (for we soon found that, although bass wouldn't strike in muddy water, chubs, suckers, perch, and other small fry were not so fastidious; and while perhaps not as gamy were at least fully as filling), soft-hoiled eggs, buttered toast and hot coffee effectually dispelled what little depression of spirits remained, as the natural result of our severe tussle with Kemple's Falls so late in the evening of the day before, at the close of an already long and arduous day's cruise; and we felt fully ready to tackle anything not absolutely impassable.

We felt fresh and in good mood for the falls, as we paddled boldly up and headed our canoes—one at a time—over the verge and straight down the smooth pitch, and began the long, exciting descent. We first had a wild, exhilarating rush down a steep, but tolerably smooth, slope, reminding us of a greatly magnified repetition of the Devil's Race-path and containing nothing worse than a couple of fish dams, which we jumped without tarrying to inspect very closely at the bottom, which we found a hundred yards or so of big waves, whose flashing crests had attracted our attention as soon as we rounded the point above and sighted the falls, and from whose tumultuous caresses I was fain to quickly close my own hatches and apron.

This was followed by a considerable expanse of still water, through which we paddled leisurely, stopping at a beautiful spring nestled in a shady bank, the beauties of which for camping purposes we all admired.

"Now the next half mile is a bad one," said George, as we paddled out from the spring and approached the wall of reefs, rocks, and low bushy islands that extended across the river below the still reach.

"Why, is it rough?" asked Lacy apprehensively. "Not at all," said I. "It is simply the most interminable series of reefs and ledges I know of on the entire river. I never have been able to find the channel, but think it goes in here in the middle; at any rate, I'm going to try here."

"Well, I'll try over here toward the right bank," said George, suiting the action to the word.

"I think you're right," I replied; "but it will do no harm to try. The lack water from the Columbia Dam used to come over this," I said to Lacy, who had followed me. "You can see the remains of the dam down there now, at the foot of the reefs, half a mile below."

"What became of the mill?" asked Lacy. "I don't see any signs of it."

"We went out with the dam, in the great flood of '70," I replied. "We found the reefs very troublesome and great care and patience were required in order to thread our way through their mazes. The passages of clear water through their generally parallel lines led us from the middle of the river close in to the left bank, when, before getting too close in, we took advantage of favorable little gaps or openings in the irregular 'saw-tooth' faces of the reefs, and slipped over them, and over the water streaming into the river, to again be led back to the proximity of the bank some distance further down. We found no regular boat channel, but the tactics we employed zigzagged us through the reefs without wetting our decks or much more than occasionally scraping our keels."

"Now," said I, as we rounded the point and passed the remains of the old dam and the final stretch of the falls lay before us, "we come to the last part of the river, and over which they say we must keep cool, keep your hatches closed, dodge the rocks and hold her back all you can. Look out for the big fish dam at the bottom of the falls!"

The remaining half mile was a tumultuous mass of foaming, splashing waves, profusely dotted with black, threatening rocks and boulders of all sizes and shapes, around and against which the waves leaped and stormed, and over which the water streaming in sheets from her decks and closed hatches. He soon came shooting down past us at the lower end of the fall, plumped down over the big fish dam at the foot and pulled up to the dam below and joined us, as tired as we were and fully as glad of a chance to rest a short time after his severe exertions.

I stopped all night once up at that house there on the hill," said I, as we lay in the shade near the shore and floating over awake in which George had speedily joined us, and as I spoke indicating a large, comfortable-looking two-story brick mansion, occupying a commanding position on the bluff, overlooking the river and the falls, and but a couple of hundred yards or so from the river.

"Commodore, you appear to have stopped considerably along the river," I remarked, as he refilled his pipe and struck a match on his boot heel and lit it.

"Well, yes," I replied, "that first cruise of mine was rather an eventful one, and if I gained nothing else, I certainly gained a large store of experience which has been useful to me ever since."

"Did you do any camping at all on this cruise?"

"Only one night, although I had a tent and camping outfit with me. I had intended to camp every night, of course, but one thing or another occurred on different evenings, that rendered it advisable to seek quarters at some farm house or other rather than camp."

"You found no trouble in getting accommodations I suppose?"

"Not a particle. I found the people at the better class of farm houses invariably generous and hospitable, freely taking me in for the asking, and giving me the best of the place afforded in the way of supper, lodging and breakfast, and refusing all pay, although, of course, I always tendered payment."

"Old Virginia hospitality is proverbial," said George.

"Yes, I don't know that the people of this State are any more so than the people of other States, but I do know that their reputation for hospitality is well deserved. The country people are simple and direct in their manner toward a stranger, and if they give an invitation they mean it."

"One of the most valuable lessons I learned on this cruise was on this point. It happened this way. Way back up at one of the North River dams, while making a landing to scout around for assistance in portaging the dam, I carelessly lost my paddle overboard, and as I was swept over the dam, and as the water was high, I was unable to recover it, and as a matter of course, my cruise was in a fair way to end right then and there. By a piece of undeserved good fortune, however, I found a cooper shop at the mill, and the cooper in the course of three or four hours or so, whittled me a new paddle out of a piece of pine fencing, for which, by the way, he charged me the exorbitant sum of 35 cents."

"We'd during my detention here the cooper came, and the proprietor of the mill, who had taken considerable interest in my cruise, and who had, in the course of conversation, learned who I was, kindly invited me to his residence near by to dine with him. It was my first day out on the cruise, which you will remember, was my first cruise, and being enthusiastically full of the idea of being taken into the life of a canoe and upon my own resources, and moreover, being accustomed to the mere empty formality of such

invitations in town where they really mean nothing but civility and politeness. I thoughtlessly declined the invitation and was surprised to notice that the gentleman seemed displeased and hurt. I incidentally mentioned the matter in conversation with Len. Mohler that evening while enjoying my after supper pipe on the veranda of the Weyer's Cave Hotel, and he assured me that I had made a mistake, and impressed upon me earnestly that the next time I was invited by one of the farmers in the valley to go to his house and stop with him for a meal or for a night, to accept the invitation if possible, for he meant it, and to decline it causelessly would surely offend and wound him. During the remainder of my cruise I had occasion to test this advice, and you may be sure I acted upon it and found no cause to regret it."

THAT "MAIL AND EXPRESS" CRUISE.—Though the *Mail and Express* canoeist has been enjoying the freedom of New York for some time, his wild, weird story of this famous land cruise has only reached a termination last week, concluding as follows: "Over 6,250 miles I had carried that precious bottle. * * * regarding my achievements I may have accomplished, I leave my readers to judge of their worth, and would only say in conclusion

Perseverance is a Roman virtue
That wins each god-like act, and plucks success
E'en from the spear-proof crest of rugged danger."

It is all very well to talk about perseverance and success in connection with this cruise, but its most striking characteristic is the cold, calm cheek with which the claim is made that something noteworthy and extraordinary has been accomplished. Taking those of Mr. Kappalee's figures most favorable to him, allowing that the distance he canoed is not 6,250 miles, as intimated in various parts of his log, but only 5,000, and of course that his time of 230 days does not include Sunday traveling, the average per day we have about 25 miles, which over such a route is as absurd as 50 miles would be. It may be true that "it is possible to cross the continent by water except for a carry of 12 miles," but it is entirely untrue that Mr. Kappalee did this or anything approximately like it. If he wishes to obtain the respect of canoeists he must promptly repudiate the absurd claims that have been made, whether by him or by others for him, and prove by his log how many miles he actually covered afloat in his own canoe, or even in anything that can be properly called a canoe, and how much of the 6,250 miles was made in canal boats, railway trains, stages, wagons and other easy and convenient vehicles which are not canoes.

THE ACCIDENT TO COL. NORTON.—More detailed accounts of the accident to Col. Norton, mentioned last week, bring the very welcome news that he is in good hands, and his injuries are much less serious than at first reported. With a native hunter and a boy he had camped about 10 miles from Tallahassee, intending to push his explorations from his camp. He put on a pair of climbing spurs and ascended a tree to a distance of about 75 ft. He had descended some distance in safety, but the increased girth of the tree made it impossible for him to span it, and after sliding down until about 45 ft. from the ground, he dropped. Fortunately he fell straight, landing on his feet, which were driven 3 or 4 in. into the ground. He was unconscious for a long time, but the guide, who had served as a nurse in Southern hospitals during the war gave him the best attention possible, though there was no aid at hand. He was finally transferred by the guide and the boy to the former's house, and later on was taken to the hospital at Jacksonville, where he now is, under the care of his wife and daughter and the guide. The doctor reports no bones broken, but some injury, how much is not yet determined, to the spine.

CANOING ABOUT ROCHESTER.—It is decided to make a cruise down the Genesee on Decoration Day, and to invite the Rochester C. C., the Buffalo C. C., the Free Academy C. C., and the Newark C. C. to join. The committee for the day is G. H. Harris, J. G. D'Olive and F. J. McCall. The Rochester C. C. has a war canoe which will accommodate twenty persons, it will make

its maiden trip down the Genesee River from Mount Morris this cruise. About twenty members of the Rochester C. C. paid a visit to Capt. George W. Ruggles, of Charlotte, on March 18, an electric car being chartered by the party for the evening. The captain entertained his visitors in grand style. After they had partaken of a fine supper, G. H. Harris, the purser of the club, read several letters of regret from absent members and presented to the captain an elegant badge of solid gold, suitably inscribed. Afterward the guests were shown several new canoes which the captain has in process of construction, and returned to the city shortly after midnight.

A. C. A. MEMBERSHIP.—Eastern Division: C. J. Dayol, Providence; C. C. Baron, Lowell; C. W. Hubbard, Boston. Central Division: E. G. Ricketson, Bloomington, N. Y.; William Howcroft, Plattsburgh, N. Y.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

O. H. R., New York.—There is a letter for you at this office.
W. R. F., Lynn.—We have not published the sail plan of Bat, as it has no special features. You will find the latest sail plans in *FOREST AND STREAM* of Dec. 29, 1891, Oct. 17, 1889.

B. B. S., Warwick, N. Y.—Mr. Rushton has made a number of experiments with electrical launches, but we know of none now on the market in this country, though they are built in England.

T. McG., Detroit, Mich.—Will you kindly inform me if a St. Bernard's coat will change from a black to a tawny color? And at what age, if at all? Ans. It will to a slight extent after the first shedding.

J. C. S., Newark, N. J.—You will find directions for building canvas canoe in issue of Nov. 6, 1884. Every volume contains lines of canoes suitable for building from. See "Canoe and Boat Building for Amateurs" for full instructions in all kinds of building.

Krt.—Will you be good enough to give me register number of the collie dog Domino, formerly owned by Mr. Barbour, of O. N. T. Co., Newark? Have one of his offspring and would like his pedigree. Ans. Domino (14651), by Ivanhoe (8648, Vol. V.) out of Shepherdess (7485, Vol. IV.).

A. B. M., Cohasset, Mass.—The laws of North and South Carolina and of Georgia contain special provisions governing the shooting and fishing in certain counties. These are all stated in the *Book of the Game Laws*, which you had better study. We can send it to you; price 30 cents for a single issue or \$3 for the annual subscription, four numbers.

CONSTANT READER.—Will you give me the pedigrees of the following English setters through the columns of *FOREST AND STREAM*, Druid, Star and Queen? Ans. Druid, by Prince out of Dora; Prince, by Dash II. out of Moll III.; Dora, by Duke out of Rhebe. Star, by Leicester (142) out of Dart (335); Leicester by Dan out of Lill II.; Dart, by Prince out of Dora. Queen, by Rob Roy (228) out of Pickles; Rob Roy, by Fred out of Rhebe; Pickles, by Dan out of Lill II.

CONSTANT READER.—Please give the pedigrees of Count Wind'em, Nora and Mersey, the dam of Royal Blue, for three generations. Ans. Count Wind'em by Count Dick out of Phantom, by Llewellyn's Prince out of his Lill II.; Count Dick by Dan out of Countess; Dan by Field's Duke out of Statter's Rhebe; Countess by Laverack's Dash II. out of his Moll III.; Llewellyn's Prince by Laverack's Dash II. out of his Moll III.; Nora by Dan out of Nellie. Dan already given and Nellie is by Laverack Dash

II. out of Moll III. Mersey by Leicester out of Dart; Leicester by Dan out of Lill II.; Dart by Prince out of Dora.

J. B. B., New Haven.—I have had an antelope skin ruined by moths, and a porcupine skin, though this latter was treated with corrosive sublimate. Will you please tell me some way to treat skins to keep moths out of them? Ans. We know of no better way of treating skins that are constantly exposed than by a bath of a strong solution of corrosive sublimate. This, however, ought to be applied once a year. It is well in spring to wrap up and put away such furs, first treating them with corrosive sublimate and then wrapping them up in paper, enveloping them so completely that the moths or other insects cannot get through the covering. A little camphor or mothball sprinkled over the furs lends additional protection. We always pack away our fur mats and rugs in spring and take them out in late fall.

H. C. G., Norris, Texas.—Will you please inform me as to the best remedy for mange in dogs? Would like it in the form of a dip, to be used in a tank, so that the dogs could be immersed in it. All of my hounds, as well as my two pointers, are affected and I think dipping them in some preparation would be the easiest way of curing them. Ans. You will find the following quite as good as dipping and almost as readily handled: Take a gallon of lard oil, one pound of black antimony and one pound of sulphur lac. Mix thoroughly and rub on the sores or all over the dogs. Keep them warm till it dries on, and in two or three days wash off. Of course you can mix as much as you require according to the above proportions. If you cannot procure this, you will find one of the advertised sheep dips a good remedy. We have often cured sheepdogs in that way.

L. R., St. Louis, Mo.—Kindly give me, through your columns, registry number of the Llewellyn setter bitch Trinket, dam of champion Gloster. 2. Also please give pedigree for three generations with registry numbers, if possible, of Llewellyn or Laverack setters Dash II. (E. 5,039) and Nora (E. 7,218), sire and dam of Dashing Rover. Ans. 1. She is not registered. 2. Dash II. (E. 5,039), by Blue Prince (4,259) out of J. Armstrong's Old Kate; Blue Prince, by Pride of the Border (E. 4,275) out of Nellie (E. 1,583), by Dash II. out of Moll III.; Pride of the Border, by Dash II. (E. 1,341) out of Belle II.; Dash II. by Sting out of Cora II.; Moll III., by Fred I. out of Belle II.; Sting, by Rock II. out of Blair's Cora (black and white); Cora II., by Fred I. out of Cora I.; Armstrong's Old Kate by Dash II. (E. 1,341) out of E. Armstrong's Kate, by F. Graham's Duke (E. 1,341) out of V. Corbett's bitch, which was out of a pure Beausert bitch by Graham's Roll; Graham's Duke by Dan out of Bess. Nora, by Dan (E. 1,338) out of Nellie (E. 1,557), by Dash II. (E. 1,341) out of Moll III., by Fred I. out of Belle II.; Dan, by B. Field's Duke (E. 1,361) out of Statter's Rhebe (E. 1,546) by Rake out of Psyche.

SPORTSMAN, Conn.—1. Will you please tell me how a well-trained bird dog should act in the field, that is, the points that he must have to be a perfect dog according to the rules now used at field trials? What I want to know particularly is whether a dog should drop every time a bird is flushed, whether it is fired at or not. Take an extreme case where a bird is flushed very wild and the dog sees or hears it, must he drop to the ground or is he considered just as perfect if he remains standing, if he does not offer to chase? Is it out of order to command a dog to charge or to chase each time a bird flushes, or must he be trained to do it each time without being spoken to? 2. To be perfectly trained, about how far can a dog range from his handler in open ground and be in bounds? Ans. 1. The dog should drop to wing at all times, or if he does not he should at least stand steady without any caution. It is not necessarily a demerit when he only stops to a command; the circumstances of the flush must always be taken into consideration. 2. Opinions differ on this score; the Eastern field trial people require a dog to range wide and fast, the Central expect him to keep well within hail of his handler and to quarter a moment. The dog should never, unless the country is heavily wooded, range out of sight of his handler.

HE season is rapidly approaching when Anglers will need to replenish their stock of Fishing Tackle.

Before doing so, we would advise them to call on us and examine the largest assortment to be found

in the World, or send us 10 cents to pay postage and we will mail you our 136 folio page illustrated catalogue and price list.

FISHERMAN'S AUTOMATIC REEL.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR
The Automatic Reel.

FIRST—It will wind up the line a hundred times as fast as any other reel in the world.
SECOND—It will wind up the line slowly if the angler chooses.
THIRD—No fish can ever get slack line with it.
FOURTH—It will save more fish than any other reel.
FIFTH—It will prevent tangles, lines and snells from being broken by large fish.
SIXTH—It enables the angler, and makes it desirable, to use lighter tackle.
These claims have been substantiated by the most skillful fishermen in America and Europe.

Improved
AUTOMATIC
REEL.

This reel is manipulated entirely by the hand that holds the rod.

Angeli's Pat. Metal Revolving Flies, FOR TROUT AND BASS.

Revolving Metal Wings on a Feather Fly.

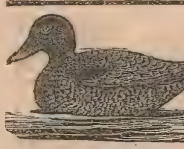

Revolving Wings and Body.

These flies are of light metal, of attractive colors, in nickel and bronze. When trolled in the water the body and wings revolve, giving them the appearance of live flies in the water. The difference between these flies and the artificial feather fly is this: One is a dead fly in the water and the other is a live fly. These flies have been well tried. The Angler has only to put one on the end of his leader to find out that it is the best trout fly in the world.

You can fly-fish at the bottom of deep water by letting the metal fly sink and drawing it up rapidly catch large trout that won't rise to the surface.

The metal wings shown in the lower cut are made to fit all sizes of artificial feather flies for trout and bass. The angler can vary his flies by slipping on various colored wings over a single feather fly, as shown in the center cut. A pair of nickel wings with bronze body, fitted to a "Professor," will be found a killing fly under all conditions.

Price of Wings or Flies, \$1.00 per dozen.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, APRIL 9, 1891.

VOL. XXXVI.—No. 12.
No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices \$1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price for single copy \$4 per year, \$2 for six months. Rates for clubs of annual subscribers: Three Copies, \$10. Five Copies, \$16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, \$5 per year; \$2.50 for six months. Address all communications Forest and Stream Publishing Co., No. 318 BROADWAY, NEW YORK CITY.

	ANSWERS TO CORRESPONDENTS.

A NEW FOREST RESERVE.

FOR about ten years we have been working to secure for the Yellowstone Park an enlargement of its area, and proper protection for its forests, game and natural wonders. In four successive sessions of Congress bills providing for these measures have been introduced and have passed the Senate, but have failed in the House, usually through the opposition of a small but powerful railroad lobby, which insisted that no bill for the Park's protection should pass which did not grant them a right of way to build a railroad line through the Park. Through the interest felt in the National Park by successive Secretaries of the Interior, many steps have been taken providing for a more careful protection of the Reservation, but it still remains without a legal form of government, and a great area on the east and south, useless for settlement but of the utmost value as a forest preserve, has been left to the mercy of woodchoppers and of Indians, and careless or malicious persons who start forest fires. During the last few years much of this region has been burned over. This great territory has now by Presidential proclamation been set aside as a forest reservation in which timber cutting and settlement are forbidden, and is therefore practically safe from depredation. During the closing days of the Fifty-first Congress a bill was passed entitled "An act to repeal timber culture laws and for other purposes," and this bill was approved March 3, 1891. Section 24 reads as follows: Section 24. That the President of the United States may from time to time set apart and reserve, in any State or Territory having public lands bearing forests, any of the public lands wholly or in part covered with timber or undergrowth, whether of commercial value or not, as public reservations; and the President shall by public proclamation declare the establishment of such reservations and the limits thereof. Not long after the passage of this act, the section in question came under the notice of some of the vigilant and earnest friends of the Yellowstone Park, who recognized that it offered a means of protection for the terri-

tory south and east of the Park, which it has so long been hoped might be added to the Reservation. The full meaning of this section being appreciated, Mr. Arnold Hague and Mr. W. Hallett Phillips brought the matter to the attention of the Secretary of the Interior, whose interest in this and similar subjects is well known. Mr. Noble at once realized the force and effect of the law, and, the matter having been fully discussed, a proclamation was drawn up and sent to the President, with a strong letter of recommendation from Mr. Noble. The result is seen in the executive proclamation which we print in another column. While the President's proclamation does not actually add this forest reservation to the National Park, it is the first step toward doing this; for since settlement within the boundaries named is prohibited, it will hereafter be a much simpler matter to have the region formally added to the Park. In connection with this proclamation the following section from the Revised Statutes of the United States should be read by all persons: Section 3383. Every person who unlawfully cuts, or aids, or is employed in unlawfully cutting, or wantonly destroys or procures to be destroyed, any timber standing upon lands of the United States, which in pursuance of law may be reserved or purchased for military or other purposes, shall pay a fine of not more than five hundred dollars and be imprisoned not more than twelve months. The setting aside of this tract of land as a forest reservation practically adds to the Yellowstone National Park 1500 square miles of territory, and enlarges the whole reservation to more than five thousand square miles—a little less than the combined areas of Connecticut and Rhode Island. The territory set aside is high, rough mountain land, valueless for settlement, but of extreme importance as protecting the sources of many tributaries of the Yellowstone, Snake and Wind Rivers. This new reserve is also of the utmost value as extending the protected range of the many varieties of game which are found within the Park. It covers in part the wintering ground of the elk to the south of the Park, the range of the bison, and the great sheep grounds which lie on the east side of the Park, on the heads of the south branch of Clark's Fork of the Yellowstone, of the Stinking Water and of other streams. It will be observed that the boundaries as stated leave the valley of Clark's Fork outside the forest reserve, so that it is open to settlement and traffic. This valley is the natural route by which Cooke City is to be reached, and the establishment of this reserve therefore does not in any way interfere with the efforts which that settlement is making to secure a railway outlet. It is not yet definitely known what measures will be taken to protect this new forest preserve, but it may perhaps be assumed that it will be placed under the charge of Capt. Geo. S. Anderson, the superintendent of the Yellowstone Park. He could look after the protection of the forests and could prevent the killing of game by enforcing the game laws of Wyoming, which are sufficiently stringent if they were only observed. The protection of this additional adjacent area cannot but be regarded with very great satisfaction by that large class of our citizens who are interested in the Yellowstone Park; while to those who for years have been working to bring about such a result, it is above all a source of pride and triumph that their labors should have been so far crowned with success. To Secretary Noble, whose broad mind appreciates the importance of preserving from spoliation spots like the Yellowstone and Yosemite regions, too much credit cannot be given for the active interest he has shown in this matter. Mr. Arnold Hague, of the United States Geological Survey, whose intimate knowledge of the Park extends back over a number of years, has long been a consistent worker for this reservation, with an eye single to the public good, and the same may be said of Mr. W. Hallett Phillips. To all these gentlemen the country owes a debt of gratitude for what they have done. It may fairly be said that the FOREST AND STREAM has borne the heat and burden of the day in carrying on its fight for the protection of the people's Park. The battle began a good many years ago and it has been kept up ever since. We have driven out of the Park more than one set of land grabbers, and by our criticisms have made it possible for rich and poor to share alike in this great heritage which belongs to all citizens of the United States. The work is not yet completed. While much has been done, much more remains to be accomplished; but as

public sentiment in favor of protection for the Park is constantly growing stronger, we look forward to a day when this larger Yellowstone Park will be properly governed and carefully protected so that it may remain forever a spot singular by its beauty and its wonders, a source of pleasure and pride to all our people.

THE HELEN KELLER FUND.

IN our issue of March 19 some account was given of the "Helen Keller Fund," and since some readers may have overlooked what was then said, we refer briefly again to what appears to be a most commendable effort. Mr. William Wade, of Hulton, Pa., some months ago gave to Helen Keller, the little blind girl, a mastiff for a companion. The child and the dog were greatly attached to each other. One day in January last, Helen being then in Boston, and Lioness the mastiff in Birmingham, Ala., Helen's home, a policeman shot and killed the dog, because she was at large contrary to a city ordinance. When this occurrence was reported in the FOREST AND STREAM more than one kind heart was prompted to make good the child's loss by sending another mastiff to take the place of the one so cruelly killed. In this kindly purpose, however, all others were anticipated by Mr. Wade himself. But, Mr. Wade wrote, for all those whose sympathies had been awakened by the mastiff incident, there still remained a way to show interest in the child; and it is a way still open to others than "dog men." There is in Pittsburgh a little boy, blind and mute, in whom Helen has taken great interest; and to the sweet child has come the purpose of providing that this boy, afflicted as herself, shall have the opportunities she has enjoyed of instruction at the Perkins Institution for the Blind in Boston. In her letter, published in our issue of March 19, she wrote that she was going to try to raise a fund for this purpose herself; and Mr. Wade has suggested that readers of the FOREST AND STREAM should join with her in this work. Helen has already secured a part of the required sum, as appears from this letter: PERKIN'S INSTITUTION AND MASSACHUSETTS SCHOOL FOR THE BLIND—South Boston, March 23, 1891.—Dear Mr. Wade: I am making arrangements to receive Tommy and shall send for him soon. The amount required for his education will be about \$700. If you can manage to raise \$200 or \$500 towards this sum I think we can raise the rest. Helen's efforts have already secured \$120 and her success has made her very happy. Thanking you for your kind interest in this work, I am, sincerely yours, M. ANAGNOS. Mr. Wade pertinently suggests that "if after the little girl's success we dog men cannot raise \$300 I shall be disappointed." We have noted the fund in these columns because we think it should appeal to the sympathies and meet the support of even a wider circle of readers than those who are interested in our kennel pages. In addition to the money already acknowledged, we record the receipt of \$5 from "P. O. P.," New York. Subscriptions may be sent to the FOREST AND STREAM to be forwarded, or may be addressed to Helen Keller, Perkin's Institute for the Blind, Boston, Mass.

SNAP SHOTS.

IT is popularly supposed that the lion is the most courageous and powerful of the carnivora, or at least of the felidæ; but on the few recorded occasions of a battle-royal between the lion and the Bengal tiger, the lion has come off second best. One such combat occurred recently at the Calcutta Zoo between an African lioness and a tigress. They were exhibited in adjoining compartments of the same cage, and the door having been carelessly opened between the two compartments, the tigress rushed in and disposed of her rival in a fight which lasted about ten minutes. The great success which has attended the establishment of the German and Austrian Alpine Club suggests the desirability of getting up similar organizations in this country for climbing and exploring the less accessible peaks of the Rocky Mountains. The Alpine Club, established 1876, now numbers 22,586 members, and owns 113 huts of refuge, and at its last meeting voted \$5,000 marks (nearly \$9,000) for the construction of roads and huts. In this country we have at least as fine a field for exploration, and no want of adventurous spirits of the right temper, all that is needed is to divert their energies into the right channel. There is the Appalachian Club, but with our mountains and our population this is but one where there might well be a score,

The Sportsman Tourist.

HOW COMES THE SPRING?

WHO can tell how spring comes,
When the branches of brown turn red;
When the bluebird and robin fly northward;
When the brook bursts its icy bed;
When the earth, after sleeping all winter,
Is breathing the perfume of life,
And the heart-throbs of Nature quicken,
Like the pulses of heroes in strife?

Who can tell how spring comes,
When the winds forget to moan
And steal gently through the valley,
With an idle mono'one;
When snows melt in tears for winter;
When soft grows the blue of the skies,
And, over the marshy meadows,
The mists of evening arise?

Who can tell how spring comes,
Like the olive-bearing dove,
With its melody of gladness;
With its harmony of love?
Who can tell? Ask not the question,
But, if yesterday were dear,
Be thankful for a blessing
And say, "The spring is here."

SHOSHONE.

PETE'S GHOST.

[This is a continuation of "Shoshone's" trip to "Dixie." See "Southward Bound," in issue of March 26.]

STORM-BOUND! The fact that I am writing on brown wrapping paper indicates either that I am in a terribly impecunious condition or that I am out of reach of the luxuries and necessities of an effete civilization. The mountain peaks that loom up on three sides of us are veiled in clouds, and down the valley there is a white wall—dense, impenetrable. Even the pines are covered, and stand like snow giants bidding defiance to the elements. For two days and three nights the storm has raged, nor is there sign of intermission.

To get out of this ———, call it what you please, words of mine are inadequate to do justice to my feelings, we must cross one of three divides. On none of them is there less than three feet of snow. To the east we can cross the mountain, go down into Grass Valley and thence to the Colorado. Southward a lone trail of seventy miles leads to Dixie; while the road that goes west will take us to Cedar City.

O tempora! O mores! Was it for this we left home and fire, the daily paper and three square meals? Seventy-five miles from a railroad, twenty-five from daily mail, and heaven only knows how far from a good cigar. "Listen to my tale of woe." The principal building of the settlement is store, saloon, post office and hotel. About the fire, that sympathizes with despondent nature to such an extent that it positively refuses to blaze, sheepmen, hunters, tie choppers and prospectors gather and swap lies. I divide my time between a back number of the *Salt Lake Herald*, a well-worn copy of "Faust," that is always with me, and "The Book of Mormon," in Danish. Now and then, once or twice a day, a customer will come in, buy two bits' worth of this or that, pay for it in script and retire. Script is a wonderful thing. So far as I can make out, it is a kind of wampum, issued by storekeepers for grain and produce, and redeemed by the same storekeepers in merchandise at their own figures. If I had a bushel of the stuff that wet log would do something beside smoke.

There is one happy man in the settlement, and but one. He has come from the lower country and is engaged in the occupation commonly known as "sparkin'." He goes out directly after breakfast and comes in when the last man is snoring, so we are not cheered by the light of his countenance.

We talk about one thing or another. I learn most when I say nothing. Politics, religion, crops and hunting are discussed whenever the crowd tires of diagnosing and prognosing the weather. A majority of the assembly are saints. Paddy is not one of the elect and never hesitates to revile them. Last night one of the boys asked him what his religion was. "Begorra, I've got no religion. I'm a catholic," was the angry reply.

They say that these mountains are full of deer and mountain lions. One man says that a few years ago it was unusual to find more than eight or ten deer in a bunch, while now bands of thirty are not infrequently met with. This seems incredible, and yet I know it to be a fact. The Pah-vant range, west of the Upper Sevier River, is exceedingly rugged. The roads across the summit of the divide are forty miles apart and the mountain is seldom visited except for timber, and this is obtained near the settlements. The climate of these west mountains is mild. The warm valley is on one side, the warmer desert region on the other. A continuous chain of settlements along the Rio Virgin has driven game from its old winter quarters, and it takes this portion of Utah as the best camping ground that is left.

Ducks are abundant on the river, finding the waters more open and the feed better along the Upper Sevier than near its mouth. I was lucky enough to get a pair of teal on the way up, and they were a great relief after the bacon upon which we had been subsisting. We have seen plenty of deer, but as the law is supposed to be in force, we will not kill any until we get away from the settlements and actually need the meat.

Forty miles to the south, away up among the snows, is Panguich Lake. We intended to reach it before the storm and make a week's camp, but the fates interfered. Panguich Lake is frozen over, but it is a bonanza to men of the settlements who want cash. Last week 1,900 lbs. of trout were caught through the ice. These the fishermen sold at ten cents per pound, and the middlemen delivered the goods in Salt Lake city for eighteen cents a pound. At this rate the supply will soon be exhausted. I believe, in spite of all assertions to the contrary, that giant powder is used in this profitable business, and if I can ever prove it the offender will have a chance to pay a fine.

What? Amid the clouds of tobacco smoke there is a light. The old log is actually beginning to burn. The voices are hushed, and a veteran pioneer, who invariably

takes the lead in story-telling, a man who has spent forty years in the wilderness, begins a tale of adventure:

"About twenty-five years ago, before the sheep got so thick over in the East country that they drove out all the deer, I had a few cattle ranging in Grass Valley. At that time there was no settlement within fifty miles, and when we went in we had to pack grub enough to last for the season. For all the cattle I had I might have gone by myself, but a feller gets dogged lonesome when he don't see a human in three months, and there's no tellin' what might happen. So I took Pete Larsen for company. Pete was a good boy in them days, before drink got away with him. He took to prospectin', and the last I heard of him, he went west from Silver Reef out on to the desert, and took two quarts of whiskey, a pick and a shovel, and I always allowed he dug his own grave. That's neither here nor thar; Pete was ez good ez four of a kind on that trip.

"We went slow and lived high. There was plenty of trout in them days. The deer run in big bands, and it was no trick at all to get all the mountain sheep we wanted. The Indians were stayin' on the reservation and we had everything our own way. Fishin' and huntin' took up our time for a month, and when we got down to Otter Creek we made up our minds to go over to Fish Lake and make a steady camp. Fish Lake is one of the purtiest ponds you ever seen, and now it's a great place for campers. But then there was nothin' but the shiny water and the mountains comin' right down to it and the finest timber in the land.

"Game? well, I should say so—all kinds that a decent man would want to eat, and enough lions, bears, beavers and otters to make a trapper rich for life. We put the tent in a quakin' asp grove and built a bowery in front of it, where we ate and smoked and lived. The tent was our sleepin' room and pantry. The day after we struck the lake I was ridin' up a little side cañon and right across from me was a bunch of deer. They seen me, but was in no hurry to git out of range, so I pulled down on to what I tuk to be a barren doe—the best eatin' in the world. I hit her hard and druv her ahead of me almost to the camp. She had been hit low and quarterin', and every jump she made the insides kept comin' out of her and draggin' on the ground. I expected to see her drop every minute, but when she got within a hundred yards of the tent she bolted for Cove Cañon and ran a full half-mile ez tight ez if she'd never been touched. Then she fell dead in her tracks, and when I got to her she was purty nigh ez well dressed ez if I'd done the job myself.

"One afternoon Pete and I were out with our guns. For a wonder, we were on foot and never a thing did we see till we were almost back to the tent. Then I saw a couple of kittens in the trail. They were about a week old, as large as a two-months-old Newfoundland dog and the sassiest little devils you ever seen. Pete warn't no whar in sight, neither war the old lion, so I thought I'd catch one of 'em and pack it to camp. The little cusses couldn't run very fast, but how they did scratch. Finally I got one of 'em under my arm, with its feet in chancery, and started along. I don't know how I happened to be clean off my guard, but I hearn a growl and a spat behind me, and as I turned—well, I never got turned. I jest spun around and went down in a heap. Look thar, gentlemen."

He took off his coat, rolled up his shirt sleeve and showed three red streaks, looking as though the arm had been burned with a hot iron, that extended from shoulder to elbow.

"Thar's plenty more marks like that on my back and sides. I clean lost my head and didn't feel a bit of pain; jest had sense enough left to give myself up for a goner. Then I hearn a couple of shots. They sounded a long way off and the next thing I knowed was Pete draggin' me out from under the biggest tree lion that I ever laid my eyes on. He had been the other side of the brush patch and seen the brute spring, but he couldn't shoot for fear of puttin' daylight through me. Pete helped me back to camp, and mighty weak and sore I was for a month.

"The queerest part of the whole business was the way Pete tuk on. He said there was somethin' in that lion's eyes that reminded him of a human. He always was a superstitious cuss—that Pete. He said that if it hadn't been to save my life he'd never have shot her. I didn't take much stock in his feelings, but that night, after we'd turned in, we hearn the darndest moaning and cryin' up in the pines. I told Pete to get up and see what was the matter. He did want ter and he trembled like a leaf when he crawled out. It didn't take more'n a minute for him to be back.

"What is it?" says I.

"Bob," says he, 'there's a light way up on the mountain and there's somethin' white a movin' about it. This durned camp is ha'nted and I'll be blowed if I sleeps here another night.'

"Yer' daff," says I, 'that's nothin' but an owl, hootin' and hootin' and hootin'.'

"Owl yer eye! Bob, didn't you ever hear tell that the speerits of humans is sometimes found in dumb critters an' when you kill a critter that's that way it's jest as bad as murder. The critter dies but the speerit stays with you and follers you from land to land, and if that lion didn't have a human speerit in it I'm a liar.'

"After a while the howlin' stopped. I went to sleep, but Pete said that he didn't close his eyes. The next day I couldn't get out. Pete wouldn't leave me. He wouldn't leave camp either. He just hung round, acted solemn and downcast like, and got the water without sayin' a word. That night the cryin' and the screechin' was as bad as ever. Pete wouldn't go even to the tent door. He was purty nigh crazy, and looked mighty tough when daylight came. The third day I could get around the camp, and I told Pete that just as soon as I could travel we'd quit the kentry and go back to Otter Creek. By night I felt so much better that I made up my mind to go up into the pines the next day and find out for myself what all the racket was.

"The third night came and we turned in. After a while the same wailin' began again. I was purty weak, but I didn't take no stock in Pete's ghost. I went outside with my rifle and fired as close as I could for the sound. You'd oughter have heard the yell that follered. Then I shot again, and everything was still, except the echets that kept ringin' back and forth through the cañon.

"Thar, Pete, I've quieted yer speerit for you."

"God help you, Bob, thar's no tellin' what you've done," says he, and we both went to sleep.

"I hadn't strength enough to climb the hill the next day, and the next night we heard no noise. On the second day after we went up into the pines, and after huntin' around found an old squaw stiff and cold. She had been turned out by Santaquin's band to die, and while I didn't hit her, I reck on my shootin' scared her to death. Pete didn't say no more about speerits, and we camped by Fish Lake till snow flew."

Indian John arose with the quiet dignity characteristic of the Coon Creek U'es, wrapped his blanket about him and muttering, "Ugh! heap bad man," strode out into the tempest.

Somebody says that it is cold enough to freeze the flames as they come out of the chimney. A disconsolate drummer proposes a game of "high five" and gets no encouragement. He has already been set down as a tenderfoot. I beg a little pinch of villainous tobacco, wrap it up in a piece of brown paper, take a puff or two, light a candle and am gone.

About the roof the storm shrieks and rages. Through the chinks the snow has blown and sifted, and there are little drifts on the floor. Bah! this is an execrable country. What if the "speerits" of the slaughtered innocents that have fallen by my hand should surround my bunk? Wouldn't I have a sweet time?

SEASHONE.

MARYSVILLE, Utah, Jan. 10.

Natural History.

THE BIRDS OF KANSAS.*

ORNITHOLOGISTS have long known Col. N. S. Goss as an enthusiastic worker in this science, and it has been also that he has been engaged for many years in collecting material for a work on the birds of the State of Kansas. The work has recently been issued from the press, and a copy of it was received at this office the day before the death of its lamented author.

The title of this work, "History of the Birds of Kansas," explains just what the book is. It treats of 343 species and subspecies, and is illustrated by photographic engravings, made from the mounted birds of the "Goss Ornithological Collection." The work is not burdened with synonymy, as the name of the bird, as it appears in the A. O. U. Check List, alone being used. The ordinal, family and generic characters are quoted from Baird, Brewer and Ridgway, with such changes as are made necessary by more modern classification, since Col. Goss did not have access to collections sufficiently large to enable him to prepare original descriptions.

It is in the notes which follow the descriptions of the species, and which give the author's own observations, that we find the best and most entertainingly original work in the book. These notes, to accumulate which Col. Goss traveled over much of the North American continent, give us a great deal of information, which is no less interesting to the general reader than it is to the student of bird life. They show in almost every line the careful accurate observer and at the same time the ardent lover of nature. In his account of the downy woodpecker we find the following defense of that useful little bird in which a popular prejudice is combated. He says:

"Of all our woodpeckers none rid the apple trees of so many vermin as this, digging off the moss which the negligence of the proprietor has suffered to accumulate, and probing every crevice. In fact the orchard is his favorite resort in all seasons, and his industry is unequalled and almost incessant, which is more than can be said of any other species we have. In the fall he is particularly fond of boring the apple trees for insects, digging a circular hole through the bark ju't sufficient to admit his bill; after that a second, third, etc., in pretty regular horizontal circles around the body of the tree. These parallel circles of holes are often not more than an inch or an inch and a half apart, and sometimes so close together that I have covered eight or ten of them at once with a dollar. From nearly the surface of the ground up to the first fork, and sometimes far beyond it, the whole bark of many apple trees is perforated in this manner, so as to appear as if made by successive discharges of buckshot, and our little woodpecker, the subject of the present account, is the principal perpetrator of this supposed mischief—I say supposed; for so far from these perforations of the bark being ruinous, they are not only harmless, but, I have good reason to believe, really beneficial to the health and fertility of the tree. I have it to the philosophical biologist to account for this; but this fact I am confident of. In more than fifty orchards which I myself have carefully examined, those trees which were marked by the woodpecker (for some trees they never touch, perhaps because not penetrated by insects) were uniformly the most thriving, and seemingly the most productive. Many of these were upward of sixty years old, their trunks completely covered with holes, while their branches were broad, luxuriant and loaded with fruit. Of decayed trees, more than three-fourths were untouched by the woodpecker. Several intelligent farmers with whom I have conversed candidly acknowledged the truth of these observations, and with justice look upon these birds as beneficial; but the most common opinion is that they bore the trees to suck the sap, and so destroy its vegetation, though pine and other resinous trees, on the juice of which it is not pretended that they feed, are often found equally perforated. Were the sap of the tree their object, the saccharine juice of the birch, the sugar maple and several others would be much more inviting, because more sweet and nourishing than that of either pear or apple tree; but I have not observed one mark on the former for ten thousand that may be seen on the latter; besides, the early part of the spring is the season when the sap flows most abundantly, whereas it is only during the months of September, October and November that woodpeckers are seen so indefatigably engaged in orchards, probing every crack and crevice, boring through the bark, and, what is worth remarking, chiefly on the south and southwest sides of trees, for the eggs and larvæ deposited there by the countless swarms of summer insects. These, if suffered to remain, would prey upon the very vitals (if I may so express it) of the tree, and in the succeeding summer give birth to myriads more of their race, equally destructive."

*History of the Birds of Kansas. — By N. S. Goss. — Illustrating 320 Birds. — Topeka, Kansas: Geo. W. Crane & Co., Printers and Binders, 1891.

I can show another way of explaining the matter without necessity of claiming that this ugly charge is correct; but it will be very much for the advantage of sportsmen who come here to disprove it themselves by demanding that good and trusty wardens be placed in the woods

next summer. If they do not do this before next July, very few in this State will disbelieve the charge. If I seem to neglect the fact that people from outside the State have been fined before now, it is not because I have forgotten it; this is a broader matter. For the half of the year when non-residents are here and the laws are constantly violated, no attempt is made to enforce them, as we know and the Commissioner admits; for the half of the year when few except residents are in the State, they are at least partially enforced. The people here demanded that the laws should be uniformly and justly executed, and yet matters have grown worse every year. It now remains for the summer visitors to state openly whether they wish them enforced in summer, and to do it over their own names, so that we may know who they are. For every one who comes here is known by a larger circle than he is aware of. He sees very few of the residents, knows next to nothing about them, and thinks that they know as little of him. On the contrary, no one comes here whose whole cruise is not known by at least twenty residents, sometimes by hundreds. What he has seen done and said, what kind of a man he is and all the particulars concerning him, are told from one guide to another, are discussed in a dozen lumber camps during the winter, are told again on the drive in the spring, and then are carried to a score of different towns to be talked over by the inhabitants. Instead of being done in a corner, what he has done is better known than if it had been published in the daily papers. Next fall is to be the decisive time in game matters in this State, and it is necessary that those who speak should speak right and then should live up to their professions.

Of the charge of unconstitutionality of the laws I will not now speak, since as I understand it, it is directed rather against interpretations of the laws than against their explicit meaning as they are printed, and the present discussion is a consideration of matters affecting sportsmen from outside the State rather than local topics.

A subject of much interest to sportsmen, if they could hear it discussed as it is here, is the way game matters are managed in the Legislature. Abundant discontent prevails. It is claimed that petitions sent in by the people are disregarded; that officials are bought up, that log-rolling and wire-pulling are openly practiced, and worse practices are carried on behind slight screens, while the whole is controlled by railroads, hotels and politics. That these charges are unreasonable and exaggerated is not to be denied; that they are baseless is another matter. We have only too good reason to fear a substantial truth at the bottom of some of them; for, speaking plainheartedly, non-residents have too openly declared an interest in our game legislation for us not to take them at their word. Mr. J. F. Sprague, of Monson, Maine, writing in *FOREST AND STREAM* in October, 1893, says of the sportsmen who came here at that time:

Instead of these laws failing to secure the approval of this class, they have ever been their truest and most staunch and reliable friends, and in more than one instance these "professional men" from other States have inspired or originated the acts which are now the very laws so despised by "Olibos."

In the *FOREST AND STREAM* for Oct. 30, 1884, "Special" writes:

The request to change the beginning of the open season there [in Maine] to Sept. 1 will come from some of the leading sportsmen and friends of game protection in Massachusetts, Rhode Island and Connecticut. * * * The request for change will come from sportsmen who desire to add shooting to the fall fishing.

Rev. Newman Smythe in *Scribner's Magazine* for October, 1890, says:

Efforts have been repeatedly made by the Kineo Club to have the laws so modified that, while the wholesale slaughter of deer and moose may be prevented when they are helplessly yarded in the deep snows, some opportunity for legal shooting may be granted somewhat earlier than October; and a bill which was introduced into the last Legislature of Maine for this purpose, passed one branch of that body but was defeated in the other by some influence adverse to sportsmen. Gentlemen who take to the woods in summer generally denounce, and are quite ready to help expose indiscriminate and wasteful killing of fish or game; but as in the course of the season they bring considerable money into the State, they naturally think that some liberty might be granted them of feeding.

It is the same old story of crust-hunting, and the amount of money left; and we notice that the gentlemen neither wait for the law to be changed nor for open season to begin, so we fail to see what difference it makes.

Then we hear the other side from our representatives, how they were approached, how the lobby was too strong for them when some popular measure came up; of the bills that failed to pass, and the people who were there to get them through. One bill I remember, as reported by our own representative as long ago as there were pigeons in the State, tried to make it a State prison offense to fire a gun within 200 yds. of a pigeon bed owned by a certain game club from out the State. We have heard the boast of the man who declared that people outside the State could pass "any reasonable laws" in Maine. We have heard Mr. Stilwell say, when he was opposing an open September some years ago, that "the men and the means" were there to put the bill through. On the whole, we are "ower canny" to disbelieve those who say that our game laws are fearfully and wonderfully made.

We do not deny that many of the bills introduced and advocated by those outside the State, make good laws—better perhaps than we should have made for ourselves; but the fact that they did not originate here arouses suspicion of their import, and, to our minds, makes the moral obligation less. Even if it were all good and disinterested, we have had too much of it. If for ten years Maine people had besieged the New York Legislature with bills proposing this and that means of purifying the municipal affairs of New York city, and had concerned themselves in season and out of season in telling New York people what to do about it, much the same state of feeling would exist there toward us that exists here to-day toward those who have made our game laws for us; and however good the measures proposed might have been, they would hardly be called popular measures, nor the reform a popular reform.

How much has been done by those outside the State we cannot say; but if our present trout law was a native production it is the oddest bit of legislation with the oddest history of anything ever produced here. One thing I do know, for I was a child at the time and frequently saw the man most active in it, heard him talk on the subject and remember the particulars. The law forbidding the killing of moose for five years was proposed, drafted and principally carried through by a Massachusetts man, Mr. John M. Way, who published the first tourists' map of Moosehead Lake. It was a good law

and was very well supported, but was hardly a popular measure, and was not primarily intended to benefit the people, but to increase the number of moose available for sportsmen. Mr. Way saw the need of this. The previous winter he had stayed six weeks at Haymook Lake in the camp of Mr. Gardiner G. Grinnell, of New York, and Capt. Samuel Cole, of Greenville, trying to kill a moose illegally. To illustrate how the law was passed let me quote from a private letter written by a prominent game club man to Mr. Way, who showed it to my father: "Don't get up petitions, for that will stir up the opposition of the country members. Get the right men at Augusta fixed and rush it through, for it is hard to unmake a thing after it gets to be a law."

This is not the kind of legislation that does much good here, and friends of game protection will be doing a favor to themselves and us if they try to discourage it.

FANNIE PEARSON HARDY.

ERRATUM.—I notice that by a mistake in copying my last paper I wrote that the caribou horns were sold to the station master at Mattawamkeag, when I should have said at Kingman, which is the next town above.—F. P. HARDY.

LASSOING A BEAR.

VENTURA, Cal., March 25.—*Editor Forest and Stream:* The following is from the *Ventura Daily Free Press* of to-day's issue. I can vouch for its truthfulness, having known Ramon Ortega for sixteen years, his veracity being unquestioned, and to-day, having heard the story from his own lips and examined the trophy. He is renowned as a *vaguero* and bear hunter. This is the story:

"Ramon Ortega lassoed a big black bear yesterday and choked it to death. He is the most noted bear hunter in southern California and several days ago when he began to lose some of his stock on his ranch at the head of the Sespe, some 50 miles from Ventura, he started out to hunt for the thief. Early yesterday morning he discovered him in the shape of the bear, in a little narrow cañon, and although without firearms, so soon as he caught sight of the monster he spurred up his horse and gave chase. It was a short race, for as soon as distance would permit his lasso went circling about the head of the bear and caught him about the neck. A few dexterous turns of the horse soon choked the life out of the animal, and Ortega, as a trophy, cut off one of his paws and brought it to town with him. It measured seven inches across and eleven inches in length. He tells as a fact that in 1864 he and his brother killed 56 bears in one month about the regions where Bard-dale, Ventura county, is now laid out, and they were all killed the same way as the one yesterday."

Six years ago, while crossing the trail with his ten year old son, to this same ranch, he came face to face with a she grizzly and her two nearly grown cubs. He was armed with a Winchester, but had only five cartridges at hand. He succeeded in killing the three bears with the five balls, the last of which was sent through the enraged mother's heart as she reared to embrace Ortega's son, who had been dismounted by his frightened horse.

A. J. COMSTOCK, M.D.

WHY I GO HUNTING.

Editor Forest and Stream:

Some weeks ago your Chicago correspondent gave some good advice to overworked professional and business men. I want to add a few words on the subject, believing that my own experience is that of many professional men.

Some twelve years ago I made the discovery that too much office work was using me up. I took too much time to decide questions of judgment and worried too much over the decisions after they were made; found all my work hard work; lost my patience at trivial things; was annoyed at trifles; would not eat or sleep well, and was in a bad way generally. As I came of a long-lived family, I did not propose to give up without a struggle even if the doctors did tell me I had nervous dyspepsia.

I had a fairly good history of my family for a couple of hundred years, and in looking it over made the discovery that close confinement in an office did not "run in the family." I now believe that in a new country like ours we have no type of office men answering to the types of miners, toy makers, cobblers and hundreds of others in the old countries.

At this time a friend suggested hunting, since, living in a small village, although having my office in a city, I could readily find something to hunt. I had been fond of hunting in my youth, but had never done much of it, and none for years. My friend went home with me one afternoon, and I got out my old muzzleloader and tried a few shots at chips thrown in the air. The result satisfied me that if birds were plentiful enough and got up close enough to me they would not all get away; and I deliberately took up hunting as a means of improving my health, and I have stuck to it ever since and mean to stick to it so long as I can carry a gun.

The first fall I went to Iowa after chickens, and found I could do quite well at them. I made no profession of being a crack shot, and so was not annoyed in the least at misses. Never losing my temper I found a great advantage, and being a very industrious hunter I made as good bags as much better shots.

I am satisfied that there are many over-worked men who could derive much benefit from hunting, and would too if they only knew how easy it was to take it up even quite late in life. For the last six seasons I have spent a good part of November in deer hunting. I killed six deer last November, and stopped every deer I should have stopped. The year before I missed a running buck at 50 yds., but killed a doe the next day with as easy a conscience as though some other fellow had missed the buck. Our deer club used to hunt with dogs, and your correspondents may say what they please about still-hunting, but I would rather go out day after day and hear the dogs and hear some other member of the party shoot a deer or miss him, and never see one myself, than to pot-hunt a dozen a day still-hunting. I have killed but two standing deer, and never want to kill another. We never killed deer out of season, as is done all around us by the still-hunters; never killed a deer in the water, and have more deer around our club house than six years ago, and expect to have fine shooting for years to come if we can keep off the still-hunters. We own thousands of acres of land, poison the wolves, put out salt and plant turnips for the deer, and do everything in our power to keep up the

supply of deer. I killed one deer last fall at 200 yds. and one at 235 yds., and felt better over it than I would to go into a farm yard and kill a dozen—beg pardon—I mean, kill a dozen standing deer, as they were both on the dead run over logs and stumps and through brush.

I have added fishing to my list of desirable sports, not because I can get many days actual fishing, but because one can spend so much time getting ready before the season opens and so much time lying about it afterward.

I throw a fly just as I shoot. Plenty of men can beat me at both, but what of that? I can get as much fun out of a few days in the woods, along a trout stream, or on the prairie, as any one. I claim that I can do more work in shorter time and do it better than before I took up hunting and fishing, and there are thousands of over-worked business and professional men who could say the same if they would only give hunting and fishing a trial.

What business has a man whose father was a blacksmith and grandfather a farmer, and great-grandfather a carpenter, perhaps, to think that he can sit at an office desk day after day and not suffer for his foolishness sooner or later? The most extravagant thing a man can do is to work himself sick; the next worst thing is to think he can do good work when out of condition. Plead with your readers to treat themselves at least as well as they do their horses.

DUDLEY.

WILDFOWL IN OREGON.—IV.

IT is said that all true sportsmen abhor a pot-hunter, and that no gentleman will pot a duck. But they all do it. I have done it myself. I have seen the best of them sneaking on to decoys, and have had the pleasure of protesting against some of the most blatant taking a shot at mine. A short time ago, in one of my rambles I came suddenly upon a fine flock of mallards feeding in a little secluded pond near Columbia Slough. Fortunately I was not discovered, and quietly drew back where I could study the situation. My imagination came to my aid and I could see the ducks swimming gracefully around, feeding leisurely, entirely unconscious of my presence and the impending danger. I observed that by going around to the left I could come up behind a little clump of willows within easy range of the game. Here was a pudding and no mistake. With the stealthy tread of a cat I approached my unsuspecting victims. I even got down and crawled. I was nearly to the willows and cautiously peered through them to make sure. The first thing that met my view was a dog sitting there under a leaning willow on his haunches demurely looking out over the pond, and the next thing I saw was a man quietly lighting his pipe. To say that I sneaked back and away, clear away from that pond is putting it modestly; and friend H. does not know to this day how near I came to potting his stool of mallard decoys.

The open season for shooting water fowl in Oregon begins Sept. 1 and closes May 1, while in Washington it commences Aug. 15 and closes April 1. Washington has the best law. Mallard and summer or wood ducks are, as a rule, paired and nesting in April and often in March, while the wood duck shooting must be had, if at all, about the last of August. It is a burning shame and a sin to shoot ducks that are paired and nesting, and every true sportsman will refrain from firing at them, law or no law. The laws of this State must be materially changed and then enforced, and the various rod and gun clubs are disposed to urge the matter at the coming session of the Legislature. We hope that some of the Eastern sportsmen will lend us the aid of their influence, and I can assure them that their efforts will be appreciated by their brethren of the Northwest. I have received communications from the secretaries of several local clubs relative to the matter, notably one from Secretary M. E. Pogue, of the Salem Club, wherein he advocates the enactment of a law prohibiting the sale of all kinds of game, and restraining sawmill men from running their sawdust into the streams. Trout are subjected to more grievous abuses than are waterfowl, for the reason that they are more helpless; but both need the strong hand of the law to save them from ultimate annihilation. Ours is yet one of the best States in the Union for wildfowl and trout; but how long will it remain so unless the fowl can have decent treatment and the trout can have pure, sweet water in which to live and multiply.

I will venture the prediction that, unless some prompt and energetic action is taken by those in authority the boy hunters and anglers of to-day will live to see the time when they must fill their game bags with crows and jays, and their creels with chubs and suckers.

And now my dear *FOREST AND STREAM*, in closing these careless letters, I hope that, even if productive of no other good, they will have given Eastern sportsmen an appetite for a more thorough and perfect knowledge of this, to most of them, *terra incognita*.

S. H. GREENE.

PORTLAND, Ore.

CREASED.

I SUPPOSE that every boy who has read much hunting or Indian literature is familiar with the marvellous shooting of the long-haired scout of fiction who, whenever he wanted a fresh horse, used to go out on the prairie and crease an animal out of the herds of wild horses, which were always so abundant in the books—and nowhere else. I myself, in the course of a somewhat long experience of wild Western life, never saw any of this "creasing" done, although I once knew of its being attempted by a somewhat loud mouthed and widely-advertised character, who was once a resident of this State and is now a showman. This attempt was not successful. The man shot a little too low and broke the neck of a very handsome wild stallion.

Instances of accidental creasing of game are not very uncommon, however, and I recall one case where this helped out a small party of very hungry men.

There were half a dozen of us, white men and Indians, who had for some days been following the trail of a small war party of Sioux who had stolen a lot of our horses. Partly by good luck and partly by the instinct of our Indian allies, we made a cut off on the Sioux, and just before light on the morning of the fifth day we overtook them, killed four, and recovered all the horses. We lost no men, though we had two wounded.

When we had started on the trail of the Sioux we had taken what food we could lay our hands on, but this was not very much, because we had expected to be gone only three or four days. The consequence was that for the

last two days we had had nothing to eat and we were getting pretty hungry. There had been one or two chances, on the fourth day of our ride, to kill antelope, but as we did not know how near we were to the enemy we had not dared to fire a gun.

When we made the attack every one hoped, I think, that we would capture some food, but either the enemy had been as short of food as we were or else the ones who escaped had carried off what dried meat they may have had, for there was not a morsel of food in the camp.

It was pretty evident that we had a choice of three courses: (1) to continue hungry, (2) to kill and eat a horse, or (3) to kill some game.

We started back for the camp, determined to starve a little longer before trying horse flesh. Jack and I rode ahead, the loose horses driven by an Indian followed us, and the rest of the party followed the horses. We had not gone more than three or four miles when, as Jack and I rose a little ridge and looked across a flat, we saw, standing on a little ridge on the other side, what we took to be a cow elk. Only our heads had shown and we ducked down and dismounted at once, while the men behind all stopped, understanding by our actions that we had seen game. Jack was a good shot and I asked him to kill the elk, for I did not want to take the responsibility of the shot. We crawled up to the ridge and looked over and saw the cow standing there broadside to us and quite unconscious of our proximity. She seemed to be about 200 yds. distant, and I said so to Jack. He answered, "It don't look nearly so far to me, by the ground, and yet she looks small."

Jack fired and the elk gave a jump and turned around so as to face us. She gave no sign of being hit, and we had not heard nor seen the ball strike anywhere. I said to Jack, "You must have over-shot. Try her a little lower." He shot again and the elk went down as if it had been struck by lightning. We jumped on our horses and rode over as fast as we could, but before we got to her we could see that we had been badly fooled. The animal, in the first place, was less than 100 yds. from where we had shot; in the second, she was a yearling and not a cow. Finally, she was not killed, but only creased, the ball having cut a little line between the ears from which a drop or two of blood was flowing. I guessed what the state of the case was before I got to her, and jumped off my horse and on to her head, while I cut her throat. She began to struggle almost as soon as the knife touched her, but we held her head down until she was dead.

A little further on we came to a stream where there were some willows growing, and there we had a feast, and disposed of about one-half of the meat of the animal. The remainder kept us going until we got back to the camp, and we never got a shot at anything else during the whole of that march.

CHADRON, Neb.

OLD MAN.

SIERRA NEVADA NOTES.

THE past winter has been a splendid one for game. By this I mean for the game itself, not for the hunters of game. There were early September rains that started herbage, and thereafter, at wide intervals, came refreshing showers that kept things going until the latter part of February, when heavy rains set in. The snows at no time came lower down than at an altitude of 3,000 ft. This gave the deer and mountain quail a chance to pass the winter under the most favorable circumstances, and it is to be hoped, will help them to recuperate from the losses caused by our disastrous season of last year.

I reported great losses last year in both kinds of game, but the half was not told. Other observers, as well as myself, aver that over 75 per cent. of the mountain quail perished in last winter's unprecedented snows in this section of the Sierra Nevada. The deer also suffered terribly, but just to what extent is hard to determine—probably 50 per cent. Twenty-five carcasses were found last spring, after the snows had melted, on less than half an acre of ground near Michigan Bluff, in this county, while finds of from one to a dozen carcasses were reported from all over this and adjoining counties.

A bill is now pending before the State Legislature, with a fair prospect of passing, making it unlawful to kill any male deer, antelope, mountain sheep or elk, for the next six years. Should this pass, and 'tis a consummation devoutly to be wished, it will give our harassed and rapidly disappearing game a chance to replenish our mountains. Our laws already protect the females of these animals, but the skin butchers play all alike when out on their nefarious trips after buckskin.

Last year I recorded in *FOREST AND STREAM* the unprecedented numbers of Oregon robins, Lewis woodpeckers, blue-fronted jays, common robins, etc. that the severe winter had driven down into this section of the State. This year I have noted none of these birds excepting the common robin, and that is always with us in winter.

The berries of the toyon (*Heteromeles arbutifolia*) furnish the favorite winter food of these birds, and as it grows in great abundance at this altitude (500 to 2,000 ft.) the robins are very plentiful with us throughout the winter.

I also noted their great destruction of the olive crop last year, and of the consequent war of extermination that was waged against them. This year the crop was gathered without loss. Another such a year as last year will probably not occur again for two or three decades—perhaps never—and the olive crop and the birds' lives will thus be spared.

An attack was made upon our State Fish Commission in the present Legislature, but fortunately failed. It is true that the Commissioners have not done much during the past four years, but it has been due, to a great extent, to the niggardly appropriation granted them, and not to want of effort. It is true that the late Commission was appointed through political influence, more than for any special fitness for their position, but I believe they tried to do their duty according to their lights. More will be expected of the new Commission just appointed by Governor Markham, with Joseph D. Redding at its head. If they had a decent appropriation to work with, instead of the inadequate sum now granted, they could do a splendid work. But even as it is, I am satisfied that these new appointees will accomplish great good. Mr. Redding is a man of ability, and has served in the same position before, and knows all the needs of the State. His co-commissioners I do not know, but trust they may be as zealous as he is. If they prove to be so, the nefa-

rious netting in our great bays and rivers by the Chinese fishermen will be checked. These people use finemeshed seines that not even a water bug could crawl through, and destroy all the young fry in the waters. Verily, "all is fish that comes to their nets." More anon.

AREFAR.

AUBURN, California, March 18.

ST. LOUIS NOTES.

ST. LOUIS, April 5.—The King's Lake Club had its annual election last week, with the result that the officers remain the same as last year.

Our State Legislature has adjourned, and the Hawkins game bill died in the Senate, to the great regret of all sportsmen.

Last week at Compton Avenue Park there was a live bird shooting match between J. E. Hagerty, of this city, and Harvey McMurchy, of New York. Hagerty was badly beaten, the score being 89 to 96 for the victor.

The State Assembly was liberal to our State Fish Commission, having appropriated \$9,000 for its maintenance. In connection with the U. S. station at Neosho, Missouri is pretty well provided for in the way of fishculture.

Two swivel gun fiends were arrested and convicted last week of shooting ducks at our neighboring Illinois town of Collinsville. One was fined \$25 and costs and the other \$10 and costs.

The Ballard Rifle Team has reorganized and will open a 200 yds. range.

The Western Coursing Association has been incorporated with a capital stock of \$5,000. Object, to give coursing exhibitions with hares and greyhounds. April 11 and 12 are the dates for the first show.

A farmer's club over in Illinois is again chasing out sportsmen from St. Louis—rather we should say hoodlums who call themselves sportsmen. Every Sunday there is an outpouring of a rabble with guns which bring disgrace upon all decent hunters.

A few days ago I ran across Mr. C. Morrison, of Waterloo, Ill., and he unfolded to me a tale of fishculture and sport which might well be imitated. In conjunction with four other enthusiasts a small lake of only four acres was purchased some years ago and stocked with croppie and bass. Now the little body of water contains plenty of game fish and affords most excellent fly-fishing during the whole season. Last year Mr. Morrison says at least 500 lbs. of fish were taken from the lake by the fly. The club of five members is called the Island Lake Shooting and Fishing Club. Dr. J. S. Sennett is president and W. H. Horine secretary.

Governor Francis has signed the Coots fishing bill, and it is now a law.

ABERDEEN.

"CLOSE SEASON" SCREED ABOUT GUNS

WHAT would sportsmen do during the close season were it not for the weekly visits of the *FOREST AND STREAM*; which comes freighted with so many things of interest. The wonder is how it is possible to get together weekly such an amount of interesting matter from all parts of our country—"and the rest of mankind"—as is to be found in each number. I have read with growing interest every issue of the *FOREST AND STREAM* since its absorption of the *Rod and Gun*, and honestly believe that I have gained more reliable information in geography, natural history, etc., than from all the various encyclopedias. In addition, we have scientific gun and powder tests, penetration and speed of shot and bullet, articles on guns, and gun implements—sights, chokebores, hammerless, long and short barrels, large and small bore, light and heavy weights, etc.

Some of our modern gun modifications are of decided merit, some of doubtful utility, and some worse than useless! Among the latter is placed the full choke, which, in close shooting, so mangles its victim as to render them disgusting to look at or handle, and unfitting for the table or the taxidermist. But fortunately this evil is correcting itself, and choking is fast losing favor.

Another is the "pistol grip." Can any one name a single point in favor of that unsightly lump which mars the recent breechloader?

Another is the recent and at present fashionable hammerless—the most graceless and ill-looking implement a sportsman ever took aside; reminding one more of black-snakes or oxen without horns than a thing for enjoyment. It may shoot as well and be as safe as its predecessor, but what a thing to look at! For gracefulness and beauty of proportion the old muzzleloading flint-lock fowling piece, as manufactured by Manton and other artists, has never been equalled.

Many and different kinds of sights for shotguns are being advertised. To this there is no great objection, as they neither hinder nor help in wing-shooting. Who thinks of the sights on his gun when a grouse or quail springs up before him? Although I have carried a fowling piece for more than sixty years, I never think of the sights on my gun unless shooting at a target from a stationary rest.

The real cause of so many misses in wing-shooting with young sportsmen—and older ones, too, for that matter—is not for want of any particular gun sight, but for want of a suitable drop of the breech. This may be too much or too little. The correct thing is to have it just right, and this only practice can determine, and each one for himself. Mr. Hough gave some excellent hints in this matter some months since. No general rule given in inches and fractions can be relied on for different persons. The following is believed to give the best satisfaction to all shooters—if it is original:

In testing a gun (for purchase) place heel plate firmly against the shoulder, with the muzzle drooping, raise the gun slowly, and if the butt of the barrels are first seen set it aside, it is not the gun you need; in practice you will generally miss your bird by under-shooting, the drop is too great. If in the next trial the muzzle of the barrels first come in sight, don't buy it, the drop is too little and you will over-shoot. Keep on trying until you find such a gun that when it is raised to a level the eye glances along the entire length of the barrels at the first sight without your ducking or turning the head. That is the gun you want, and one that will satisfy you in practice, whether it be stub and twist, laminated or Damascus, or a piece of gas pipe. Many are the ducks I have lost from having too straight a breech.

Among the hopeful signs is the growing feeling that all spring shooting should be abandoned in practice, and strictly prohibited by law and enforced by adequate

penalty. The sooner the better. Another evidence of healthy growth with sportsmen is that it is not needful to carry 8 or 12 lbs. of gun metal when out for a day's sport. There may be some excuse for a market-shooter—when out for ducks or geese—carrying an 8 or 10 lbs. gun. But any sportsman—whose object is sport and not slaughter—who cannot make a satisfactory bag of ducks or other game with a 7 lbs. gun, 12-gauge, had better confine himself to rod, reel and line.

POUGHKEEPSIE, N. Y.

CLEANING GUNS.

WORCESTER, Mass.—*Editor Forest and Stream:* I have noticed recipes in the *FOREST AND STREAM* concerning the cleaning of guns, but I have never heard of a method that could surpass the one that I will endeavor to explain.

The trouble with most methods is that it takes too long to clean a gun to obtain a favorable result. By my method I will guarantee that any sportsman can clean his gun in three minutes, so that when the gun is put away and not looked at for six months the barrels will be as bright as a mirror.

Remove the barrels. Hold them over a pail or sink and pour enough hot water through the barrels to thoroughly wash them out. Then running a woolen cloth through a few times will remove the remaining dust. Wipe dry the exterior of the barrels. Take another woolen cloth, add a few drops of watchmaker's oil (the best preparation known, as it contains neither salt nor acids), draw through the barrels a few times, wipe outside with same rag. The locks can be oiled with the same kind of oil. For the stocks boiled linseed oil is excellent.

Where not obtainable watchmaker's oil may be made as follows: Take a small bottle and fill with pure olive oil. To this add a small strip of clear lead. Cork and place in a window where the sun's rays will shine upon it. Let it remain until a curdy substance settles to the bottom (about a week's time) or the oil is colorless. Then carefully separate the pure oil from the impurities which settle in the bottle.

WILLIAM BROWN.

Editor Forest and Stream:

Your correspondent inquires in regard to proportion of alcohol and sperm oil I use, referred to in a recent item, in relation to cleaning guns.

I use about half and half. The compound is not chemical, only mechanical and requires shaking when used. I might have added to that item, the oiling sponge spoken of is fastened to a metallic tool, such as usually accompanies a wiping rod, screwing into the end of the rod if desired. By sprinkling a little powdered emery upon the oiled sponge it makes a fine tool to remove rust from the inside of shot barrels, although I would not recommend the free use of emery except in case of necessity, on account of its great cutting power. I prefer to avoid the rust by keeping the gun clean, as recommended. H. L.

A PRESIDENTIAL PROCLAMATION.

ON Saturday, April 4, the President issued the following proclamation. Its effect is to withdraw from settlement or occupancy about 1,500 square miles of territory on the south and east of the Yellowstone Park, which it has been hoped might be added to that reservation. It is now in order for the friends of Park protection to shout Hurrah!

By the President of the United States of America:

A PROCLAMATION.

Whereas it is provided by section 24 of an act approved March 3, 1891, entitled an act to repeal timber culture laws, and for other purposes; That the President of the United States may, from time to time, set apart and reserve, in any State or Territory having public land bearing forests, any part of the public lands wholly or in part covered either with timber or undergrowth, whether of commercial value or only as public reservations, and the President shall, by public proclamation, declare the establishment of such reservations and limits thereof.

Now, therefore, I, Benjamin Harrison, President of the United States, by virtue of the power in me vested, do hereby make known and proclaim that there has been, and is hereby reserved from entry or settlement and set apart for a public forest reservation all that tract of land, situate in the State of Wyoming, contained within the following-described boundaries:

"Beginning at a point on the parallel of 44deg., 50min., where said parallel is intersected by the meridian of 110deg. west longitude, thence due east along said parallel to the meridian of 109deg. and 30min. west longitude; thence due south along the said meridian to the forty-fourth parallel of north latitude; thence due west along the said parallel to its point of intersection with the west boundary of the State of Wyoming; thence due north along said boundary line to its intersection with the south boundary of the Yellowstone National Park."

Warning is hereby expressly given to all persons not to enter or make any settlement upon the tract of land reserved by this proclamation.

In witness whereof I hereunto set my hand and caused the seal of the United States to be affixed. Done at the city of Washington this 30th day of March, in the year of our Lord one thousand eight hundred and ninety-one, and of the independence of the United States, the one hundred and fiftieth.

BENJAMIN HARRISON.

By the President:

JAMES G. BLAINE, Secretary of State.

A RELIC OF ANCIENT DAYS may be seen in the window of C. Louis' gun shop. It is an old musket, originally flint lock, but now altered to percussion, brass mounted, and having a 62-in. barrel, of between 10 and 11-gauge. The breech is stamped in three places, one design being a large crown, the others smaller crowns having under them the letters G and V respectively. Save a little outside corrosion, the piece is in very good condition, is not as heavy as its great length would lead one to expect, and is well balanced. The sportsmen who are striving to create the best "all around" gun might get some points from an inspection of this old veteran. It can carry several handfuls of small shot for snipe, etc., enough slugs and buckshot for deer or bear, while its great length suggests a feature hitherto overlooked by enthusiasts in the evolution of the "all around" gun, and that is its adaptability as a fish pole when game is shy—a most desirable improvement. The weapon was brought in for some repairs by a farmer, who stated that it was given him by his grandfather. It is evidently very old, but still in active service.—*Ogdensburg (N. Y.) Journal.*

CHICAGO AND THE WEST.

SANDUSKY, Ohio, April 8.—In a hurried business trip in this hurrying day and age of the world much of the fact and incident of interest to sportsmen comes in that shape called in the newspaper counting room "too late to classify." It would be hard for me to make a story out of the past week's shiftings which should fit any one department very well, but still it would go hard if one couldn't find some sort of news along the lower edge of the Great Lakes, in a country qualified for a wide range of field and water sports. For instance, there is Detroit. That thrifty city is certainly favored by Diana and Neptune alike, although authorities do say, she doesn't recognize her mercies fully, and isn't a red-hot sporting town. At least, that is what the dealers say, and the late suspension of the single retail sporting goods house of any consequence would seem to warrant it. In the past, the spring trap tournament at Detroit was wont to be one of the finest. This spring, as reported fully elsewhere, the shoot was only a conservative success. May be Detroit is conservative. If so, she must follow the fate of the conservative, time through and the world over, and lead only in decay and death. From a fate so sad may she long be spared, for a more beautiful city, or one more beautifully situated, it would be difficult to find.

Doubtless by this time the duck shooting has assumed big proportions on the flats above Detroit and on the river below town. The most earnest efforts were making in the Legislature of Michigan this winter to abolish spring shooting, and let us hope that ultimately this effort will reach success. The better of the ducking clubs of that region do not shoot in the spring now. There was considerable shooting on the Flats last week, and as noted earlier, quite a flight of deep-water ducks was on. Snipe had not yet made their appearance, and snow lay on the ground, openly and unabashed, though the days were calendared for spring.

The coming season will be a great one in Detroit yachting circles. The yachting industry in the West has never been fully chronicled, exploited or apparently understood. Some authorities say that the yachtsmen of the Lakes will talk, but won't yacht. I do not believe this, nor do I believe any one would think so who was really familiar with the fresh-water seas. Chicago, it is true, has no yachting, and probably never will have, but Detroit, with her pretty inclosed and less dangerous waters, supports quite a fleet. The Michigan and the Detroit yacht clubs number over 500 members and own over 50 sailers of all classes. The summer races are good events. This summer they will be better than ever. The starting line runs from Belle Isle to the Park House opposite, and the big river on a racing day has a very nautical look. A great rivalry exists between the two clubs above named.

The Detroit Boat Works lie just below the anchoring ground of the yachts. I went in there and saw some things I never saw before. This firm is building a submarine boat for some Chicago fiend with torpedo on his brain. The hull looks like a turtle set up edgewise. I have never seen on the marshes around Chicago any of the monitor or sneak-model boats which are in such general use about Detroit, or any of the canvas-lined double-enders for fishing use which this firm makes; so perhaps Chicago hasn't exactly all the ideas in the world after all.

There are numbers of finely-bred hunting dogs in Detroit, as we all know, but much as I love a setter, I believe I would trade all the Detroit cracks for the big white Russian poodle Bob, which the trap-shooters of the late tournament will remember so well. Bob's owner had him out at the grounds. A more remarkable case of animal intelligence than that of this dog was probably never seen. He is descended of performing stock, and though not a circus dog himself, he outclasses any trained dog I ever saw. The remarkable feature about his performance, if so it may be called, is that he does not act by rule, rotation or routine, but never gets puzzled or tired or confused. Bob apparently understands human speech. This is an old and common saying, but one which will rise to the lips of any who may see him. There is another old saying, that such and such a dog could "do anything but talk." Well, Bob can talk, distinctly and unmistakably. True, his vocabulary is limited, consisting of only two words; but whenever his owner says to him, "Bob, can't you say 'Oh, no?'" Bob at once remarks in a hoarse, but distinct whisper, "O-o-o, no-o-o!" The poor fellow would unquestionably like to talk, and to this extent he unquestionably does. It sounds uncanny.

Coming down from Detroit to Toledo I saw eleven meadow larks, a pair of turtle doves and one sparrow hawk. The road ran along the lake shore for a distance, and it seemed remarkable how many marshes, dull creeks and lagoons back from the lake there were all through that region. We must have passed close to the grounds of the famous Toledo Ducking Club, whose privileges are so valuable that a share of the stock is worth \$3,500 to-day. There were no birds visible working over the marshes, but the country seemed naturally a great one for waterfowl. What regret rises in one's mind when he thinks of the magnificent past and the possible future of this whole country in sporting matters. The waste, the greed, the butchery of the rabble of half-breeds or no breeds who make most of the shooting population of what is now called America!

Toledo is something of a yachting point also. I am told there are forty boats there under the flag of Commodore Ketcham, and some of them flyers. Will the commodore detail a clerk to tell FOREST AND STREAM all about the Toledo fleet?

From Toledo to Sandusky. Sandusky-on-the-Bay. Sandusky, which might have been Cleveland, but wasn't and never can be now. Sandusky, the biggest fresh-water fish market in the United States, they say, and certainly the biggest, quietest and comfortablest dormitory in the world. It is too early in the season for Sandusky yet. In the summer months it is said to be lively here. Of course, everybody knows that Sandusky is the entry port for the bass reel fishing of the islands, Pelee Island club traffic, the W. C. A. canoe meet at Ballast Island, and all the motley summer travel of the Put-in-Bay, Peninsula and Cedar Point resorts. Excursions, and not exertions, are what keeps Sandusky alive. A quaint, quiet and very pretty place is Sandusky, and sometime one of our American novelists will find a new and pleasant field here for a story. Quite a place, too, naturally, for field sports, as remains to be investigated

and chronicled by an enterprising journal of the field, *vide* FOREST AND STREAM. For instance, there are the trout clubs of Castalia Stream, only six miles or so from here, which certainly deserve a good and thorough study and a careful story of that. I remember how surprised and delighted I was seven years ago, when I discovered trout in the Castalia Stream. Let no man dispute it, I was discoverer as much as though I had seen the first trout that ever swam there. It was in the dead of winter, and a cold one, too, but as I passed over the bridge below the never-freezing pool, I saw the dart of a fish which I knew must be a trout, though I had then no idea that there was a trout in any Ohio stream. Excited, I told my news, and learned the history, or part of the history, of the Castalia Stream. It was part of my mission here to get a good and perfect history of this singular little stream and the clubs which own it now. To do this I found it necessary to go on to Cleveland. So, still skirting the shore of pretty Lake Erie, and crossing a lot more of lovely duck marshes, I ran up to Cleveland.

I shall not soon forget my few days' stop at Cleveland, for never so clearly in my life before did I realize the actual truth of the common saying about the brotherhood, the freemasonry of sportsmen and of sportsmanship. I cannot call Cleveland less than delightful, nor any man there born of any but blood royal of the crown.

In view of my visit to Cleveland Mr. Gerould, of Spaulding's Chicago house, had furnished me with a letter to Mr. C. W. Burrows at Cleveland. Mr. Burrows I found eager to assist in the hunt for bed rock facts about the Castalia clubs. He stopped writing and set the telephone into a serious tinnabulation, calling up members of the two different clubs. Mr. Harry Brown was absent that day, fishing on that very stream. Mr. Ingersoll was expected back that day from a similar trip. Mr. Scott Robinson was sick. Mr. Clark T. Hasbrouck was absent. So on through a great list of sick or absent. At last Mr. Burrows took up his hat. "Come with me," he said. We visited Judge Ranney's office, but the fishing member of the firm was absent. We met a dozen men on the street, and got a dozen futile directions to members of the clubs. Mr. Rollin White we almost caught, up at the White sewing machine offices, but he eluded us. Then we went to the Clerk of the Supreme Court, to the Lord High Custodian of the Cuspudore, and a lot others. Finally we went to the Mayor's office. Here is where we ought to have gone in the first place, because here dwells that veteran and most amiable sportsman, Hon. George W. Gardner, Commodore of commodores, known by every one in Cleveland, known and beloved of every yachtsman on the Lakes, and first in the hearts of all his canoeing countrymen, from Ballast Island to Chicago, anyway. All readers of the fine-print end of FOREST AND STREAM will remember Mr. Gardner's presence and address at the banquet of the W. C. A. at Chicago last January.

"So you are of the FOREST AND STREAM family, are you?" said Mayor Gardner—or perhaps I ought to call him by his first and highest title, and speak of him as Commodore Gardner. "Well, I am glad to see you," Mr. Burrows then explained our errand.

"You want to call on Mr. George J. Johnson if you want anything about the Upper Club of Castalia," said Mayor Gardner, "and for the Lower Club you would better see Mr. Lee McBride. Either of these men will tell you all you want to know. They are both in town, and neither of them is ever sick, so you are all right there. Now come here and let me show you some of our boats." And he brought us to where the pictures of the old Marietta and of the more recent Wasp hung upon the wall with others, including Mr. Ketcham's Toledo yacht, the Speranza, and a print showing the Puritan-Genesta race.

"Our yacht fleet here," said Mayor Gardner, "is a large one, and one whose success deserves special comment. We are not favored here by nature as a yachting town, as Detroit or Sandusky, for instance, for our shores here are very bluff and rude, and Lake Erie in the open is the most dangerous of all the Great Lakes. For this reason I believe our sailors are the most daring and adventurous of any on the Lakes. They stand out in almost any weather. We have little 16 and 20 ft. cutters here which go out when it alarms even the old Lake captains to look at them. I must show you some of our boats. You see this water-color here?" pointing to a small canvas on the wall, "this is a view of the shipping in the Old River Bed, as it is called, and was presented to me by the Cleveland Art Club. You must come up to-morrow, say at 2 o'clock in the afternoon, and we will make a trip among the shipping. Do you know that within the last two years Cleveland has built more tonnage than all the ship-building towns on the whole Atlantic coast? Well, that is a fact. Another thing, we are building a yacht here now which for elegance and for truly modern equipment will surpass anything now on the Eastern coast. Do me the favor to call on Mr. Coffinberry, the president of the Cleveland Ship Building Co., this evening, and ask him to tell you about the steam yacht they are building for Mr. J. H. Wade, Jr. Wait, and I will give you a letter to Mr. Coffinberry." And this letter was duly received.

"How is the canoe editor of FOREST AND STREAM?" asked Mayor Gardner as we turned to go. "Tell him I still have the old canoe he built for me more than a dozen years ago and she is as staunch and sound as ever. I have traveled over 2,000 miles in her and she is good for 2,000 miles more if I ever get the time. Now you go and see Mr. McBride and Mr. Johnson and Mr. Coffinberry, and come back here to-morrow, and we will meet Mr. Will Huntingdon, one of the liveliest members of the Ohio State Fish and Game Commission, and he will take us up the old channel in his steam yacht."

Now, that's the kind of a Mayor to have. FOREST AND STREAM doesn't go into politics, but I am satisfied that if Commodore Gardner would come out to the much-vexed city of Chicago the paper wouldn't object to the boys starting a large sized boom for him as Mayor for life.

It was evening, about the dinner hour, when I arrived at the elegant residence of Mr. Johnson, on that world-famous residence street, Euclid avenue; yet Mr. Johnson was accessible and soon enthusiastic over the Castalia Trout Club, and for nearly an hour the atmosphere was fishy, while the dinner maybe waited. Mr. Johnson said—but I am not going to tell what he said, for there is not room now for the story of the club.

Mr. Lee McBride, well known hereabout as one of the great firm of Root & McBride Bros., dwelt a little further up the avenue. He was more fortunate and had dined before the butler served on him the relentless summons

to come forth and talk to a stranger about fishing. Mr. McBride was as genial as Mr. Johnson. We had a long talk about the Castalia stream, and he said—but no matter what he said just yet, for all that is part of the history of the lower stream, for which we have not room at present. But on the following morning, calling by request at his place of business, he gave me further data from his desk (he is secretary of the "Lower Club"), presented a letter to Mr. C. W. Sadler, at Sandusky, and said:

"You must meet Mr. Sadler. He will go down with you to the stream, and though Mr. Sadler is not a member of our club, he is an angler and an enthusiast. You must both take your rods, and I hope you may have good luck. I want to get away and meet you on the stream on Saturday. The fish seem to be rising well. Mr. Harvey Brown yesterday took a 15lb. basket, the limit, in a few hours, and they averaged well."

Now, what could be nicer than all this? What Aladdin's lamp charm lies between the covers of FOREST AND STREAM?

It was dangerously late in the evening now to call, but I sought out Mr. Coffinberry's apartments at the August Stillman, on Euclid avenue, and sent up Mayor Gardner's letter, resolved, if need be, to have Mr. Coffinberry out of bed but what he should be interviewed about the new yacht. But like all the others, Mr. Coffinberry was smiling and pleasant, and as full of courtesy as of fact. Mr. Coffinberry said—but that also is another story, and I shall not spoil it by telling it here, for Mr. Coffinberry, the designer and builder of the new yacht, has promised photographs and a full technical description of her as soon as she shall be completed. She will be the most considerable craft of the kind ever built on the Lakes, although her owner, Mr. Wade, deprecates all heralding of her excellence, and her builder speaks very modestly of all that himself. She will cost between \$100,000 and \$200,000, and will be a strong sea-going steam cruiser, not so fast as thoroughly safe and comfortable. She will be steel frame and steel plated up to the windows, with plain steel bulkheads and very strong decks for heavy seas, the total effect being that of a rather high-riding, plainly-finished boat. Lighted throughout, from search light to hold, by electricity, heated by steam throughout, with hot and cold air fans, a large refrigerating machine of the ammonia process sort, an elaborate distilling plant equal to 1,200 gallons of fresh water daily, and a dozen other extensive and expensive projects for comfort, she should warrant her builder's description as a "floating museum of conveniences." The expensive character of her woodwork, the original plans for the quarters of passengers and crew, and many other details, make her a marvel for this country, and it is thought that she will eventually open the eyes of many down-East folk who do not think that the yachting or yachts of the West amount to much.

The following afternoon the appointment was kept with Mayor Gardner, though Mr. Huntingdon was not to be found.

"We will go down and get the city fire boat," said the Mayor, and this indeed is what we did, pausing for a few moments at the neat quarters of the fire boys, near where the Superior street viaduct towered 60ft. above us. Mr. Dickinson, the fire chief, was not on hand, so Lieut. Campbell, after some fruitless telephoning, went aboard as skipper, and the J. L. Weatherly with two passengers and the full crew of the river fire force, turned around on her heel, gave a kidney-crawling whistle or two and started down the river.

I do not know that this is just in the line of any one department of FOREST AND STREAM, but I do not know of any more interesting little trip than this down the old channel of the Cuyahoga, the "Crooked river" of the Indians. It would certainly open any one's eyes to see the magnitude of the shipping interests of the Lakes. We passed whole lines, two deep, of fine modern steel ships, all of which take any weather in their traffic with the Upper Lakes, and saw also any quantity of the old wooden ships, barges, iceboats, lake freighters, tugs, fish boats and what not else. The big steel ships, averaging 3,000 tons burden, were in the majority. We passed the mouth of the new river and saw on the pier the club houses of the Cleveland Yacht Club and the Cleveland Canoe Club. Then we saw the big passenger boat, the City of Cleveland, twin to the ill-fated City of Detroit, which was sunk last Monday night; and near by us saw, too, the schooner now called the Col. Cook, but once known as the Augusta, which years ago collided with and sunk the Lady Elgin on the Upper Lakes. The Cook is a rough-looking, hang-dog sort of a craft to-day, and doubtless has a bad conscience and an unlucky record. Not far from here were two yachts in dock, the Say When, owned by W. J. White and calked with Yucatan gum, and the Winnifred, owned by Dan Peels. The former boat is a Herreshoff yacht, and just got in last fall after a long cruise to the Gulf of Mexico. And then we came up with the skeleton of a new boat, to be the largest passenger steamer on the Lakes, now on the ways in one of the largest yards. And so on, and so on, past the great ore, red with the rusty treasures from the Superior country, past one slip after another crowded full of noble shipping, and up to the vast dry dock, the largest in the country, where ends the first chapter of the Old River Bed. It would take Dickens to do all this river life rightly. Out of it all, I do not know that we saw anything much prettier than two little baby cutters, deep, sturdy little fellows, about fifteen feet in length, which we found hauled out at one yard along the bank.

"You have seen only a part of the shipping," said Mayor Gardner, as we said good-by at the end of a hurried walk to catch a train, "and you can as yet tell nothing of the yachts and canoes we have." This is true, and it is unfortunately true also that only a part can be told of what we did see.

And so back to Sandusky, with some talk with Messrs. A. C. and A. L. Moss, treasurer and secretary of the "Upper Club" of Castalia, and by courtesy of the former gentleman recipient of a card to the rooms of the Sundeand Club of Sandusky, where, I am informed, FOREST AND STREAM is kept and read religiously. There are many pleasant sportsmen in this city also, and indeed—well, this is a pretty good sort of a world, after all.

Mr. Sadler I found here easily, and he at once agreed that we should go down to Castalia together on Saturday, at which time I will go over the stream and dig into its history as much as possible.

"I was just about to go out on the marsh after a few ducks this morning," said Mr. Sadler. "I don't much believe in spring shooting, but I have not had a hunt for a long time and I thought I would try for a bird or two, especially as the snipe have not got up yet. I only saw one snipe on the grounds I hunted over the other day. However, it looks like rough weather, and I concluded not to go."

"How many duck clubs have you around here?" I asked, "and how large are they?"

"We have two large ones up at the head of the bay," said he, "and several smaller ones."

Then we fell to talking about the duck clubs, and Mr. Sadler said—but never mind what he said, for there isn't room to tell about these Sandusky duck clubs now and do it as it should be done, and we may best postpone that for a little while, until we have more facts and more time to classify. Meantime the main fact in American history seems to be that Mr. Sadler and I are to-morrow to see again a real, live brook trout—if we have luck; for it is snowing here now, and the indications are for colder weather to-morrow.

E. HOUGH.

BEAVER TRAPPING.—In Mr. Griffin's paper on beaver trapping, printed in our last issue, a typographical error occasions confusion in the first column of p. 208, about three-fourths the way down the column. As printed the directions read: "Having chosen my spot I take a lot of mud from the bed of the creek and make a little mound like the ones formed for sitting and rolling on by the animal himself. I then dig out a place large enough to hold the trap in the edge of the bank, splashing water over the digging to make it look natural and old. Just under water and on the bank above it I set up a little step on which are a few drops of the beaver medicine. This should be fastened to the trap either by a slender twig or a piece of black thread so that the animal, when he dives in the water, will carry it with him. This is to keep the other beaver from smelling it. The trap is set 6 to 9 in. below the water's surface, and the end of the step is 6 in. above water, and a foot or more to the landward side of the trap." They should read: "Having chosen my spot, I take a lot of mud from the bed of the creek, and make a little mound like the one formed for sitting and rolling on by the animal himself. I then dig out a place large enough to hold the trap in the edge of the bank just under water, splashing water over the digging to make it look natural and old, and on the bank above it I set up a little stick, on which are a few drops of the beaver medicine. This stick should be fastened to the trap either by a slender twig or by a piece of black thread so that the animal when he dives into the water will carry it with him. This is to keep the other beaver from smelling it. The trap is set 6 to 9 in. below the water's surface, and the end of the stick is 6 in. above water, etc."
